that it has defects, and are continually striving for its bettterment; but in the Southern States every difficulty is increased, and every element of opposition enlarged, while, contrariwise, each resource is diminished and each support weakened. In a country of sparse population, ravaged and impoverished by war, with wealth unequally distributed during a century and a half of an unnatural and oppressive social order, the mass of the people are poor and bear taxation with hardship. In most of the States there are no invested State funds. Trained teachers are yet few, and their increase is slow under the discouragement of unattractive positions and meagre pay. But add to all this that in each locality there must be a double system,—schools for white children, schools for colored children, separately,—largely increasing the proportionate cost, and inevitably causing the schools to be scattered and difficult of access.

These are the general facts, briefly stated. If we should enter upon a full examination of the case, we should find at each step the evidence that the means of overcoming illiteracy in the South are altogether inadequate. Take, for example, a few of the most striking details. In the former slave States, only a little more than half (55.8 per cent.) of the colored people of school age is even enrolled in the schools. The schools are kept open but a small part of the year,—in Alabama, 87 days; in North Carolina, 12 weeks; in South Carolina about 3 months; in Louisiana about 5 months. In South Carolina, the average number—*average* number, mind,—of pupils to each teacher is 46 and a fraction. In North Carolina, the monthly pay of a male teacher of colored schools will average $24.69, and a female teacher $20.36; and the schools are open 3 months in the year. In Virginia, the Superintendent reports that in order to house at one time the whole school population of the State there would be needed 24,000 schools, while the actual number in existence (1887) is 7,140.

These facts are, it must be confessed, far from encouraging, especially if we are to compare them with the conditions of educations presented in other parts of our own country,—and by the nations of Europe generally, with whom, in the race of life, we are obliged to compete. But it is still proper to remember how much interest has been awakened in the subject, how much has been done by private means to establish schools and colleges, from the smallest and humblest to universities of ambitious grade. Taking colored education only, in the South, the Peabody Fund disburses to it, annually, about $60,000, and the Slater Fund about $45,000. Twenty institutions of the rank of colleges, are reported (all in the South but 2), with 238 teachers and over 5,000 students,—all these the outgrowth of private philanthropy or denominational interest. They include such institutions as Fisk University at Nashville, Howard University at Washington, Straight University at New Orleans, and others well organized and at least tolerably supported. Of normal schools, such as that at Aiken, there are 34 reported; of schools of secondary instruction, 46; theological schools, 25; law schools, 4; medical schools, 3; schools for the deaf and dumb, and for the blind, 9. Counting everything, the United States Commissioner of Education, in his report of 1885–86 (the latest issued, and from which nearly all the foregoing statistics are taken), counted a total of 19,000 colored schools, and an enrollment of a little over 1,000,000 scholars.

That the chief work of redeeming the colored people in the South from ignorance and its consequences must be done by public schools is of course plain. That the Nation should aid the States in this work, heartily and quickly, I regard as beyond the verge of reasonable controversy. That the legislation to this end, so long proposed, so earnestly urged, so completely justified in Congress, remains still unenacted is a reason for reproach and an occasion for amazement. It is opposed, it is true, in the interest of that class in the South who prefer that the negro should remain ignorant, and objections come also from some in the North whose views of the function of government forbid them taking a broad view of the question, but neither the selfishness of the one class, nor the narrowness of the other commends their opposition to our regard.

But aside from this great and important work of the public system, there are two aspects of the case to which we may especially attend. While the Blair bill or similar legislation remains unenacted, while the processes of public education are so imperfect and inadequate, help to the general work must continue. And even when it shall be enacted, and when, after decades of patient and faithful exertion, the public schools of the South have increased in efficiency many fold, there will still remain a wide field for labor among the colored people. They need a training which the public schools cannot, for a long time to come, think of supplying. They need a development, not merely of intellectual faculties by instruction from books, but of moral qualities and industrial habits derived from the patient example and the continual precept of good people.

It is to this side of the work that I think the attention of Friends must naturally be directed. The qualities that need to be developed in the colored people, and trained up to useful results, are those with which Friends have for generations been familiar, and which are necessarily the product of their ethical system and their habits of life.

It is easily perceived that a people who have but just emerged from a soul-depressing condition of slavery, and who, without any interval of preparation, have been introduced not merely to freedom, but to citizenship and at least a nominal possession of political rights, must lack many of the qualities which a prosperous and worthy existence in society demands. They lack in order, system, punctuality, promptness, exactness. They lack in all those qualities which bloom in the soil of self-respect, and which are repressed, if not destroyed by degrading conditions. They need to have their truthfulness and their conscientiousness developed. They need to be patiently aided in a better way, as to sober and virtuous living.

If Friends are to turn their attention in this particular direction, and include in their general scheme of philanthropic labor systematic and maintained

aid to the education and training of the Southern people of color, I can see many reasons justifying the step. Let me mention some that readily occur to the mind:

1. As has already been remarked, the work is congenial. The qualities which need to be trained up are those which Friends have themselves developed. Whatever Quakerism may do, or not do, theologically, the world has seldom denied that its order brought forth, *when consistently observed*, men and women of a good life. The colored people appeal for precisely the kind of aid which Friends are competent to render, and which their principles permit them to afford. Whatever scruples they might have in undertaking missions of dogma in foreign lands, they are not restrained from but urged to works of morality in their own community.

2. I find a second reason in the historical precedents. From the day when George Fox, preaching in Barbadoes, advised the planters to treat their slaves kindly and ultimately set them free, the sympathies and the activities of many Friends have always been extended to the colored people. Recalling the labors of John Woolman and Anthony Benezet and Warner Mifflin, we may remember also the testimony borne by Elias Hicks, and many in later time. It seems a falling away from the standards when, so long as the African race need a helping hand, the followers of George Fox should not be prompt to extend it.

3. A third reason for aiding the colored people is the encouragement of their quick response. They are easily touched, appreciative of sympathy, and sincerely grateful for help. The cheerfulness of their temper makes them easy to labor with, and the evidence of success in well directed efforts for their improvements is seldom wanting. As compared with the experience of the missionaries in some foreign countries, where years of patient labor can hardly show a single definite result, the educational work among the American freedmen has been wonderfully fruitful and rapid in its progress.

The patient effort which I think may most profitably be made in this field by us is that of increasing the efficacy, and elevating the character, of the schools that prepare teachers. Leaving, as we must do, the education of the mass of children to the public schools, and hoping to see them increase and improve year by year through better laws, more friendly officials and more adequate expenditure, the training of good teachers is a task so far less in its proportions as to be within the possibility of influence by special schools, such as Martha Schofield has established at Aiken. It is clearly and emphatically my conclusion that only to this branch of the work is it worth while for our comparatively small body to direct its efforts. If our time and means are given to one simple object of keeping in question one, or at most two schools, strictly for the training of advanced scholars who desire to teach, we shall accomplish something which is definite and satisfactory, so far as it goes, and shall be able in time to see that there is really good fruit resulting from our endeavor. Our school should not only teach the learning of books, but the methods and habits which accompany, and in part form, good character. It should turn out teachers who shall have upon them the evidence of contact with the typical qualities of Quakerism. It should, of course, provide industrial training: this is a most needful feature in the South, as it is everywhere. How to use their hands as well as their brains is the lesson which colored people, like white people, need to learn. And I believe that Friends, by example as well as precept, are admirably fitted to teach it to them, to make them comprehend the dignity and worthiness of labor, as well as to give them instruction in its methods.

This is, indeed, the essential feature in the work of elevating the colored people. They must be willing to work, they must learn how to work,—not merely in the rude ways of the Slavery era, but according to the skill and knowledge of freemen,—and, furthermore, *they must have the opportunity of work.* Without industry their case is hopeless.

And this is generally realized by those engaged in the promotion of their education. In the disbursement of the Slater Fund, special favor is now shown to those schools that give practical attention to industrial training. Under the hand of Dr. Haygood, of Georgia, the Agent of this Fund, a true and wise friend of the South and all its people, this excellent policy is carefully followed. The Slater Fund appropriation to the Aiken School, the past year,—the first it has received,—was made to the industrial department and to it only.

If the colored people of the South can have a real education their relation to the republic may become that of a support and not a burden. They were unsettled by Freedom, and confused by Enfranchisement, and this scarcely the less that both these great gifts were their inalienable right,—the latter being the protector and guaranty of the other. The education they need is one adapted to their circumstances,—not theoretical, but practical; not overly ambitious but real and thorough in essentials; not calculated to "cram," or to confuse, or to inflate their minds, but to *lead out* their faculties, and train them for useful avocations. That same problem which confronts educators in all directions of how to bring within a reasonable limit of time and strength the study of the vast circle of knowledge, and how to combine the essential part of it with the training of the physical faculties, is the problem presented as well in the case of the Southern colored people. But there is one great and serious difference between the two cases,—that while for the children of the North there is the certainty of wise care and ample expenditure, for the children of the South, and especially those of color, such assurance does not yet exist.

HOWARD M. JENKINS.

I SLEPT, and dreamed that life was beauty;
I woke, and found that life was duty.
Was thy dream, then, a shadowy lie?
Toil on, sad heart, courageously,
And thou shalt find thy dream to be
A noon-day light and truth to thee.

Ellen Hooper.

SCRIPTURE LESSON, No. 35.

NINTH MONTH 9, 1888.

TOPIC: UNBELIEF.

GOLDEN TEXT.—"Ye search the Scriptures, because ye think that in them ye have eternal life: and these are they which bear witness of me."—John 5: 39.

READ Numbers 14: 1–10.

THE report brought back by the spies filled the people with fear and dismay, and they turned longingly towards Egypt, as they were accustomed to do when any discouragement came before them.

The picture given of the murmurings and discontent shows how great was the responsibility Moses assumed when he accepted the leadership of the Israelites. While all went on smoothly and harmoniously, they rejoiced and were glad; when it was otherwise they were ready to stone Moses, and turn their faces towards Egypt, the house of their bondage. This is the case with many who start on the journey towards a higher life—they find the road beset with difficulties comparable to the giants that dwelt in the land of Canaan, and are ready to give up the attempt, until some Caleb or Joshua, whose heart is set on best things, reassures them of safety, and infuses the courage into their efforts that brings success. It was not until they remembered the Tent of Meeting, where the glory of the Lord was manifested "to all the people," that they saw how they had sinned in his sight.

The words of Allen, in his "Hebrew Men and Times," are in place here. He says, "There was but one course to follow. The leader's mind was too clear not to see it, too calm and strong to flinch from it. Perhaps such another instance of resolute and high-minded patience is not to be found in all history as this; when the old man Moses, already (by our account) more than eighty, turned deliberately back from the Promised Land—the goal just reached of his hope and expectation,—and adopted the far-seeing policy of adhering to that nomadic life till a whole generation should be trained of sinewy and determined men, inured to toil, and bred to the hardy valor of the wilderness."

The subject of this lesson, when taken in connection with the history of the Jewish people, is an interesting one.

Through all the years of their bondage in Egypt, the promises made to Abraham, Isaac, and Jacob, had been handed down from generation to generation, inspiring them with a blessed hope in the future; inciting them to a purer life and a more patient endurance of the present, giving them faith in the special call of their father Abraham and the promise of an inheritance as a chosen people, keeping them the while apart and peculiar.

Now, after all the years of wandering and privations, sinning and repenting, they are nearing the goal of their hopes, the promised land of Canaan, and from the encampments in the wilderness of Paran, their great leader and law-giver, by divine commandment, appointed and sent forth representative men to go search out the land. "Go you up this way southward, and go up into the mountains; and see the land what it is, and the people that dwell therein" (chap. 13, ver. 18). "Now the time was the time of the first ripe grapes." After forty days, they returned to Moses and Aaron, and to the congregation of the children of Israel, bringing with them the fruit of the country, saying, "Surely it floweth with milk and honey." All this must have sounded pleasant to the people, so long fed on manna, and must have been a fresh impetus to press forward to a realization of their hopes. And Caleb said, "Let us go up at once and possess it, for we are well able to overcome it." But when they reported the strength of the people, the walled cities, the many nations that dwelt in the south, in the mountains, by the sea, and the coast of Jordan, and moreover the men of great stature, the children of Anak, then it was that those who were filled with unbelief and want of faith in the promises, said in reply to Caleb, "We be not able to go up against the people for they are stronger than we" (13: 31).

Truly this, coming from those who had gone and seen for themselves, was discouraging to the homeless, weary, travelworn people, and surely we may not marvel that they faltered, and that for a time their belief and faith in the promises made to their fathers and to themselves through Moses, was tried to the utmost, and that in view of the dangers and uncertainty before them, they said, "Let us make a captain, and let us return into Egypt" (14: 4). But the faith of Joshua and Caleb never faltered, and their advice and exhortation was, "If the Lord delight in us, then he will bring us into this land and give it us." "Only rebel not ye against the Lord" (14: 8–9).

We of to-day rebel and murmur against the trials and crosses sent us by our Heavenly Father, instead of having faith that it is all for our good, and saying "Thy will be done."

EXPEL ERROR BY INSTILLING TRUTH.

THE most effectual method of expelling error is not to meet it sword in hand, but gradually to instill great truths with which it cannot easily coëxist, and by which the mind outgrows it. . . . Instead of expending his strength in tracking and refuting error, let the minister who would serve the cause of truth labor to gain and diffuse more and more enlarged and lofty views of our religion, of its nature, spirit, and end. Let him labor to separate what is of universal and everlasting application from the local and the temporary; to penetrate beneath the letter to the spirit, to detach the primary, essential, and all-comprehending principles of Christianity from the incrustations, accidental associations, and subordinate appendages by which they are often obscured, and to fix and establish these in men's minds as the standard by which more partial views are to be tried. —*Channing.*

WHATEVER be our reverence for Jesus, even though it attribute to him a nature ever so extraordinary and exalted, still we must remember that he is presented to us as the great ideal, model, example of all that we should be.—*Dr. Dewey.*

THE TENDENCY TO RITUALISM.

THE message of George Fox included a protest against forms and ceremonials. Much of his emphasis was laid upon this. It was the logical companion to his one great conception of the immediate revelation of God's mind to man's mind. Believing that there is such a communication, to be listened for and listened to, the ceremonies of worship become not merely useless but distracting. When, therefore, Fox declared the one great and overshadowing thought, he declared the other also. The ceremonial of the "steeple-houses," in the hands of the professional "priests," seemed to him to strike at all religious life,—to confuse and confound the passage of the divine message to its human destination.

So it is that Friends are plain, and quiet, listening for a still small voice. Yet the temptations toward a ritual assail them on all hands. On every side there are other ways of praise and worship. There is music of organs, there is singing of congregations and professional choirs. There is order of worship,—prearranged programmes of praying, singing, preaching, chanting, responding, sitting, rising, bowing, kneeling. And beyond this there are yet more forms and ceremonies, such as those which the most elaborate rituals require—the burning of incense, the lighting of candles, the swinging of censers, the wearing of vestments, the sprinkling of water accounted "holy," the adoration of materials believed to have become the very blood and body of Divinity.

The question we ask here is, Does not the tendency to Ritualism feed upon itself, and proceed logically and necessarily to the highest and most elaborate forms? If we enter upon ceremonial, is there any stopping place short of its highest development? It must be confessed that when we consent to the praise of musical instruments, the great organ of the cathedral is more splendid and impressive than the feeble little instrument of a narrow church.

We believe that Ritual does grow by what it feeds on. This is the experience of the churches. When devotion turns to ceremonial it cannot check itself. If a form is good, the most definite and strict use of it is the best. If a professional minister is good, he whose training in his profession is most thorough, and whose devotion to its details is most earnest, must be the one most desired. We recall the complaint of a woman in a certain congregation of the Episcopal church against the Bishop of her diocese, (a most admirable man, sincere and meek in his Christian character), that he was "so slovenly" in the performances of the "offices" which were assigned him in the ritual. The word she used was doubtless unjust; the fact was that he did not magnify each detail of the ceremonial, and give it the appearance of being vital and essential. To him, doubtless, the form was outward: to her it was the substance of worship.

A journal of the Roman Catholic church, the *Catholic Standard*, in a recent paragraph remarks upon the fact that in St. Paul's Cathedral, in London, erected in the spirit of Protestantism as a protest against Rome, and having, as it says, "no 'Lady's Chapel' and no statue to the honor of the Holy Mother of God," the authorities of the Church of England have now "actually erected a rood-screen and a statue of the Blessed Virgin," and despite "a storm of indignant demonstration from the Protestants of England," have adhered to their course, so that now "the strange spectacle is presented of two of the most significant emblems of the Catholic church being introduced into a cathedral which was erected as a protest against that religion." This circumstance seems to us natural enough. It illustrates the progressive movement. There was the same movement from the primitive Christian system of the first few centuries of our era up to the time when Christendom was ruled from Rome, with a rod of iron, and the revolts of Wycliffe and Huss and Luther gave sign that the load of ritual and the rule of ecclesiastics had become unbearable. The transition from the simple ways of the first Christian congregations to the vast and overshadowing Papal organization was slow, but it was steady, because, *the way being once entered upon*, the successive steps were natural and logical. The mind of man moves in this way. That which we accept to-day is the basis of to-morrow's acceptance. If it seems good to proceed the first step, it must be good to take the next. Ritualism is a growth. It has its beginning in the first departure from simplicity; its end is limited only by the possibilities of our yielding to outward ceremonial and ecclesiastical assumption.

MARRIAGES.

AYRES—WILBUR.—At the residence of the bride's parents, on Fifth-day, Eighth month 23d, by Friends' ceremony, Mary E., daughter of Allen E. Wilbur, of North Easton, N. Y., and Samuel G. Ayres, of Granville, New York.

DEATHS.

ANDREWS.—At the residence of her uncle, Henry Serrill, West Philadelphia, Eighth month 26th, 1888, Frances

S., last of the children of the late James, Jr., and Ellen B. Andrews, in her 25th year; a member of the Monthly Meeting of Friends of Philadelphia.

BARROWS.—Eighth month 21st, 1888, at Atlantic City N. J., Arad Barrows, Sr., of Philadelphia, aged 68 years.

BURTON.—At the residence of her nephew, Franklin C. Paxson, Germantown, Phila., Eighth month 25th, 1888, Anna Paxson Burton, widow of Anthony Burton, of Bucks county, in her 91st year; a member of Falls Monthly Meeting.

FARQUHAR.—At her home, Olney, Montgomery county, Md., Eighth month 26th, 1888, Sarah B. Farquhar, in the 83d year of her age, daughter of Roger Brooke, and widow of Dr. Charles Farquhar. She was for many years an Elder of Sandy Spring Monthly Meeting.

GIBBS.—At the residence of her son, Thomas S. Gibbs, near Columbus, N. J., Eighth month 23d, 1888, Edith Gibbs, in her 81st year.

GRIFFIN.—In Philadelphia, Eighth month 24th, 1888 Frances Louise, wife of George Truman Griffin, and adopted daughter of Edwin Griffin, M. D.

HEADLEY.—At Bristol, Pa., Eighth month 25th, 1888, Thomas Headley, aged 87 years.

IREDELL.—At Norristown, Eighth month 23d, 1888, Phebe J., daughter of Robert and the late Teressa J. Iredell.

JACOBS.—Eighth month 18th, 1888, at Willow Grove, Pa., Marie Coane, daughter of Henry L., and Florence B. Jacobs, of Philadelphia, aged 2 years, 11 months.

KINSEY.—On Fifth-day evening, Eighth month 23d, 1888, at his home in Quakertown, Pa., Samuel Kinsey, in his 67th year; a member of Richland Monthly Meeting, Pa.

NEALL.—Eighth month 24th, 1888, Alfred C., son of Rebecca S., and the late Isaac C. Neall, in his 41st year; a member of the Monthly Meeting held at Green street, Philadelphia.

PERRY.—At Pomeroy, Chester county, Pa., Eighth month 19th, 1888, Rachel Perry, aged 82 years.

SMITH.—Eighth month 18th, 1888, at Lincoln, Virginia, of typhoid fever, Portia H., daughter of the late William J., and Portia H. Smith, aged 24 years; a member of Goose Creek Monthly Meeting of Friends.

TRIMBLE.—At Hamorton, Chester county, Eighth month 23d, 1888, James Trimble, aged 89 years, 6 months.

For Friends' Intelligencer and Journal.

LETTERS FROM EUROPE.—XXV. FURTHER LONDON NOTES.

The Tower of London is a building or rather a collection of buildings of which we see the like nowhere else. It was at once a fortress and a royal residence and a state-prison. Here are still kept the crown jewels, the earliest of which I presume is the sceptre of Edward the Confessor, a round rod of gold perhaps thirty inches long, and one inch in diameter, ornamented with pearls and diamonds. There are other and larger sceptres of later monarchs. There are several crowns, that used at the coronation of Queen Victoria being the most costly and literally blazing with diamonds. There is a great deal of gold plate, which is used at various ceremonies, the total value of all being twenty million dollars. This treasure is kept in a glass case in the middle of a small strong room, and the custodian, who is a woman, took care to inform the company that it would be idle to attempt to carry any of it off, as she had only to press a button when every door in the building would be at once closed. This announcement only suggested that the first step in the enterprise should be to seize the woman.

Some two hundred years ago, and consequently before the electric button was put in, a man did succeed in seizing the crown, and having hidden it under his cloak, got as far as the outer gate before he was caught.

In one of the buildings is a vast museum of arms, offensive and defensive. The latter are particularly elaborate, covering the warrior from the crown of his head to the tips of his fingers and toes. One cannot think much of the courage of a man who provides for his safety with such extreme care and who, thus protected and mounted on a horse similarly guarded, rode among the half naked serfs that composed the mass of mediæval armies and clove their heads in as much security as if he were killing sheep.

Among the curiosities in this museum is "the block," a ghastly word in English history. There never was but one "block" in England and this is that one. It is a rough cube of English oak, about two feet every way, dark naturally but black by age and use. The opposite edges of the top surface are scooped out by a circular cut to give place for the chest and head of the victim and enable him to place his throat solid on the narrow ridge between. The axe which struck the blow leans against the block. It is like a heavy butcher's cleaver, and several gashes in the block show that it was accustomed to drive sheer through bone and gristle and sink into the wood. Besides many nobles who lost their heads upon this block, one king and three queens were there executed, —Charles I., Annie Boleyn, Catherine Howard and Jane Grey.

Understanding that some parts of the Tower were shown only by special order, I had taken the precaution to obtain a card from the Lieutenant of the Tower. The only additional places worthy of note were the Torture Chamber, and the Condemned Prison. The former is a subterranean room, of course with very thick walls, and may have been chosen because the shrieks of the victim could not reach the upper air. The rack and thumb-screws are there ready for use should ancient methods of extorting truth ever come in vogue again. A niche in this Chamber in which a man can neither stand, sit or lie down was the abode of the famous Guy Fawkes after having undergone the discipline of the instruments I have just named. His crime was a plot to blow up the Parliament while in session with gunpowder, in 1605.

The prison in which the noble prisoners were confined before execution possesses a mournful interest, especially when we reflect that their offenses were rarely other than political. It is a well-lighted room the walls of which are of a light drab stone, and so soft that many prisoners have thereon cut their names with, very often, pathetic inscriptions. Among these names is the one word JANE, wrought in relief by Lady Jane Grey. The fate of this hapless young woman has drawn forth the sympathy of

many generations. She is represented to have been beautiful, accomplished, learned and pious, the happy wife of a loving husband, Lord Guilford Dudley, who was the son of the Duke of Northumberland. On the death of Queen Mary, (the daughter of Catherine of Aragon, first wife of Henry VIII., and of course a Catholic), the Catholic party under the lead of the Duke of Northumberland and others denied the right of her Protestant sister Elizabeth, (daughter of the divorced and beheaded Annie Boleyn), to take the crown, and in an evil hour offered the succession to her cousin Jane Grey, indeed proclaimed her queen with little regard to her own wishes. The Protestants were however strong enough to seat Elizabeth on the throne, and lost no time in bringing Jane Grey and her supporters to the block.

Among the interesting institutions of London are the Inns of Court, associations of lawyers each possessing its special Inn comprising chambers for residence and business, dining-halls, libraries and other public rooms. These public rooms are handsomely ornamented with carved oak, dark naturally and with age. There are four principal Inns,--Gray's Inn, Lincoln's Inn, the Inner Temple, and the Middle Temple,—besides a few smaller inns subordinate in position to these. When the lawyers began to live in their own private houses, chambers in the inns were let to laymen. The family of our Washington had for their London residence an apartment in Gray's Inn where Lawrence Washington resided, A. D. 1544–1579. He was George Washington's great-great-grandfather. Dr. Johnson and Oliver Goldsmith both lived in the Temple, and the latter is buried in the Temple churchyard. The inns had attached to them small parks, which are still kept as lawns and are now beautifully improved; and it produces a singular sensation when walking in the throng and bustle of a vast city to pass under an archway and find onesself in green fields, with grass and trees and birds. Other oases like these, only not hemmed in closely by houses, are frequent in London and are a great refreshment to the eye. They generally take the place of a block of buildings, are indeed unoccupied squares, but though some are open to the public, the majority are not so, being the property of adjacent house-holders, who alone have the privilege of admission.

I must not omit to mention, though I can do so but briefly, the two public schools, Westminster and and the Cloister-house, or as the latter is generally called, the blue-coat school. For the scholars wear long blue coats almost to their heels, short clothes, and yellow stockings, and always go bareheaded. These schools were established and endowed for the benefit of indigent boys not able otherwise to obtain an education, but at the present time the appointments, which are very valuable,are given to the nominees of those having "influence," that is of the rich. Boys are taken at the age of ten years and supported until they are fitted to enter the universities,—till sixteen years of age, I believe.

It is said that Victor Hugo when in London was fond of riding on the top of omnibuses. I shared his taste as did all my children, and when weather did not compel us we never rode inside. Indeed the outsides were favorite places for everybody except old ladies. A winding and not very steep staircase led to the top, and the seats were just as comfortable as below. From this elevated position to look down upon the crowded side-walks full of that busy tide of life which old Dr. Johnson used so much to delight in contemplating and mingling with, was a most pleasant experience. In the busier parts of Holborn, for instance, and Cheapside, the street would be packed with vehicles many of them omnibuses, carrying like ours top-loads of passengers.

Other interesting phases of London life show themselves in the parks. In Hyde Park every afternoon from five o'clock till seven it is the fashion for the great world to drive, and consequently a constant stream of carriages flows along the road. There are many thousands. The occupants are not at all distinguished by dress or appearance, but the coachman and the footman who sit together on the box are dressed in style. They have fair-topped boots, white breeches, blue coats, white gloves, and sometimes wigs. The royal coachmen only wear red coats. Mingling with the ordinary carriages here and there is one of the Coaching Club turnouts, with four horses driven by the owner. The coach is in construction like the old stage coach, but carries no one inside. The passengers are mostly ladies, and all ride on top. Several times during "the season" the Club has a "meet" in the park, and then musters about twenty-two turn-outs.

The equestrians have a track to themselves known as the famous "Rotten-Row." Many of these are ladies attended by their grooms. It does not seem to be customary for gentlemen to join them. Both men and women are extremely ungraceful riders. The universal and only gait is a trot. Pacing and cantering are absolutely unknown. Then, too, the horses are large heavy animals, in no way proportioned to the weight of the rider, and the consequence is that every rider must rise in the stirrups or be shaken out of all form. This feat I have seen at home performed with a certain amount of grace, the rise being sufficient to avoid the toss, and yet the rider's garments did not entirely clear the saddle. But the English, both men and women, rise clear of the saddle six inches or more: and to do this they have to bend forward, and use an amount of effort that is painful to themselves and ridiculous, at least to strangers, to see. The public crowd to these exhibitions by tens of thousands.

In Regent Park pedestrians only are admitted, and it is consequently the favorite resort of those who engage in athletic sports. The Park contains nearly 400 acres, and all over the green sward are thickly scattered parties practicing the national game of cricket. From little boys of eight up to middle aged men, all seemed to go at it with zest. And yet it seemed to me a slow and dull game. Notwithstanding the fondness of the English youth for outdoor sports I cannot say that I observed in them any special appearance of activity or health. But on this subject I may have more to say hereafter.

LETTERS FROM CHICAGO.—III.

Our little meeting had the company, on last First-day, of Allen Flitcraft and wife, of Chester, Pa., and the acceptable ministrations of the former. They were on their return from California, and stopped here on their return to visit the two sons (and daughters) and the six little grandsons, and incidentally our meeting and First-day school. Notice being given through the papers and otherwise, our meeting room was full, even overflowing into the hall. Perhaps if we took more pains our meetings would be larger in many places than they are. We often feel that we have not many attractions to those accustomed to a varied form of worship, and so settle down to our little meetings with little or no effort to increase the attendance. Possibly increased numbers would increase the life in many cases, being so many more channels in which the divine life might flow.

We had a few hours visit also, from your L. J. R. on her return from the West, and from her report, and others, we feel sure that fresh life and interest is being aroused among our isolated members,—not always so isolated if they knew each other's nearness.

Where there are only one or two families of Friends in a neighborhood, and they do not feel that they can attend any of the places of worship in their vicinity, they might call their family together, with any others who would be willing to join, and if they did not feel the strength to hold a house meeting, then have a Bible class. The Lesson Leaves issued by Friends can be obtained freely for such a purpose (by addressing R. M. Janney, 1500 Race street, Philadelphia). The verses of the chapter could be read around by the company, the leader reading the remarks upon the lesson, and calling upon each one for any thought they might have upon the subject, (always avoiding controversy), while the Golden Text might be committed to memory. If a meeting never should come from such beginning, the exercise and study would itself be good. It might or might not become a First-day school, though in most cases we think it would at least do that. If we were among those who are so isolated we should certainly try to begin in this way, and I feel that once begun in the right way it would not decrease but increase. It would even be practicable where there is but one Friend in a neighborhood to get one or more to join with them, not necessarily Friends. If our views are truer than some others and we are helped and strengthened by them, we ought to try to spread them and to feel a responsibility to forward the truth. One Friend in a lonely situation in the West, another in the South, or one in Europe or Alaska, could thus light a little fire that might spread to unexpected proportions. Faithfulness in little things often producing great results.

The wonderful work of William Duncan among that savage tribe of Indians, the Metlacahtlans, shows what one truly concerned person may accomplish. Of course one must wish for good for himself and others, and work in the right spirit, as only right desires can produce good. We must permit each other to "mind the Light" and be true to our own convictions.

My own mind and heart have been so instructed by these Scripture Lessons, and the consequent exercises, that I feel like urging them upon others for their careful consideration.

We understand that Lydia H. Price, of your yearly meeting, expects to attend our approaching yearly meeting, which expectation we hope may be realized. May all who gather there, take with them their best gifts and lay them on the altar. There is nothing too good for the service, "a willing spirit" being the first condition. Let us stand *for* something good, even more than against something evil. Let all our influence be of a positive character. If we cannot move forward, let us at least learn to *stand*, let us never go backward. In faith is strength, in doubt is weakness. It is the believer not the doubter, who works—Faith and trust produce works, their legitimate fruit. What is it to us when and how the universe was created? What is the future of the world to us? Let us go on our way like the stars in their courses,—

"They own thy power, accomplish thy command."

This is our duty—to move as we are moved upon, fulfilling our destiny, guided by the unerring spirit within us, which we may know, and as our own poet, Whittier, says:

"Here let me pause, my quest forego;
Enough for me to feel and know
That He, in whom the cause and end
The past and future meet and blend—
Guards not archangels' feet alone
But deigns to guide and keep my own;
Speaks not alone the words of fate
Which worlds destroy and worlds create,
But whispers in my spirit's ear
In tones of love, or warning fear,
A language none beside may hear."

NOTES OF A TRIP TO THE PACIFIC COAST.—IV.

On Eighth month 9th we left Mammoth Hot Springs Hotel in the stage for the branch railroad to Livingston. Our ride for miles is through the valley and on the banks of the Yellowstone river, whose waters are bright and clear. At Livingston we strike the main line of the Northern Pacific railroad on our way east.

While going through the National Park we had the pleasure of meeting many well-known faces,—friends who had come on a Raymond Excursion, and who, like ourselves, were enthusiastically admiring this wonderful region.

A long ride in our Pullman of two days and nights takes us through Montana, Dakota, Minnesota, and Wisconsin. The first town we come to of note is Helena, the Territorial capital, which is situated in the midst of a mountain region of inexhaustible mines, the stronghold of Montana's wealth. Miles City and other towns of smaller size and note attract our attention; then we enter a district called the Bad Lands; here the mounds are of every conceivable form, and the coloring is very rich. It is said that ages ago dense forests existed here. The name

is a misnomer and means that it is difficult to travel through with horses. The soil is exceedingly fertile, and grass grows luxuriantly. Coming through Dakota we observe the thriving towns of Bismarck, Jamestown, and Fargo, which is the largest city in the territory, a railroad centre and military post. As we pass through the Crow and Flathead Reservations we see many Indian camps and wigwams. The former tribe have a fine country to roam in, with plenty of buffalo, elk, and deer to hunt; they live well and drink the muddy waters of the Missouri.

The Flathead Agency is under the control of the Catholic church, which supports a Jesuit Mission upon it, and this has converted some to their faith. The Government supplies farming utensils and implements for husbandry with which they carry on a limited amount of work in this line, aiding and encouraging them to labor for their own support. Among them are many half-breeds, who are proud of their white blood, and as a rule are fine looking men and women. This reservation contains 1,500,000 acres and is held by three tribes. The Chippeway Indians have a reservation in Minnesota.

We arrive in Minneapolis on Seventh-day evening and spend First-day in that beautiful city, the twin sister of St. Paul, eight miles westward on the Mississippi. Thirty years ago none but the red man lived here, and the city has grown with surprising rapidity, its progress being largely facilitated by the excellent advantages for manufacturing afforded by the Falls of St. Anthony. Its population in 1870 was 13,000, now it is 150,000. Having the largest flour mills in the world it is a great wheat market. The Pillsbury mill being of the largest capacity, we spend a few hours in visiting it and are politely escorted through the different departments and obligingly informed of their system of making flour, which is termed the "roller process." On one floor we see the vast machinery, on the next we see where the wheat is ground and on another, they were packing it into large sacks for transportation to Europe, turning out at the rate 7,000 barrels per day. The building is immense and filled with machinery which is run by water power, steam only being required in cold weather when the river is frozen. This is a model flour mill and the visitor who examines as we did its features in detail will be well repaid. First-day we attended Friends' meeting and First-day school. We occupy our time next day in going around the city and out to the famous falls of Minnehaha; thence to St. Paul and spend a little time in the capital of Minnesota. It is built on terraces or bluffs which rise in gradation from the river, many fine stores and public buildings, with several avenues of palatial residences. Next day we go to Milwaukee, and after sight seeing sufficiently to get a good idea of this large and flourishing city, we go on to Chicago where we spend a week pleasantly and profitably with near relatives with the prospect of returning soon to our home in Chester, Pa., we feel an inward expression of gratitude for preserving care and continued safety throughout our long trip of nearly 9,000 miles.

Chicago, Eighth month 22.

SYSTEMATIC PRISON VISITATION.[1]

It is chiefly in some of the Northern States of the American Union that both the successes and the failures of volunteer prison visitation have been observable of late years; because in that country, more than in any other, the authorities have opened the prisons to the influences of benevolent persons from outside. Yet even there, it is by no means easy to measure the benefits or inconveniences of this syssem; inasmuch as all moral results are peculiarly difficult to estimate.

The oldest and most systematic body of volunteer prison visitors in the United States, if not in the world, is the "Philadelphia Prison Society." It was founded in 1787, and has been incorporated by the State Legislature. It consists of about fifty regular visitors; and, on the average, they visit more than 350 prisoners each month. In a recent Memorial to the Legislature, the Committee remark: "For *one hundred years*, the members of this Society have rendered personal, constant and gratuitous care to the prisoners of fully one-half of this State, visiting them continuously in their cells, giving them wise counsel, urging reformation, and encouraging and aiding them by every means in their power." They add that they have often been rewarded by improvements in the moral state of the offenders, not only while in confinement, but after discharge: and that some of them have risen to honorable positions in the community. They further observe that theirs is "a work which saves not only the lives and characters of human beings, but thousands of dollars to the treasury of the State; and at the same time gives greater protection to the community and exalts the standing of the commonwealth."

Pennsylvania alone, amongst American States, has retained, though in a relaxed degree, the Cellular System, and has endeavored in the chief prison in Philadelphia to secure the separation of prisoners from the corrupting effects of association with their fellow-criminals. At the same time, an unnatural and pernicious solitude has been guarded against. And it is especially by means of the constant visits of the many members of the local Prison Society that the success of this modified and ameliorated system has been maintained. The Committee speak of it as "The Separate System of our State, the system whereby re-commitments are lessened, and the opportunities for reformation increased." The visitors carefully cultivate harmonious relations with the resident officers, and earnestly seek to avoid interference or collision with them. They work well together. Even as to the prisoners, the reception of visits is not compulsory. Each is allowed the exercise of his own choice, as to being visited or not; and also if he objects to any particular visitor, his feelings on that point are respected. A recent instance is mentioned of a prisoner there, who, on being first accosted by some of the Committee, replied, "Have you any whisky? That is all I want." But by means of subsequent offers of books and of seeds

[1] From the volume just issued by William Tallack, of London, "Penological and Preventive Principles; with Special Reference to Europe and America."

and plants for his little plot of garden-ground, his reluctance was overcome and he willingly accepted the good offices of the visitors.

Both the governor and the resident chaplain (or "moral instructor") of the Philadelphia State prison, testify in their reports to the value of these volunteer services. It is mentioned by the Prison Commissioners of an adjoining State, New Jersey, that an experiment made some years ago to introduce in that district the separate system of imprisonment, resulted in failure, mainly and especially because *no collateral provision* was instituted for securing the visits of suitable persons, outside the regular official staff.

The essential separation from evil companions should never degenerate into unnatural solitude. King Oscar I., of Sweden, well observed: "The solitary cell ought to be inaccessible to the outer world, but *not* to the admonishing and instructive voice of the philantropist. 'I was in prison, and ye visited Me,' say the Scriptures. May the heavenly doctrine not be lost, but manifest itself in action."

In some of the American prisons, the aid of volunteer visitors is the almost exclusive means for diminishing the ignorance of the inmates.

At Baltimore, prison visitation has been erroneously stated to have failed, owing to sectarian jealousies and mutual interferences on the part of the ministers of the various denominations, who were permitted free access to the inmates. But recent inquiries have proved that, on the contrary, the visits have been very useful and warmly approved by the authorities. In the Western States of Indiana, Iowa and Illinois, the members of the "Hicksite" section of the Society of Friends have taken a prominent and almost invariably successful part in the work of prison visitation in their respective districts. A governor of Iowa State Prison has reported: "Very important moral aid has been rendered, from time to time, by many godly men and women of the 'Hicksite' Friends' sect, who have spent hours and days here, ministering to the moral welfare of the prisoners. The effect of these visits was so unquestionably beneficial to the convicts, that I should be remiss if I failed to make formal mention of them, as examples of Samaritan goodness which others may well emulate. If these good people fully realized the beneficent influence their visits and ministrations made upon the convicts, the reflection would constitute a reward so ample as to leave little else to be desired." But it is to be noted that "the Friends," as a body, cultivate in their ministrations the elements of spiritual encouragement, and inculcate the universal love of God to man and the grace of the Divine Spirit as offered to each individual heart. They also scrupulously avoid mere terrorizing attempts to proselytise, and usually confine themselves to the simplest principles of religion.

The ultimate good effects of such influences have been proved in many instances. The governor of a prison in New England stated, at a public conference, that he knew sixty-four criminal men who had been influenced, by lady visitors, to lead altered lives, and some of them had died rejoicing in the hope of everlasting life. He added, that he "felt prepared to lose his arm, if necessary, in defence of the work of lady visitors in prisons."

Yet, in regard to some American prisons, it is also to be observed that a gross want of care is manifest. In many jails almost indiscriminate access to the inmates by outsiders is permitted. In some of them, the prisoners are subjected to the idle observation and curiosity of any strangers who choose to pay a small fee to the jailer or sheriff. Whilst marked benefit arises in the prisons where visitation from the outside is subjected to discriminating regulations, there can be no doubt but that great mischief, both to the prisoners and to the community, ensues from the reckless license often permitted in America in this matter.

ST. MICHAEL THE WEIGHER.

Stood the tall archangel weighing
All man's dreaming, doing, saying,
All the failure and the pain,
All the triumph and the gain,
In the unimagined years,
Full of hopes, more full of tears,
Since old Adam's conscious eyes
Backward searched for Paradise,
And, instead, the flame-blade saw
Of inexorable law.

In a dream I marked him there,
With his fire-gold, flickering hair,
In his blinding armor stand,
And the scales were in his hand;
Mighty were they, and full well
They could poise both heaven and hell.
"Angel," asked I humbly then,
"Weighest thou the souls of men?
That thine office is, I know."
"Nay," he answered me, "not so.
But I weigh the hope of man
Since the power of choice began
In the world of good or ill."
Then I waited and was still.

In one scale I saw him place
All the glories of our race,
Cups that lit Belshazzar's feast,
Gems, the wonder of the East,
Kubial's scepter, Cæsar's sword,
Many a poet's golden word,
Many a skill of science, vain
To make men as gods again.

In the other scale he threw
Things regardless, outcasts, few,
Martyr ash, arena sand,
Of St. Francis' cord a strand,
Beechen cups of men whose need
Fasted that the poor might feed,
Disillusions and despairs
Of young saints with grief-grayed hairs,
Broken hearts that brake for man.
Marvel through my pulses ran
Seeing then the beam divine
Swiftly on this hand decline,
While Earth's splendor and renown
Mounted light as thistle-down.

—*James Russell Lowell.*

THE UNSEEN FRIEND.

My child went forth into my garden fair,
Having no wish or will to stay by me;
But that I patiently had followed him out there
He could not see.

He passed on from the garden to the wild
Where cruel and fierce-roaring monsters lie;
I drove them back, but nothing told the child
That it was I.

He saw his brothers toiling on the road;
"I will give life and strength for them," cried he;
But that I made him strong to lift their load
He did not see.

Soul-thrilling words of love bade him rejoice,
And filled with music all the desert place;
And yet he never knew it was my voice,
Nor saw my face.

And when the night came and his eyes grew dim,
And dark and chill the mists about him lay,
He did not know my hand was guiding him
Till it was day.

—*Selected.*

From The American, (Philad'a).

WHERE RANK WEEDS GROW.

I HEARD a katy-did, last night, the first of these tiresome singers, and, I am told, there will be frost in six weeks. It is certainly appropriate that the frost should occur on so suggestive a date as September 21; the day when summer really ends. But August suggests the close of the season in other ways: the gathering of the reed-birds in the marshes, the flocking of the black-birds, the evening roost-ward flight of the crows; to say nothing of early asters and golden rod, among flowers, that are now blooming along the dingy, dusty roads. I have noticed all these, and some at a much earlier date than the first faint lisping of a timid katy-did; and all such sights and sounds are similarly suggestive: the summer is drawing to its close.

To determine what shall be the objective point of an August ramble is seldom an easy task. Occasionally there is a bewildering profusion of attractive features; frequently, there is a dearth of them.

Recently, when neither upland nor meadow appeared specially attractive in the glare of August sunshine, I plunged into a pathless marsh, led on solely by a hope of novelty.

Except you have had experience in such tramps there is little to attract one, however rank the vegetation, gorgeous the bloom, brilliant the butterflies, or abundant the manifold forms of life; for the charm of a ramble is lost when too prominent a feeling of uncertainty as to your own safety surrounds you—when we lack the assurance of a firm footing. How often I hesitated to leave the trembling tussock upon which I stood, not knowing but a treacherous quicksand spread out before me. Still, I ventured on, hidden from all the world, at times, by the tall reeds or swordlike foliage of the stately typha. The testy marsh-wrens scolded as I passed; the lisping swamp-sparrow stared and stammered from his perch, and great blue herons cast ominous shadows as they fled. Without a vestige of reason for so doing, beyond a forlorn hope of novelty, I still struggled forward, to find at last a bush-clad island of firm earth. Here was a happy combination, as it proved, of novelty, an evidence of summer's close, and an opportunity to rest.

It was plainly evident that what was now a marsh had at some distant time been a broad and shallow stream. There was yet to be traced a narrow, tortuous channel, through which flowed the waters that gathered here from a hundred hill-foot springs near by; and now this unsuspected remnant of a pre-historic creek was indeed beautiful—gorgeous with its wealth of pink rose-mallow, not pink alone, but mingled with flowers white as driven snow, others that were deep rose-purple, and many with a brilliant crimson eye that glowed like coals of fire.

I had not been over-rash, although the outlook was so unpromising at the start; for here, indeed, was novelty. In past years this water plant was to be met with here but very sparingly, and now there were hundreds in dense clusters. The birds that flew over, the fishes that gazed skyward, and the frogs that skulked among the humbler weeds alone knew of this bright water garden, and well had they kept the secret. I wondered not that they protested so vehemently, when by lucky chance I too discovered it.

Heresy, if you please, but flowers alone cannot fill for me a long summer's day. I will not say that, in this case, I tired of them; but ere long I was ready for other objects to fill in the wide landscape, and soon they came. A pair of snowy egrets dropped from the fleecy clouds, sinking eastward with as soft a flight as might bits of the clouds themselves. Nearer and nearer they came, until I could see the fluttering down upon their breasts. Then, with closed wings, these beautiful creatures touched the water with their extended feet and stood upon the soft mud, the embodiment of grace. They came to rest rather than to feed and pruning a misplaced plume was the extent of their labors. Nor did they speak. I could not detect the faintest utterance, although so very near them. Over a little space of open water, they occasionally walked to and fro, as if the statuesque attitude they usually assumed became at times a little tiresome. Despite their beauty they were stupid, and their listlessness robbed them of all interest after a few minutes' gazing at them. I became impatient at last, and suddenly emerging from my retreat, shouted loudly. With startled cries they instantly took wing and rose to a great height, before deciding upon any course. I thought that they might return, but they did not. Nevertheless, I was not to be left alone. I had startled the many small birds that throng the marshes, and these life-long familiars crowded about me. I am not far wrong when I say, the smaller the bird the greater its curiosity.

Among the many that ventured even into the cluster of button bushes that was my shelter, came a crested titmouse, and I laughed when it sang, after due inspection of the spot, *'t sweet here, 't sweet here!* The bird was right; I had found an enchanted isle.

While the day lasted I was content with these

small birds, wrens, thrushes, warblers, titmice, and sparrows. All came and went without let or hindrance, and accepted my presence without complaint, as some had done while I was struggling in the marsh. Some sang sweetly, and others chirped in so contented a strain, that their voices were musical by merit of suggestiveness. Association is the needed charm when we watch the birds. The stately egrets were soon forgotten; but who can forget the door-yard songsters that have been favorites for years? I even forgot the treacherous marsh as well as its rare visitors and was again at home. My feathered friends had merely rambled from the garden and lawn with me, and we were sojourning together in a little wilderness. A pic-nic more enjoyable by far than many I have attended. With such fancies I whiled away the sunny afternoon, and feared that no trace of an adventure would enter into the day's outing; but at last it came.

Certainly, not one of the birds in the bushes was nesting; nor were any accompanied by young birds. Thinking of this, I thought to imitate the cry of a fledgling in distress, to see if the birds near by would be disturbed. Immediately a cat bird shrieked its alarm cry and came very near to me. It located the sound I had made unerringly and berated me soundly for supposed cruelty. I was harassing a young bird, it thought, and must give it up. The marsh-wrens were straightway up in arms, but held aloof; the swamp sparrows twittered excitedly, but bravest of all were two cat-birds. They longed to thrash me soundly and almost came within my reach. As suddenly as I had started the commotion, the birds suppressed it. Since that day I am convinced that sudden thoughts occasionally strike a bird. When most demonstrative, in the abruptest manner, one of the cat-birds took up a position directly in front of me, but was silent. He remained but a second and then, in a changed voice, chattered impressively to all within hearing.

"What fools we have all been," he seemed to say; "there are no young birds now to worry about," and straightway the gathered crowd dispersed in almost perfect silence.

I may be in error, but if actions ever correctly interpret an animal's intention, this story of the cat-bird is literally true.

It was with a tinge of regret that I finally retraced my steps, or attempted to do so. I found less supporting growth and deeper mud on my return, but reached the higher meadows in reasonable time. As I took a farewell glance at the reed-hidden isle, locating it in fancy, for it was really hidden, a cloud of red-wings settled over it for the night, and filled the air with the matchless charm of their flute-like whistle. So what indeed matters it if the katy-dids do sing, and summer has but six weeks left to it? These need not prove six weeks of idleness, nor will they lack abundant charm, if happily we know where to look. CHARLES C. ABBOTT.

Near Trenton, N. J.

REPENTANCE without amendment is like continual pumping in a ship without stopping the leaks.

SOCIAL INTERCHANGE IN AMERICA.

IT is one of the compensations for having such a large country as our own, that the facilities for communication between States are such that you can have part of your family in the East, while the rest are in Oregon, and not feel that you are beyond the reach of a visit every year or two, by going to them or by their coming to you. If an English family breaks up, and part of them go to Australia or New Zealand, it is for a term of years; and if the family is poor, it is for life. If England ever accomplishes Dr. Freeman's dream of the federation of the colonies, the colonies may be politically nearer to the mother country than they are now; but the English can never be so near to one another as the Americans are to their own kith and kin, who have betaken themselves to the other side of the continent, in search of new homes. It is essential to the integrity of the nation that this separation of families shall not result in the alienation of its members from one another; and that in the successive generations the traditions of the family life, which began in the East, shall be so treasured in the newer life of the West that they shall bind the broken strands together in closer love of a mother country—even if it does not take the scattered members often to the ancestral home. There are so many Americans in the Western States and Territories who once belonged in the East, or whose parents or grandparents came from the seaboard States, that one who goes there always feels as if he were among his aunts and cousins, and the intercommunication between these peoples is one of the most interesting features of our national existence. It is one of the great silent tests of a common sympathy, one of the links of heart and life that are stronger than bands of steel, to knit men together in a great commonwealth. The interstate commerce is a source of common acquaintance; the exchange of goods is always a great tie between States, and, happily, there are no bars to our free intercourse on business lines; but, great as these are in the way of creating the feeling of a nationality, they are inferior to the interests of kith and kin which, during the last hundred years, have given the whole Northwest, no matter how far the people might penetrate, the feeling that New England and the Middle States are their mother country, and that nothing goes on there that is not of concern to them.

It is the interchange of peoples—North, South, East and West—that is creating a tie of family and of country which is stronger than any political or business tie that may be created. At this season, this mixing together of the people of the most distant sections is one of the delights at the mountain and at the seaside. Half the persons whom you meet, though you cannot tell that they are unlike you in speech or manners, are from the Western States, or from the Pacific Coast, or are fresh from the South. The people who travel are persons of wealth, often persons of culture, keen observers of life, thoughtful about the development of the country as a whole, and, like all bright Americans, ready for the interchange of ideas. It is these people who are making for us a common public opinion that is beyond the creation of the press, that is the outcome of the free meet-

ing of man with man, and which is a powerful corrective of the derelictions of party. Commerce and business are not so much discussed; but a comparison of experience is reached, which is the outcome of personal character, and amounts to a wider education. The coming together of these parties in the railways, on the piazzas of the summer hotels, in the interchange of visits at one another's homes, is one of the indirect ways in which we are learning to know and respect one another for what each has won in his experience of American life; and this is at present one of the most fruitful sources of the wider public opinion about things in common that is beginning to find expression in different parts of the country. The people of the North have a similar opportunity, during the winter, of traveling through the Southern States and in California; and by this passing from one part of the nation to another, a large amount of of correct information has been diffused at the North respecting the real situation at the South, which has been of the first value to this section of the country. We are no longer isolated from them, nor they from us. It is this growth of a common interest that is beginning to have a voice in the better portion of the press. It is the demand that in all public measures the whole of the United States shall be taken into account. This is not realized yet to any large extent; but those who watch for it are able to see it, and every year it is possible to see more of it.

The growth of this common feeling, that our country is worth while, is of the greatest importance in view of our heterogeneous population. The nationalities of Europe have been dumped by the shipload into our Western towns and cities, as the raw material for American citizenship. They have no attachment to the nation as such. They do not speak our language or think our thoughts. The work of educating them to the duties of American citizens is before us, and the success of that work, in part, depends upon the fidelity with which we grow together as a people. It is in this light that our social mixing and drawing together along the great thoroughfares of active life, alike in our business and in our pleasures, has the greatest interest to the statesman and to the thoughtful citizen. The intense loyalty of the Briton, the pride of country which lives like hope in the breast of the Scot; the interest in the bogs of Ireland which is always the point of sensibility with the Celt, indicate the sources of power in the control of these different nationalities; and the same interest is one of the sentiments that is in the course of formation in this country, and in no portion of it with greater rapidity than at the West, where the new peoples are yet to be infused with the idea of absorption into Anglo-American life. The freedom of the individual in the United States requires large growths of public sentiment, large increase of loyalty to American principles, before it will make over our later population into such loyal citizens as have been fashioned into patriots east and west of the Alleghanies. It is the free intercourse of one race with another, on the basis of race and family traditions, under which we have grown to be what we are, that is to intensifiy the central interest in the wholeness of the country, out of which are to come the future possibilities of a great people. The railroad is one agent in this transformation; the old ties of kindred and family are another; the natural hunger of the American for the sensations of travel is another. It is a great thing for a people to become acquainted with one another. Nearly all our political difficulties of the past have arisen from the fact that we did not know one another and could not think alike. The present tendency of things in the United States, along social lines, is to this unity of national interests; and every time an active and thoughtful American travels from one State to another, he helps to formulate the intelligent public opinion that is to rule the nation in the future.—*The Christian Union.*

HELIOTROPISM.

As its derivation would indicate, heliotropism means "turning toward the sun," and is the technical name applied to all such phenomena in the vegetable kingdom. It was well known to the ancients that plants exhibited a remarkable sensitiveness to light, for Aristotle mentions it, and indeed, in its more apparent forms, it is conspicuous even to the *naïve* observer of to-day. The sunflower, or *tournesol*, as the French name it, follows the daily course of the sun with its disk-like inflorescence; plants, potted and placed in a window, bend toward the light, unless, perchance, the plant is an ivy, in which case it bends away from the source of illumination; trees and shrubs in the edge of a thicket or forest may be seen to slant toward the open, and in general it may be said that there is scarcely a plant which does not respond more or less distinctly to the directive action of light. Exceptions, as shown by Darwin and by Edouard Morren in his treatise on insectivorous plants, are for the most part carnivorous species like *Dionea, Drosera, Nepenthes*—the Venus's-flytrap, sundew, and pitcher plant, respectively—and twining plants. The reason why these plants should not fall under the rule will be apparent when the uses of heliotropism are discussed. Parasitic and the so-called saprophytic plants of the lower orders—those which live upon once-living matter—are commonly insensible to heliotropic stimulus, and, in short, all plants devoid of the great light-product—chlorophyl—manifest in this direction either weak irritability or none at all.—*Conway McMillan, in Popular Science Monthly.*

TRUTH-SOWING.

This morning I plucked a globe of the dandelion—the seed-vessel,—and was struck as never before with the silent, gentle manner in which Nature sows her seed, and I asked if this is not the way in which the spiritual seed, *truth*, is to be sown. I saw, too, how Nature sows her seed broadcast; how the gossamer wing of the dandalion-seed scatters it far and wide; how it falls, as by accident, and sends up the the plant where no one suspects. So we must send truth abroad, not forcing it on here and there a mind, not watching its progress anxiously, but trusting that it will light on a kindly soil, and yield its fruit. So Nature teaches.—*Channing.*

MOTHER'S WORK.

A CHAPTER of A. M. Diaz's "Bybury to Beacon street" is full of sound counsel to the young people of the day, and is worthy of wide distribution. The mother of a family, after a hard forenoon's work has given up to tears, for her girl and boy had gone away leaving their tasks undone, and the burden of the day seemed to be growing greater than she could bear.

Her husband, finding her thus discouraged, inquired into the matter, and came to the conclusion that their children should be made to realize that a part of the household work belonged to them, and not that they were generously "helping mother" when they gave any assistance.

"So one evening, after Laura had finished her examples, her father asked her to write down all the different things I had to do in the different days of the week. She began to write, her father and Fred prompting when her memory failed.

"The list covered both sides of the slate. Husband wrote at the beginning, for a title, 'Mother's Work,' and then remarked that it was a good deal of work for one person.

"'I help her some,' said Laura.

"'Yes' said he, 'I suppose you call what you do helping her, and that Fred calls what he does, helping her, but after all, you are only helping yourself. Mother eats a small part of the food she cooks, and wears a small part of the clothes she makes, and washes, and irons, and mends. So all this work is not really hers, but only hers to do.'

"Then he rubbed out the title, and wrote in its place, 'The Family Work which is called Mother's Work.'

"'Now, I should like to know,' said he, 'why members of the family consider it a favor to mother when they do parts of their own work?'

"'For instance, I have noticed that, to a get meal and clear it away, there must be wood and water brought, vegetables got, cleaned, and cooked, other things cooked, the table set, dishes washed, knives scoured, and some tidying of the room afterward. Now it doesn't seem right for one person to do all this labor and for other persons to feel that their part is only the eating part. That isn't fair play.'"

Having thus convinced the children that it was not, indeed, fair play, the father proceeded to allot them a certain portion of the family work for their own doing. Reader—big boy or little girl—profit by the hint, no longer pluming yourself on "helping mother," but honestly assuming the labor which belongs to you.—*Exchange.*

CHRISTIANS, in the matter of promoting the Kingdom of Christ among men, are "laborers together with God." They do not work alone. God works with them and by them and through them. He associates his power with their efforts, and they associate their efforts with his power. Paul plants, and Apollos waters, and God gives the increase. Human efforts approved by God, and accompanied by divine efficiency are sure to succeed.

GREENLAND EXPLORING EXPEDITION.

NEWS has come of the Greenland exploring expedition under Dr. Nansen. "It appears," says the *St. James's Gazette*, "that he and his six companions landed on the east coast of Greenland on the 18th ult., in latitude 65 deg. 30 min. This is nearly two degrees south of the Artic Circle, and will imply a journey of some three hundred miles across to the west coast. The two Laplanders who accompanied Nordenskjöld in his second unsuccessful attempt to cross Greenland (in a higher latitude and from the west side) managed to advanced eastward some hundred and forty miles and attained a height of over five thousand five hundred feet, whence they got a view of what appeared to be an endless snow-field. Should Dr. Nansen's party reach this snow-field, their chances of success will be great, as they are all famous snowshoe walkers, and have frequently crossed the Norwegian mountains in the depth of winter. They could not have landed in Greenland at a better time; for they escape the short and thoroughly disagreeable sub-Arctic summer. What has been described as an endless snow-field is no doubt the water-shed of the innumerable Greenland glacier streams, the terminations of which form such a striking feature of the Greenland coast. Should this prove to be the case, the ultimate discovery of a vast inland sea, or series of great lakes, is not improbable."

GETTING OLD.

"THE realization that we are getting old," "that more and more of this world is getting behind us, and that soon very little of it will be before us, need not necessarily be a sad one. It will not be, it will in fact be found a very pleasant one, if we have made the world, as we should make it, a brighter, purer, and better world by our acts of benevolence and mercy while in it, and by using it and teaching others to use it, not as a finality, but as a preparatory school, a sort of robing-room, for an eternal and an unutterably happy and glorious life in a world unseen to mortal eye, although it nearly touches this. If we have lived aright, and are still living so, this matter of growing old is simply one of an earlier release from burdens of responsibility which have always proved heavy, and have often seemed ready to crush us; from trouble and worries and annoyances, very often causeless, it is true, but always afflictive; from a blasting of hopes which once seemed so stable and so promising; and from a thousand other things which we need not now stop to think about. But this growing old is something better than a promise of a near and nearer release from the things which have made this life a burden and a sorrow."
—*Evangelist.*

TRUST as though heaven were gained by faith alone,
And work as though all merit were thine own.
—*Snow.*

THE Gods approve
The depth, and not the tumult of the soul.
—*Wordsworth.*

THE BRAKES.

WHAT countless years and wealth of brain were spent
To bring us hither from our caves and huts,
And trace through pathless wilds the deep-worn ruts
Of faith and habit, by whose deep indent
Prudence may guide if genius be not lent,—
Genius, not always happy when it shuts
Its ears against the plodder's ifs and buts,
Hoping in one rash leap to snatch the event.
The coursers of the sun, whose hoofs of flame
Consume morn's misty threshold, are exact
As bankers' clerks, and all this star-poised frame,
One swerve allowed, were with convulsion rackt;
This world were doomed, should Dullness fail to tame
Wit's feathered heels in the stern stocks of fact.

—*James Russell Lowell.*

A STRONG WILL.

SOME people mistake the negative of will for the positive. They plume themselves on having a strong will when what they really have is the very opposite—a strong *won't* obstinacy is a very good thing in its way, but it is by no means the highest manifestation of strength of will. It is not always a virtue to clog the wheels.

A fortress is a strong thing, but it is not so strong as the army that batters it down. A strong will is an energy, a force, an active, living thing. It is constructive, not obstructive. It plans and proposes. It is progressive. It presses toward the mark. A strong will originates. It does not simply resist. To say no, and to stick to it, is not so grand a thing as to say, This will I do, and to do it. Take care that you do not mistake the lower for the higher form of will. Be a force, not an obstacle.—*Christian Union.*

IT was infinite compassion that prompted the shepherd to keep on seeking for the lost one "till he found it." Nothing stopped him, no disappointment or probabilities of failure caused him to falter in his pursuit. There is in this a deep lesson, but also a sharp rebuke for the most of us, for we seek a little while zealously, perhaps, and then grow tired and conclude the labor too severe and uncertain. "Till he find it."

IF the dialect of angels could be used on earth its fittest place would be in the home circle. The dialect of home should be such as would not stain an angel's tongue, nor fall harshly on an angel's ear.—*G. S. Weaver.*

WHEN anything is done,
People see not the patient doing of it,
Nor think how great would be the loss to man
If it had not been done.

—*Longfellow.*

CHILDHOOD often holds a truth with its feeble fingers which the grasp of manhood cannot retain, which it is the pride of utmost age to recover.—*John Ruskin.*

SOME sound writer has said that greatness consists not so much in doing extraordinary actions, as in doing common actions in an extraordinary manner.—*Hopes and Helps.*

THE Christian never falls asleep in the fire, or in the water, but grows drowsy in the sunshine.—*Berridge.*

NEWS AND OTHER GLEANINGS.

—The following work is carried on by the Chicago Central W. C. T. U.: Two day-nurseries (where an aggregate of over 14,000 children were cared for last year), two kindergartens, two industrial schools, two medical dispensaries, a waif's Sabbath School, a nightly gospel Temperance meeting, a free lodging-house for girls, where over 400 were cared for last year, a lodging-house for men, where 60,000 were lodged during the year, and a lunch-room just opened.

—In a recent sermon Bishop Fallows said: "The time has come for the setting apart of woman for the work of the gospel ministry. If woman in the beginning, through Satan, tempted man and led him astray, Christ has come to destroy the works of the devil. On the resurrection morn the commission was first given to woman to preach the good news to man. The Corinthian women were not to be compared for a moment with the refined, cultured women of to-day. The injunction to the former did not apply to the latter. I have been long in coming, I confess, to this conclusion. I read the life of our Lord in a new light, the last ritualistic prejudice has vanished. Christ's commissions were given to women and men alike. Men have too long misconceived the true position of women. This present period in the church is very important. Let us not array ourselves again against Holy Ghost women, lest we be found to fight against God."

—Latest semi-official returns from the Bandai San earthquake in Japan give the number of persons killed at 476 and injured at 41.

—A cable message from the European Union of Astronomers announces the discovery of Encke's comet on its present return, at the Royal Observatory of the Cape of Good Hope.

—A great storm of wind and rain reached from Boston to Mobile on the 21st of last month. During the day four water spouts burst over Chesapeake Bay. The remarkable meteorological phenomenon was accompanied by tall columns of black clouds moving in rapid rotation, the bay at their bases being violently agitated, and heaped up with a leaping or boiling motion, and the water being apparently carried up in large quantities. The funnel shaped clouds seemed to descend near the mouth of the Patapsco River and pass up the bay over Poole's Island and Whorton's Point, following Elk River over Chesapeake City, and thence into the Delaware. Several small vessels were capsized. On shore the wind played curious tricks, overturning buildings, levelling fences, and picking up horses and vehicles and carrying them hundreds of yards. Baltimore City was visited by a rain-storm in which the wind reached a velocity of twenty-two miles an hour. During the evening a cyclone or water-spout wrought terrible havoc in the vicinity of Wilmington, Del. One person was killed and seven were seriously wounded, while a large number were hurt less badly. The storm came from the southwest and cut a direct line for the northeast. It was first seen about four miles south of the city. Its path

TREASURES.

HAVE hope! Though clouds environ round,
And gladness hides her face in scorn,
Put thou the shadow from thy brow;
No night but hath its morn!

Have faith! Where'er thy bark is driven,
The calm's disport, the tempest's mirth,
Know this: God rules the hosts of heaven,
The inhabitants of earth.

Have love! Not love alone for one,
But man, as man, thy brother call,
And scatter, like the circling sun,
Thy charities on all.

Thus grave these lessons on thy soul—
Hope, faith and love—and thou shalt find
Strength when life's surges fiercest roll,
Light when thou else wert blind.

—*Schiller.*

For Friends' Intelligencer and Journal.

TO OHIO, AND THE YEARLY MEETING.

THINKING Friends might be interested to hear of our journey west, I will try to give some little account of it. We left Philadelphia at 11.50 a. m., the 23d of this month. Having expected to stop one night at Altoona or Cresson in order to see the mountains by daylight, we did not take a sleeping car; but word received just before leaving expressing a doubt of our being able to make connections, we decided to go on to Pittsburg, where the train was due about midnight; but wash-outs from the late storm and flood had rendered the road impassable, and we were obliged to branch off on other roads, and not having the "right of way," to wait often,—once an hour,—for the passage of freight and other trains. We slept some in our seats, each one reclining and at intervals peering out into the moonlight to enjoy the mountainous scenery by the way. There was some impatience manifested and complaints of slow travel, but we felt very thankful for a safe passage, convinced they were doing the best possible under the circumstances. We reached Pittsburg at 6 o'clock next morning, having an hour to breakfast and prepare to take Pittsburg and Cleveland train for Bridgeport, Ohio. Friends from Salem took the train at Rochester *en route* for Yearly Meeting and after the manner of Friends soon found us, extending a most cordial welcome. Many of the corn fields were immersed in water, the stalks covered with mud, and little prospect for an autumn crop. (At Pittsburg we had found many detained on account of the floods, having failed to make connections, the Baltimore and Ohio line being also badly damaged.) We reached Bridgeport after 10 a. m., going across to a house to which we had been recommended, kept on temperance principles, and were very kindly cared for, waiting for friends from Mt. Pleasant to meet us, which they did. We had a very interesting ride, over a hilly, picturesque country, one continuous hill for miles out of town. The autumn flowers were abundant, and I thought a larger growth than ours. We could see the surrounding country for a great distance and the grand old hills lent enchantment to the view. The country is remarkably beautiful here, as with us,—everything so fresh and green; the corn crop is very fine. We have been favored with the most delightful weather and were very thankful to have it cooler. We reached the attractive and hospitable home of Abel and Amy Walker near 6 p. m., and greatly enjoyed the restfulness of the home and a good night's sleep. The view of the surrounding country is very fine; being on high ground, Mt. Pleasant meeting-house, where the Yearly Meeting is held, can be seen in the suburb of the village a mile and a half distant.

On Seventh-day we attended the meeting for ministers and elders in the small, but neat, Short Creek meeting-house, close by, where all their meetings are held except the Yearly Meeting. Ann Packer was present,—she felt probably for the last time,—to mingle with Friends in the old familiar places; also Thomas Tomlinson from Iowa.

The meeting was small, but life abounded, and it is comforting to feel that numbers are not needful to reeeive the blessing.

We had planned for the crowded time between Ohio and Illinois Yearly Meetings, being misled by a mistake in the *Almanac* which we hope other Friends may avoid,—and on finding we had another week, had changes to make, but still under limitations, our tickets to Chicago expiring the 10th. Yesterday we attended meetings in the commodious Mt. Pleasant house,—morning and afternoon. Friends coming from a distance, and many perhaps being under the impression that the meeting convened at 11 a. m., made it late in being settled,—but we were glad to welcome all.

The meeting becoming very quiet and attentive to the word spoken, we hope it found a place in the hearts of the people. There was only one communication in the morning, seeming so different from our crowded meetings in Philadelphia. In the afternoon several Friends spoke, and testimony was borne to a practical religion regulating the whole life, rather than a merely professional one. We lodged at John E. Carpenter's, where I am now writing. His wife is the daughter of Abel Walker, and neice of Mercy

Griffith Hammond, who is greatly missed in the home and the Yearly Meeting." The morning is cloudy but every thing is fresh and green around, and we shall enter this morning upon the business of the Yearly Meeting, which we trust will be a profitable occasion.

Mt. Pleasant, Ohio, Eighth month 27.

The attendance appeared to me about as many women as our monthly meeting at West Chester, Pa., but life abounded. The young people took part in the business, and there was such a restful feeling in all having time to express their concerns that there has arisen a renewed sense in my mind of the advantage which might arise in dividing the Philadelphia Yearly Meeting into three bodies. We could not be separated in loving interest for each other—but our coming together might be of greater profit and the arousing of fresh life.

Ann Packer opened the meeting with loving words of counsel, encouraging to individual faithfulness to every monition of duty. Sarah C. Fox was appointed to assist Jane Edgerton as clerk, in place of Mercy G. Hammond. The reading of the excellent epistles called forth a feeling of thankfulness for this connecting link of sisterly love and interest. A proposition was brought up from one of the Quarters to accord all the privileges of our Society to the children when one parent was a member. In the afternoon there was a meeting in the interest of First-day schools. One report told of the establishment of a new school which was in a flourishing condition. The meeting was one of great interest.

Third-day morning the weather continued fine. Friends again met, and the reading and answering the Queries called forth expression, showing they were not considered merely in a formal manner. They differ somewhat from ours in Philadelphia Yearly Meeting, having one in regard to oppression, and a care for those in our employ,—seeming appropriate in these times, when the subject of Capital and Labor is being so freely canvassed. In the evening, a meeting of the Temperance Committee was held at the Short Creek meeting-house. There seemed some discouragement in view of different opinions as to the best mode of forwarding the good work, but there are earnest workers in the field and doubtless they will sow the good seed to bear future fruit.

Fourth-day morning another session of the meeting for ministers and elders was held, where helpful words of counsel were given by Ann Packer and others. Then a meeting for worship was held, quite well attended, and a season we trust of profit, an exhortation to a fuller appreciation of our privileges as a Society and the responsibility resting with us for the trust reposed. An elderly man (Presbyterian) made a few remarks at the close, expressing himself as not satisfied with the meeting on First-day, but now his mind was clearer in regard to our attitude. He alluded to the Atonement and the reliance he placed on it, and hoped he was not mistaken in us. Ann Packer spoke, I think to his enlightenment and comfort. We had a very pleasant interview with him afterwards and received a "God bless you."

In the afternoon the meeting went into joint session to consider subjects of united interest. The first was the proposition to receive the children into care where one parent is a member. This was weightily considered and adopted with great unanimity, thus affording comfort to some who have so desired the benefits of the Society for their children.

Then the Indian question came before us. Some letters were read in addition to the Committee's report, and the subject of appointing matrons for Indian Agencies, to instruct the women in household duties, was considered. Some of the yearly meetings had felt that even without Philadelphia Yearly Meeting's coöperation they must move in the matter; but while much interest was expressed, way did not open to go forward in the work. It was referred to the committee which was continued to do what they could to encourage Congress to make an appropriation for this good work. Then adjourned until Fifth-day morning to meet again. After some preliminary business of men's and women's meeting, separately held, we gathered with a sense of the near approach of separation, the business of the Yearly Meeting being finished on Fifth-day. When the epistles were presented there was found an over-supply, so willing did those appointed for the service seem to work. They were very good and it was left with the clerks to embody with the others as seemed best the ones not needed. When men Friends came in, the report of Philanthropic Work was considered, including Temperance, Social Purity, Peace, and kindred subjects, in the forwarding of which many feel a deep interest. There was also a report of one committee on membership, and some discussion as to what ought to constitute a member, and whether long absence or indifference should forfeit the right, but some felt willing to extend the cover of charity, one Friend expressing that he had been careless and indifferent for twenty years and now fully appreciated the privilege. The Temperance Committee reported and was continued for further service, and while in joint session under a solemn covering, the meeting concluded with a feeling of gratitude for the privilege of having mingled so pleasantly and profitably together. We had greatly enjoyed the social life in homes around Mt. Pleasant, the recipients of their kind hospitality, and could but feel regretful in parting from them. Thomas Tomlinson, a minister from Iowa, had been most acceptably present. We shall probably meet at some other meetings ere we leave Ohio. He came last evening (Fifth-day) with Henry Pickering and wife, to Sarah L. Dungan's and son William, in Colerain, members of Concord Meeting, about three miles distant. They have a beautiful home with many interesting relics. Many traveling Friends have been partakers of the comforts dispensed. It is raining—but we feel thankful for the delightful weather throughout the Yearly Meeting, and it will not interfere with our journey to Plainfield this morning.

One feature of the country around Mt. Pleasant was novel to us. There is a railroad being constructed to that place and the coal beds are growing valuable. We heard them speak of selling the land for thirty-three dollars per acre and marvelled how such highly

cultivated land could be sold for such a price, but found it was only the coal strata beneath, leaving the surface undisturbed for the quiet pursuits of agriculture. The session yesterday was very long, and we felt quite weary, but stood the journey here better than we thought, and are refreshed this morning. There is so little time for writing and such small ability, that reports will necessarily be imperfect, but we may continue to send some tidings from time to time of our progress and welfare.

Eighth month 31. LYDIA H. PRICE.

CENTENARY OF PLAINFIELD, N. J., FRIENDS' MEETING.

HISTORICAL SKETCH BY NATHAN HARPER.

IN preparing this "Historical Sketch of the Meeting House, its Erection and Occupancy," care has been taken to follow closely the given title, and to render the narrative as concise and explicit as possible, without drawing too freely upon details. The minutes of the monthly meetings, covering as they do a lengthened term of years, are voluminous, and although freighted with items of decided interest, time, necessarily limited by an occasion like the present, demands restricted quotations and comments. It is proper to remark that copious extracts from the original records were kindly made and transmitted for use by our friend Abel V. Shotwell, of Rahway.

In the year 1684 the seat of government of the Province of East Jersey was removed by direction of Governor Barclay from Elizabeth Town to Perth Town, now known as Perth Amboy. Gawen Lawrie was then Deputy Governor. He had been a London merchant and was a member of the Society of Friends, as were likewise several of his official associates, notably among them being Miles Forster, who married a daughter of the Deputy Governor, the first marriage recorded in the book of minutes of the Society in these parts, and who held the appointment of Receiver of Customs; John Barclay, a brother of the Governor; John Reid, at one time Surveyor-General, and as such the author of a survey entitled—"A map of the Raritan, Millstone, and Rahway rivers, and of Bound, Green, and Cedar brooks, with the plantations thereupon," a fac-simile of which is in possession of the Historical Society of New Jersey; and George Keith, an active member among Friends, who also filled the office of Surveyor-General and in 1687 ran the division line between East and West Jersey. George Keith was a man of collegiate education, literary attainments, and strong natural abilities but, unfortunately, possessing an overbearing disposition and given to unwise controversy, he sowed seeds of discord which ripened into bitter fruit. He antagonized individuals, evinced hostility to the Society, and influencing other members of prominent standing to follow him, finally became an avowed apostate. The course pursued by Keith and companions disrupted the meeting and virtually suspended it for the period of fifteen years.

Notwithstanding such untoward circumstances, the religious principles and observances of the Society survived the ordeal and lived to flourish anew, for the records inform us that Friends assembled in a meeting capacity at the house of Nathaniel Fitz Randolph, in Woodbridge, Ninth month 16th, 1704, and that meetings continued to be held thereat until Ninth month 19th, 1713, when reference is made to a meeting-house.

The minutes of the meeting thus established at Woodbridge omit mention of Lawrie, Barclay, Forster, and Keith, once so conspicuous in the affairs of society at Amboy, but in lieu thereof speak of Fitz Randolph, Hadden, Smith, Brotherton, Thorn, Pound, Webster, Shotwell, Vail, Laing, and others, names still familiarly known and respected in this section of New Jersey.

At a monthly meeting held at Woodbridge Ninth month 16th, 1721, John Laing, one of the most prominent members, on behalf of himself and other Friends, asked permission to hold a meeting at his house, which request was soon thereafter granted and carried into effect. The residence of John Laing was in the Township of Piscataway, County of Middlesex, and not far from the boundary line of the present city of Plainfield. On the farm then owned and occupied by him can be located an ancient burying place.

At an adjourned monthly meeting held at Woodbridge, Third month 27th, 1731, the following minute was approved: "The Friends belonging to the meeting held at John Laing's, deceased, desire liberty to build a meeting-house on the land given by the said John Laing for that purpose, this meeting grants their desire and orders that John Kinsey should pay the money given by John Shotwell, deceased, to that use."

At the next monthly meeting, Fourth month 17th, "Abraham Shotwell and Benjamin Smith were appointed to manage the building of the meeting-house near John Laing's, deceased, the said house not to exceed 24 foot square and 14 foot between joynts."

Such recited action brings us down to a newly erected meeting-house in the Township of Piscataway, which was designated and always known as Plainfield meeting, and which became the immediate predecessor of the building wherein we are now convened.

After the lapse of twenty-nine years, a proposition to remove Plainfield meeting-house, so called, from the Laing locality, was introduced at monthly meeting held Eighth month 21st, 1760.

The question of such removal appears to have engaged the prolonged attention of Friends, as their recorded proceedings attest. Committees were appointed from time to time to consider the matter, but no definite conclusion was reached until Eleventh month 15th, 1787, when, at a monthly meeting held at Rahway, a committee consisting of John Webster, David Vail, John Vail, Isaiah Shotwell, John Webster, (3d) Isaac Laing, Jacob Laing, Samuel Pound, Josiah Dunham, John Haydock, Benjamin Shotwell, Joseph Stackhouse, Joseph Shotwell, Wm. Smith, Hartshorn F. Randolph, Ambrose Copland, and Samuel Marsh, appointed the previous month to take into consideration the renewed re-

quest for a new meeting-house at Plainfield, and a proper site therefor, reported as follows:

"The Committee all agreed that a lot of land containing three acres, near the house of John Webster, the third, would be a suitable place for said house to be built on, and proposed that the size of the house should be about 34x48 feet. They have premoted a subscription and it appeared there was upwards of three hundred pounds subscribed."

After deliberating thereon, the meeting agreed to the place proposed, also to the dimensions of the building, and appointed as a committee, with authority to purchase the land, agree with some persons to undertake the building, as might be judged best, and to call upon subscribers for the money—William Shotwell, Hugh Webster, William Webster, David Vail, Ambrose Copland, Edward Moore, William Smith, and Edward Fitz Randolph.

At subsequent monthly meetings liberty was given said committee to use the timber on the lot where the old meeting-house stood, and also to decide as to the expediency of appropriating any part of the old house towards building the new one.

Thus we have the authorization to purchase the site and to rear the identical edifice whose Centennial anniversary we are now met to commemorate.

On the 20th of Eighth month, 1788, a monthly meeting was for the first time held in this, the then new meeting-house at Plainfield, which to-day, dating from such occupancy, is one hundred years old.

The final report of the Building Committee was presented to a monthly meeting held at Plainfield, Fourth month 21st, 1790, and read as follows:

"We the committee appointed to have the care and oversight of building the new meeting-house at Plainfield, report they have performed the service, and that the expenses of the house is four hundred and seventy-four pounds, seven shillings, and ten pence, exclusive of what stuff was got from the old meeting-house:

Expenses of the house, ...	£474,07,10
Cost of land and fencing the same, . . .	47,14,03
	£522,02,01
Money subscribed, ...	£510,04,09
Land and old meeting-house sold to Joseph Laing, ...	08,13,06
Old stable, etc., sold for, ...	04,18,00
	£523,16,03
Due the meeting, ...	£01,14,02

William Shotwell,
Edward F. Randolph,
William Webster,
Edward Moore,
David Vail,
Ambrose Copland,
Hugh Webster."

We have thus summarily reviewed the salient points connected with the erection and first occupation of this old meeting-house. As far back as 1769 the monthly meeting herein held was designated as that of "Rahway and Plainfield," a name it continues to own.

The early concern of Friends regarding Slavery is evidenced by the following report of a committee made to Plainfield monthly meeting in 1775:

"We the committee appointed to inspect into the circumstances of the negroes belonging to Friends who are members of our monthly meeting, have agreed to report that we have inquired into their situation, and we find that some of them are old and incapable of procuring a comfortable subsistence were they to be set free by their masters, and that some are under age. Encouragement was given that they should have learning, and when of age should be manumitted, and that there is one we judge proper for freedom whose master can not be prevailed with to set him free.

Joseph Shotwell,
John Webster,
John Haydock."

A living concern was also manifested at an early date against the sale and use of intoxicating liquors by members of the Society.

We are to-day in the presence of the history of a hundred years. Measured by the standard of olden Europe and the Orient, such period of time might be deemed comparatively trivial, but estimated from an American standpoint, it certainly possesses valid claims to venerableness. When this building was first occupied for meeting purposes, the Federal Constitution had been formulated in Convention only eleven months, and George Washington was not elected first President of the United States. The annals of the past one hundred years are indeed wonderful, more so than those of any previous century. The momentous changes wrought and results attained almost challenge belief. One hundred years ago, steam and electricity, those giant motors of utility, since set to work revolutionizing the world, were practically unknown. Around where we are now gathered the gentle sound of lowing herds smote the air in lieu of the screeching locomotives, and rural quietude here reigned in place of the rattling noise of modern traffic; then lumbering vehicles rolled slowly along uneven and winding country roads instead of, as now, power-driven coaches swiftly rushing over graded and steel-clad avenues of travel; and then, the wildest imagination ventured not to predict the coming day when lightning, pressed into the service of man, would flash intelligent converse to and from the uttermost parts of earth.

The storms of a hundred winters have beaten upon this venerable pile, and yet, shingle-sided and wrought-nailed, with the exception of a portion of one end damaged by fire and repaired in 1873, it stands outwardly as of yore, while within, its massive frame timbers, richly browned, not by artistic brush, but by the mellowing hand of time, clearly show the marks of implements wielded by the sturdy forefathers of 1788. It may be interesting and not entirely inappropriate here to speak of an incident which personally associates the erection of this house with a memorable event in national history. During the contest for American Independence, when the British forces held possession of Perth Amboy and the adjacent country, General Washington and staff

called at the farm residence of John Vail, grandfather of the late Jonah Vail, and requested to be guided to some prominent spot on the mountain from whence a good view of the plain below and the movements of the enemy could be obtained. There was a man at Friend Vail's house at the time who, being acquainted with the mountain paths, at once volunteered his services and piloted the Continental Commander to an over-look eminence which bears the historic name of "Washington Rock." The guide was Edward Fitz Randolph, a member of the committee charged with the building of Plainfield Meeting-house, and who, as a mechanic, gave to its construction manual labor.

The great and distinguished history of this old house is interwoven with the sacred and vitally important cause of religion. For years it was the only place of public worship in this vicinity, the surrounding country being settled principally by Friends. Here thronged congregations met to engage in silent adoration or listen to words of earnest exhortation. Residents of Plainfield, now far advanced along the journey of life, remember with pleasurable emotions those long-passed days when in the bloom of youth they here attended meeting. From yon raised seats the most eminent ministers of the Society have proclaimed with demonstration and power the glad message of gospel truth and love, and borne valiant testimony against worldly evils and human wrongs. Generations have come and gone. The years have performed a hundred circuits. Still the protecting wing of Ancient Goodness remains outstretched, and numbers weekly assemble within these age-tinged walls to partake of spiritual communion after the plain and simple manner of Fox and Penn.

Almighty God! with fervent praise
We thank thee for the by-gone days,
And trustingly await the future.

Editorial Correspondence Friends' Intelligencer and Journal.

THROUGH CANADA AND HOMEWARD.

At 10 o'clock on the morning of the 20th the General Conference of Friends, First-Day Schools opened, in the same meeting-house in which the half-year meeting had been held, with a large attendance, and the devotional silence usually observed in all our gatherings. The names of delegates were called by Associations, each of which was represented except Illinois; for the absence of one delegate from that Association a reason was given. This session was occupied with the routine business of the body, interspersed with much pertinent expression relating to the several subjects brought up. The most noticeable feature, and one in which the whole audience heartily united, was the proposal to send a greeting by telegram, from the Conference to the Centennial Meeting at Plainfield, New Jersey, held to commemorate the one hundredth anniversary of the occupancy of the meeting-house. The following telegram was sent at once that it might reach its destination in time for the opening of the meeting in the afternoon.

Sparta, Ontario, Eighth month 20, 1888.

To Aaron M. Powell, Friends' Meeting-house:

The First-Day School General Conference of the Seven Yearly Meetings, in session at Sparta, Yarmouth, Ontario, Canada, to Friends of Peace Street Meeting, Plainfield, N. J., sends loving greetings on this, the Hundredth Anniversary of the erection of the meeting-house. The good seed sown by Friends is bearing much fruit, and will continue to grow and to feed and bless all who accept the bread of life which is offered freely without money and without price.

Joseph A. Bogardus, } Clerks.
Rebecca Schooley, }

As a Friend in attendance will give a full report of the proceedings of the General Conference for our paper, it is only necessary te say briefly there were three other sessions held, all marked by great earnestness, and all of a devotional character, which was felt to be largely due to the deep spirituality of the meetings which preceded the Conference. There were those whose voices had seldom if ever before been heard in our gatherings, who bore testimony to the value of these meetings to themselves, and all seemed to feel that it was a great privilege to be in attendance. The matter of Lesson Leaves was fairly considered, and the general expression favored the present plan of preparing them.

The business throughout was conducted with deliberation and a willingness to concede to every one the same liberty of expression that each claimed for himself; all was done in harmony, and the good feeling maintained when differing views of the same subject were presented gave evidence that the One Controlling Power of all rightly gathered assemblies was in our midst.

After all was accomplished for which we had met, and full expression had been given to the good that had been received, the Conference adjourned to meet two years hence in Indiana, at the time of holding Whitewater Quarterly Meeting.

Then came the farewells which were tender, grateful, and expressive of Christian fellowship. Some of the delegates left the same evening, but the greater part waited for the noon train (eastward bound) next day. Among the latter was your correspondent, who by this stop-over was enabled to enjoy a little social intercourse with the good Friends who had so hospitably entertained us.

In this brief opportunity we listened to the recital of hardships endured by the Friends who, about the beginning of the present century, came into the then wilderness of Canada, and after uncounted labor and privation, established permanent settlements on the same tracts of land their descendants are now occupying, which from dense forests, roamed over by savage men and beasts scarcely more savage, has, through untiring energy and labor become a very paradise of beauty and luxuriance. The log hut, for which the trees had to be felled and their trunks hewed into shape, consecrated by the toil and sweat of the father and his boys, and made homelike and endurable through the patient love-service of mother and daughters, sufficed for a time. Deft, womanly fingers spun and wove and made into warm garments for winter the fleece of the flock, and with much necessary labor prepared the flax of the field for wear during the brief summers that were made shorter by the deep shadows of the surrounding forests through which the warming rays of the sun scarcely penetrated.

It is one thing to read what has been written by others of these pioneer times, when not a plot of ground large enough to take in his log cabin and the garden could be had until it was cleared of the trees, and a whole season had to be given to the preparation of the ground before a single crop could be planted. We are apt, when we read of these things, to think they are colored by the imagination of the writer, but when we hear from the lips of the aged patriarchs, a remnant of whom are still left us, the plain, unvarnished story of pioneer life in their boyhood, no pictures of the imagination are too highly wrought, or too tragic to answer the description. And the privations and hardships endured by the women, many of whom had passed their girlhood amid the refinements of social life, can never be portrayed. From such ancestry comes the best blood of the race, and the qualities that must tell for good upon generations yet unborn.

We take our leave with the exchange of many good wishes, and return to St. Thomas, where we arrive in good season.

From here we go our several ways east or west, with the conviction that the reunion we have enjoyed has added to our vital, religious force and brought the several parts of our heritage very near together in Christian fellowship.

St. Thomas is apparently an old Canadian town, substantially built, mostly of brick, and one where much business is transacted. *We* take the east-bound train and go all the way round the lake to get to Erie, a point nearly opposite St. Thomas, that might readily have been reached in less time by crossing the lake, only there is no line of steamers running between the two cities.

The ride to Erie takes us within view of Niagara Falls, and we hear the endless roar of its mighty waters, gathered up from the far north-west so near the water-shed of its Pacific slope as to suggest the brine of the ocean, and rushing onward through lake and strait and river in a succession that is simply beyond description, pours the accumulation of its flood of waters into the broad Atlantic. Surely here the forces of nature, grand as they are irresistible, are worthy our deepest thought, and should awaken in us the profoundest reverence for Him whose care is over all his works, so that whether it be the mighty ocean, or the tiniest drop that falls into its bosom, it is not suffered to fail of its mission to water and refresh the earth.

Before we reach Niagara we pass the town of Welland, where we get a view of the canal that connects the two lakes Erie and Ontario. It and the town take their name from a small tributary of the Niagara river which has its rise in the province of Ontario, and forms part of the Welland canal, emptying into the Niagara river above the Falls. It does not take long to run the 27 miles from Falls View to Buffalo, with its outlying districts for miles covered by lumber-yards, and its fine breakwater, which affords protection to the commerce of the great lakes when the stormy winds, that make the navigation of lake Erie so difficult and dangerous, are prevailing. The road from Buffalo follows the lake, and runs through many pretty towns, with adjacent vineyards and orchards and fields dropping fullness into the lap of plenty, making the heart overflow with thankfulness to the Giver of all good. Now we see the wide stretch of water shining through the hazy atmosphere of this warm summer weather,—then through skirts of woodland, remnants of the "forests primeval," our busy engine hurries us along until the solid old town of Erie is reached, in the deepening shades of evening.

Here the people seem to be very much absorbed in their own affairs, though there is said to be some awakening to the public needs among the millionaires who have become such in the prosecution of the various industries that centre in this locality. The whistles of the factories call to labor at an early hour in the morning and at intervals throughout the day the same shrill note is heard blending with the puff and blow of trains innumerable that come and go in all directions, freighted with the products of shop and field, and a full complement of pleasure-seekers and traveling salesmen.

Among the most interesting and absorbing works for the general welfare is a combination of wealthy, public-spirited men, who have undertaken to drill a well for the purpose of supplying natural gas in opposition to a company which at an exhorbitant price now furnishes it to the citizens for heating and culinary purposes. The well has reached the depth of 4,000 feet without success, and it is their intention to go five hundred feet further. A company at Pittsburgh having bored 4,600 feet before gas was reached, encourages the company to continue. The work has been in constant progress for eleven months.

One day is given to Chautauqua Lake, with the hope of being in time for its School of Literature and Science, where the best expositors of evangelical religious thought in our day may be heard. We saw the wooden counterpart of the great temples of Greece and walked through its academic grove, but the great masters were gone, and the quiet of the "assembly grounds" was broken only by the voices of the excursionists.

Another afternoon is spent on the lake. A stiff breeze gives us some experience of the effects of the chopping waves that make this at such times a turbulent little inland sea. The Hospital that crowns the bluff overlooking the lake, on State street, has just been undergoing enlargement, and was thrown open to visitors during our stay. It is well equipped, and does noble service for the suffering. The Soldiers' Home in the eastern suburbs of the city is within reach of the breezes from the lake, and has also been enlarged and much improved. Another Charity is the Home for the Aged and Infirm, to which has been added quite recently rooms to accommodate aged couples.

After a week spent in the enjoyment of all that social visiting, excursions, and the like have to offer, time, as it ever has done, brings round the end of all this varying chapter. We leave Erie in the gray dawn of the early morning of Eighth month 3rd, and as the clock strikes twelve, midnight, enter the door of our own home. L. J. R.

For Friends' Intelligencer and Journal.

DEBORAH F. WHARTON: A TRIBUTE.

It would doubtless be acceptable to survivors to have a clear and full portraiture, in written words, of the life of our venerable friend, Deborah F. Wharton. But the pen of friendship and strong affection falters in the attempt to delineate so complete an ensample of all the Christian virtues which adorned the daily walking of our dear departed friend. Those whose privilege it has been to mingle with her in social and religious communion will ever bear in mind the impress for good which her purity, benevolence, and dedication of heart unconsciously spread around her, and how these conspicuous attributes gave a lustre and an influence to all her utterances and all her doings. In her own purity of thought there was a uniform observance of the "golden rule," which allowed not a criticizing censure or unkind judging of the motives of others to have place, —and hence the words of calumny and fault-finding were foreign to the benevolent and religious sensibilities of her nature. To an eminently cheerful and social temperament were added the dignity and force of strong religious convictions, and an independence of action in closely adhering to these.

Her excellent husband, Wm. Wharton, was a highly esteemed elder and valuable laborer in the concerns of the Society—a gentleman of the olden type—remarkably affable, and exemplary in all his deportment and intercourse with the surrounding world. These estimable characters were permitted for many years to enjoy the happiness of a sacred union, their interests being mutual in all things pertaining to this life and to that which is to come. In their hospitable home the pleasures and comforts derived from social, intellectual, and spiritual fellowship, were largely partaken of. When death severed this close tie, our dear friend, the subject of this feeble tribute to her memory, was favored to sustain the sorrow with resignation and fortitude. She continued to reside in the same home, surrounded by a loving family of children,—still dispensing, though with a subdued spirit, the wonted rites of hospitality. In subsequent years the trials of family bereavements were her portion; several of her children in early maturity of years were removed by death. While keenly feeling these tender separations, she believed it right to give proper attention to her secular and religious concerns—appearing not unto others to mourn,—but willing to perform the duty of the hour as it presented to her view.

There exists, no doubt, in every branch of our widely spread Society, a knowledge of our dear friend as a valued, approved minister and a faithful laborer in the services of our Religious Society. In the expansiveness of Christian charity the cause of humanity found in her a willing advocate, where even its rights were denied and its appeals for redress commended themselves to her attention. With an abundance of this world's treasures at her disposal, she ever maintained a remarkable simplicity and consistency of deportment in all the affairs and relations of life; an abiding sense of the stewardship entrusted to her being evinced in manifold remembrances of the poor and a sympathizing concern to encourage deserving efforts for self-support. In her demise many have lost a kind, helpful, though unknown friend—so considerately and delicately were her alms and bounties bestowed. These benevolent sympathies and Christian evidences of love and tenderness flowing toward all the human family continued unabated to the close of a long and beautiful life. This close came as an Angel of Light gently releasing the purified spirit from its earthly tabernacle.

"So farewell, mother in Israel!
Thou whose radiant course was like
An angel's standing in the sun,
Undazzled and unswerving;—
It was meet that thou should'st pass
From earth without a cloud."

Eighth month 30, 1888. C.

REPORTS OF THE PHILANTHROPIC UNION.

Editors Intelligencer and Journal:

Having received several inquiries, I wish to give information through your columns that the Proceedings of Friends' Union for Philanthropic Labor has been distributed to the several monthly meetings, except that those for Genesee Yearly Meeting were sent in one package to John J. Cornell, and all for Ohio Yearly Meeting to Sarah C. Fox, Short Creek, Ohio.

J. Wm. Hutchinson.

New York, Ninth month 3.

Every Christian ought to be where for the time being he belongs. He ought to be, at every moment of his life, just where he would be glad to be found if his Master were to come seeking him. Whether it be work or recreation that is his duty for the hour, *that* is the thing for him to attend to then. And as a man's duty never can be at two places at the same time, a Christian believer who is at the place where he belongs can rest assured that his Master would not wish him to be at any other point in the universe than just there. This is a good test for a Christian in his deciding what he had better do for this evening, or for this morning. He ought to do that which he ought to do; and whatever he does should be that which he believes that his Master wishes him to do above anything and everything else.—*Selected.*

Hardness is a want of minute attention to the feeling of others. It does not proceed from malignity or a carelessness of inflicting pain, but from a want of delicate perception of those little things by which pleasure is conferred or pain excited. A hard person thinks he has done enough if he does not speak ill of your relations, your children, or your country; and then, with the greatest good humor and volubility, and with a total inattention to your individual state and position, gallops over a thousand fine feelings, and leaves in every step the mark of his hoof upon your heart.—*Sydney Smith.*

If we dwelt more upon God's fullness and his desire to make us partakers of it, our Christian character would be richer.—*H. W. Beecher.*

PHILADELPHIA, NINTH MONTH 8, 1888.

THE DANGER OF HERO WORSHIP.

ONE of the most brilliant, yet most unbalanced and most untrustworthy of modern writers is one who has strongly insisted upon the yielding of mankind to hero worship. Perhaps the obvious defects in Carlyle's system have prevented many from following him in this direction, especially when so unlovely a character as Frederick of Prussia, miscalled "the Great," was presented for their admiration; but we fear there is too much danger with some of allowing themselves to worship, mentally at least, some conspicuous person, without carefully considering how unlikely it is that his merits are exactly measured.

We take the case of Charles Darwin, for example. How is Darwin to be esteemed? Certainly not without caution and qualification,—for reasons which we shall in a moment indicate. But his great achievements in science, his heroic contributions to the stock of accurate human knowledge, his devotion to truth, his patience, his simplicity, his amiability, command the attention and respect of the world. His biography, told in his own letters and journals, may well fascinate us. It is not unreasonable, on the contrary it is natural and just, that we should have praise and appreciation for such a worker.

But this does not imply everything. It does not imply the justification of an entire surrender of our regard and our judgment,—the sinking of our individuality in that of Darwin, and the acceptance of his mind as our ideal. In the very biography which we found so charming there was a significant and notable absence of one thing needful to make a character round and perfect. Darwin himself felt and acknowledged that he had sunk all else in his one pursuit: he was a naturalist, and nothing more,—a great one, indeed, but that only. He had found in himself a gradual extinction of not only the elements that are æsthetic,—that see the poetry and beauty of life,—but even the elements that are religious, and inward, and spiritual. He declares this frankly, and, as a scientific journal has remarked, it has sharply demanded attention from those who were giving themselves up unreservedly to the worship of "pure science." Frances Power Cobbe says this single instance has gone far "to throw a sort of dam across the stream, and to have arrested not a few science-worshippers." They find themselves querying whether a knowledge of the habits of earthworms, though leading up to other and vaster knowledge of material things, will compensate for the absence of spiritual feeling, or even of the æsthetic sense. As an article in the *Atlantic Monthly*, (quoted on page 272 of the current volume of this paper) puts it, there was a blank page in Darwin's experience, and this is the page of spiritual life. "What interested him was the immediate present, and he dealt with it admirably, both in the intellectual and moral world; but what was remote was as if it were not."

Here is an instance, we say, which may well check the inclination to hero-worship. So much might be said for Darwin, yet not everything. The ideal was not perfect. That we should appreciate and admire in him what may be worthy of appreciation and admiration did not imply the fitness of an entire surrender of our regard and judgment.

CORRECTIONS.—A correspondent—N. C., Brooklyn,—calls attention to the historical statement in J. D. McPherson's recent letter on the Tower of London, respecting the unfortunate Lady Jane Grey. The facts concerning her are, not that she was put forward by a Catholic faction against Elizabeth and the Protestant party, as stated, but that, at the accession of Mary, the Catholic, (Elizabeth's elder sister), known in history as "Bloody Mary," a Protestant movement was begun in behalf of Lady Jane, and upon its failure she was beheaded, as referred to by J. D. M. The reign of Mary began in 1553, and Elizabeth followed in 1558. The execution of Lady Jane occurred in 1554.

In the article by A. C. D., in last week's paper, on the Plainfield Centenary, the word *Piscatany* should be Piscataway; and where it is said that remarks were *freely* made, it should read briefly made.

DEATHS.

CLEAVER.—Suddenly, on Eighth month 31st, 1888, William J., eldest son of John and Sarah J. Cleaver, of Whitemarsh, Pa., in his 35th year.

COATES.—Eighth month 29th, 1888, at the residence of his brother-in-law, Richard Mather, West Philadelphia, William Bailey Coates, aged 65 years; a member of Western District of the other body of Friends.

SEAMAN.—At his home, Westbury, Long Island, Seventh month 4th, 1888, after a long and painful illness, Edmund Seaman, eldest son of Hannah and the late Jacob Seaman, aged 56 years; a member of Westbury Monthly Meeting of Friends. Interment at Westbury, L. I.

STAR.—Departed this life on the evening of the 31st of Eighth month, 1888, Phebe M. Star; a member of Fairfax Monthly Meeting, Virginia, in the 69th year of her age. The life and death of this dear Friend was a useful lesson to us all. Calm and collected in her last moments, her desire was to be released from her sufferings whenever it should be the Good Father's pleasure to call her home.

W. W.

James Udall.

"Mark the perfect man, and behold the upright, for the end of that man is peace."

How applicable is this beautiful Scripture truth to those whose lives have been spent in doing good to their fellow men, and whose unblemished characters stand as an example that all may follow.

Such was our lamented friend, James Udall, whose long and useful life has ended, and we may rest assured that his purified spirit, having cast aside its earthly garment, is now clothed in immortality and eternal life.

Although not a member of our Society yet the principles of Friends ever clung closely to him. He was a constant attender of Manhasset Meeting with his devoted wife, when health permitted, she having been educated in another faith, yet after her marriage felt it was her duty and pleasure to go with her husband, and now after fifty-four years of sweet companionship, the golden chord is at length broken, and the precious spirit removed from works to rewards.

He was a life long friend of our dear departed friend Henry Willets, both "lovely and pleasant in their lives, and in their deaths were not long divided." Those who have shared his unbroken friendship as the writer has done for nearly half a century, can testify to the goodness and symplicity that marked his character. He was an earnest seeker after truth, unselfish in his business relations, ever ready to assist the poor and needy, giving with a liberal hand, not only to the meeting, but to those who required assistance, expressing his convictions that true religion was not so much in what we believe as in the way we live.

A touching tribute to his memory comes to me from his devoted daughter, who, in early life, was left a widow with an infant, and who has devoted her life to her parents with almost more than filial tenderness; she says: "His life and character was so lovely it made our home so beautiful that his death has left everything everywhere desolate, lonely, and sad,—so hard to live without his sweet, loving presence and beautiful soul, inspiring our lives with its loveliness—so noble, exemplary, and consistent, living out the Golden Rule socially, morally, and spiritually.

"My grandmother, Deborah Udall, (a beloved member of Manhasset Monthly Meeting), told him 'he had never given her any anxiety, only when he was sick, or out in the boat in a thunder storm.' 'Oh! mother!' he said, 'this is the greatest blessing and legacy thee could bequeath me. I am so happy that I have given thee so little trouble, and that my life has been so satisfactory. I have tried to do right and make those around me happy.' His health had been frail during the last few months, and after an illness of a week's duration he calmly and sweetly passed away in the 81st year of his age."

On the 7th of Fourth month, 1888, the funeral took place at Manhasset meeting-house, where a very large and interesting meeting was held, and a precious testimony given to his worth—giving consolation and comfort to his sorrowing family and many friends. "I hear a voice from the casket saying, 'mourn not for me,'" was the expression that fell from the lips of this ministering friend on the solemn occasion.

Surely no monument of stone over his last resting place is needed to commemorate his virtues, for his memory is embalmed in the hearts of those who knew and loved him well. E. H. B.

Bayside, L. I., Eighth month 30.

Rarely promise, but, if lawful, constantly perform.—*Wm. Penn.*

SCRIPTURE LESSON, No. 36.

Ninth Month 16, 1888.

Topic: THE WATER OF LIFE.

Golden Text.—"For my people have committed two evils; they have forsaken me the fountain of living waters, and hewed them out cisterns, broken cisterns, that can hold no water."—Jeremiah 2: 13.

Read Numbers 20: 1-13.

It was in the wilderness of Zin that the "whole congregation" of Israel spent the closing years of wandering, which prepared the younger generation to enter in and possess the fertile fields and wooded hillsides of their ancient patrimony. The men who came out of Egypt had, through the enervating influences and hard toil of their servitude, in the low lands of that country, lost the vigor and sturdiness of their nomadic ancestry, and, as we have seen they preferred the uneventful drudgery of their bondage with its "leeks and onions and flesh-pots," to the hardships and privations incident to the journey over the uncultivated lands through which they were obliged to make their way.

The scarcity of water became a serious obstacle to their good order, and the absolute necessity for an immediate supply brought up the cry which was ever ready to break forth, when danger or disappointment confronted them. Moses, as was his unfailing custom, went into the Tabernacle to lay his new-found difficulty before the Lord, and this brings us to the point of value in the lesson.

Take thy rod. This rod was one of the sacred treasures of the Tabernacle, and the same that Moses had carried with him in his interview with Pharaoh.

Smote the rock. The wisdom and far-sightedness of Moses, under the guidance of the Divine Spirit, enabled him to meet the necessities of his people, yet his angry impatience brought sorrow and loss to his spiritual life.

If one were asked to state what, of all the varied blessings that our Heavenly Father has conferred upon us, is the most to be desired, he could not hesitate to answer that it is the power to discriminate between right and wrong, to determine what is good and what is evil, what will make our lives happy and filled with peace, and what will destroy such peace and happiness.

Such knowledge is indeed the Water of Life, that which refreshes, invigorates, animates our whole existence, and which alone makes life desirable. It is obvious that this knowledge can only be derived from the source of all good, our Divine Father and the Creator of all. That he bestows such knowledge cannot be gainsaid, for whatever be the theories of men regarding the *manner* in which mankind become aware of the law of right, and thus responsible for its observance, every one is conscious that it is within his own power to acquire a knowledge of truth, which, if obeyed, will direct into ways of life eminently conducive to permanent happiness and peace.

The fundamental doctrine of the Society of Friends is that the Divine Father reveals *directly* to every human soul this knowledge of truth, which is sufficient to its needs, and so inspires it with a consciousness of right and duty, that every one who is willing to

be guided by its promptings will certainly find the true way of life, and obtain the power to fulfil the will of his Creator.

This revelation, or witness for truth, never can lead astray, but is adapted for every condition in life, teaching self-denial, prompting to works of righteousness, impelling to acts of kindness and charity, leading away from all debasing and ignoble actions, and up to greater and greater purity of character, nobility of purpose, and integrity to all that is good.

This word of God, speaking in every soul, is then indeed "the well of water" that springs up "unto eternal life," that which we may have for the accepting, and which, if accepted, will over-rule all the ills of life and will fill the soul with unspeakable peace.

For Friends' Intelligencer and Journal.

YARMOUTH, AND THE TRIP THITHER.

It was a pleasant party of Friends, eighteen in number, that met recently on a bright morning at the Reading Railroad Station, Philadelphia, *en route* for St. Thomas, Ontario. Those who had with the thoughtfulness of experienced travelers secured seats in the roomy and well-appointed parlor cars of the Lehigh Valley Railroad, had some advantage over others whose time and thought were otherwise occupied up to the starting day. But these were not disposed to murmur or let aught detract from their appreciation of the ride, because of less luxurious accommodations; they enjoyed with a zest born of the novelty and newness of the scenery, the rapidly passing panorama that revealed here a thrifty town, there a well-cultivated farm, ascending till Bethlehem was reached and our first halting place of any moment was made. We tarried just long enough to get a good glimpse of this pretty place, associated in our minds with that religious sect the Moravians, who settled here in 1740. Their religious forms and a social life of their own, added to habits of unusual economy and industry, soon won for them the designation of a "peculiar people." A fellow feeling of sympathy was awakened, and a desire to stop and see if any of their primitive simplicity of life were left to us now, but alas! for the thought that would dwell with the past; no time could be allotted to it, for on, on we must speed, this time a few more of us with comfortable parlor car conveniences, gazing eagerly at the landscape, now revealing the wonderful coal regions of the Upper Lehigh. Passing Mauch Chunk, with its picturesque surroundings, its mountains of black coal dust, side by side with its mountains of greenness, its renowned "Switchback," its homes for the miners, poor cabins beside the tastefully adorned and capacious mansions of the wealthy which we had seen—these were all objects of great interest. Then came the "breakers" where the "black diamonds" of these great coal fields are separated and made ready for our use when the chilly blasts of winter make them of more value to us than their brilliantly white sisters, whose office is to adorn the person and please the eye. As we still ascend, the heart utters its silent thanksgiving that we are permitted to witness in so brief a time so much of the beauty of God's creation, and so much of the development of man's mechanism, by which the greatness of his power is continually becoming more and more apparent. By late noon the climax is reached, and we are on the summit, where, at an elevation of 2,000 feet above the sea, we stop for dinner. Here a fine hotel, the Glen Summit, enjoys a most magnificent view of mountain peaks and ranges with lovely valleys intervening. The time is too precious to waste in the every-day pastime of eating dinner, so having supplied our physical needs in that line from a lunch basket while on the way, we take advantage of the halt to wander out for a wider view of the grand scene. It is certainly a tempting spot for those who have the leisure and the means here to breathe the fresh mountain air and feast the eye on the beauties of nature. But we must journey on, the descent being equally as fine as the ascent. We wind round for a distance of fourteen miles, catching glimpses of streams and lakes, so suggestive of coolness and trout fishing, and reach at last, nestling in the valley of Wyoming, the town of Wilkesbarre, which all the time was very near to us though hidden from our view. We had delighted our eyes with the fresh fall asters, just bursting into bloom, while close beside them in almost barbaric splendor nodded the golden rod, and at every turn the wild wealth of ferns caused many a sigh that we must pass them by. Speeding on, we now cross the border into New York State, passing in the twilight hour Lake Seneca and other charming spots, hoping for a nearer view on our return. Settling ourselves to rest as the darkness gathered around us, we ere long were aroused to find we were within sound of the roaring waters of Niagara where we were to leave our comfortable quarters and be transferred to the Michigan Central Railroad for landing at St. Thomas.

Out into the night with its rain, and, we had almost said, its darkness, for the lights in a station house, which was being reconstructed, were few and dim, we waited for some hours, and were here joined by another Friend bound for the same point. Some, by preärrangement, made a stop at the Falls, others would have done so but for the great influx of excursionists that just then filled the place. Crossing the Suspension Bridge we were soon made conscious of our presence on foreign soil by the demand for "all passengers going to Canada present luggage for inspection." This occupying but a brief time we again tried to rest, but a crowded second-class car was a poor substitute for the luxurious one we had left, and we resigned ourselves to discomforts which were somewhat mitigated by the sympathy of a pleasant conductor who much regretted his inability on account of a great pressure of travel, "to do better for us." At early dawn we landed 125 miles from the Falls on Canadian soil, and were met and cordially greeted by friends who soon transferred us over fine roads, in open topped wagons (here called "democrats"), past large farms with acres of fine woodland, to the Friends' settlement of Yarmouth, Ontario.

The face of the country revealed its nearness to the great lakes by its level surface, its many deep fissures through the rocks, its continual greenness, as

if constantly moistened, and its general fertility. For that section St. Thomas is the chief market, it being a city of 12,000 inhabitants, though much is shipped abroad. The making of cheese, which is rich and good, is an important industry. Fruit, too, is much raised, the apple crop being of excellent quality. The restrictions of trade on account of the tariffs imposed by both countries are serious barriers to intercourse with "the States," and we found a general desire among the Canadians to obtain a freer interchange of products.

There is, we found, a feeling still preserved of "loyalty" to the English Queen, and yet there was evident a realizing sense of the value it would be to them to be united to "the States." It was a new experience to some of us, to find ourselves looked down upon, as it were, by her stately majesty in many a large picture placed in the rooms devoted to our service. Yet our intercourse could not have been more pleasant and kindly if we had all claimed allegiance to the same laws. We mutually recognized a broader brotherhood, a kinship of faith, and a kindred devotion to the one great power, God over all. The solidity and intelligence of those Canadians it was our privilege to meet, spoke well for the home training and their system of public schools; with the efficiency of the latter we were quite impressed. Yet the regret was universal among the Friends that so few of them were so situated as to be able to give their young people the advantages of an education at Swarthmore College and elsewhere among Friends. This, too, we hope time will remedy, and put it in their power to mingle, while obtaining an education, with young people of their own religious faith.

L. H. H.

NEWS OF FRIENDS.

BUCKS QUARTERLY MEETING.

Bucks Quarterly Meeting, held at the Falls, on the 30th of Eighth month, was very largely attended and was a very interesting meeting.

Many strangers as well as a number of members from neighboring quarterly meetings were in attendance. There was a comfortable degree of stillness obtained nearer the appointed hour than has often been the case, when Sunderland P. Gardner, of Farmington, New York, arose and commenced a very interesting discourse which continued for more than an hour. He was listened to with profound attention, and from the feeling that prevailed it was evidently to the general satisfaction of the large and intelligent audience present. After Sunderland sat down, a few very satisfactory words were spoken by Elizabeth Paxson and Thomas Foulke, and after a brief and impressive silence the first meeting closed and the regular business of the Quarterly meeting was then proceeded with. A minute that had been granted to Robert M. Croasdale, (a minister), by Falls Monthly Meeting, to attend Baltimore Yearly Meeting and appoint meetings, was produced and endorsed by the quarterly meeting.

A part of the Yearly Meeting's Visiting Committee were in attendance, and at the close of meeting arrangements were made for their attendance at the different monthly meetings composing the quarter as they occurred in the following week, and also the attendance of some appointed and some parlor meetings if way should open.

At the close of the Quarterly Meeting there seemed to be a feeling prevalent that we had had a very satisfactory opportunity together, and a desire prevailed that we may continue to have such meetings in the future.

SOUTHERN QUARTERLY MEETING.

This meeting was held at Easton, Md., on the 29th of last month. Samuel S. Ash and Henry T. Child of the Visiting Committee of the Yearly Meeting, and Martin Maloney from Avondale, were in attendance. The meeting was large. The three Friends named spoke. At the close of the meeting for worship, Richard T. Turner, Jr., referred to the John M. George school, and desired to know the views of Friends in relation to the scope and character of the school that is to be established. The sentiment of the meeting was that it would be better to have a school for the rudimental branches of education, to fit the scholars for the practical duties of life. The question whether there should be a particular kind of dress required was referred to and strongly objected to. The meeting then separated, about forty of the men going up stairs. The first, second, and eighth queries were answered. The George school was again considered, and a free interchange of sentiment was had. All were of the opinion that such a school as was spoken of in the first meeting would meet the wants of Friends generally. And it was hoped that such a school would be opened without much delay.

The meeting on Fifth-day was large and satisfactory. Henry T. Child spoke for about an hour. Samuel S. Ash also spoke, and Martin Maloney appeared in supplication.

It was an encouraging season for all, and hopes were expressed that some of the Yearly Meeting's Committee and other Friends would attend all the quarterly meetings.

THE THOMAS ASYLUM FOR INDIAN CHILDREN.

This Asylum is on the Cattaraugus Reservation, in the State of New York. We left Buffalo on the 28th of Eighth month, by the Erie Railroad, for North Collins, a distance of 22 miles. From North Collins to the Asylum is six miles by private carriage.

Half of the ride is past the homes of the Indians. Some have comfortable, two-story, frame, painted houses with white window curtains. The men in the fields working with teams; the children about the lawn. At one house some lads were pitching quoits. It is vacation. We passed two public school buildings in good repair with a fresh coat of white paint on each. The Indians have horses, cows, pigs, and poultry. All the men, women, and children we saw were well clothed in citizens dress, as their employments required.

The land is good; they raise corn, potatoes, and

buckwheat. The other harvests were over. We did not see many grain stacks,—the apple and pear trees were well covered with fruit. We passed the fair-grounds which calls together many white people to see the products of the Indians at their annual display. The land is good, much of it covered with forest in its natural state. The approach to the Asylum was very cheering. There were good fences, and a large, well-kept lawn with shade trees. The large, well-painted wooden buildings, which have now 112 children, are all in excellent repair. The parlor is papered and well furnished, one table containing the work of the children on sale, they receiving the money. The sleeping rooms are neat. Iron bedsteads of the best kind with wire springs and hair mattresses, and covered with white counterpanes. The pillows are of feathers, with cases and shams. A red work-bag hangs on the post of each bedstead. The schools were not in session. The larger girls were in the sewing room. They remain in the Institution till 16 years of age and teach sewing to the younger girls. They do all the sewing for themselves and for the boys. One girl was knitting on a machine. They knit all the stockings, some sewing on the machines and others by hand. The garments made by the children last year numbered 2,159. All the children were neatly dressed—the larger girls in white aprons, trimmed dresses, and morocco shoes. All the smaller girls wore gingham dresses, ruffled on the bottom of the skirt, and a piece of lace on the neck of each dress. All the younger girls and and boys were without shoes and stockings. They were called in from their play to speak and sing for us, which was very well done. The neatness, order and promptness was wonderful. It was like a well-conducted home, where all knew their places, and filled them to satisfaction. The farm contains 125 acres. The boys, under the superintendent, raise all the grains, corn, vegetables and fruits, averaging in value $2,644. The products are mostly consumed on the place. They have 5 horses, 10 cows, and pigs, but no poultry. There is a good barn and a work shop, a garden, and a fine grove of forest trees with swings. They have a pond with a boat for rowing in summer, and in winter they have fine skating. All the grounds are in good order. We did not go over the farm. The likeness of the kind Friend for whom this Institution was named, Philip E. Thomas, hangs in the parlor.

This home, so well conducted, is a monument well fitting to his care and interest for the Indians. It was near this Institution our friend, Joseph S Walton, and family resided; a school for Indians was kept by them. We saw the Friend at North Collins who taught the school after Joseph and family left. We were kindly entertained by this Friend's sister, and heard from them much of interest about the Indians. If the millions of money that have been worse than wasted upon the military had been used to educate, civilize, and Christianize the Indians as the Friends did on this reservation in years that are past, there would not be the cloud of dishonor that now hangs over this Government. It is thirty-two years since the Thomas asylum was established. It was supported for many years by the benevolent. Our kind friend, Lydia Ann Thomas, and others took an interest in it. It is now a State Institution under a Board of Managers appointed by the Governor—one of the board. John Mt. Pleasant, an Indian, died last year. I quote from the last report: "During his long career his example was of inestimable value to his people, an example of industry, thrift, temperance, and right living, illumined by self-abnegation and benevolence. His loss to us friends and co-laborers in the adminstration of this interesting charity is great." The State appropriated last year $10,000 for expenses, $1,000 for teachers, $2,000 to buy land.

In this visit I had the company of Amelia Hicks, of Westbury, L. I.

THE ISLES OF SHOALS.

THE ISLES OF SHOALS are a series of rocky islands, nine in number, situated in the Atlantic Ocean, about ten miles east of Portsmouth, N. H. Star Island, Appledore, and White, are the largest and most prominent because of their hotel accommodations, and the last named is noted for its light-house.

The rocks at Star Island are of "granite intersected with a basaltic dyke," but of such structure as makes them quite unique, "their like being found in but one point, jutting out in New Hampshire." The shores of this island are bolder and grander than the rest of the group and rise to a height of sixty feet above the sea. The rocks have been thrown up vertically and lie in confused heaps, and the sea dashes up amongst them with a tremendous grandeur all its own. We are reminded of E. L. Wilson's description of Mt. Sinai, and imagine that some such convulsion of nature must have been required to throw these cliffs into their present arrangement.

The air is simply perfect,—balmy, salt, and pure; a "land breeze" being impossible, the situation here is equal to a sea-voyage without its dangers and annoyances. On a clear day we see the hills of York in Maine, and the shore of New Hampshire distinctly outlined with the "Hotel Wentworth," and the "Farragut House" at Rye Beach, and other resorts of less note. Far in the northern horizon the White Mountains can be discerned against the sky. A luxuriant growth of grass and a few familiar wild flowers struggle with the stones for a subsistence on the more sheltered portions of the islands. We seem to play "stone-tag" as we step from one projecting rock to another.

The timid little "Quaker lady," or bluet, and the buttercup seem belated, in company with the golden-rod and fall aster. A dwarf pipsisiwa, with its frail white blossoms, seems strangely out of place in these rude surroundings; and a tall dandelion—*leontedon*—that enlivened the sod of Harvard College grounds, is also abundant here. The latter is a wild-wood flower around Philadelphia, and is even scarce as far north as the Delaware Water Gap, but around Bos-

ton it is very common as is also the pink, white, and blue succory.

Butterflies of two varieties are very numerous, as though they were stranded here, and were obliged to stay. The children shook one of the few trees, and they flew out like autumn leaves before the wind.

To-day is bright, with the sea raging after last night's storm, and it is an impressive experience to sit on the cliffs and listen to the thunders of the billows below us. The waves fly up against the rocks in snowy foam, cover them for a moment, and then flow back in cascades of brilliant whiteness. On the more gentle slopes, where we can approach more nearly and the sea is calm, we count many jelly-fish brought in with the sea-weeds. The water is so clear that we can see many feet below the surface, and when the children throw out a baited line we see the fish come up in swarms eager for the bait. The name "Shoals" was given to these islands on account of the remarkable "shoaling" or "schooling" of fishes about them. Codfish are found in abundance a few minutes sail from here, and many other edible fish delight the epicure and fisherman.

Evidences of the occupancy of Star Island by our early New England settlers give a human interest quite unexpected to the stranger. Notable among these is a triangular monument of white marble to the memory of "Capt. John Smith, who discovered these Isles, (properly called Smith's Isles), in April, 1624, while with eight others in an open boat he was exploring the coast from Penobscot to Cape Cod."

The "little village of Gosport" held the life and activity of these "stern and rock-bound coasts" for two centuries, and the ruins of Fort Star, the old Stone Church, the parsonage, and the tombstones with the names of those sturdy sons of a sterner ancestry give convincing testimony that the brave forefathers of New England lived and struggled here.

Star Island, Eighth mo. 23.

WINE DRINKING IN EUROPE.

[Extracts from a private letter of Elisa H. Schofield, dated at Rome.]

You cannot have the least idea of what not drinking wine means in this country. Since I touched the shores of England I have seen but one wineglass unused besides my own and that is that of a gentleman of our party, a middle aged man. At those large hotels in London and Paris I have run my eye down the tables in vain; men, women, and children all drink it as water. My heart sinks and fails within me when I think what it would be for a young man to pass through what I have to. They don't mean to be the least unkind but they urge me, think I ought not to drink the water, (which, as far as I can judge, is good and I am perfectly well), express surprise, and argue with me. The hardest day was the long, hot ride in the cars from Genoa to Pisa, when we could not get a drop of water at any of the stations. They never have it on the cars, and look in blank amazement, even if they understand you; so all the day I had no drink,—the others brought wine. Every one says it is very "light" and pure, and it must be, for I cannot detect it at all on the breath. Sometimes I wish I were like the others, several of whom say they never drink it at home, and some belong to temperance societies. Mr. P., that day, was so solicitous for me, said: "I do honor you, Miss S., but I think you really ought to take some of this, it will do you good": and so it goes.

Our guide cannot understand why we should object. He says, "why here children are *punished* if they do not drink their wine at table; my sister has often made her boy stand in the corner because he did not like it and would not drink it. Now I shall 'ave to put you in the corner if you do not take it." The other day when they passed the strawberries, he took up my plate and said, "I am going to fix them for you and make them good!" I smiled and watched him sugar them all well and mash them with a fork, and then pour wine over them. I waited till he came to the last and then laid my hand on the bottle. "Oh, but you must; it is good for you and I want you to do;" and he poured the wine on. But Mrs: W. had to eat them. I could but pity the hurt look that passed over his face; he was so sure I would not refuse. Sometimes he says I will make him a teetotalar. Last night at dinner I saw them watch me as the waiter passed the wine round; and our guide, who was farther down the table, laughingly called: "Ah, Miss S., you must take some to-night!"

They don't mean to be unkind and I don't mind, although it is not pleasant to be singled out as peculiar by the party. I realize as I never could before what a trial it would be to a young man. I know they all respect me for it; and it was shown last night by the guide's answering so quickly and sincerely when I asked if I were naughty, because I did not take the wine.

E. H. S.

SWARTHMORE NOTES.

—Nearly all of the $40,000 subscribed for the endowed professorship has been paid in to the Committee on Trusts, Endowments, and Scholarships.

—The vacation is about over; the college is again open to prepare for the return of students; several of the professors are already on the ground, and the prospect is good for a full college the coming year. The following notice has just been sent out:

"New students who have not been classified should present themselves at the college on Third-day, the 11th instant. The examinations for classification will take place on the 12th. New students, who have already been classified, by testimonials from their teachers, or otherwise, will present themselves, with the old students, on Fourth-day, the 12th inst. All students should reach the college not later than 8 p. m. on the day of their arrival. Regular examinations will begin on Fifth-day, the 13th."

"So every spirit, as it is most pure,
And hath in it the more of heavenly light,
So it the fairer body doth procure
To habit in, and it more fairly dight
With cheerful grace and amiable sight;
For of the soul the body form doth take;
For soul is form, and doth the body make."

—*Spenser.*

MY WEALTH.

I DO not own an inch of land,
But all I see is mine,—
The orchards and the mowing-fields,
The lawns and gardens fine.
The winds my tax-collectors, are,
They bring me tithes divine,—
Wild scents and subtle essences,
A tribute rare and free;
And, more magnificent than all,
My window keeps for me
A glimpse of blue immensity,—
A little strip of sea.

Richer am I than he who owns
Great fleets and argosies;
I have a share in every ship
Won by the inland breeze
To loiter on yon airy road
Above the apple trees.
I freight them with my untold dreams,
Each bears my own picked crew;
And nobler cargoes wait for them
Than ever India knew,—
My ships that sail into the East
Across that outlet blue.

The sails, like flakes of roseate pearl,
Float in upon the mist;
The waves are broken precious stones,—
Sapphire and amethyst,
Washed from celestial basement walls
By suns unsetting kissed.
Out through the utmost gates of space,
Past where the gay stars drift,
To the widening Infinite, my soul
Glides on, a vessel swift;
Yet loses not her anchorage,
In yonder azure rift.

Here sit I, as a little child;
The threshold of God's door
Is that clear band of chrysoprase;
Now the vast temple floor,
The blinding glory of the dome
I bow my head before;
The universe, O God, is home,
In height or depth, to me;
Yet here upon Thy footstool green
Content am I to be;
Glad, when is opened to my need
Some sea-like glimpse of Thee.

—*Lucy Larcom.*

COURAGE.

BECAUSE I hold it sinful to despond,
And will not let the bitterness of life
Blind me with burning tears, but look beyond
Its tumult and its strife;

Because I lift my head above the mist,
Where the sun shines and the broad breezes blow,
By every ray and every rain-drop kissed
That God's love doth bestow;

Think you I find no bitterness at all?
No burden to be borne, like Christian's pack?
Think you there are no ready tears to fall
Because I keep them back?

Why should I hug life's ills with cold reserve,
To curse myself and all who love me? Nay!
A thousand times more good than I deserve
God gives me every day.

And in each one of these rebellious tears
Kept bravely back, He makes a rainbow shine;
Grateful I take his slightest gift, no fears
Nor any doubts are mine.

Dark skies must clear, and when the clouds are past,
One golden day redeems a weary year;
Patient I listen, sure that sweet at last
Will sound his voice of cheer.

Then vex me not with chiding. Let me be.
I must be glad and grateful to the end.
I grudge you not your cold and darkness,—me
The powers of light befriend.

—*Celia Thaxter.*

THE TRAINING OF CHILDREN.

THE Apostle Paul interprets this Hebraic declaration when he says: Train up your children in the nurture and admonition of the Lord; that is, in character-building and man-building of the Lord. If we can find our way to lay up the layers of character, one after another; to build up habits of life, one after another; and fill the man full with that which we wish to be manifest in after life—the child, so trained, so builded, so filled, will not depart from the way thus marked out for him. The difficulty is, we govern our children in one way; we teach our children in another way; and we train them in a way different from both. Our training is not according to our teaching and our government.

The law that I have laid down is an absolute physiological law. It is not only easily ascertainable by a broad survey of the phenomena of human life, but it is absolutely physiologically true that we are what we are accustomed to do. The man grows as the tree grows. We do not, like the serpent, cast off last year's skin, and leave it in the valleys. That which we did last year habitually, and the outward manifestation of our life—that which was the bark of our life—last year, we absorb, and it becomes the woody fibre of our life this year. The eye sees according to its habit of seeing, and the ear hears according to its habit of hearing; the fingers and the hands act according to their habit of action; and the brain is according to what it has been habituated to do. What we have allowed ourselves to think and feel, that is building up the brain layers that are to be the organs of thinking and feeling in the future. Supposing, for example, Mr. Zundel, playing on this great organ for so many years, had breathed his own spirit into it, he had not merely touched its keys, and evolved from it the harmony that there was in his own soul; but in the touching of its keys, and in the playing of the instrument by that very process the pipes had been built up, and when he had played the trumpet, the trumpet had grown stronger; and when he had played the diapason, the diapason had grown strong; and when he had played the flute, the flute had grown sweeter—it would be by this time a Zundel organ. And when Mr. Shelley played on it, and put in the organ the incarnation of his own spirit, we should have a Shelley organ engrafted on the Zundel organ, and the musicians themselves

would have made the instrument they played upon. That is what we are doing in life, every one of us. We are playing on ourselves; we make ourselves; and we are the harmony or discord we have given forth.

Now, what our text says is this: Take your child and play upon him such music as you mean he shall produce in after life. Do you want a brave man? Do not shield your child from dangers; let him face them. Do you want a strong-willed man? Oh! do not try to break your child's will. A child with a broken will is more to be pitied than a man with a broken back. Make his will strong and wise. Do you want him temperate? Restrain the childish appetite for candy, and he will know how to restrain in manhood the appetite for strong drink. Do you want him generous? Teach him to be generous by training him for it. Do you want him economical and wise? Do not give him all the money he wants. Habituate him to think and do to-day what you want the man and the woman, by and by, to be and to do. If you can form the habit, you will create the character; and the habit and the character you form will be invariable and unalterable.

See how God takes these children and puts them into our hands, that we may train them for a glorious manhood and a more glorious eternity! He puts them into our hands absolutely impressionable, soft, plastic, full of the elements of nature, ready to receive the impress of our mind and our influence; eager in their questioning, wanting to know all things; open-eyed with astonishment; long ears, ready to listen to all sorts of things that they ought not to listen to and to all things which they should listen to—if we know how to minister to their listening; imitative, quick to follow the example that is set before them, and then put into a home that is the microcosm of life, where all the various practices of life can go on; mistakes committed, sins committed, perpetrated, and no great harm come of it. The household is made up of a life that is a little life and preparation for a greater one. The little mother carries her doll children through all the diseases, no matter whether she nurses them wisely and doses them correctly or no; but she is learning. These infantile and childhood processes are the very ones by which our children are to learn the habits of their life. If we can so impress ourselves on them, so guide and direct and master them, that they shall not be governed to do our will, not merely taught to see our truth, but trained and guided to do of their own will and in their own growing wisdom, the things that are right and wise and true, from that pathway, when led by faith, from that character when wrought in them, they will never depart.

Oh! we cannot train our children in the way they should go if we take them grudgingly and reluctantly; if we feel a burden and a care; if we dread their coming before, and almost wish we were free of them afterward. Oh! the cruelty, the cruelty to children that live in an arctic atmosphere, and not in the tropic of love! And we cannot train our children by passing them over to tutors, governesses, nurses, or what not. We cannot train them by proxy. We cannot find teachers and others that shall do it. We cannot train them by a little religion at night or a little religion in the morning. Just look at the breakfast table while you are talking things over, at your boy or your girl, and see how the eyes open wide at some manifestations of worldliness, at some expression of vanity, at some utterance of malice or ill-will. At night you will kneel by that little girl, teach her to say, "Now I lay me down to sleep," and you will think you are training. All your training was done at the breakfast-table. You can no more teach a child to be pious by a few minutes' prayer at night in an atmosphere of worldliness, vanity, and selfishness, than you can make a man well by giving him a quinine pill at night and morning, while he lives in miasmic marshes. It is the atmosphere of our homes that trains our children; what they imbibe that makes them what they are.

I sometimes think the tenderest word in the Bible and the sweetest is the most awful. And when I clasp my hands and lift my eyes up into heaven, and say, "Our Father," and then stop and think what earthly fatherhood is teaching children, I sometimes shiver at the falsity we are in danger of teaching in our homes. But, truly beloved Christian fathers and mothers and care-takers, if we will put round about our children the shield of patience and courage and love and hope, if we will train them to think the thoughts we want them to think in their manhood; to have the purity and the unselfishness and the courage we want them to have in their manhood; if we will train them as our Father trains us; not fearing to let the discipline of life come upon them; not fearing to let its winds, and its troubles, even, come upon them—if so be they grow strong to meet life's windings and to bear life's burdens—we have not only the law which I have tried to expound to you, but we have the promise of God's blessed exhortation, and his assurance: Train up your children—not govern them, not merely teach them—train up your children in the way they should go, and when they are old they will not depart from it. And if for a little time they seem to do so, the mother love, the father fidelity, and the sweet magnetism of a never-forgotten home will hold them fast and bring them back to life and to God again.—*Lyman Abbott, in Christian Union.*

"If it be possible," said Paul to the Roman Christians, "as much as lieth in you, live peaceably with all men." He did not say *some*, but *all* men. This may in some cases be a difficult task; and yet we are to do our utmost to follow this direction. The rule, though often violated, is a sound one in Christian ethics.

Every solitary kind action that is done, the world over, is working briskly in its own sphere to restore the balance between right and wrong. Kindness has converted more sinners than either zeal, eloquence, or learning; and these three never converted any one, unless they were kind also.—*F. W. Faber.*

CULTIVATED HAPPINESS.

How may one cultivate happiness? For one thing, instead of looking to the future, conclude to be happy in the present. No one knows enough of next year to depend on being happy then; nor is it well to wait till the new house is built, or the children are old enough to take care of themselves, or a fortune has been amassed. It is the case of the rich fool in the Scripture.

There is much pleasure to be obtained from little things that are often neglected as too trivial for notice; a flower in the window when a green-house is beyond one's reach; a book from the public library if one cannot purchase books of one's own, or paper-covered volumes when fine bindings are too expensive; the music of the voice when an instrument is wanting. There is almost always a substitute attainable for the pleasure that is desired, and the child who fishes with a bent pin and a string gets all the happiness of a fisherman from it.

There were never before so many enjoyable things accessible to the common people. With parks, art galleries, libraries, museums, the dwellers in cities have pleasure and information almost forced upon them; and for those who live in the country Nature's picture book is continually open. The trouble is, people do not appreciate what may be so easily obtained. Men like Thoreau and John Burroughs will note with a naturalist's delight the common sights of nature, and we enjoy reading their books; but the things themselves are all around us, and we take no pleasure in them. We need to learn to enjoy the simple daily joys of life, and to open our eyes to the wonderful world about us.

Some people lose the pleasure of life through sheer egotism. If for a few hours they could forget themselves they might be happy. It is an old saying that it is more blessed to give than to receive; and it is true in every sense. To give of time and thought and interest to others is infinitely better than to absorb it all in regard for the welfare of that insignificant but big-feeling "I." "Look out and not in," and "Lend a hand," are good mottoes for him who seeks true happiness. Busy he must be, for there is no pleasure in idleness; and the more help and comfort he can bring to his fellow-men by his labor, the happier he will be himself.

It is well to quit thinking of disagreeable things. No doubt they are plenty, but why pay any attention to them except to strive to overcome them? Don't roll trouble over and over until it has grown like a snowball. If you have a skeleton in your closet, just keep it there; don't let it out to terrify the rest of the family, and don't keep slipping away to take a private look at it. If you keep it shut up closely enough it may possibly crumble into harmless dust—bones do that way sometimes.

It is a great aid to cheerfulness "to count up your mercies," as the contented old lady put it. And remember that according to Mark Tapley there isn't any credit in being jolly under agreeable circumstances. He had finally to give up the task of finding a situation so wretched that there was any credit in being jolly in it. A good many persons are more easily satisfied, and take credit, not for being jolly, but for simply not grumbling at slightly annoying events.

These brief suggestions are only with regard to outside expedients; the true secret, simple and disregarded as it commonly is, lies in seeking true happiness, which is only found in God himself. All other happiness is temporary; this alone is permanent. It is, as has been beautifully said, when our will is parallel to God's that there is no cross; the cross is found when our will is at right angles with his. Human nature clings desperately to its own way and finds it hard to believe that happiness is found in the renunciation of self-will. But it is only when God's children can say with Paul, "For me to live is Christ, and to die is gain," that they know the meaning of "rejoice evermore." Then can they be calm in danger, and joyful in tribulation, and all things are well with them. This has made prisoners sing in their dungeons, and martyrs happy at the stake, and the happiness is the privilege and the duty of every Christian to-day. We not only may, we ought to be happy. How happy we might be, no matter how circumstanced, if once we would seek it in the will of God. God only knows how blessed he would make us if we would but let him.—*A. H. B., in The Occident.*

LECKY ON CHRISTIANITY.

If we were to judge the present position of Christianity by the tests of ecclesiastical history, if we were to measure it by the orthodox zeal of the great doctors of the past, we might well look upon its prospects with the deepest despondency and alarm. The spirit of the fathers has incontestably faded. The days of Athanasius and Augustine have passed away never to return. The whole course and tendency of thought are flowing in another direction. The controversies of bygone centuries ring with a strange hollowness on the ear. But if, turning from ecclesiastical histories, we apply the exclusively moral tests which the New Testament so invariably and so emphatically enforces, if we ask whether Christianity has ceased to produce the living fruits of love and charity and zeal for truth, the conclusion we should arrive at would be very different. If it be true Christianity to dive with a passionate charity into the darkest recesses of misery and vice, to irrigate every quarter of the earth with the fertilizing stream of an almost boundless benevolence, and to include all the sections of humanity in the circle of an intense and efficacious sympathy; if it be true Christianity to destroy or weaken the barriers which had separated class from class and nation from nation, to free war from its harshest elements, and to make a consciousness of essential equality and of a genuine fraternity dominate over all accidental differences; if it be, above all, true Christianity to cultivate a love of truth for its own sake, a spirit of candor and tolerance toward those with whom we differ;—if these be the marks of a true and healthy Christianity, then never since the days of the apostles has it been so vigorous as at present; and the decline of dogmatic systems, and of clerical influence has been a measure, if not a cause, of its advance.—*From "History of Rationalism in Europe."*

OBITUARY: HENRY RICHARD, M. P.

LONDON, August 21.—Henry Richard, member of Parliament for Merthyr Tydvil, and well known as an advocate of arbitration for the peaceful settlement of disputes between nations, died suddenly at Bangor, Wales.

Henry Richard was born in 1812, the son of a Methodist minister. For some years he was himself an "Independent" minister at Marlborough Chapel, Southwark, London. He was a thorough Welshman and commonly known among his colleagues in the House of Commons as "The member from Wales." His first public reputation was won as an advocate of popular education, and in defending the Welsh from what he regarded as false reports made by the Government Commission which was sent in 1846 to inquire into the state of education among them. Mr. Richard prepared and delivered an elaborate lecture, afterwards published in book form, as were also a series of letters printed later in the *Morning Star*—in both of which he refuted the adverse criticisms. Mr. Richard also published a "Life of Joseph Sturge" and an essay on "The Present and Future of India."

The work to which Mr. Richard more especially devoted his life has been the advocacy of peace and the establishment of international arbitration as a substitute for war. In pursuance of this work he traveled extensively, and his face was well known in all the chief continental cities. The earlier efforts made by him were in conjunction with Elihu Burritt, as early as 1846, and resulted in a memorable series of peace congresses held from 1848 to 1852 at Brussels, Paris, Frankfort, London, Manchester, and Edinburgh. The London Congress in 1850 was attended by a number of the most prominent anti-slavery advocates of America—Garrison, Wendell Phillips, Tappan, and others. These gatherings gave to the peace movement its first world-wide recognition. They attracted public attention and secured the pacific advocacy of Cobden, Bright, Lamartine, Arago, Humboldt, Liebig, Visschers, Suringar, Chevalier, Coquerel, Sir David Brewster, Varrautrap, Cormenin, Victor Hugo, Emile de Girardin, Beckwith, Garnier, and many others.

Mr. Richard succeeded in enlisting the late Lord Clarendon and his colleagues in the Congress at Paris, in 1856, in the advocacy of his views, and they were embodied in the celebrated protocol recommending States to have recourse, in case of disputes, to the good offices of friendly powers. The action of the Congress of the United States during the session of 1872-73, in favor of the principle of International Arbitration, was the result of Mr. Richard's persistent agitation, and since then the Parliaments of Italy, Sweden, Belgium, and Holland have made similar declarations.

Mr. Richard was first elected to Parliament for the Welsh Borough of Merthyr Tydvil in 1868, by a vote of two to one over Lord Aberdare, who, as Mr. Bruce, was Mr. Gladstone's first Home Secretary. Ever since then he has been regularly returned for the same constituency without opposition, except in 1880, when a Conservative candidate attempted to secure one of the seats for the Borough, but was defeated by a vote of two to one. Mr. Richard was an earnest advocate of Church disestablishment throughout the United Kingdom, and also urged persistently the perfection of a complete system of national and compulsory education.—*Exchange.*

NOW.

"WHEN I am lying pale and dead,
Come not, dear friends, around my bed
And pour your loss in deafened ears,
And wash my heedless face with tears.
What thrill of hope or tenderness
Will beat beneath my burial dress?
What look of gratitude arise,
And lift the lids of sightless eyes?
What loving voice escape those lips,
From which no speech or language slips?
Alas! I cannot rouse and say:
'If ye lament me I will stay.'
Speak while I hear, and while I long
To feel your love is true and strong,
While peace can soothe my troubled brow,
Wait not to miss me; hold me now!"

—*Rose Terry Cooke.*

A JAPANESE BRIDE.

QUITE as interesting as the scenery were the movements of a bride and a groom in the same car with us. We afterward learned that he was a Nagoya youth who had gone to Kioto and prospered in business, and had just been down to Nagoya to marry the young girl chosen by his parents and a go-between friend of the family. He was a raw, callow youth in appearance, and, spreading his rug on the cushions, lay down at half-length and obliged the bride to sit bolt upright in a small space. When he did sit up, it was he who leaned against the bride's shoulder, instead of resting her head on his shoulder in true wedding-journey style.

For the whole day that we traveled together it was his comfort and not hers that was considered. The groom hurried on board the steamer and into the next train of cars, and, helping himself to the only chair or seat, looked around curiously to sse where she was going to sit. The bride smiled sweetly all the time, and did not seem to think it at all out of the way for her to be cushion, or footstool, or baggage-porter for her lord. She wore a dark striped silk kimono and an ecru obi, brocaded with pine needles in black and gold. The Japanese reverse our customs in traveling, and wear their best clothes when on a journey, in order, they say, that their station may be known and proper attention paid them. The bride's attention was much occupied with her new gold ring, the wedding ring being a foreign fashion that they have taken up with enthusiasm. The gold band on the finger is fast replacing the shaved eyebrows and blackened teeth that used to distinguish the married women; but they adhere to the change in hair dressing, and after marriage red is no longer worn. The gay red crape petticoats, the red folds in the neck of the kimono, and the bits of red crape tied in the hair, disappear on the wedding day and the Japanese have the bitter maxim: "Love flies with the red petticoat."—*Japan Letter in St. Louis Globe-Democrat.*

THE CANNING OF PEACHES.

This industry has grown to enormous proportions in this country. Baltimore is the chief packing place, but a great many canneries—and their number is constantly increasing—are distributed through all the various peach districts. The present season will be the first for years that they have been able to get "a full packing."

They commence their operations about the 10th of August; the "Mountain Rose," a white peach, and the "Crawford Early," being the first peaches they get hold of, their time lasting from the 10th to the 15th of August. The next two varieties they take are the "Foster," and the "Reeves Favorites," (the former a white and the latter a yellow peach), then they follow with the "Oldmixon," "Stump the World," "Crawford's Late"—all old varieties, but good—and "Stevenson's Late." "The Smock" is a variety which has a rich yellow flesh, with a red centre around the stone. It is considered inferior to the others in flavor and is not put up except by the evaporating establishments, who prefer it on account of its beauty.

The tin cans used by the largest packers are manufactured by themselves at an average cost of two and three-quarter cents each. Granulated is the only quality of sugar used in canning, and the quantity varies from one to five pounds per dozen cans (each can weighing about three pounds when filled).

The peaches intended for cooking are allowed, according to their quality, from one to two pounds of sugar for each dozen cans; and those for table use, three to five pounds.—*Table Talk.*

The German Emperor has given his consent that the bust of a lady should have a place among the memorial statues at the Berlin University. The lady thus distinguished is the Countess Louise Bose, who at her death a few years ago, left nearly the whole of her considerable fortune to the Berlin University to enable poor medical students to pursue their studies, and to help medical men to enlarge their knowledge by making scientific journeys of discovery. This is a beginning to the opening of German universities to women, and we hope it will cheer on their way the brave ladies who have lately formed a Society at Weimar, which under the name of "Frauenverein Reform" has for its aim the opening to girls and women of all the professions at present monopolized by men. How great and difficult is their task, anybody acquainted with the "woman question" in Germany will understand.—*Pall Mall Budget.*

Badly shaped mouths result from children being permitted to suck their fingers. Another bad habit is biting the lower lip. The entire shape of the face is spoiled in this way. Red lips are the announcement of good health, and good health is the fashion. Women who have determined wills frequently get into the bad habit of drawing their lips together in a way they think expresses determination; the lips are pliable, and naturally assume the position oftenest given to them. So she who feels on pleasant terms with the world, and makes it a point only to say pleasant things, will have about her mouth what the French call riant—a look that tells of a laugh, without the sound and a smile that is not a smirk.—*Exchange.*

The Rockford, (Ill.) *Morning Star* devotes nearly two colums to the business women of that place who "earn their own living." It makes an excellent showing. Sometime we shall try to find space for it. But the article leaves out altogether the home-makers, the house-mothers, who earn their living many times over, and work more hours than any other class. They should be counted at least in numbers.—*Woman's Journal.*

Give thanks unto the Lord, call upon his name, make known his deeds among the people. Sing unto him. Sing psalms unto him, talk you of all his wondrous works. Glory ye in his holy name: let the heart of them rejoice that seek the Lord. O give thanks unto the Lord, for he is good: for his mercy endureth forever.—*I. Chronicles*, 16.

The truly religious man and woman will not tolerate a religion which is only a weekly parade, but which cannot reach down to the depths of one's nature and cleanse and purify it.—*Jewish Messenger.*

The true meaning and benefit of the Scriptures, is not attained to in the reading of them, unless the Spirit which gave them forth, do open and unseal the mysteries contained in them.—*Thomas Ellwood.*

They who delay setting out, merely because the road is difficult, or that they cannot see to the end of the journey, are in danger of being belated.—*Dillwyn's "Reflections."*

NEWS AND OTHER GLEANINGS.

—A Washington despatch to the Hartford *Courant* says: "Just complaint is being made of the defacement of the marble pillars of the capitol by the custom of draping the exteriors of public buildings when public men die. It takes about 5,000 yards of calico and costs about $500 to drape the exterior of the capitol, and the calico used once is never fit for use again. The black cloth works great injury to the marble walls and pillars. The dye transfers itself to the marble, and the stain is difficult to remove. Two or three years ago Congress appropriated four or five thousand dollars to have the exterior of the capitol cleaned. It is all streaked again."

—When the first electric telegraph was established, the speed of transmission was from four to five words a minute with the five-needle instruments; in 1849, the average rate for newspaper messages was seventeen words a minute; the present pace of the electric telegraph between London and Dublin where the Wheatstone instrument is employed, reaches four hundred and sixty-three words. And thus what was regarded as miraculous sixty years ago has multiplied a hundred-fold in half a century.—*Science.*

—The "Fire Rescue Exhibition" closed in London on the 4th of Eighth month. The contents of the exhibition were divided into three classes: (1) appliances for preventing fires, including fire-proof cements and chemicals; (2) appliances for extinguishing incipient fires, including

different kinds of hand grenades and domestic fire-engines; (3) appliances for escape from burning buildings. The third class was by far the largest class and the most interesting. Among fire alarms exhibited was one which rings automatically, being set off by the expansion of the air at the top of the room in which the fire occurs. A committee of experienced firemen are to draw up a report for publication, pronouncing on the value of the different contrivances exhibited.—*The American.*

—It is now possible to ascend Pike's Peak by wagon. Who among those who from a distance of 100 miles or more gazed in '49 upon this snow-topped crest supposed that in '88 a decrepit team of mules and a wagon with the tire wired on would ever desecrate the noble height! Of course tourists who have paused at the foot till now, will ride to the summit, breathe the thin, cold air, look upon the panorama of beauty which spreads to the Uintah mountains of Mormondom westward, and south to the Spanish peaks guarding the New Mexico line. They will be sure to do this. But the element of adventure is gone. The accomplishment is no longer a tug, a test of endurance, or a triumph.—*Omaha Herald.*

—The International Association, having for its aim the mitigation of the evils of intemperance, is to hold its next session in 1889 at Christiania. Norway is making great progress in the cause of temperance, and restrictive legislation with regard to the consumption of intoxicating drinks appears to have been attended with the most satisfactory results. About fifty years ago the annual consumption of alcoholic liquors per head of the population was estimated at about seventeen quarts; at present it is only three quarts. Sweden is advancing as rapidly as Norway, but there is much greater room for reform. She has succeeded in reducing her annual consumption from fifty-two quarts to about ten quarts.

—In consequence of the increasing number of accidents to tourists in the Alps, the Austrian Government has addressed a circular to the officials in the Alpine provinces instructing them to exert their influence towards the promotion of any measures tending to diminish the number of such casualties. They are urged to encourage the development of the guide system, and to endeavor to secure a reduction in the charges of the guides; they are also called upon to assist the Alpine Club in the work of making roads and erecting lodges on the mountains. The local authorities are expected to do their share in putting up safeguards against accidents. The circular points to the necessity of abating the present evil of marking out dangerous excursions to tourists.

CURRENT EVENTS.

THE yellow fever, at Jacksonville, Florida, continues serious, and has rather increased. The bulletin issued on Second-day evening showed 37 new cases and 2 deaths within the preceding twenty-four hours. The total number of cases had been 295, and the total number of deaths 36. Many people have left the city.

A HEAVY storm visited Hot Springs, Arkansas, late on the night of the 30th ult. Several buildings were swept away, and Mrs. Mattie Fletcher and her four children, colored, were drowned, and a woman named Harrison was killed by the collapse of a building. Several others, whose names were not learned, were lost. The victims were poor people living in small cottages, which could not stand against the storm.

THE public debt statement issued on the 1st instant showed that the reduction of the public debt during the month of August was $7,324,676.

SEVEN firemen were killed on the 2d inst., in a large fire which destroyed a block of buildings in Baltimore. The firemen were at work in the third story of a large drug-store when warning was given that the wall and roof threatened to fall in. They rushed down but seven of them were crushed by the falling floor. The explosion of fire works in one large shop and of cartridges in another added much to the confusion and danger.

A HUGE oil tank containing at the time 20,000 barrels of petroleum, burst on the 1st inst., near Oil Centre, Ohio. About two dozen men were employed about the tank when it burst and three of them lost their lives. The flowing oil was ignited from a neighboring forge and the whole was soon a mass of flame. There are sixty-four other large tanks in the neighborhood which were threatened by the flames.

LOVE OF GOD.

LIKE a cradle, rocking, rocking,
Silent, peaceful, to and fro,—
Like a mother's sweet looks dropping
On the little face below,—
Hangs the green earth, swinging, turning,
Jarless, noiseless, safe and slow,
Falls the light of God's face, bending
Down and watching us below.

And as feeble babes that suffer,
Toss and cry, and will not rest
Are the ones the tender mother
Holds the closest, loves the best,—
So, when we are weak and wretched,
By our sins weighed down, distressed,
Then it is that God's great patience
Holds us closest, loves us best.

—*Helen Hunt.*

For Friends' Intelligencer and Journal.

SETTLEMENT OF MIAMI MONTHLY MEETING, OHIO.

IT was a subject that claimed the attention of George Fox and some of his coadjutors that Friends should exercise care to preserve correct accounts of the first settlement of their various meetings. Philadelphia Yearly Meeting, at an early date, had this interesting subject before it, and quarterly and other meetings were encouraged to collect and forward to the Yearly Meeting accounts of the settlement of the various meetings. This was done by several meetings, and the accounts were handed over to Samuel Smith, whose works, I believe, yet remain inaccessible to the greater part of the Society; the younger members especially being unacquainted with the value of such records. Many interesting incidents are no doubt already lost and those yet remaining are not in a situation favorable to their preservation.

My attention having been recently turned to Miami Quarterly, Monthly, and Particular Meetings, I offer to the INTELLIGENCER AND JOURNAL the following, taken mostly from recollections of social converse with some of the early settlers of that meeting, who were witnesses to the privations of an early pioneer life.

The meeting took its name from the Little Miami River, that passes about a mile to the east of the site of the meeting-house which is on a hill rising probably over 100 feet above the river which flows through a very fertile valley of varying width and which is frequently overflowed by floods, preserving its richness so that the continued cultivation of corn for 80 years has not materially lessened the yield. Miami was the name given by the Sha-wâ-no-ese[1] tribe of Indians to the original possessors of the country bordering upon the great and little Miami rivers. The name this original tribe gave themselves was *Tewigh ewee*, and they claimed they were created in that valley, being there when the English first became acquainted with it. The signification of Miami is said to be equivalent to mother.

The first settlements by the whites was about 1796 by Samuel Highway, an English Friend, and some two or three others. But it is not known that there was much increase of settlers until about 1800, when several families of Friends from the Carolinas and elsewhere arrived, and a meeting was held at some of their houses. In 1801 or 1802 a meeting-house of logs was erected on the ground now occupied by the other branch of Friends. The town of Waynesville was laid out adjoining the meeting's property in 1802, by Samuel Highway. The site of the meeti ng-house commands a view of the river valley for several miles to the northeast. The certificates for Friends then were sent to Redstone Meeting, held at Brownsville, Penna., distant about 300 miles, which was the nearest established meeting for business until about 1804, when Short Creek and Miami Monthly Meetings were simultaneously established. The former was opened a month the earlier, and is about 200 miles from the latter.

From Miami, meetings were set up within a few years at West Branch, 40 miles west of N., now in Miami county, Ohio; Cæsar's Creek, 8 miles northeast; Center, 14 miles east; Clear Creek, 50 miles east, and several other places. The country was rapidly filling up, and as many as thirty certificates for families were presented at a time, and the sessions of monthly meeting sometimes were continued until near sunset. Miami Quarterly Meeting, if my memory is correct, was established by Redstone Quarterly Meeting, with the approbation of Baltimore Yearly Meeting, and was to embrace all the members west of the Scioto and north of the Ohio rivers. Redstone Quarterly Meeting with its monthly meetings, was pretty early established by Friends settling in the valley of the river Monongahela. (This is the southern affluent of the Ohio, uniting with the Allegheny at Pittsburg to form the river called by the Indian tribe which claimed to be the aborigines, *Ohio*. The name was pronounced in their very ancient language by sounds which we may imperfectly represent by O-he-zeeh, equivalent to the French *la Belle Rivere*. The Shawonese Indians termed it Kis-pe-li-ka, or Eagle river. The Shawonese in speaking referred to

[1] Shawnese in English.

themselves as Sha-wa-no. They were a Southern tribe that migrated to that section not far from 1750.)

At the time of settling Miami Monthly Meeting, Redstone Quarterly Meeting had two monthly meetings in Pennsylvania, in Fayette county, Redstone, held at Bridgeport, a suburb of Brownsville, and Westland, some 12 miles further westward. Other particular meetings probably existed. Interesting memoranda of a visit to these by Peter Yarnall may be found in "Friends' Miscellany." Few if any members now reside in its limits and no meeting has existed there for years. Its records ought to be in the care of Ohio Yearly Meeting. In 1812 a proposition was forwarded by Miami, Short Creek, and probably Salem and Redstone Quarterly Meetings for the establishment of a Yearly Meeting to be composed of Friends residing west of the Allegheny Mountains. I think it was the second time a movement to this end was made, and in 1813 Ohio Yearly Meeting was opened. The settlements around Miami continued to increase, and in 1811 a number of families of Friends settled a little north of where is now the flourishing and beautiful city of Richmond, Indiana. That neighborhood rapidly filled up, largely by Friends from the Carolinas, and a meeting was granted them, called from the name of the river near by, Whitewater. Other settlements followed and large meetings gathered. Quarterly Meetings were established at Miami, West Branch, and Whitewater, which applied for a yearly meeting for all Friends residing west of the Scioto river, in Ohio, and North of the Ohio—which request resulted in the opening of Indiana Yearly Meeting in 1823 with these assigned limits.

In the foregoing sketch reference has not been confined to the present limits of Miami Quarterly Meeting. Meetings were held in some places for a few years only or the name or place of meeting changed. Cincinnati, Springboro', Hopewell (Salt Run), Turtle Creek, Sugar Creek (a branch of Springboro'), Grove, were probably constituents of Miami Monthly Meeting about 1816. The Quarterly embraced Miami, Center, Clear Creek (Highland Co.), Fall Creek, Elk, Cæsar's Creek, and probably Fairfield Monthly Meetings, at one time, a territory afterwards containing Miami, Centre, and Fairfield, and parts of Alum Creek and Westfield Quarterly Meetings.

At the time of the Separation of 1828, Indiana Yearly Meeting had nine quarterly meetings reporting to it, supposed to have some nine thousand members.

Of the pioneer settlers of Miami Meeting few memoranda now exist. They were more particularly acquainted with the use of the axe than that of the pen. The observation of Joseph Cloud, one of them, probably conveys their feelings correctly: "When I die, just say Joseph Cloud is dead." While not destitute of literary ability, the necessity of a living overshadowed other considerations excepting religious duties. It is possible the misfortune of the Separation in '28 did much to lessen any desire to record passages that now would greatly interest some of this day.

Of Samuel Highway, the original proprietor and perhaps first settler at Waynesville, I have no account further than that his residence was southeast of the meeting-house, and on the river banks. How long he remained I do not remember to have heard. Some of his descendants were in the vicinity twenty-five years ago, but were not members with Friends.

Rowland Richards came from Virginia with a large family of daughters and I think, one son. The daughters were Abigail, who married Ezekiel Cleaver; Hannah, married David Halloway; Mary, married Wm. Mills; Sarah, married Judah Foulke; Katharine, married Isaac Mills; Sidney, married ———. Rowland Richards and his wife Lydia were advanced in years when they arrived, he being an acknowledged minister, and sitting at the head of the meeting. He was one of primitive appearance, and adherred to the broad pronunciation. A stranger called to see him and inquired if "Mr. *Ro*-land Richards lived there," when the old man replied: "No, *Ro*-land Richards don't, but plain Row-land Richards does." He was tenacious of his views of discipline. A young couple, somewhat related, proposed marriage, to which he strongly objected, but Friends generally assented, the parties not being nearer than third or fourth cousins. When the time for its accomplishment came, Rowland continued the sitting long and then rose and observed that he supposed there was a couple present to be married and he supposed they might as well proceed to say the ceremony, and then he walked out, not being willing to sanction the marriage by his presence. He was doubtless sincere in his views and his daughters were all an honor to their education. He went to Ohio from Virginia, but did not long survive, his widow living several years after him. Between him and his fellow minister, Joseph Cloud, the want of congeniality of sentiment was evident. Joseph was from one of the Carolinas, and imbued with some jealousy which then as well as now had influence against those of a northern or eastern State. Joseph was rustic in appearance and home surroundings, while Rowland Richards possessed more of the manner and habits of the Virginia gentleman. Of their ministry probably no fault could be found, each filling his allotment with true dignity, and being careful to mind his own calling. But in regard to business in the Society a difference of view was often found, accompanied with bluntness of expression. On one occasion Joseph gave his view of the subject before the meeting, at some length, and when he sat down Rowland arose and sonorously asked, "And who is this that darkeneth counsel with words without knowledge?" to which Joseph quickly answered, "If I have darkened counsel do thou unfold it."

Joseph Cloud's residence was some 3 miles nearly south of the meeting-house, on the east bank of Miami, where he farmed for a living. A neighbor going there on business found him in his barn treading grain out of the straw with his horses (the usual way before threshing machines came). Several being wild colts and without bridles, he was driving them around the floor rapidly and applying to them epithets not usually found in the vocabulary of a

Quaker minister. He spent considerable time in visiting Friends in adjoining neighborhoods. At one time he visited several places and had performed his expected service and the Friend accompanying him inquired whether any further had opened. He replied in the negative, and said they would get home as soon as they could. The Friend observed the road was by a Friends' meeting-house, where next day would be their regular meeting. Joseph said he did not intend to stop but go home as quickly as he could. In the morning they started pretty early, and as they came near the meeting place found several Friends going to their meeting, who expressed satisfaction at the prospect of their company, but Joseph told them he was not going to stop. After passing the house they met others who were surprised that Joseph and his companion did not stay to the meeting. But on he would go, for he said he had no business there, for it was not his meeting. After they had passed all, Joseph and his friend conversed for some time as they rode along the narrow path, when at length the latter who was before, discovered Joseph did not reply to his remarks, and looking back discovered him at a considerable distance galloping his horse as fast as it could go, returning to the meeting, and by the time the friend reached the house Joseph was powerfully addressing the company.

He had several sons, who were brought up in much restraint, and who as soon as they became of age gave wide scope to their inclinations.

R. H.

Haddonfield, N. J.

For Friends' Intelligencer and Journal.

BENJAMIN G. FOULKE.

Born Seventh month 28, 1813. Died Eighth month 14, 1888. Interred in Friends' burial ground at Richland, Pennsylvania, Eighth month 18, 1888.

At the close of a life such as his,

"If we, who loved him, drop our tears,
We mourn no blighted hope or broken plan
With him, whose life stands rounded and approved
In the full growth and stature of a man."

A man faithful to the call of duty, of unquestioned probity, and unusual forebearance, he leaves no memory of service uncompleted, of hopes deferred, or plans evoked. He was staunch in his adherence to, and advocacy of, the principles of the Society he loved so well, and of which he was a conscientious and valued member. He was made an Elder of Richland Monthly Meeting at the age of 34 and served in that capacity until his death, a term of 41 years; and was successively chosen clerk of his own monthly and quarterly meetings and of the Meeting of Ministers and Elders. For thirteen years he acted as clerk of Philadelphia Yearly Meeting of Friends, and to each of these important positions he brought much dignity and earnest thoughtfulness. His clear perception and great moderation enabled him to quickly gather the sense of a meeting, and embody its judgment in most fitting terms.

One who knew him well has said of him: "Efficient and sharp sighted at the clerk's table, sedate and solemn in the gallery, and then so genial in the social circle, that he was beloved as well as esteemed."

Another, an aged Friend whom he much revered, in speaking of his many virtues added: "Where shall we see the man who combines the settled decision, the clear judgment, and deep religious experience which he possessed. I have in former years sat by him at the clerk's table and marvelled at the promptness with which he solved difficulties to the satisfaction of all."

Gifted by nature with a good intellect and excellent memory, his varied reading stored his mind with much useful information. He was an interesting talker and socially a welcome companion, especially of young people, and there are many who will cherish the remembrance of the pleasant hours passed with him.

Benjamin G. Foulke commenced his business career as a surveyor and conveyancer, and finally became engaged in securing the right of way for the North Penn and Bound Brook Railroads. His extensive business acquaintance and strict integrity of character caused many large interests to be entrusted to him; and he by his sound judgment, quiet manners, and Christian forbearance so guided his footsteps that he was never engaged in any kind of litigation or business controversy. His knowledge of the laws of real estate and orphans' court settlements was largely relied upon by the community, and for many years he was consulted or employed in weighty matters relating thereto. Those of his friends who recently gathered at his hospitable home to celebrate the fiftieth anniversary of his union with one to whom his love had been the guiding star of her life, will find it hard to realize that so quickly has reached the reward so soon been taken home, the genial spirit which that day bade them welcome. He was fully aware of the serious nature of his last illness, and "The light within," that through life had been his strength and comfort, grew brighter and more bright as the end approached. In the hours of intense suffering his fortitude and sweet submission were a beautiful evidence that the sustaining Power was very near, and fearlessly he was led "step by step" to his Heavenly Father. Ours is a selfish sorrow! We mourn the devoted and tender husband, the loving father, the steadfast friend. He

"Finished his work and kept his faith
In Christian firmness unto death:
And beautiful as sky and earth,
When autumn's sun is downward going
The blessed memory of his worth
Is round his place of slumber glowing!"

E. B. F.

Yet shall the blue-eyed gentian look
Through fringed lids to heaven,
And the pale aster in the brook
Shall see its image given.

The woods shall wear their robes of praise,
The south wind softly sigh,
And sweet, calm days in golden haze
Melt down the amber sky.

For Friends' Intelligencer and Journal.

SARAH B. FARQUHAR.

A LIGHT goes out in some home. A pure and upright walk is ended upon earth. A bright example is taken from among us. A love centre vanished. An old and honored land-mark removed forever; and we feel that we must speak, that we cannot keep silent when the heart cries out. And yet we ask if it is worth while; if it will serve any good purpose to the living—this love we would fain express. We fully agree with the Editors of the INTELLIGENCER that notice of the dead should not be only tributes to their merits and virtues, but should tend emphatically to the bettering of those who read them; we humbly trust, therefore, that these earnest words concerning the life and character of our cherished relative, Sarah B. Farquhar, may reach some tried spirits and, perchance, give them new heart. Of a timid and retiring nature, shrinking from responsibility,—shielded in earlier life by a wise and tender father, and later by a devoted husband, she was suddenly left, while yet a young woman, with six little children whom she must rear and educate, and this too with very slender means. The history of her patient and steadfast endurance, of her unflagging industry, of her struggles, and of her *success*, is written upon the hearts and lives of the loving children and grandchildren who, in truth do "arise and call her blessed."

And not only this; she has been an influence for good in her neighborhood far and near, her gentle self-effacing yet active charities are attested by many humble homes and hearts that her works and her words have brightened,—these and her wonderful industry, extending into her eighty-third year! In winter weather so severe that we younger ones would not have braved it, I have heard of her at a neighbor's assisting in some urgent work for a destitute home. And a son whom I saw a few days ago showed me with pride and bitter sorrow the suit of clothes which her precious hands had made for him this very spring; a sister telling me at the same time that there lay then in his bureau drawer six pairs of new stockings knit and placed there by this loving mother; these things may sound trivial to some, but they seem to me well worth the telling; they are or should be aids and strong encouragement to practical and continued usefulness.

She was deeply interested in our valued Society, was a constant attender at meetings, let the weather be what it might—very humble, doubting her own ability for active service in the Society she dearly loved—but oh! so faithful, so consistent, so true!

Since the time when her young husband was snatched from her side by an acute attack of pleurisy and she knew that the rest of the hard journey must be made alone, she has seemed to live out in verity these lines of Samuel Longfellow:

"Embosomed deep in Thy dear love,
Held in Thy law I stand;
Thy hand in all things I behold,
And all things in thy hand;
Thou leadest me by unsought ways
And turn'st my mourning into praise."

She had a long and severe illness, lasting fifteen weeks, and we marvelled that such suffering should come to one who surely needed no further disciplining. This, however, was the result of natural law. Peacefully and quietly she entered "that tranquil land" and may we not believe of her—of our beloved and revered Mary S. Lippincott, Deborah F. Wharton, and others as good and pure as they

"That ever near us tho' unseen
The dear, immortal spirits tread,—
For all the boundless universe
Is life; there are no dead."

Sandy Spring, Md. C. H. M.

PROVISION FOR DEPENDENT CHILDREN.[1]

ALL childhood commences life with certain inherited tendencies peculiar to its paternity. On this state of heredity and the surrounding influences to which development is subjected, seem to rest the formation of character. Thus there appears to be a destiny awaiting every child dependent on former or present influences. From which it would seem that each one is not so much the builder of his own character as we are usually taught to believe. As a result of these influences, the mature man is measurably powerless to be better than he is. Accountability of the adult life therefore looks forward to a purer posterity and *into* the present right development of the rising generation.

It is not within the scope of this paper to discuss the aspect of moral duty in these matters, nor to consider the case of those provided with virtuous, painstaking parents, and with homes of comfort, but to confine the thought closely to a few practical observations bearing upon the guarded care of that class of youth known as *dependent children*.

Because a child's progenitors have been ignorant, and bred paupers, is no reason why criminals and paupers should continue to be propagated. Every State should have such laws as would protect the child, and by so doing protect itself from being obliged to support the children after they have become criminals by *neglect*.

Take the child who is surrounded by a loving home and happy influences, and observe the many admonitions needed, here a little, there a little, to guide it safely day by day from infancy to manhood and womanhood. Is it any wonder then, that he who is "nobody's child" if left to himself, with his inherited tendencies, should become idle and vicious?

Many of these children are the hapless victims of previous wrong-doing, and in order to prevent crime, or bring it under control, we must begin at the *source*, by properly caring for this class of children.

The heart of the true philanthropist, warmed with awakened thought and sympathy, and warned by a correct knowledge of sequences, reaches out after these helpless little ones, with an eager desire to embrace them within some helpful, protecting care, and turning to his co-workers thoughtfully and prayerfully asks—*what shall we do with them?* The charitable

[1] A paper read at the meeting of Friends' Union for Philanthropic Labor, in New York, Sixth month 2, 1888.

institution is needful for the care of the incorrigible, insane, idiotic, epileptic, and otherwise infirm or disabled. Such an institution as that at Elwyn, in Pennsylvania, for the feeble-minded, is a blessing and an honor to any State, when there are so many of this unfortunate class needing care.

The private family system, as operated through the "Children's Aid Societies," commends itself to our favor as the most natural and practical method of providing for the future well-being of the pauper-child, who is not infirm.

Under this system the child receives the restraining and moralizing influences of the family circle, with its varied relationships of parent and child, brother and sister. Here they learn the first great lessons of childhood—the duty of obedience to a loving and *personal* being—instead of the inflexible rules of an *impersonal* institution. Assigned to the little duties incident to a country home life, they are taught valuable lessons in individual faithfulness, responsibility, gratitude, affection for the family and neighbors, kindness in the treatment of animals, the rights of others, the rights of property,and the varied refinements to which the plastic mind and heart of youth is susceptible. It is under this natural interchanging method of giving and receiving, of loving and being loved, that they grow up to be practical, provident and useful, in a degree not attainable by the ordinary institution life.

In Pennsylvania five years ago the subject was agitated throughout the State. It was thought by many, that no other method would be successful than the building of institutions for the pauper children. Objections were urged against this method as simply assuming that the continual and ever enlarging burden of pauperism must go on, which assumption is unworthy of the intelligent population of any State. It was considered the better method of reclaiming such children from the taints of pauperism to introduce them into active life so as to become useful and worthy citizens by means of the well ordered family home, where each child may have the care, education, and industrial training as under parental authority ; which sentiment was soon after enacted into the laws of the commonwealth.

This salutary law requires that no child between the ages of *two* and *sixteen* shall be retained in any almshouse of the State for a longer period than sixty days.

The noble philanthropic women arose in behalf of the children and proffered most valuable aid in the care of them. "Children's Aid Societies" have been formed in most of the counties of the State, the object of which is the removal of all children from almshouses and other pauperizing influences, into respectable families. After being placed into what appear to be suitable homes, committees visit them periodically, to ascertain if they are being properly cared for, trained and educated, as every child is required to have at least *three months'* schooling during the year. By this means the children receive protection, until they have attained a proper age to assume the responsibilities of life. The Aid Societies also render aid to all classes of dependent children, whether they be chargeable to the county or otherwise. Valuable assistance is given to indigent mothers, who are found places at service in good families, where each can support herself and child.

This work being one of love and tender sympathy, very appropriately devolves upon the women of the land. Young women and girls lend their aid and find great pleasure in the work for the uplifting of humanity, by casting the sunshine of their own pure hearts into lives that have been shadowed from the very beginning.

By the careful training of dependent children from infancy to years of rightful understanding, invaluable aid is extended to the faithful workers now laboring in the great problem of social purity.

Now that the family home system is no longer an experiment, we would in conclusion express the hope and desire, that all whose services have been called to this special work, might early come to see the wisdom of adopting this most natural and effective method, and labor to hasten the time when we shall no longer need an asylum for the orphan, nor an institution for the friendless, when the work can be better done by the aid societies, who shall provide a home for every dependent child in the land. So plain a duty as this can scarcely be called by the name of charity. It is the voice of God appealing to the faithful heart, to go, protect and save these helpless ones from a possible life of degradation and woe.

The maintenance and perpetuity of our republican government and all its blessed institutions, are dependent upon the virtue and intelligence of our people. As far as possible, no child should be allowed to grow to maturity without the opportunity of coming under the sacred and refining influence of a well ordered home. If we would have a community pure, we must have a pure home life. If we would save the nation, we must save the boys and girls ; for God's promise of strength is to him that "visiteth the fatherless and considereth the poor."

John J. Cornell said that the State Board of Charities, (New York), had reported that there were 21,000 children in the State charitable institutions. Inquiry shows that the institutions are themselves a cause of pauperism. In several instances as many as five successive generations of paupers are known to have been the result of the method of care for the dependent in public institutions.

Jesse H. Griffen asked—What brings children in large numbers to pauperism? The Superintendent of the Asylum for the feeble-minded at Elwyn, Pa., where there are about five hundred inmates, says that the cause of the unfortunate condition of at least nine-tenths of those under his charge is strong drink.

William M. Jackson said that experience showed that environment was much more influential than heredity in determining the character of the moral development of the young. Numerous instances show that pauper children when surrounded by the more favorable influences have been developed into what is noble and good.

YARMOUTH AND THE RETURN TRIP.

Very busy were the days allotted for our stay in Canada, but good use was made of the time between the several meetings for observation of our surroundings. Some of these meetings have been elsewhere noted, and the First-day School General Conference of the seven yearly meetings, the objective point of this Canadian visitation, will also be fully reported in these columns. I want, however, to say of this gathering that, having been in attendance at most of the fifteen previous meetings of the Conference, not one of them equalled this in the earnestness exhibited, the order and directness of the remarks to the subject under consideration, or, better than all, the harmony and religious feeling that characterized each session.

In our visits to the many kind friends whose homes were hospitably opened for guests, we could but notice the profusion of flowers and their vigorous growth, the beauty and thriftiness of their trees, the sugar maple being native and plentiful, also the abundance and fine flavor of their early varieties of apples, though smaller in size than most of our summer fruit. The quince was observed to be of large growth as to the trees, and the fruit thereon abundant and looking perfect. The climate being colder and seasons shorter than ours, we ought not to have been surprised at finding that much oats remained to be cut at that date,—8th mo. 20th. Nevertheless, it did seem strange, and also to find raspberries and gooseberries still on the bushes, and tomatoes and melons, so plentiful with us, not yet ripe. The short seasons must be some disadvantage; otherwise this portion of America's broad domain, seems most favorable for good homes for farmers.

But all occasions must terminate sometime, and on the closing of the Conference at the end of the second day's session, those who from distant parts of our heritage had so pleasantly and profitably mingled, were obliged to separate; some to pursue their trip to the St. Lawrence, Thousand Islands, and other noted localities, others direct to their homes in the West and in other parts of Canada, but the most, perhaps, returned, by the continued kindness of their friends, to St. Thomas, taking the East bound trains via Niagara. Our party, making the trip by night, were favored to see the country by moonlight, which gave its peculiar charm to the views of the Falls obtained as we passed over the Suspension Bridge that connects Canada with "the States."

A day can always be well spent at this most wonderful place, even by those who have previously witnessed the awful grandeur of the scene; and those of us (and there were several) who viewed it for the first time, will remember it as one of the sights to be long treasured. Niagara is one of Nature's marvels that cannot be adequately described, neither can the artist sufficiently protray the beauty, color, and volume of water in such rapid motion as is here witnessed. It must be seen to be at all realized, and as the State of New York has now obtained possession of the ground surrounding the American Falls, they can be visited at a moderate cost, and it is a treat that all who enjoy the grandeur of nature should indulge in at least once in a life-time.

The ride from Niagara through New York State to Geneva is varied and interesting, past large apple orchards giving promise of our winter stores of this valuable fruit, and vineyards with their wealth of grapes, fields of buckwheat whitening for harvest, occupied our vision till the darkness settled upon us.

After a night of rest in the pretty town of Geneva we took the boat for a sail on Seneca Lake, one of those beautiful inland seas without apparent inlet or outlet, clear, blue, and placid, and said to be "without bottom." It affords fine sailing, which is especially enjoyable after hours of riding in a crowded car. We experienced a feeling of sympathy in the joyous exuberance of life that characterized a picnic party which shared the deck of the boat with us, as we watched the ripples beneath us, or viewed the well cultivated hillsides that sloped down to an abrupt rocky shore, affording but few landing places in the entire 40 miles length of the lake. Reaching the end we are at the famous Glen of Watkins; here, too, a day can be well spent. Here is another variety of picturesque scenery well repaying a visit, though not so grand as Niagara. The Glen is the great attraction, but the view from the mountain of the beautiful lake, nestling so calmly amid the hills, with the picturesque town on its banks, is one of the charming sights of the place.

A fresh morning ride of an hour, during which we pass the vine-covered hillsides, whose bunches of luscious grapes are ripening to fill the countless number of baskets we have just seen stored away ready for use at Watkins, also acres of fine celery that finds so ready a sale in our markets, and we land at Elmira, having arranged to spend a few hours for the purpose of visiting the famous Reformatory, an institution which is a credit to our age. Its position, on a hill two miles from the city, is very fine, commanding a view of the "everlasting hills." We were cordially received and a guide promptly conducted us through the various buildings where the effort is made to restore criminals, placing them under reformative instead of penal treatment. Here are nearly 800 men and boys convicted of every variety of crime except murder, undergoing what may be termed a curative process that has been, so far as tested, very successful in turning many of them from evil ways. The system is one of promotion, and all the prisoners can earn an earlier release than the extreme of their sentence by a regular systematic plan dependent upon industry and good conduct. They have three grades,—one, an ordinary citizen's dress, which all assume upon entering, and they are promoted downwards to the third grade, a prison suit of red flannel, for misconduct; or behaving well, upward to the first rank, a military suit of blue. Upon seeing the cells of the last class, with their comfortable spring beds with white covers and neat cupboard and book shelves for their individual belongings, together with their pleasant dining hall, with its white covered tables and bright dishes, and learning of their bill of fare—quite different from the ordinary prison rations—we marvelled not that their am-

bition could be aroused, and that no further punishment was necessary than to curtail or promote to these privileges. This treating them as men and brothers and training them in the ways of honest life, cannot but have a good effect on many, and is certainly worth its cost.

The visit to the work-shops lacked the interest that would have attended it a month ago before the enforcing of a late law, (passed at the special session of the Legislature, in Seventh month) which prevents lucrative work being pursued in the prisons of New York. The machinery previously used was mostly packed up and stored away and in lieu of work the men were being put through a form of military drill for exercise. Some work for the use of the prison itself is permitted, and trades are taught, one set being occupied in the building of a brick house, another a frame one, while a third mixes the plaster and puts it on the walls; and this all in miniature, inside of the great workshops. Various other occupations are taught, as well as work on the large farm. But the stimulus of labor for results other than the learning to perform it, is missing, and the officials were emphatic in their desire for the repeal of a law that they think must work disaster to their system of prison reform.

The school instruction outlined for their prisoners is very creditable, as is also their provision for moral and religious training. A large proportion are of foreign birth, and almost one-half from the city of New York. In their annual report, a copy of which was given us, there is much to interest and instruct, especially in the "biographical statistics" of the inmates, which are a sermon of themselves. One item we feel like quoting, *i. e.*, the percentage from good homes, of these prisoners being 9 per cent., while those from positively bad ones, 52 per cent. Much of interest remains to be told, but as the reader might weary, we can only counsel all interested in prison reform to make a visit to the Elmira Reformatory. The afternoon's ride was again over the Lehigh Valley Railroad, and we renewed our acquaintance of ten days before with its beautiful sights, reaching the summit at sundown and watching the foaming waters of the Lehigh till darkness added a new charm to the scene by the countless bright lights that gleamed from the dwellings on the hillsides. At Mauch Chunk this was most noticeable, and we could but exclaim, "Blessed be he who discovered this means to so brighten these homes," remembering the grimy candles of the past, that failed to reveal many things that were evil, and which now vanish in the presence of greater light. Setting foot upon our own soil we are thankful for the privileges we have enjoyed and glad to be again at home, that precious blessing that all who enjoy a true home know well how to prize.

L. H. H.

He that would employ his abilities, his influence, and his authority, in the reformation of others, must take care to reform himself before he enters upon the work. "When thou art converted," said Christ to St. Peter, "strengthen thy brethren." (Luke xxii. 32.)—*Horne.*

SCRIPTURE LESSON, No. 37.

Ninth Month 23, 1888.

Topic: THE LIFE OF THE RIGHTEOUS.

Golden Text.—"The path of the righteous is as the shining light, that shineth more and more unto the perfect day."—Proverbs 4 : 18.

Read Deut. 34 : 1-12.

Moses, the leader of the migration of the Israelites, draws near the end of his pilgrimage. Aaron, his brother and constant companion, has, in the solitude and grandeur of Mt. Hor, divested himself of the robes of his priestly office, and placed them upon his son Eleazar. Then he passes from earth and finds a burial place on the lonely mountain top. Thirty days of mourning were kept, and after they were ended the whole multitude took up their line of march by the way of the Red Sea, which, forty years before, their fathers had crossed in their first journeyings. Again they "speak against God and Moses," and are made conscious of their sin. They journey onward through many dangers, and the oppositions of the petty kings or chiefs of the tribes that occupy the country which they pass, and come into the region of Mt. Nebo, from which Moses is permitted to look over the whole land that Jehovah "had given to the children of Israel for a possession." (Deut. 32 : 50.)

And Moses passed from human sight, and was buried in the valley, in the land of Moab, the place of sepulture being kept from the knowledge of the people. He had attained the age of one hundred and twenty with undiminished vigor.

Before his death Moses had "laid his hands upon Joshua," and consecrated him as his successor, he being one who, because of his courage and wisdom, was favored of God, and permitted to lead the Israelites into the promised land. The tribes were encamped at the ford of the Jordon when "Moses went up from the plains of Moab" to the mountain over against Jericho, the city of palm trees, and Jehovah showed him all the land of Judah unto the utmost sea, and the south, and the plain of the valley of Jericho, and said, "I have caused thee to see it with thine eyes, but thou shalt not go over thither." So Moses, the servant of Jehovah, died there, in the land of Moab, according to Jehovah's word.

The career of Moses, the deliverer of the Israelites from Egyptian slavery, now drew to its close. Commencing his great work, as the record informs us, late in life, for which the study, the experience, the communion with God of fourscore years had prepared him, he pursued the difficult path marked out for him by Divine Providence unfalteringly, while his powers of mind and body held out. For forty years he had borne with the weakness and perverseness of his people. With that heavy responsibility weighing on him continually, it was yet a rare thing for his repose of spirit to give way, however deeply tried by that wayward nation. His life was devoted to a noble purpose. He had turned aside from the honors and distinction, that it would seem awaited him at the Egyptian Court, to become one with a despised and degraded race. The author

of the Epistle to the Hebrews justly calls this an exhibition of the spirit of Christ. The merit of the Hebrew Lawgiver has its root in self-sacrifice, of which, until the coming of the "Prophet," foretold by him, there is scarcely a finer example in all history. (Deut. 18: 15.)

In our narrower sphere we have seen men and women inspired with a measure of this noble quality, whose beautiful lives left the fragrant memories we cherish of them, by reason of their forgetfulness of self and their unwearied efforts for the good of others.

Mothers, as a rule, it may be said, tread this path of unselfishness with beautiful fidelity; the righteous life is exemplified by them under petty trials, scarcely found in the lot of any others, and how bravely they bear them! The secret with Moses, Samuel, Paul, as examples of righteous living, was their love of God, of truth, of goodness, and this led to their love for their fellow-men.

CO-OPERATION IN THE HOME.

WE have coöperation to meet the various exigencies of business and benevolence, and so far as it leads to unity of purpose and endeavor it is helpful, and enables those who thus work together to accomplish vastly more that can be done by individual labor.

But nowhere in the whole range of human effort is coöperation so important and fruitful of best results as in the family, where unity in all that pertains to the welfare of its members should be the first consideration of those who are the heads of the family. The home is a miniature world in which centres all the interest of the several constituents. The fact of a home presupposes joint partnership and this again calls for such deference to the wishes of each as joint partnership involves. There must of necessity be concessions, and these should be mutual. It is just here that the home so often fails of its highest purposes, just here lies the rock upon which it may be dashed to pieces. When the "forbearing one another" in love is wanting, there can be no true home life; as the years roll on the two who were meant to be an unit in all that concerns unity of interest and affection, find themselves farther and farther apart.

And in the management of the children, how essential is coöperation on the part of the father and mother; yet how often in homes where the very atmosphere is love, do we find the children vacillating between two lines of discipline, for the reason that the parents have never agreed upon a basis of family government in which harmony of action shall be secured. The question should come up in every family where there are children, and for every child as it attains conscious existence: how shall parental authority be administered that it may develop the best results in the children and cultivate a spirit of willing obedience to the parents and of loving self-denial and loyalty towards one another? These are qualities of heart and mind that must be developed through training, and it is in methods of training that parents so often differ: one would accomplish the desired result through moral suasion, the other believes there are times when to "spare the rod" is to "spoil the child;" each is sincere and has only the best welfare of the children at heart, and yet if one acts out the individual conviction without regard to the wishes or convictions of the other, then must come sooner or later a conflict of authority that may be of incalculable harm to the disposition of the child.

It wants only for parents to have a fair understanding of what family government aims at, to see that there can be no prescribed line that will meet every case, and that both methods will have to be adopted. The object of discipline is not simply to enforce parental authority, but to develop in the child a sense of limitation to his desires, to teach him that the rights of others must be considered as well as his own, and that the parent is a much better judge than himself, of what he may do or have, without trespassing upon the province of another.

Our little children are what our family government makes them, to a far greater extent than most of us are willing to admit; but it can scarcely be called a failure, even if the success has not been all that was hoped for when there has been such a unity of purpose between the parents that the children know of but one law, and that the law of love which compels obedience for love's sake. The old maxim, "Train up a child in the way he should go, and when he is old, he will not depart from it," has lost none of its force and significance in all the centuries that have passed since it fell from the lips of Israel's king.

MARRIAGES.

AMBLER—HALL.—On Ninth month 5th, 1888, at the residence of the bride's parents, under the care of Goshen Monthly Meeting, Louis Bartleson Ambler, son of William and Mary B. Ambler, of Norristown, Pa., and Mary Agnes, daughter of Morgan B. and Susan S. Hall, of Sugartown, Chester county, Pa.

HOLME—MILLER.—By Friends' ceremony, at the residence of the bride's parents, Ninth month 6th, 1888,

Charles E. Holme, son of Eleanor and the late Thomas W. Holme, and Mary T., daughter of Joseph G. and Isabella T. Miller, all of Brooklyn, N. Y.

DEATHS.

BROWN.—In Wilmington, Eighth month 28th, 1888, Susan Brown, in the 87th year of her age ; a member of Wilmington Monthly Meeting of Friends.

FAWCETT.—On the 25th of Fourth month, 1888, at Zanesfield, Ohio, Lucetta Thomas Fawcett, wife of Oliver Fawcett, and daughter of the late Jonathan and Sarah Thomas, aged 55 years, 9 months, and 17 days .

She was a lifelong member of Green Plain Monthly Meeting of Friends. She was very exemplary in her life and conversation. When in health, in the social circle, she was wont to turn the conversation into a religious channel, and enjoyed talking of the loved ones in Heaven. Once, before her last severe illness, she had a vision of her father, mother, brother, and two sisters who had died some years before; this vision and the impressions connected with it, lifted her into an atmosphere of peace and trust. She was devoted to her home, her husband, and three sons, and was ever ready to make sacrifices for their comfort, even in her last illness desiring that she could do more for them. The moral character of her sons gives evidence of the value of her counsel and prayers. She was highly esteemed in the community as a friend and neighbor, and sad indeed was the stroke that fell upon relatives and friends when she was called home. Much sympathy was felt and expressed with the bereaved family. May this dispensation be sanctified to the good of all who knew her. "For the lamb which is in the midst of the throne shall feed them, and shall lead them unto living fountains of waters : and God shall wipe away all tears from their eyes."—Rev. 7 : 17.

O . F.

FOGG.—Ninth month 3d, 1888, Joseph T. Fogg, in his 59th year; a member of Pilesgrove Monthly Meeting, N. J. Interment at Mullica Hill.

GARRETT.—At his residence, Media, Pa., Ninth month 3d, 1888, William Lewis Garrett, aged 56; a member of the Monthly Meeting of Friends of Philadelphia.

KIRK.—In Byberry, Pa., Sixth-day, Eighth month 31st, 1888, Martha, widow of Samuel Kirk, in her 79th year ; a member of Byberry Monthly Meeting.

LORD.—Near Parkville, N. J., on Second-day, Ninth month 3d, 1888, Benjamin J. Lord, in his 76th year. Interment from Woodbury Meeting.

McGOWAN.—In Jersey City on the 26th inst., of dysentery, Jane McGowan, for fifteen years a faithful servant in the family of the late Jonathan Thorn. The above notice, taken from a New York paper, will be read with interest by many who have received hospitality in the house where this "good and faithful servant" performed her daily duties, during the recorded years. Doubtless by such her kind attentions are held in grateful remembrance. E. W. A.

MASON.—By lightning stroke, on the 7th of Seventh month, 1888, Charles A., son of George and Margaret G. Mason, in the 14th year of his age ; a member of Maple Grove Monthly Meeting of Friends, Indiana. He was an uncommonly beautiful lad, fond of attending meetings and First-day schools, often holding serious conversations with his mother on the Bible, death, and the future state, and but the week before his death said to her, "I do not know but I may be struck dead any day." He was fond of reading the following lines emphasizing the last ones :

"For us who in these latter days
Look back to see God's ancient ways ;
For us, for all, the young, the old,
These sacred leaves their truths unfold.
Examples dark or bright are given
To warn from ill, or point to Heaven ;
Proclaiming that all sin is death,
All trusts in man an empty breath,
And every hope a broken reed,
Which springs not from the promised seed ;
Therefore, O ye who feel secure,
Take heed, is *your* foundation *sure?*" E.

MORRIS.—Eighth month 20th, 1888, at his residence, near Cambridge City, Wayne county, Indiana, Samuel Morris, aged 84 years and 6 months ; a lifelong member of the Society of Friends, and for many years an esteemed elder of Milford Monthly Meeting.

He was the last of the pioneer settlers of that part of Wayne county, having moved with his parents from North Carolina in early boyhood. He was a man of quiet demeanor, but very social and hospitable, and for many years his house was the home of traveling Friends, and the stopping place of many who were attending the Quarterly Meeting when held at Milton or Dublin. He was looked up to by all who knew him as an example of honesty and straightforwardness, and was very useful in his meeting, traveling much on committee service. As a sheaf of grain, ripe and ready for the harvest, he has been gathered in. While eating his dinner he suddenly threw up his hands with a groan, and in five minutes the breath of life had left him. "Blessed are the dead who die in the Lord from henceforth. Yea, saith the Spirit, that they may rest from their labors, and their works do follow them." E.

SATTERTHWAITE.—Ninth month 5th, 1888, at her residence, Mansfield, N. J., Achsah Satterthwaite in her 87th year.

WALTER.—At Media, Pa., Ninth month 8th, 1888, Ruthanna, wife of Nicholas F. Walter; a member of Chester Monthly Meeting.

WORTHINGTON.—In Byberry, Pa., Ninth month 1st, 1888, Comly Worthington, in his 72d year; a member of Byberry Monthly Meeting. He often felt it right to give expression by way of testimony in our religious meetings.

EDITORS INTELLIGENCER AND JOURNAL :

The name of the Friend whose obituary was sent you last week was Phebe M. Steer and not Phebe M. Star, as you have it in this week's issue. W. W.

LETTERS FROM EUROPE.—XXVI. A VISIT TO PARLIAMENT.

LONDON, July 8, 1888.

THROUGH the courtesy of our legation I had the pleasure of attending sessions of the Houses of Parliament. Access to the Houses in session has always been difficult, but it has been much more so since the attempts of the dynamiters to blow up the Houses and other public buildings. Formerly the public were admitted to the buildings at all hours, and to the legislative chambers after the Houses had risen ; but it now requires cards to obtain admission even to the old Westminster Hall, where the Plantagenet kings were crowned, and the courts of justice were held for centuries. Each of the foreign legations is allowed to give cards to two persons daily. Such restriction is necessary for the strangers' gallery does not hold more than a hundred, and besides

the numerous legations the six hundred and seventy members can also give cards.

The Chamber of the Commons is a long, rectangular room furnished with seven long benches on each side, running the length of the room, and each rising about a foot above the one before it. The lower benches are about ten feet apart. The Speaker's chair is on one of the short sides, and the Government party occupy the benches on his right, while the Opposition sit on his left. But this is merely custom, and is not strictly observed. In fact, Lord Hartington, who deserted Mr. Gladstone on the Irish question and now votes strictly with the Ministry, still sits on the front Opposition bench with his former leader.

The benches on both sides are cut through about half way down the hall by a pass-way which is called "the gang-way" and which seems to sub-divide the two parties into two other divisions. On the Opposition side, all the Irish members sit "below the gang-way," and on the Government side, all the ministers who have seats in the House (some are peers and sit in the House of Lords) sit above the gang-way,—the most important of them on the front bench.

The House presents a great contrast to our House of Representatives. Though the members number almost three times our representatives, the chamber is much smaller than ours; so that though there are no desks, not more than half the members can crowd into the chamber, and when any attractive occasion occurs they struggle for places like boys at a circus. As private members originate no business and very rarely have occasion to handle papers, there are no pages or messengers in the House; and if a member has to pass anything to the clerk's desk, it is handed along from one to the other till it reaches its destination.

When a vote is taken the division is not taken in the House, but in two chambers outside called the "aye and no lobbies" to which the members repair to be counted. Before this is done, electric bells are rung all over the building to call members who have not been in and probably could not get in the chamber.

The strangers' gallery consists of three back benches in the short gallery in front of the Speaker. The two front benches are for peers, diplomats, and distinguished strangers. The two long side galleries are for members who can't find seats down stairs. The short gallery over the Speaker is for the official reporters and the press; and behind that, shut off by a close wire screen which prevents any one from seeing them, and which must almost prevent them from seeing anyone, is the ladies' gallery. I computed that their line of vision after passing over the heads of the reporters would reach the floor a few feet from the farthest end of the chamber, and enable them to see a dozen or two of the least distinguished and most modest members.

The proceedings on the evening of my visit were of considerable interest. Custom allows any member to interrogate the ministry upon any subject which he deems to be of public interest, by putting a question of which he has given sufficient notice to allow the minister to prepare an answer. And this exercise on the evening in question occupied three and a half hours. The questions were almost exclusively propounded by Opposition members and were designed to bring to public notice some misdeeds of the Government subordinates, the inquirer stating the facts as he understood them to be, and in such form as would make the best case against the Government. The minister presiding over the department to which the subject pertained, was obliged to answer categorically how far the facts were as stated, and could then give such explanation as he pleased of the case. It is absurd to devote so much as a third of each session to these questions, which are mostly of an unimportant character and are sometimes childish. It is a fact that a few days after my visit the ministry were asked whether at a certain time and place a race was got up between a lamb, a dog, and a hen, attended by some circumstances of cruelty. The minister having been given time to make inquiry, answered that such a race had been arranged and attempted but did not come off, as the supposed lamb was an old sheep which frightened the dog, and the hen had squatted down and refused to budge. I presume this must have been considered a proper subject of inquiry as involving some dereliction of duty on the part of the police; but it is singular indeed that such a subject should occupy the time of a body that legislates for a fifth of the human race.

Bad as the custom, is I was indebted to it for an opportunity to see and hear all the ministers and some of the most prominent of the Opposition members, among them Mr. Gladstone. Later in the evening a warm debate sprang up upon a bill brought in by the Government to commit the government of the counties to councils elected by the people. The police, however, were to be under the control of the justices of the peace, who are appointed by the Crown. The Opposition moved to transfer the control of the police to the elective councils.

Mr. Gladstone and many prominent men on both sides spoke. All made short speeches, not over ten minutes in length; for the members being elected for seven years are for a time independent of their constituents and seldom "speak to Buncombe." The house was very attentive and followed the speakers closely, as was shown by the cheers or jeers that instantly greeted every salient point. They are accustomed to make quite a variety of inarticulate comments—"ah! oh!" laughter and groans, and sometimes "hear!" and "shame!" But on this occasion all was in good humor, though rude. The house was loud in the expression of its feelings, but there was no attempt to suppress or even to embarrass a speaker. At the conclusion of the debate a vote was taken and the ministry was sustained, but by a very small majority; whereupon a storm of cheers burst from the Opposition. And why? Not because they had passed their measure, for they had failed; but because the reduction of the ministerial majority held out hope of a future defeat, in which case the ministry would have to resign and the Opposition would come in,—as I have explained in a previous letter.

A few days later I visited the House of Lords and there being no separate gallery for women, was accompanied by my daughter. We were ushered in upon the floor, and she was placed in a box with four other ladies while twice as many gentlemen stood up behind. The chamber is much like that of the Commons but handsomer, with gilding and carved wood-work. There were some twenty peers present, mostly stout, good-looking men, but by no means exceptionally so; nor did I observe anything particularly refined or stylish in their manner or language. The Lord Chancellor presided, clad in a long robe which, when he entered and retired, trailed more than a yard behind him. He was preceded on both occasions by the mace-bearer and the purse-bearer. He wore a grey wig with lappets coming down in front, and being close shaven, looked like the portrait of a great dame of the last century. His seat is not a chair but a "wool-sack," so called, which being in shape of a bale of wool may be such in fact, though covered with a rich stuff. I think this seat was ordered by Edward IV. in token of the esteem in which he held commerce. Since then the power of both king and nobles has been destroyed, but the wig and robe and wool-sack survive unchanged.

Our visit to the Lords was on June 15, and we heard the prime minister announce the death of the German Emperor, which had occurred that morning. He was replied to by one of the earls, and there were a few other speeches, but nothing of note.

The House of Lords is just now in a most unsatisfactory condition, and the word goes that "it must be mended or ended." It is without any power or any real weight in the legislative system. It hears appeals from the courts below, but the custom is that no peer can vote on a judicial case but such as have obtained their rank by eminence as lawyers. These at any one time rarely exceed four or five; and desirable as it may be to increase the number, it can only be effected by the creation of a new and permanent peerage, that is, by making all the lawyers' heirs as well as themselves peers. The idea now is to allow the Queen to create peers for life only. This or something else will be done to strengthen the House of Lords. But it is doubtful if anything will avail. The difficulty is that the Lords represent no body but themselves. They have no power at their back that could enable them in case of need to resist the House of Commons. It was simply a lucky accident that gave our system a Senate representing the States, and therefore as strong as the House of Representatives itself.

If I mention the British Museum it is not to give any account of the acres of buildings devoted to the preservation and display of millions of noteworthy things, antique statuary, antique gems that were ancient when collected by Roman magnates from Asia and Greece in the days of the Republic, architectural fragments preserving some beautiful feature of an old temple, stone coffins containing the remains of kings that were contemporary with Abraham, manuscripts nearly and coins quite as old. Thousands of these objects, carefully studied by scholars and antiquaries, occasionally yield a new fact of little value, I fear, to mankind. The most interesting division of the British Museum, to me, was the library, with its vast rotunda accommodating hundreds of readers not only with seats but also with desks and writing materials to take notes. I do not think I ever saw the places filled. The number of books runs up, I think, into millions. The catalogue occupies a good deal over a hundred volumes; and as in order to see a book one must find the entry in the catalogue and ask for it by the description and number there given, it is no small labor to one who consults many works.

The museum is hardly larger than that of South Kensington, but is of a wholly different character, the latter containing collections which illustrate the mode of living in different parts of the world, and the natural and artificial productions of such parts. It has also fac-simile plaster-casts of celebrated works of art from the continental museums. So far as instruction is concerned, a plaster-cast of the Dying Gladiator or Apollo Belvidere, is quite as good for the purpose as the original. In Germany the office of the museum is carried very much farther. In one or more may be found samples of the products of every country, whether natural or artificial, with statements of prices, and modes of obtaining them; and also samples of the natural and artificial products of all Germany, with cost and locality and mode of production, and information as to the foreign lands in which markets for them can be found, and every particular which can concern a producer desiring to find a market for his production. In this species of help and instruction for the people the German government is, I believe, ahead of any other in Europe.

I must not leave London, as I am about to do, without mentioning the underground railroad which permeates and encircles the whole city and gives rapid communication between the most distant points. There are numerous stations where, descending into the earth, one finds himself in a well-appointed railroad depot, in which trains arrive and depart at intervals of five minutes or less. The track is double, and the road is a circle with many loops; so that one set of trains always run on the inner circle round and round, and another set does the same on the outer circle going in the opposite direction.

The vast tunnel through which the trains run is necessarily filled with smoke and gas, but not as one would think, so as to be actually unbearable. Besides the ventilation afforded by the frequent stations, depressions in the surface of the ground occasionally bring the track into the open air, and expose the tunnel to the action of the wind. But with all this, these roads, I fancy, are used only by persons to whom time is a first object. Without them the business of the city as it is now carried on, could not exist, for the population necessary to transact it could not live within accessible distance.

J. D. McPherson.

It is impossible that anything so natural, so necessary, and so universal as death should ever have been designed by Providence as an evil to mankind —*Swift.*

AN ENGLISH "PUBLIC" SCHOOL.

In the last number of *The Century* magazine there appeared an article upon one of the most interesting of the large boarding (or, as they are called, "public") schools of England, which form so prominent a feature in the educational system of that country. I am impelled to offer to your paper a little account of this school and a few extracts from this well-written article, as worthy of consideration, at a time when the subject of the proposed new Boarding School is claiming the attention of Friends.

Uppingham School, situated in Rutland county, England, was founded in 1584 by Robert Johnson, archdeacon of Leicester, as a "faire, free grammar school," and holds a charter from Queen Elizabeth, dated 1587. For two hundred and seventy years it had varying fortunes, depending upon the character of its head masters. In 1853 Edward Thring was appointed head master, and from this date began a new era for the school, which now takes a place in the very front rank of English public schools.

The work at Uppingham has centred around two or three clear and sharply defined ideas of its able master. The first of these, and that from which the arrangement and management of the school have their origin, is, "that every boy, stupid and clever alike, should have a fair chance, and should be really trained. Mr. Thring claims that a school, however great its prestige, numbers, wealth, or prize winners, cannot be called a good school or even an honest school unless it makes this a first condition of its work." "Justice, then, which means adequate individual training for each boy, is the central idea of Uppingham, and all the arrangements and machinery of the school are directed to this end. The first step towards securing this is by putting strict limit upon the size of the class." The limit to classes is about twenty. This number is large enough to give sufficient stimulus and at the same time, if the class is properly graded, all its members can have individual training and attention. "Numbers are necessary for a great school, and contact with his fellows is essential to a boy's getting the full advantage of public school life; but unwieldy numbers make discipline difficult and training impossible, while unchecked contact with a mass of thoughtless natures breaks some characters, even though it strengthens others. At Uppingham the number of boys in a single house is restricted to thirty; this enables the master and mistress of such a house to take a personal interest in each boy, and to surround him with something of the refining and humanizing influences of home." "The advantages of this arrangement are manifold. There is less chance for large combinations for purposes of insubordination or evil of any kind. The house-master has a more independent field of work. He cannot shift the responsibility for ineffective discipline on any one else, and the credit for good results is all his own. Each house has a reputation of its own to maintain, and this tends to a healthy rivalry, both in studies and atheletic games, which in turn fosters sympathy between the master and his pupils. As in the limited class, so in the separate house, justice can be done to the individual life, and the weaker are allowed a fair chance. There is a further safeguard still in the provision made for the private life of the boy by a method simple enough in itself, but of the deepest significance as an aid to training. Each boy at Uppingham has a study of his own,—intentionally made quite small, usually about five feet by six—which is meant to be for him a real sanctum, a little home, where he can be alone when he wishes, either for study or that retirement which boys as well as men need to collect anew their moral forces during the rough struggle and the temptations of daily life. These studies are entirely separate from the sleeping apartments." "Small dormitories, holding a limited number of boys are adopted for sanitary and other reasons, but the idea of privacy is maintained by providing separate compartments for each boy. It is found the space required for giving each boy this separate study and sleeping compartment is not much greater than the ordinary bedroom arrangement. As the boy takes his meals in the hall, and uses his study as his sitting-room, the dormitories can be perfectly ventilated. The small size of the study-rooms prevents the congregation of numbers and makes strict rules upon this point easy and natural,—an important fact for the masters in respect of discipline; important, too, for the boy, as giving him security from the bullying or persecution of a crowd by which he might be overmatched or cowed, to sensitive boys a danger among the most difficult of all to deal with in a great public school."

The house-master is not necessarily the teacher of those under his domestic care, for these are distributed, according to their standing, among all the masters. Edward Thring has fixed about three hundred as the largest number that he will permit at Uppingham, considering this number to be sufficient for proper grading, economy of teaching power, and personal acquaintance on the part of the head master. The reputation of his school has been such that no little resolution and self-sacrifice have been required to adhere closely to this principle. "While the responsibility for character training as well as intellect training makes the demand for strong men imperative, it increases in a tenfold degree the necessity that the machinery should be as perfect as possible. Mr. Thring's work has largely lain in working out this problem of school structure in its bearing on character training. To this fundamental principle that justice should be done to each boy, he finds a natural corollary in the maxim that high-class work cannot be done over a series of years without good tools."

Nothing, he claims, "should be left to the ability of the master that can be accomplished by mechanical contrivance. The actual wall of brick or stone which makes discipline easy or vice difficult is a power for good." "In training the young, plenty of employment is the secret of a healthy moral life. It is not only for the hours of work that this is true. 'Leisure hours are the key of life,' and in a good public school they must be provided for as carefully as any other." In a large school, where each boy is intended to be trained, provision must be made for di-

versity of taste and ability. "Every teacher ought to know that it is essential to the happy life and healthy moral development of a boy that he should always have some field in both work and play where he can maintain his self-respect among his fellows. A lad who has not the capacity to excel in the main studies of a school, or strength to distingnish himself in its hardier sports, may often achieve excellence in minor subjects of study, or acquire skill in other recreative employments. A school is not a perfect training place,which has to crush the weak in the process of developing the strong, either at work or play." Although Edward Thring considers most thoroughly that the classics are of the highest value as a means of intellectual training, he has made ample provision for other subjects in his efforts to do justice to all classes of mind. The modern languages, science, mathematics, and the fine arts have been amply provided for. He was the first head master perhaps to realize the necessity of boys who were not strong enough to take part in the more active games having other means of physical development, and the first gymnasium under a competent instructor, possessed by a public school in England, was opened at Uppingham in 1859.

"For many years the school has had a carpentry, where any boy, by the payment of a small fee, can secure regular and thorough instruction in the working of wood and the use of carpenters' tools. In 1882 this field of useful manual occupation was enlarged by the construction of a forge and metal workshop, where skilled instruction is similarly given, and a boy can go far toward making himself a good mechanical engineer. The school gardens, opened in 1871, cover some acres, and are laid out and planted with much taste. A boy may have his own small plot of ground for the cultivation of plants and flowers. An aviary affords an opportunity to observe the life and habits of a considerable collection of birds. A boy must be of abnormal type, if he cannot in this category find means of passing pleasantly all his leisure hours."

Perhaps it should be said that after the article from which this outline has been taken was prepared for the *Century*, Edward Thring died, in Tenth month, 1887. He was well known in America through his two books, "Education and School" and "Theory and Practice of Teaching." M.

Philadelphia.

MONTHLY SCHOOL REPORTS.

Doubtless it is very desirable to have some ready means of communication between teachers and the parents and guardians of children in reference to the punctual attendance of the latter at school, and their attention to study and deportment. As it would be impossible in the present state of affairs to have this done by personal interview, the Monthly Report seems to offer the best means that has yet been devised for keeping patrons advised in regard to the standing of pupils and of holding the pupils themselves to a proper accountability for the amount and character of their work. While this may be readily assented to by all, very serious questions arise in the minds of many of our most thoughtful teachers in regard to the wisdom of adhering to our present plans of keeping the record from which this Report is to be made; and the re-opening of our schools brings the subject fresh to our minds, and it might be well to give some serious thought to it.

Our present system of daily marks is open to a great many very serious objections. It is not the purpose here to refer to these in detail, and to speak of the great amount of valuable time consumed in this work; of the diversion of the thoughts of both teachers and pupils from the subject of the recitation to the record to be made of it; to the danger of making the record the end sought; to the rivalries,—often bitter,—thus engendered; to the temptation offered to all to deceive; to the deception really practiced; to the strain on the nervous system in our efforts to secure high marks, etc., etc. The school is to promote the development and growth of character, and this cannot be determined by per cents, by rank, or by averages. Let teachers and school committees think seriously of these things, and if per cents and rank and averages, are seen to be hindrances, as they doubtless are, let them be swept from our path as other objects are when they impede our progress.

What shall we do, then?

Something like this may be done. Open an account with each pupil and at convenient times,—once a week or oftener,—make entries in it as to the standing of the pupil in every department to which he belongs. *Very satisfactory* might be denoted by 10, *good*, by 8, *passable*, by 6, *poor* by 4, *very poor*, by 2, and a *complete failure*, by 0. Of course the meaning of 9, 7, 5, 3, and 1 would be sufficiently clear without any explanation. If proper work has been assigned pupils, teachers will soon be able to give proper marks; though of course judgment must be exercised as to what constitutes a *very satisfactory* pupil. If a boy is always punctual, conducts himself at all times as becomes a gentleman, and does all the work assigned him to the very best of his ability, he may feel sure that he will be reported as satisfactory or very satisfactory; and every pupil might hope by the same efforts to reach the same results.

This brief article is not intended to be exhaustive, but simply suggestive. It may be followed by others in the same line of thought.

NATURAL HISTORY IN OUR SCHOOLS.

Now that the summer vacation is over and our schools are opened again for another session of study and discipline, the question that should be uppermost in the mind of the earnest, conscientious teacher is, What more can be done to increase the interest of the scholars in their studies, and awaken a desire for a broader, fuller knowledge of things, as they stand related to themselves? And this question is but the outcome of a recognized impulse in the healthy young mind that is ever leading it onward in search of something it has not yet discovered. And the age is asking for our children, that

the sombre background of nouns and adjectives, of verbs and tenses, of squares and cubes, and percentages, may be brightened, illuminated by a patch of pink and blue from the roadside instinct with life,—that the dull monotony of the spelling-class be broken in upon by the innumerable living things that haunt the by-ways of the earth, or chirp or warble in fields and woodlands. This study of life as it is seen in the various vegetable and animal forms, may be made one of the most attractive features of the school-room, and it is evident that educators are appreciating the need of such instruction.

Our common school teaching has been sadly at fault in this respect in the past; it was not until the scholars passed on to the High School or College that any systematic instruction in the things that have life and in their nature, habits, and distribution over the earth, was imparted. This may have been for want of proper text-books written down to the comprehension of the youngest inquirer, or from an unwillingness to increase the list of studies, that has always appeared to be quite as large as both teacher and scholars were able to undertake. Now, however, our children fare better; with the kindergarten lessons about the things that live and grow, to give them a start, we are coming to understand that nature in its various manifestations has a larger significance in the school-room than is to be gained from a study of the physical sciences only. Gray's little manual "How Plants Grow," has brought gladness to multitudes of our children who have found in this study of plant life an ever increasing source of pure and elevating enjoyment.

And what Asa Gray did for Botany, our own townswoman, Sarah Cooper, herself an educator, has done for Zoölogy in her "Animal Life, in the Sea and on the Land."

It would be an increased delight to the children who find such pleasure in learning "how plants grow," to add to this knowledge, acquaintance with the animals that share with man the earth upon which we live. R.

NEWS OF FRIENDS.

DUANESBURG QUARTERLY MEETING.

This was held at Quaker Street, N. Y., on the 1st, 2d, and 3d of Ninth month. The meeting of Ministers and Elders, held on Seventh-day afternoon, was much larger than usual. Thomas Foulke, of New York, Isaac Wilson, of Canada, and Samuel F. Dickinson, of Scipio, were in attendance, the two latter with minutes from their respective monthly meetings. Dear Friends were also in attendance from Purchase and Stanford Quarterly Meetings. It was truly a favored season; the little company seemed closely bound in the bonds of Christian love, and the precious testimonies given served to kindle afresh the struggling desires for good until they became fervent aspirations, tending towards right thought and action.

On First-day morning the First-day School of Quaker Street convened at 10 o'clock; after the usual opening exercises the school and all present listened to an interesting address from Thomas Foulke, upon the subject of "Bible Lands;" having spent some time in travel in these distant lands, he is enabled to invest the subject with a great deal of interest. Old and young alike listened with attention.

At the meeting hour, 11 o'clock, the house was well filled in every part, seats being brought in to fill up the aisles, as the people of the Christian church near by gave up their service at this time, the minister and nearly all of his congregation coming to sit with us, an act of Christian courtesy and kind fellowship of feeling greatly appreciated by Friends.

After a short silence, Isaac Wilson in a lengthy discourse bore testimony to Gospel truth, showing the operation of the Holy Spirit on the minds and hearts of the people, as recorded both in the Old and New Testaments, making all to harmonize, analyzing many of the beautiful figures and allegories, and with a purely spiritual signification, bringing them to bear directly upon the lines of our own experience in this day. In his own peculiar manner, sometimes of entreaty, sometimes of severe denunciation of evil, he held the close attention of the people. Samuel F. Dickinson followed in Divine supplication, and the meeting closed.

An appointed meeting at half past 3 in the afternoon was held at the meeting-house. Friends gathered at that time with many others, the meeting being nearly as large as in the morning. Thomas Foulke opened an exercise bearing upon individual duty and the coöperation of the human will with the Divine indwelling Spirit; and the peace and harmony resulting from such united action. Samuel F. Dickinson followed in a short but fervent exhortation to mind the little stepping stones lying all along the path of duty, thus leading up to higher and more important service. After which Isaac Wilson again spoke to the people for more than an hour, commencing with the thought expressed by Jesus, "Be of good cheer, I have overcome the world," making clear and plain the character of this individual overcoming, and leading on to individual influence and responsibility in conuection with all the wrong and evil practices existing in the world to-day, and sealing the truth of all assertions by Scripture testimony.

On First-day evening some Friends felt it right to attend the services at the Christian church. Friend Wilson, being of the number, was earnestly invited to come forward and speak to the people which he did, (after the usual opening exercises,) commencing with these words of Jesus to his disciples: "If I had not come and spoken unto them, they had not had sin, but now they have no cloak for their sin."

This testimony was clear and convincing regarding the mission of Jesus and the wonderful power of the Christ spirit operating in the hearts of men to-day. He spoke at some length, and we believe to the satisfaction of all, the feeling in many hearts being one of gratitude that our Heavenly Father does still, in this day, "endue with power from on High," devoted laborers in his vineyard.

On Second-day morning short but valuable counsel and advice was handed forth, and we entered upon the business of the Quarterly Meeting. The answering of some of the queries called forth loving

and tender exercises, profitable to many hearts, and we separated with feelings of gratitude for the abundant evidence of Divine favor and blessing.

NEW HOUSE NEEDED AT COLUMBIA.

Editors INTELLIGENCER AND JOURNAL:

The Society of Friends holds a lot of ground almost in the centre of the borough of Columbia. An old meeting-house standing on it has become dilapidated and is going to decay for want of use and care. A small number of Friends meet weekly at the home of one of their number and keep up, as best they may, the little community of feeling and love of the principles of the Society that came of thus gathering together. In times past the parents of a number of the citizens about us frequented the little meeting-house, and it is believed if the accommodations were better, and the meeting-house opened, there would be more interest taken among those who now drift away from us. The lot held by the Society was left in trust for meeting purposes, and in such a way that it cannot be sold. The Friends here are not able to build a new house, and yet having the wish to have one built, believe their desire could be gratified if some Friends who are able would assist them. Is there not enough wealth in the Society for the accomplishment of this good work? There is very rarely any one to speak to the Friends, and they welcome a public Friend sincerely.

Any one wishing any further information should call on or address M. A. Harry, resident Trustee, Box 338, Columbia, Pa.

Columbia, Pa., 9th month 1.

SWARTHMORE NOTES.

DR. WOLFRED NELSON, C. M., of New York, who has recently returned from a five years' residence on the Isthmus of Panama, will give, at the College, on Seventh-day evening, the 22d inst., an illustrated lecture, entitled "The Panama Canal as It Is." The subject is one of very general interest at this time, not only from an engineering standpoint, but also from its commercial, economical, and international bearings. The lantern illustrations have been taken within a few weeks, and are very interesting, including views of the cities and important buildings, and illustrations of the life of the people, as well as showing very clearly the present state of the great work, and the utter hopelessness of the accomplishment of the undertaking.

The lecture will be an interesting and instructive one, and the friends of the College are respectfully invited to attend.

LOOKING at man in Jesus, we behold a being God-like in the proportions of power and quality. He ceases to be a creature of common-place. Our minds glow as we contemplate his grandeur. Our purer aspirations are called forth. We recognize man's possible divinity, we begin to see its traces in our brethren, to feel its movements in ourselves.—*Berry.*

SINGING IN THE RAIN.

HEAR my happy little bird
Singing through the rain,—
Singing while the fitful showers
Dash against the pane.
"Blue sky somewhere," carols he
From his fearless heart,
Though the clouds are gathering thick,
And the chill winds start.

Sweet and shrill the silver notes
Weave a wordless strain;
"Blue sky somewhere," in my thought
Is their glad refrain.
Always sunshine just beyond,
Brief the present ill,
Trouble never long to last,
Is their meaning still.

Sing thy sweetest merry bird,
Comforter of mine,
Bringing, in thy little way,
Help from Love divine;
Thou hast given me the clasp
Of a golden chain,
Let from heaven into my hand,
Through the clouds and rain.

What though all my way be hedged,
Love shall ope a door
For the feet that follow fain
His that went before.
What though trials test my faith,
Peace shall yet maintain
Right to rule in one who walks
Singing in the rain.

More than I can count of good
Aye has been my share;
Dearest hands to help me on,
Halving all my care;
Blessings marking every day,
To the latest one,
And the shadows only proof
Of the glowing sun.

Therefore with undaunted front,
Trusting in my King,
Shall I face whatever foe
In the path may spring.
So I hear a note of cheer
In the brave refrain
Of my merry little bird,
Singing in the rain.

—*M. E. Sangster, in The Independent.*

RAMABAI.

THE little Hindu maiden heard a voice amid the lull
Of singing streams and rusling leaves, in groves in Gungamul;
It swept along the mountain wind down to the western sea—
Heaven whispering to the listening earth, "Truth, like the air, is free!"

That word had winged her father's feet from fettering caste away,
To give his fledglings liberty for flight in ampler day

Than man's close, cage-like code allowed; and so
the maiden grew
To reach of thought and insight clear no dim
zenana knew.

Child of the lone Ghaut Mountain! flower of India's wilderness!
She knows that God unsealed her lips her sisters
dumb to bless,
Gave her the clew to bring them forth from where
they blindly grope,
Bade her unlock their dungeon doors, and light
the lamps of hope.

Bravest of Hindu widows! how dare we look at
thee,
So fearless in love's liberty, and say that we are
free?
We, who have heard the voice of Christ, and yet
remain the slaves
Of indolence and selfishness immured in living
graves?

O Ramabai, may we not share thy task almost divine!
Thy cause is womanhood's, is Christ's own work no
less than thine.
The Power that unseals sepulchres will move thy
little hand!
The stone rolls back—they rise—they breathe—
the women of the land!

—*Lucy Larcom in The Woman's Magazine.*

LOOK FORWARD AND NOT BACKWARD.

Most of us are so in the habit of measuring the success of our lives by our external achievements that we are in constant danger of losing the true estimate. A life is successful, not by reason of the external success which it wins, though this is not without its value, but according to the fullness and richness of its development. The only value of external success is as a sign of interior spirit. Our successes ought not to be things which are achieved by force of will or by skill of hand simply; they ought to be the fruits which the spirit of our lives bears, as naturally as the tree bears its appropriate fruit. No really strong life will miss some form of external success, though it may not be a form which the world recognizes; but its real achievement will always be interior and spiritual. That life is truly successful which unfolds itself strongly and harmoniously on many sides, and which has within itself the consciousness of having deserved success, whether success comes or is withheld. In the light of this truth—and it is a truth verified by the experience of all wise men—how inadequate are the common judgments of success! The world is given to the fallacy of measuring its great men by their ability to attract its attention at frequent intervals, and to rekindle the admiration which has already been excited by some previous work. But every man knows within himself whether he is successful or not, and knows it because he is conscious of his interior advance or retrogression.

Life is always and for all men a great possibility; the Golden Age lies before rather than behind; there are always greater things to be done than have been done; greater victories to be won than have been won. That which has been done, however great it may be, is never to a really great man anything more than a prophecy of the things yet to be achieved. Such a man is always looking ahead, always anticipating new growth, always open to new truth, always expecting the expansion of his life; and such a man need never be disappointed. If success comes early, and then seems to ebb, there need come with this experience no disillusion to the soul that is really strong. The applause of the world, as it dies away, may leave one with clearer vision and greater hope in the final success of his life. Nothing that we achieve satisfies us, because life does not consist in external achievement simply, but in enlargement and advance. No matter how great the victory of to-day there must be another victory to-morrow, if the soul is to be sustained, and if the great hopes with which we set out are to be justified. No man is shut out from this success; no man is debarred from these great rewards.

The memory of our defeats and sins ought not to fill us with despair, but to furnish us with new incentives for more heroic effort. Nature does not keep her wounds open; as soon as they are made, the healing process begins. There is nothing more unnatural or morbid than dwelling on one's past errors and blunders; it defeats the very ends which nature is trying to secure. The errors of the past ought to be healed in the only way in which they can be healed—by nobler living, by the consciousness of having overcome them. The only real repentance for a past sin is to be found not in sitting down in sackcloth and ashes, but in girding our loins afresh and pushing on to a height where the temptations of the past have no longer any power over us. The future is our inalienable possession; it is the wealth upon which we can all draw; it is the opportunity to retrieve the past which is open to us. There our purpose should dwell, there our hopes should build for themselves. Upon the future all our energies should be concentrated. Forget the past and press forward to the things that are to be, conscious that even the mistakes and sins of by-gone years may, by the repentance of loyal and earnest living, be made new sources of strength and of power. There is little to be gained in looking backward; there is everything to be won in looking forward.—*Christian Union.*

As men perish in sin, we are still permitted to see how the habits of alienation and conscious disobedience to the truth may become more and more settled; how conscience grows more and more silent as the voice is not heard; how the soul tends to fall into death, or rather into a life in death! To raise such dead, Christ came.—*Rufus Ellis.*

The stars in their course are in league with him who is fully committed to duty; the cherubim are his allies; the angels have been commissioned to bear him on his way; and the pestilence flees at his approach. His body may be conquered; but him nothing can hurt.—*Reed Stuart.*

Opinions alter, manners change, creeds rise and fall; but the moral law is written on tablets of eternity.—*Canon Farrar.*

LOOK UP.

Man, looked at only from below, does not inspire great expectations or reverential regard. Before us looms a being of measurable height, of weight, and bulk definable, acting under the impulse of appetites and desires which he holds in common with the brutes, showing now and again the possession of genius and virtues clearly not brutish, but for the most part failing to rise above sheer common-place alike of power or sympathy. Look at the men who ordinarily crowd our streets and engage in the world's affairs. Enter observantly into their thought, speech, aim, for a single day. You will not often be reminded of the divine. At the close of the day your memory will register a confused impression of selfishness, earthliness, weariness. The natural man of ordinary proportions is not impressive. And the observer who looks downwards at him will soon lose all heroic conceptions of life, all sense of man's high origin and destiny. The reason is plain. The close and narrow scrutiny of life obtrudes too much the play and movement of the superficial and the demonstrative, shows too clearly the seamy side, and thereby hides (what is surely there in every life) the deeper and diviner spirit. We become the victims of a delusion. The eye tricks us into the belief that we see; and under that belief we begin to cherish low views of man's worth.

Man, like Providence, to be seen aright must be looked at on high. Here we come under the tyranny of his too obtrusive parts. They are apt to monopolize attention and mislead judgment, to beget irreverence and pessimism. We require to look at manhood as it is "set on high," as it is crowned in Jesus. Looking around us, the question starts to the lip: "What is man, that thou art mindful of him? or the Son of Man, that thou visitest him?" But looking up to Jesus, and to manhood as it lives in God's thought, and as it will one day be realized through his grace, we learn how true and grand are the words: "Thou madest him a little lower than the angels; thou crownedst him with glory and honor, and didst set him over the works of thy hands; thou hast put all things in subjection under his feet." —*Chas. A. Berry.*

BABYLONIAN EXPLORATION.

Researches in Bible lands have been fruitful in rich results within the past few years. In Egypt, in Palestine, and in Asyria, discoveries have been made which throw light upon the Bible story to an extent that was hardly dreamed of as a possibility a generation ago. England has had chief prominence in the work of the Palestine Exploration Fund, the Egypt Exploration Fund, and the explorations in the valleys of the Tigris and Euphrates. But Germany, France and Switzerland have done their part in connection with researches of this nature; while America has contributed its share to such investigation, from the days of Dr. Edward Robinson to the present hour. Just now a number of American scholars are on their way to Babylonia for purposes of scientific research, and their progress will be watched with peculiar interest on both sides of the ocean. Prof. Dr. Herman V. Hilprecht, one of the editors of the *Sunday School Times*, accompanies this expedition as its Assyriologist. When the illness of Mr. John T. Napier necessitated his withdrawal from the editorial force of this periodical, Dr. Hilprecht was induced to leave his position as an instructor in the University of Erlangen, and come to America in order to give to the readers of the *Sunday School Times* the benefit of his ripe Oriental scholarship. He was already said to be the finest Assyriological scholar of his age in Europe: and he had the special commendation of the venerable Professor Dr. Franz Delitzsch, of Leipzig, of whose immediate family circle he had been a member for several years. Soon after his arrival in this country, Dr. Hilprecht was appointed to the chair of Assyriology in the University of Pennsylvania; both in that position and as an instructor in Professor W. R. Harper's summer schools of Hebrew, he has rendered important service. The explorers go out under the auspices of the Babylonian Expedition Fund of Philadelphia. The immediate direction of the party is committed to Professor Dr. John P. Peters, a colleague of Dr. Hilprecht in the faculty of the University of Pennsylvania. The ancestral home of Abraham and the cradle spot of the human race are in the general field of this party's explorations. Grand possibilities are involved in such researches.—*S. S. Times.*

THE DRYING OF MOSSES.

The power of the mosses to endure repeated desiccation has recently been experimentally treated by G. Schröder, who obtained the interesting result that many of these plants can not only resist months of dryness without any harm, but also that they do not perish even under the strongest desiccation carried on in a drier with the aid of sulphuric acid. Plants of *Barbula muralis*, which were exposed for eighteen months in the drier, after a few wettings resumed growth in all their parts. Other species of *Barbula* behaved similarly. A curious experiment was performed with *Grimmia pulvinata*, in which a stock which had been cultivated for some time in a moist atmosphere under a bell-glass was suddenly exposed, to a warm and perfectly dry current of air. It became so dry in a short time that it could be pulverized. Then it lay in a drier for ninety-five weeks. But the quickening moisture was still competent to awaken it to renewed life. The most rapid drying which could be performed in the laboratory could not destroy the plant. It even showed greater power of resistance than would correspond with its real necessities, for so speedy and complete a drying out as was effected in the experiments never occurs in Nature. The fact that a property acquired by adaptation is so plainly manifested in excess is sometimes otherwise demonstrable, and is a hard problem for the theory of selection.—*Popular Science Monthly.*

One grain of gold is better than a great deal of baser metal.—*Richard Shackleton.*

MORE GIRLS THAN BOYS GRADUATE.

THERE are six graduates, four girls and two boys, in the Lynchburg Colored High School this term, and twelve in the white school, nine girls and three boys. Year after year tells this story of more girls graduating than boys. It is the same with both races. Various causesare assigned by the teachers, who do not at all incline to believe that the boys could not equal the girls if they would. The boys are less likely to finish the course of study than the girls, many of them going into business very early. All the teachers agree that the boys are much less studious than the girls.

Base ball, cigarettes, and the various interests that attract boys and direct their minds from books, are lacking with the girls. Prof. Wyatt, principal of the white high school, says that the French Commissioner sent over to examine the American system of education observed this sort of thing going on all over the country. Notwithstanding the large sums of money bestowed on colleges for males, and the comparative disadvantage the females of the land had to contend with, it was evident that women were being more generally educated than men. The observant Frenchman predicted that before many years the American women would feel the power given them by mental culture, and would use it in a manner to astonish the lords of creation.—*Orra Langhorne in Southern Workman.*

A MAN'S vision broadens as it lengthens. Look straight down at your feet; what do you see? A few inches will measure the diameter of the circle within which your sight has play. Look up at the blue which spans the heavens, and what see you then? Your circle of vision takes a sweep which demands astronomic computation. The circumference widens with the distance. But that is not all. Within the near and narrow circle there is room only for small details and severed parts—mere fractions and fragments, whose drift is not clear. The distant and wide outlook shows great and harmonious aggregates, shows their movement and drift, shows their obedience to the time-beat of a sovereign purpose. Looking downward, we get a sight, as necessary as it is clear, of life's details—the place we must fill, the work we must do, the laws we must obey. But only as we take the far look do we catch the movement and meaning of the vast order to which these details contribute.—*Chas. A. Berry.*

THE dying year grows strangely mild;
Now in the hazy autumn weather
My heart is like a happy child,
And life and I, friends reconciled,
Go over the hills together.

THE worship of God has its natural music in the artless but affecting tones of deep-felt prayer and praise. True religion and charity have their music, for they "cause the widow's heart to sing with joy." No practiced tunes can produce true and abiding harmony of soul equal to that which sincere devotion inspires.—*John Allen.*

NEWS AND OTHER GLEANINGS.

—An ancient canoe has been found in the Tunhövd Fjord, in Valders, in South Central Norway. It has been hollowed out by means of red-hot stones, and is 4¼ metres long and 80 centimetres broad. It is in fair condition. The find is of interest, as no other primitive vessel of the kind has been found inland in Norway. The boat will be sent to the Museum at Christiania.

—The professors of jurisprudence in the Universities of Amsterdam, Leyden, Utrecht, and Groningen have presented a memorial to the Government praying that the study of Greek be no longer made obligatory on the students in the gymnasia who intend to devote themselves to the study of law. The complaint has been made that the course of study in the gymnasia is too severe, and it has been proposed to curtail the instruction in history and the modern languages. The signers of the petition declare that these branches are very inadequately taught, and recommend that the instruction in them be made more thorough, the students being permitted to drop Greek.—*Exchange.*

—Whether Volapük shall ever come into general use or not, it will have prepared the way for an international language of some kind. The American Philosophical Society have taken in hand the task of perfecting a language for learned and commercial purposes. The intention is to make the language so simple that it will not need to be learned. To read a letter one will need only to consult a vocabulary, and to write one he will go through the same process. There will be no subtleties of inflection and syntax to worry the commercial traveler. The language will be a kind of universal cipher. Dr. Hill has suggested a simplified English for that purpose; and that, possibly, is as likely as anything to take possession of the field.

—It is proposed to ask an appropriation of $250,000 from Congress for the purpose of enabling the United States Geological Survey to investigate the feasibility of a gigantic plan for the reclamation of Western desert lands. This scheme is no more nor less than to dam the waters of the Missouri and other Western rivers in flood-time, thus preventing disastrous overflows and providing an inexhaustible supply of water for purposes of irrigation. The difficulty of navigation and the destructive floods of the Mississippi, Director Powell claims, are largely due to the excessive amount of sediment discharged into its purer waters by its western tributaries, particularly the Missouri. If this muddy water can be held and used for irrigation, vertical abrasion will take the place of lateral, and the channel of the river will become deeper and more unobstructed. It is believed that the expense of such an undertaking, great as it will be, will amount to but a fraction of the value of the land that will be reclaimed.—*The American.*

CURRENT EVENTS.

FOUR counties in New Jersey had special elections, last week, on the question of liquor license, under the Local Option law passed last winter. Warren and Salem counties voted, on the 4th, for Prohibition, the former by a reported majority of 850, and the latter 997. On the following day Cape May voted for license, by 222, and Gloucester against it by 713. There will now be no more of these elections before the early part of next year.

HEAVY frosts on the night of the 6th instant did serious injury to the corn and other late crops in Northern New York and New England. In the State of Maine an estimate of the damage to the sweet corn raised for canning purposes, reaches a million of dollars. Buckwheat was badly hurt in some localities.

FOR DRY GOODS

—THE BEST PLACE IS—

STRAWBRIDGE & CLOTHIER'S,

MARKET
EIGHTH } STREETS.
FILBERT

One of the largest buildings in the city, and the largest Establishment in America devoted exclusively to

DRY GOODS.

The stock includes Silks, Dress Goods, Trimmings, Millinery, Hosiery, and Underwear, Gloves, House-Furnishing Goods, Carpets, Ready-Made Dresses and Wraps, and everything that may be needed either for dress or house furnishing purposes. It is believed that unusual inducements are offered, as the stock is among the largest to be found in the American market, and the prices are guaranteed to be uniformly as low as elsewhere on similar qualities of goods.

DELIGHT THYSELF IN GOD.

DELIGHT thyself in God,
Raise thou thine eyes above;
His heart is yearning o'er thee,
His bounty lies before thee,
Take thou thy fill of love,
The more thy need demands, the more will he
Extend the scepter of his grace to thee.

Delight thyself in God,
And all thou canst require
Shall be to him well-pleasing;
So will his love, unceasing,
Give thee thy heart's desire.
Pressed to his bosom, guided by his eye,
Thou wilt not ask the things he must deny.

—*Lucy A. Bennett.*

EXTRACTS FROM A SERMON BY SUNDERLAND P. GARDNER.[1]

THERE are three testimonies recorded in the Scriptures set forth as the declarations of God concerning himself:

"I am God, and beside me there is none else."—*Isaiah*, 45: 22.

"I, even I, am the Lord, and beside me there is no saviour."—*Isaiah*, 43: 11.

"I am God and not man."—*Hosea*, 11: 9.

If we believe this testimony of God concerning himself it will very much simplify our views concerning him. Men have given him a character we find he does not possess. We find him represented in the Old Testament as being angry with the wicked every day. Again and again he set his children to destroying each other. The tender children and innocent women were alike sacrificed. This is a wrong character given to him. He sustains no such relations to his creatures, for he is a being of infinite love. Jesus introduced a different view of our Heavenly Father. In a very few words he makes this so plain that we cannot be deceived—"Blessed are the peace-makers for they shall be called the children of God." Those wars and fightings recorded in the Old Testament had their origin in man's own sinful propensities. God is not angry with his children. He does not punish them arbitrarily.

We feel miserable and suffer under a conscious sense of having done wrong. It is not because of the Father being angry with us that we feel unhappy or punished. These are only manifestations of his love. The religion of Jesus is a religion of love, and his followers cannot fight. Here, my friends, it brings the work to be done within ourselves. Our salvation depends upon ourselves, by being obedient to the Heavenly light within. We are not now under the necessity of going to men to inquire concerning the kingdom of Heaven. All the writings of men never gave a just view of the true knowledge of God. They may give us counsel, they may give us advice, but they can give no light. Jesus said to the Jews, "Ye search the Scriptures, and think in them ye have found eternal life." The Apostle Paul had been taught to read the Scriptures; he had been brought up to believe in the law of Moses; he was instructed to be a persecutor of mankind; but he had not attained the true knowledge of God until he was met in the way by a light whose brightness exceeded the light of the sun. Here is where he first became acquainted with a true knowledge of God, his Father. This brought him under the necessity of taking up his daily cross, and of following the Heavenly light. We must come to this which can lead us daily on every step we take in the walk of life. This will lead us away from everything which can harm or destroy.

This is a very different religion from that given by Moses to the children of Israel. The law which God had written upon the tablet of the hearts of men will lead them away from all wrong.

As God dwells in us there is just where we can become acquainted with him. The vineyard of the Lord is in the hearts of men. Our Heavenly Father never placed anything wrong in man's nature. Sin comes from a wrong direction and use of our propensities. Let no man say he is tempted by God, for he tempteth no man. When we come to realize this we see what is meant by the Garden of Eden. The Garden of Eden is the heart of man.

"I am God, and beside me there is no Saviour." Here we see the great mistake of those who divide the Godhead into three persons. According to God's own testimony there is no Saviour but him. The testimony of Jesus concerning himself was, "Of myself I can do nothing." Had he been God, there would have been no necessity for him to pray to God. His language was, "My God and your God." Jesus took the book from the minister and read, "The spirit of the Lord is upon me." "He sent me to preach deliverance to the captive." Paul said, "Woe is unto me if I preach not the Gospel." This was their mission. The spiritual Christ never was nailed to the cross—never was put to death by men. Some may query, "Is this possible?" "Is this true?" "What constitutes the Christ of God?" "Is it simply God

[1] At Bucks Quarterly Meeting, at Falls, Eighth month 30, 1888. (From a report in the *Bucks County Intelligencer*.)

revealed within us?" "How is it that Christians have so long overlooked these things?"

The Apostle Peter declared, "Add to your faith, virtue; and to virtue, knowledge; and to knowledge, temperance; and to temperance, patience; and to patience, godliness; and to godliness, brotherly kindness; and to brotherly kindness, charity."

Now, my friends, what is virtue? It is overcoming those evils which beset us. We must add to our virtue, knowledge. What is meant by knowledge? It is not the knowledge of the world. It is to know thee, the only true God, and the Spirit of Christ, whom thou has sent.

How are we to understand the declaration, "We are to be saved as by fire?" If our hearts are filled with wrong emotions God's love acts upon them like a consuming fire. Some say, "If I only knew the will of God, how soon would I run to find it." How are we to know the will of God? Not from books; not from the sayings of men.

We read of the day of judgment; we read that some day we shall be called. When is the day of judgment? It is to-day. We need not wait for the great judgment day; we stand in need of judgment now.

Again, Peter goes on to tell us, "Add to your knowledge, temperance." I do not refer to this in the temperate use of drinks only. We should be temperate in the use of our passions.

"Add to temperance, patience." We should keep ourselves calm; be patient under trials and afflictions. A lack of this virtue sometimes even drives men to suicide.

"Add to patience, godliness." What are we to understand by this? Godliness is the power of all good—becoming godly is simply becoming good.

We pass from this to brotherly kindness. Oh, that there was more of this in the world. Jesus came to teach this law to men: "All things whatsoever ye would that men should do unto you, do ye even so unto them." This is the substance of all the law and the prophets. This is the fullest realization of brotherly kindness. If this law were observed there would be an end to wars and fightings. There would be no more fields of blood; no more bones to bleach in the sun. Justice will ever be done and all injustice will cease. The observance of this Golden Rule will bring us to the highest mansion of the Father's House, which is love. The word charity should have been translated love.

I desire to address a few words to my dear young friends. In the formation of character, let it be founded upon these cardinal virtues: Form your own role to wear before God, and you will not be ashamed to wear it before men. To the dear young women I would say, our Heavenly Father has placed you in a position to perform a work that cannot be performed by any one else. This is illustrated by the vision which John saw: "And there appeared a great wonder in Heaven; a woman clothed with the sun, and the moon under her feet, and upon her head a crown of twelve stars." That woman represents the church. What a picture is here for contemplation. This is the highest figure, and the grandest specimen of poetic art contained in the Scriptures. The position of the mother is the greatest and most responsible in life. After you shall have passed away, and the grass grows green upon your resting places, your influences will still be felt.

"I am God and not man." This declaration forbids the idea of man being looked upon as God. We can look upon no man in any other relation than brother. Jesus illustrated the law of brotherly kindness in many ways, but in no way better than in the parable of the good Samaritan. Here we see whose heart was in the right place. This was an exhibition of the highest morality, of the truest religion. The heart of the Samaritan was right.

Being a member of a church—or believing in a creed—does not make a man a Christian of itself. There is no mystery in regard to man's duty. It is all made plain before us by the light from our Heavenly Father. As we obey that light every step forward will be a safe step, and each one will lead us nearer the kingdom of Heaven.

Jesus said, "Suffer little children to come unto me, and forbid them not, for of such is the kingdom of Heaven." There is no stain from Adam's sin here. A little child when it first comes into the world is nearer Heaven than any thing else in the world.

"In my father's house are many mansions." The first mansion represents our first condition, when we come into the world. Sin comes afterward by our own disobedience. The representation drawn by Jesus, of the last great day of judgment, represents the relative values of faith or good work, in the settling up of the final account. "When the son of man shall come in his glory, and all the holy angels with him, then shall he sit upon the throne of his glory; and before him shall be gathered all nations; and he shall separate them one from another, as a shepherd divideth his sheep from the goats, the one upon the right hand, the other upon the left." He divided the human family into two parts, and then shall the King say unto them upon his right hand, "Come, ye blessed of my father, inherit the kingdom of my father, prepared for you from the foundation of the world; for I was an hungered and ye gave me meat; I was thirsty, and ye gave me drink; I was a stranger, and ye took me in; naked, and ye clothed me; I was sick, and ye visited me; I was in prison, and ye came unto me." Then the multitude upon the right hand inquired how all this was brought about; when they had performed all these good deeds; hark! the answer, "Inasmuch as ye have done it unto one of the least of these, my brethren, ye have done it unto me."

When the poor man fell by the wayside the Levite and the priest passed by on the other side; but, my friends, a position and a place in the church alone will not answer for us when this test is applied.

The language of Scripture is sometimes very correct, and sometimes it is not. Take the declaration, "Work out your soul's salvation in fear and trembling before God." The first part of this is true and the second is not. God means that we shall work

out our own salvation, but not with fear and trembling. No man can love that which he fears. Love and fear are antagonistic and cannot both dwell in us at the same time. Perfect love driveth out all fear. God means that we shall use our reason—that we shall make use of all the means he has given us. The Gospel says in all fear there is torment.

"I am God and not man." If we believe this declaration of God concerning himself it will bring us away from all idolatry. Jesus was the servant of God. He was dependent upon the higher power. I have heard it taught that Jesus came into the world to suffer and to die for us, and without that we could not be saved. That he suffered death and shed his blood to redeem us and gave his life as a ransom for our souls. How different from all this are his own declarations.

And now, my friends, in that love which knows no bounds, I feel to address a few words to the young men now before me. I have passed along the road you are now traveling. I feel to advise you to seek first the kingdom of Heaven and its righteousness. Let your word be as good as your bond. Men want those whom they can trust. Meditate carefully before making a promise; but when made, carry it out to the letter, and you will establish a character that will follow you through life.

For Friends' Intelligencer and Journal.

AMONG FRIENDS IN OHIO.

We left Sarah Dungan's, in Colerain, 8th month 31, in the care of Henry and Ann Pickering. It rained most of the day and we could not enjoy the scenery with closed curtains, as we desired. We had some very long rough hills to travel over: before descending one of them we stepped out in the rain to look down a ravine about two hundred feet deep, where a stream was flowing over a rough, stony bed. After several miles we came to a piked road which abound there and conduce greatly to the comfort of travelers, especially in the winter season. We passed through St. Clairsville, the seat of Belmont county, where a very fine court-house has been erected and a jail is now building,—in too close proximity we thought to the court-house and especially to the public school. Between St. Clairsville and Lloydsville we passed in sight of a very large, substantial building called in that State an infirmary, with adjoining buildings for the insane and contagious diseases, the principal edifice serving the same purpose which our county or almshouse does. We stopped to dine at Henry's father's, Elijah Pickering, an aged man, who is greatly afflicted, yet glad to see us, although we could not converse satisfactorily with him on account of deafness. We were glad to meet him afterwards at meeting, where he had not been for twelve years. We passed over the track of a very destructive cyclone which visited that section over a year ago, with a wonderful preservation of human life, coupled with a great loss of property. We lodged at Henry Pickering's and were refreshed for our journey; he and his wife kindly accompanied us through the rain to Nathan and Sarah Nichols', where we had the remainder of the day for rest, and enjoyed their interesting family of sons and daughters. All of them excepting Nathan, who was indisposed, went with us next morning, First-day, to Plainfield meeting.

We found the meeting in a pleasant grove, quite commodious, one end seeming ample; but as so many came they were obliged to open the whole house. We thought if it only could be so every week, how pleasant it would be. They have a very interesting First-day school of recent growth, superintended by Nathan Nichols, but it was thought best to dispense with it that day. Samuel and Thomas Tomlinson came into the neighborhood the previous evening and were in attendance. Those assembled, many of other sects, were very quiet and attentive to the testimonies delivered, setting forth the principles of Friends, calling to a pure and undefiled religion, which, we trust, found a lodgement in some receptive minds. There seemed a hungering for the spoken word, but we rejoiced in the thought of the little band who could worship there without it, and the hope that there might be, in the arising of interest and life, the constraining influence to speak of that which had been realized by some, of the goodness and love of the Father for the encouragement of others. We dined at Isaac and Elizabeth Haines', close by, and were then taken by our young friend, N. Clifford Nichols, to St. Clairsville. The ride was very enjoyable over the beautiful country, notwithstanding our fatigue; the day was so fine in contrast with the previous day's travel in the rain.

We were kindly entertained at the home of William and Mary E. Hoff, she a member by recent application and much interested in our Society, though they have no meeting there now. Through a misunderstanding,—partially a lack of faith it may have been on my part,—we found no meeting had been appointed; but when they found a willingness with us for one to be held, even at that late hour, 5 p. m., they were active in arranging for it. They called on the Methodist minister, who came to see us, expressing entire willingness, even a desire that we should occupy their church; word was given so far as time afforded, and when we arrived at 7.30, driven by our kind young friend who remained for the meeting, we found quite a large company, the most of them doubtless the usual congregation, while some more distant, who would gladly have been present, could have no word. After the preliminary services the minister handed the meeting over to our charge for which we felt very grateful,—first to the Giver of every good and perfect gift. Thomas Tomlinson arrived in time for the meeting, and on the opening explained our custom of sitting in silence; and after a brief season of waiting for renewed strength messages of Gospel love were spoken, closing with a fervent prayer by P. G., and we separated under a sense of the Divine blessing. Members of the church and others gathered around us expressing thankfulness for the opportunity of meeting with Friends once more, saying that their parents or grandparents had been members of our Society, and they loved to hear the plain language spoken. One of these was the minister's wife. Although weary from our eight miles' ride, not having time to rest after the morn-

ing's meeting, we felt very grateful for the opening thus made for mingling with these people and our united worship was, we trust, in spirit and in truth.

Second-day morning, after a comfortable rest and kind provision, we took train at St. Clairsville, or rather our little coach. Finding ourselves with our backs to the engine we waited patiently to be set right, but learned that the seats were not reversible and there was no room to turn cars. So we made the best of our 12 mile's ride to Bridgeport, enjoying the picturesque scenery, the rough, stony beds of the streams, the coal mines, with their little houses near by, thinking of the miner's underground work to supply us with winter comforts, lighted at their task by the little lamps attached to their caps. We made connection at Bridgeport with Pittsburg and Cleveland railroad for Rochester, where we were to take the Fort Wayne and Chicago road to Columbiana. At that place we were met by William Nichols about 4 p. m., and taken to their nice house a mile out of town, abounding with comforts and conveniences, where we had time to rest before the meeting which William and his wife Mary had appointed for us in the Methodist church, in Columbiana. It was quite well attended, and the simple faith presented and the call out of all unrighteousness was well received. A few of our members were present, also several who expressed interest for the old associations connecting them with Friends. Finding this feeling so prevalent, the shadow of regret will sometimes fall for the lost opportunities, the want of a fuller appreciation of our privileges, and a failure to *live* the profession we make, thus depriving many of a religious home among us. The next morning our kind friends took us six miles towards Carmel to visit relatives of the other branch of Friends, which was an enjoyable season. We then rode 5 miles for a 3 o'clock meeting at Carmel, where, as the meeting gathered in the old deserted house, a covering of sadness clothed the spirit in view of the desolate meeting-houses, the scattered flocks up and down in the land, and an earnest call was given to the need as of old to be found gathered in the one place for social worship,—how others afford shelter for the hungry, a religious home for weary travelers and seekers after truth, and how needful that we should fill our measure of responsibility. There are enough Friends in that section, within a scope of five miles, to constitute a meeting, and it seemed with a little help and encouragement it could be accomplished.

A sweet spirited Friend of the Wilbur body had walked quite a distance to be with us, and her presence was comforting, giving promise of the time when sectarian walls of prejudice will be laid down. Those gathered seemed very thankful for the opportunity. Oh, that there might be a renewal of life among them, and the cementing bond of love inciting to gather often for mutual strength and refreshment!

Mahlon and Ruth Nichols met us at Carmel and together with William and wife we went to Kersey and Asenath Raley's and were refreshed by the good cheer and kindly comforts proffered. Next morning, 9th mo. 5th, we accompanied Mahlon and Ruth in their commodious carriage,—doing good service yearly meeting times, and now affording ample room for us and baggage,—*en route* for their home five miles from Salem, where we rested and enjoyed the freedom of their home and mingling with their family. The next morning the house was closed and all went to meeting at the usual hour Fifth-day morning. Many of us who live so near our meeting-houses know little of the effort it costs to go so far, but to us the new country and fine farms rendered the ride enjoyable. Quite a number had gathered, and after a season of quiet waiting, which the sweet prattle of a little babe did not disturb, a comparison was drawn from the loving care and wise counsel of earthly parents, coupled with patience and charity, with all the parental attributes which must clothe the Spirit of our Heavenly Father,—that as we reason from Nature up to Nature's God, we should not miss this lesson proclaiming "God is Love."

In the afternoon we attended the funeral of Tacy Johnson, an old Friend much beloved, which met in the meeting-house. Many gathered of different religious persuasions; some words of comfort and counsel were given. We dined and lodged in the home of Dr. Garretson and wife, meeting several friends there very pleasantly; made some calls in Salem, and on Sixth-day went out with James and Rachel Whinery to their home one mile distant. The rain prevented our enjoying the attractive surroundings, the beautiful flowers, etc.,—but we found abundant within to interest.

The next morning our kind friends took us to Joseph and Sarah Hartley's, thirteen miles distant. We passed through Damascus where the Gurneyites had been holding a large Yearly Meeting. From its spirit and the methods resorted to in their religious assemblies, we scarcely feel justified in calling them Friends, though not wishing to be uncharitable or to find fault with what they feel is right for them. We were very glad to reach the home of our kind friends, where a cordial welcome awaited us, while regretting that J. and R. W. must return that evening, making them so much travel for the day. We passed by a field of oats in shock, which seemed unseasonable to us, but learned that the harvest had been very late generally. First-day morning we attended West meeting, where a large company was gathered, and we trust to profit. The right use of the Sabbath was referred to, the need for social worship and the necessity for those who thus assemble and make a profession of faith in the Inward Light, to so keep the watch over their lives as not to be cause of discouragement to others. Our friends Comly and Martha W. Harlan, with their children, came in near the close of the meeting, having just returned from the East, where they had gone to attend the funeral of their uncle, James Trimble. We felt it had been good to be thus gathered, and separated under a sense of Divine favor. We dined at T. Ellwood Lamborn's, son of Job, recently deceased, meeting his widow there, and in the afternoon returned with our friends J. and S. Hartley, spending the evening at the pleasant home of their son Richard, near by. The next morning our friends took us to Alliance to meet the train for Fort Wayne. There

is a settlement in Knox township, Columbiana county, called the Switzerland of America, noted for its cheese-making. Many Swiss families are located there, an industrious people, and their produce finds a good market. We had a pleasant ride, meeting a very interesting woman, who in company with her husband was returning to their home in Missouri, she being chairman of the Social Purity department of W. C. T. U. work in that State. We were met at Fort Wayne by kind relatives and enjoyed a day of rest which was very grateful. We took a ride over the city seeing many fine buildings, with little one-story cottages dotted in between the more imposing houses, rode by the St. Mary's river and saw where that and the St. Joseph united to form the Maumee, also the old fort where Anthony Wayne had once been encamped. It was very dry and dusty, but we greatly enjoyed the drive. We left early on the morning of the 12th, our friends kindly seeing us off for Chicago. The country contrasted strangely in its features with our previous travel,—such a wide extent of level ground. We saw many fields of hay being gathered and the many stacks of hay in the distance looked like tents. Whole fields were covered with the yellow daisy, and near Chicago two varieties of purple flowers we were not familiar with were very luxuriant and beautiful.

We reached our destination near noon and were met by our kind friends Jonathan and Hannah Plummer, whose faces it was indeed cheering to see as we entered this great city. A meeting was appointed for the evening in the same building where they usually meet. A goodly company of Friends and others met and we were glad to see some of the same faces which welcomed us nine years ago. The thought of the great conflict necessarily waged in such a crowded community seemed almost oppressive, and the difficulty of getting from one part to another, and the noise and confusion without, seemed in strong contrast to our quiet sitting together waiting for the upspringing of life in our midst. A near sympathy was felt with Friends in this locality in view of difficulties and discouragements which have been encountered, yet a sense of thankfulness for the faith and endeavor which had enabled them to rise superior to these. J. P. offered a prayer amid the silence, after which in great poverty the word was spoken, which we can only trust may have been to some profit. We met with David Laing on our return home, while waiting for the cars, and had the pleasure of riding with him part of the way.

On Fifth-day morning we walked to the lake, the waves making us feel as if by the sea; there were so many sails out on the water, with steamers plying to different points. We could see the "crib" in the distance, and enjoy the thought of such a bountiful supply for this great city. We road up Clark street in cable cars to Lincoln Park, by the monuments of Lincoln, Grant, and Schiller, alighting to enjoy the great display of flowers—the finest we ever saw. We could but wish all our friends were present to enjoy the beauty and fragrance before they faded amid the cold autumnal blasts. Returning we passed the residences of Robert Lincoln, Potter Palmer, and others. A kind friend, A. D., drove us out in the afternoon, to Drexel Avenue and Park, where we saw the fine artistic arrangement of plants and flowers, and rode through several of the streets where the variety and grandeur of the buildings, on such a magnificent scale, was almost oppressive. Neither time nor ability will permit a full description of all we were privileged to see and to enjoy. We are now restfully gathered for the evening in the home of our friends, J. and H. Plummer, expecting to leave to-morrow morning for Mt. Palatine, where the Yearly Meeting is held. L. H. P.

Chicago, Ninth month 13.

THE EARLY FRIENDS OF PLAINFIELD MEETING.[1]

"No period of time has a separate being, no public opinion can escape the influence of previous intelligence. We are cheered by rays from former centuries and live in the sunny reflection of all their light. We are the children and heirs of the past, with which, as with the future, we are indissolubly linked together."

The recollection of other days in the distant past when the pioneers on these plain fields first planted and established permanent settlements, has suggested this commemorative gathering as a proper occasion to "inquire of the former ages and prepare ourselves for the search of our fathers; to remember the days of old and consider the years of many generations."

The purpose of this paper is to reverence and honor the memories of the founders of families who were the fathers and mothers of this religious body and in its infancy nourished the meeting by their means, their energy, their time, and their devotedness.

Among the earliest pioneers who composed these first English speaking colonies on New Jersey soil, were ardent followers of the two despised sects first called in derision "Quakers and Anabaptists." They had always been foremost as advocates of free opinion and independent thinking on religious subjects. Persecuted together in Old England for conscience sake, they had sought the shores of New England for freedom to worship God. But trials and imprisonments meeting them there, and exiled from Massachusetts, they at last came to the peaceful plantations of this province. The Baptists made Piscataway their nucleus of a settlement, and the Quakers settled mostly in Woodbridge township. South of the Raritan the Baptists selected Middletown as their headquarters, and Shrewsbury settlement was made up almost entirely of the Quaker element.

Of those who were the earliest planters along this salt water frontage from Amboy to Elizabethtown Point, and whose descendants a generation or two after pushed inland, it is only proposed to make reference at this time to those who were members of the Society of Friends. This class of people from the earliest establishment of the colony, embraced the opportunity of securing permanent homes within

[1]Paper read at the Centenary of Plainfield, N. J., Friends' meeting, Eighth month 20, 1888, by O. B. Leonard.

the jurisdiction of the Jerseys. When West Jersey was set off in 1676, that province was bought for £1,000 by two devout Quakers, and became the asylum for other persecuted Friends who emigrated thither in ship-loads from England. Burlington, on the Delaware, was their headquarters where, in 1678, the first monthly meeting was settled on the 15th of May of that year. During the year following, Sir George Carteret, sole owner of the eastern division of New Jersey, died, and in the settlement of his estate East Jersey was sold at public auction in 1682. The purchasers were a syndicate of twelve Quakers headed by William Penn, and the price paid under the auctioneer's hammer in London was £3,400. The same year twelve others invested in equal shares with the original buyers, making 24 proprietors in all, who became the sole owners of the province. There was a population of 3,500 at the time living in the towns of Shrewsbury, Middletown, Piscataway (including Amboy), Woodbridge, Elizabeth, Newark, Bergen, and Hoboken. On scattered plantations outside there were probably 1,200 more, making some 5,000 men, women, and children claiming title to about 300,000 acres. For all the rest of the land in East Jersey, these Quakers held a deed conveying to them from royal patents an undisputed ownership. In August, 1684, the proprietors living in the province organized themselves into a "Board of Commissioners" for the better management of their concerns. The organization exists to this day, though there remain only 50,000 acres undisposed of out of the two and a half millions owned by them two centuries ago.

The Quakers in large numbers were now possessors of a kingdom of their own. Their migration by thousands to the shores of the Jerseys, their occupation of the soil and management of government affairs became one of the most notable events in the closing years of the seventeenth century. The chief incentive for populating East Jersey from the beginning, in 1665, was the perfect religious tolerance allowed by the Lords Proprietors, without any interference, which great privilege was frequently reässured to the inhabitants and all new comers by the Quaker proprietary government. Robert Barclay, the distinguished advocate of the doctrines of Quakerism, was appointed governor, and Thomas Rudyard, an accomplished lawyer and friend of Wm. Penn, was made first deputy governor. Gawen Laurie, a noted and wealthy member of the Society of Friends, succeeded Rudyard, whose headquarters were at Elizabeth Town and Perth Amboy, and Samuel Groome, a prominent Quaker, was designated the Receiver and Surveyor-General.

The governor's council and legislative assembly were, by a large majority, of the same creed; and for several years they had complete control of all civil affairs, and for a full generation afterward they held the predominant power in all governmental matters. Their liberal principles and tolerant laws induced multitudes to settle in the province, including many of other persecuted sects embraced in the Baptist denomination and Scotch Presbyterians.

Under their peaceful dispensation the province greatly improved in commercial and agricultural advancement, as well as in its civil government. During this period the colony was divided into four counties—Bergen, Essex, Middlesex, and Monmouth. Courts for the trial of small causes were established by the authorities, and county courts were erected and other legal processes adopted for the better governing of a growing province. Laws were at once passed for improving the interior sections of the country by laying out and opening highways of travel and making bridges and ferries, appointing public markets and fairs for the development of general trade, and enacting other statutes for the peace, prosperity, and general good order of the inhabitants.

The Quaker proprietors were mainly active in soliciting emigration, especially from Scotland, from whence many new comers of their persuasion were induced to move to East Jersey. Prior to their purchase of the territory, in 1682, there were several families of Friends who had quietly bought farms and settled within the "verge of this meeting" and become identified with its establishment.

Prominent in the early beginnings of the Society in this vicinity was Abraham Shotwell. Though himself not a Quaker, he was warmly in sympathy with the common people in their contentions with the Lords' Proprietors government about titles to the land. His property in Elizabethtown was centrally located, being on the east side of present Broad St. and extending from the creek westerly to where Christ church is now located. On account of Shotwell's independent and outspoken opposition to the official requirement, the new patents to be taken under Governor Carteret's rule, his land was confiscated and sold from him in 1675 and he himself compelled to leave the province. Shortly after his death, two sons, Daniel and John Shotwell, succeeded, under the Quaker management during 1683, in having their father's property restored to the family.

In the meanwhile Daniel was living just across the sound on Staten Island, and John, having married in 1679 Elizabeth Burton, soon after obtaining possession of the land, made his residence in this region. For generations since their descendants have lived on plantations in Union county within a few miles of this house. By intermarriage with the Thorns, Laings, Websters, Vails, Marshs, Pounds, and other pioneer settlers, they have given the State some of its most useful and prominent citizens. The Society of Friends has always had among its worshippers, as consistent and valuable helpers, many devoted and influential members of the family. Their number in this meeting was far in excess of any other family, unless it be the Vails. At the opening of this century there were found on the records the names of eighty-six Shotwells.

The first mention of this locality as Plainfield is noticed in connection with the register of the birth of one of John Shotwell's grandchildren. His daughter, Elizabeth, had married John Laing in 1705, and their daughter, Elizabeth, the record states, "was born att Plainfield ye 11th of ye 10th month 1707." Earlier references to this place had been made as the "Quaker settlement on the Plains" to

distinguish it from the still earlier planting of a small colony known as Scotch Plains, near by.

The first marriage ceremony solemnized in this meeting-house after its final completion and occupation, was Amy Shotwell to Charles Brooks. Here within these hallowed enclosures, as well as elsewhere, have the sweet voices of the gentler sex bearing the name of Shotwell been heard, and often have the members of this meeting heeded the kind words of advice and counsel from faithful speakers of this family name.

Among the very first settlers in the same locality was Samuel Marsh, one of the original associates of the Elizabethtown grant. Though a strict New England Puritan himself many of his descendants formed other religious associations. Their homesteads were in the vicinity of Rahway, and by reference to the early records of the Friends' meetings the name is frequently found. The progenitor of the family line in this State died 1683, leaving three sons, Samuel, John, and Joseph, and four daughters, many of whose offspring were prominently identified with this Society. The original ancestors of the Marsh family in the United States were three brothers born in England, who came to America the first half of the 17th century, viz: John Marsh settled in Connecticut in 1639; George Marsh made a permanent settlement at Hingham, Massachusetts; and Samuel Marsh, after a short stay in New Haven colony moved to this section of New Jersey where he became the owner of several hundred acres of land and the progenitor of most of those in Union county bearing his name. Though the family was never represented by a very large number among the Friends, the few connected with the Society were active and influential in sustaining the authorized meetings and maintaining the high standard of discipline and morals for which the Quakers have always been distinguished.

Another active and prominent Quaker of this section of East Jersey, antedating the year 1682, when the province was bought and governed by members of this religious sect, was Nathaniel Fitz Randolph, the oldest son of the largest and most influential family in this part of the colony before the Revolution. The founder of this distinguished family in America was Edward Fitz Randolph, of England, who came to America in 1630, settling at first in Scituate and afterward at Barnstable, Massachusetts, where Nathaniel was born in 1642, the eldest of ten children. He and his immediate descendants were the only members of this prominent family belonging to the Society of Friends, which society it is thought he joined at the time of his marriage, in 1662; for the same year he was punished by the Plymouth court for marrying contrary to their law. In 1670, he was fined for refusing to contribute towards the support of the Barnstable minister. After most of the diabolical devices for converting heretics had fallen into disuse in Massachusetts, there still remained this unjust law enjoining payment of church tithes. It was not till 1724 that the statute was repealed. In the meantime scores and hundreds left Massachusetts, some as soon as they could dispose of their property and others because their property had been confiscated already in 1677. Nathaniel F. Randolph exchanged his house and lot at Barnstable for John Smith's property in Woodbridge township, and as quickly as possible thereafter moved with his family to New Jersey. Just before leaving his native place, he with three other influential Quakers signed, in 1678, a remonstrance to the general court at Plymouth against being taxed to support the established ministry. This protest contained these mild words: "It's well enough known we (called Quakers) have never been backward to contribute our assistance in our estates and persons for the civil government's expense where we could act without scruple of conscience, until this late contrivance of mixing your preachers' support therewith. If the court will please to distinguish between the country rate, and the preachers' maintenance, our consciences will be eased and we will cheerfully contribute our proportionate share for the promotion of governmental affairs." But such sensible and tolerant views had not yet possessed the ruling spirits of New England. The following year, 1679, found Nathaniel on his plantation in Middlesex county, a few miles westwardly from what was afterwards known as the Blazing Star Ferry on Staten Island Sound. For years previous his aged parents and other members of his family had moved into the adjoining township of Piscataway. Nathaniel Fitz Randolph had all the intellectual endowments and moral qualities combined with an executive ability which were necessary for establishing and maintaining an independent society for religious worship. It was chiefly by his firmness, wisdom, and commanding influence in the community, that the Friends were able to overcome the rebellious disaffection caused by Keith's departure from the faith in 1689. Nathaniel's usefulness and importance in the commonwealth are manifested by his prominence in the colonial government, being a member of the legislature for several terms. His public life is full of noble deeds done for the good of the province. He filled all the local and county offices as well, from the overseer of the highway of Woodbridge township to the high sheriff of Middlesex county.

Any one familiar with the early records of the Quakers in this section, will remember that in 1704 the house of Nathaniel Fitz Randolph was opened for weekly meetings of Friends. As long as he lived his hospitality was unlimited and his zeal for the spiritual welfare of all members of the society never diminished. When he died, in 1713, he left a large number of descendants to follow his footsteps and imitate his pious example, scores and hundreds of whom adhered to the faith and practice of their great progenitor. By their intermarriage with the Hulls, Kinseys, Hartshorns, Hamptons, Marshs, Vails, Laings, Websters, Shotwells, and Smiths, besides other pioneer families, some of the very best communicants of the Quaker society are found.

The Laing family composed a prominent part of the first permanent dwellers of this surrounding neighborhood. The progenitor of the long line in East Jersey was John Laing, a Scotch farmer from

the county of Aberdeen. He came over from Craigforth in August of 1685, landing at Amboy, near which place for a few years he lived with his wife Margaret, and children John, Abraham, William, Christiana, and Isabel. During the latter part of 1689 he moved inland, purchasing a farm on the fertile plains and rolling hills not far from where New Brooklyn is now located. His son John married, in 1705, Elizabeth Shotwell, a direct descendant of the original Abraham Shotwell. His daughter Isabel, in 1700, married Joseph Fitz Randolph, son of Nathaniel, and both families were always active and energetic members of the Society of Friends. John Laing took practical measures to encourage the development of the Society, and in 1721 and after, urged upon the Quaker authorities the propriety of Friends living near him gathering at his house for religious worship. In 1725, by his urgent solicitation, week-day meetings were established at his house. The location was so easy of access to a wide circle of Friends living on farms along Green Brook, Cedar Brook, and vicinity, that by 1731–6 a meeting-house was built, which was the beginning of what subsequently became this Plainfield society.

From that primitive day to this, more than a century and a half, the descendants of John Laing have been among the foremost supporters of the gospel of peace. From the completion of the little meeting-house in the woods, originated by his forethought, till increasing congregations, generations after, required a larger meeting-house on the plains, where we gathered to-day, the name of Laing has been a pleasant and welcome household word. No more befitting memorial to the name could be erected than suitably enclosing and guarding the sacred spot donated by John Laing in 1728 as a burying ground for the Society and consecrated by the dust of generations. It would be an appropriate and affectionate recognition of the valuable services of one who may be considered the founder of the Plainfield meeting as well as the progenitor of a large and important family.

(*Conclusion next week.*)

A PURPOSE OF PEACE.

A PRIVATE letter of the dead Kaiser Frederick of Germany, which has just come to light, reveals that he had one object uppermost in his heart. It was a settlement of the Alsace-Lorraine question. For months, perhaps years, his whole mind had been given to this problem. Had he lived he would have tried the experiment of giving Alsace-Lorraine home rule, with Prince Alexander, of Battenberg, as Governor. Then, maybe, we might have seen the realization of a grander dream. "Germany would have been delivered from the cancer which has been eating away her life since 1870, even as I shall, perhaps, be freed from the cancer which is eating into my throat." So wrote Frederick. With Alsace-Lorraine independent there would have been an end of the deadly feud between the Gaul and Teuton. Europe would have been disarmed, and peace and good-will would have reigned on earth.

TRAINING FOR RESPONSIBILITY.

MANY and various are the methods that obtain in this educational age relative to the training of humanity for every purpose that the race of man is destined to fulfill. The brain in its many-sided directions has had its full share of attention, and latterly the hand, in connection with the brain, is claiming, not supremacy, but equality, in the matter of thought and wise oversight; the result of it all being at least a promise of great gain to mankind. Moral and religious training too come in, each for its own share of that direction which knowledge and wisdom are expected to be able to give to those just starting upon a life, and it would seem as if there was no lack anywhere.

But close observation of character shows but too often a want of that training which enables the young to assume with safety the responsibilities of positions of trust or care without making shipwreck of much that is of value in a material sense, as well as often harming the physical or warping the moral and religious life. There is a need of a training from very early years to some degree of responsibility regarding the burdens of this life, especially where there is wealth, and the young are apt to miss the safeguards that come with struggle and work, and which assist much in the formation of right character. Parents and guardians who find it easy for themselves to bear these responsibilities, or entertain false views about sharing them, too often cripple those under their control by saving them from all care. There is prevailing with many, a theory that youth should not be burdened with any financial or other anxieties; they should only have a chance to grow and develop and see the sunny side of life. Especially is this the case with some who in their own childhood have been forced to carry more than a wholesome share of care. Such often become morbid and rush to the opposite extreme when their turn comes to direct.

Strength of the kind needed to battle with any condition of life does not come from perfect ease and freedom during adolescence. Some trust and responsibility should be given to every child even if there is occasional loss thereby, for it is the experience of most persons that their best lessons have been learned through some error of judgment, rather than by con-

stant success. That direction of the young that can develop ability to assume responsibility, by gradually imposing trusts upon them, displays a wisdom that will be sooner or later gratefully acknowledged by the recipients themselves as well as commended by the disinterested observer. But in this, as in all things, there must be moderation used, for there are multitudes upon whom burdens come all too soon and are all too heavy to be borne. We recently noticed a case of this kind in a railroad car, where was a child of perhaps ten summers, whose spirit seemed well nigh crushed, as she strove nobly to perform her part of the care of a mother evidently under the influence of liquor, and to screen her uncourteous actions from public observation. Our full sympathy went out to the brave child who thus early was called upon to assume such a charge, though we could see how the womanly qualities were being developed, in this case too prematurely; yet, if she does not become hardened, this bitter schooling may strengthen her to walk in a better way.

We have given an extreme case perhaps on the one side, on the other many could be presented of persons whose early years were spent without a sense of care, and who in after life were overwhelmed with trials which they could not withstand simply because no strength had been developed that might have enabled them to come through strong and firm.

In the matter of financial trusts, it is unwise in parents to expend all the money the child needs for its equipments, even if the mature judgment is of the best. Trust him early to the use of funds, but do not screen him from the consequence of every mistake it will help him in the future. Train him to some work for which he alone is responsible. Give him care over some things for which he shall give an account. It requires some degree of self-denial on the part of the thrifty head of a household to give this training, yet for the lack of it many a child has brought dishonor upon a worthy name and the world has queried why is it thus? Why does not the mantle of the prudent father fall upon the child? Alas! in so many things this query is suggested!

Training as regards responsibility of membership in religious bodies is needed also, especially is it wanting in that of our own Society of Friends, where such membership comes chiefly by birthright. Very early should we begin to press upon these the value of such a connection and what is required of them so as to be worthy of it. Our youth should be early trained to contribute to the support of our meetings and have a voice in the need fulcare and changes of the property, to be allowed to share in the lighter services of the business meetings so they may grow to feel they are an essential part of the meeting, and they will the sooner come to feel it to be equally essential to them.

We have erred in the past by assuming that age, and too often advanced age, was needful ere positions of care and responsibility should be accepted. Failing to feel themselves of use many of our young people have drifted from us, finding places of usefulness in other religious folds, while others that might have grown by being trusted with responsibilities, have become dwarfed and less valuable than if sooner brought into service. Here, too, self-denial is necessary, that those able, and willing, and loving the work shall step aside to give others room for development. Happily in this regard there is an awakening, and a close watch must be kept to keep the balance true; for here, as in all our manifold relations in life, youth and age need to mingle, each exerting a beneficial influence on the other. By sharing the duties good will result to the Society in the most enduring form, the excellencies of both young and old will be brought out, and from this will result the succession of "standard-bearers" whose absence is so often lamented, and a dearth of which we so keenly feel.

MARRIAGES.

FROLICHER—MITCHELL.—On Fourth-day, Ninth month 5th, 1888, Dr. Hans Frölicher, of Solothurn, Switzerland, to Frances H. Mitchell, of Philadelphia.

DEATHS.

BAKER.—At the residence of her sister, Rachel Taylor, West Chester, Pa., on Ninth month 13th, 1888, Anna Baker, in the 87th year of her age.

BARTRAM.—At her residence, near Darby, on Second-day, Ninth month 10th, 1888, Elizabeth, widow of Thomas Bartram, in her 83d year; a member of Darby Monthly Meeting, Pa.

BAUGH.—In Media, Pa., Second month 9th, 1888, Edward J. Baugh. He was a gifted young man, formerly a pupil in the First-day school at Willistown, Chester county, Pa.

BRYAN.—At Upper Darby, Pa., Ninth month 9th, 1888, R. Emma, wife of Lewis L. Bryan. Interment at Haverford Friends' ground.

COMFORT.—At her residence, Bucks county, Pa., suddenly, Ninth month 9th, 1888, Susan L., widow of George Comfort and daughter of the late Abraham and Susan Lower, of Philadelphia; a member of Falls Monthly Meeting, Pa.

JONES.—Ninth month 11th, 1888, at the residence of her daughter, Sarah W. Roberts, near Hartford, N. J., Miriam, wife of Allen Jones, in her 83d year.

KIRK.—Eighth month 31st, 1888, in Byberry, at the residence of her son-in-law, Elmer Carter, Martha, widow of the late Samuel Kirk, in the 79th year of her age; a member of Bristol Monthly Meeting.

MILLETT.—On the night of Ninth month 9th, 1888, of pneumonia, Ann, widow of George J. Millett, in her 86th year; a member of the Monthly Meeting of Friends held at Green street, Philadelphia, Pa.

SMEDLEY.—At his residence, Fulton township, Lancaster county, Pa., Ninth month 4th, 1888, James Smedley, in the 70th year of his age; an exemplary member of Little Britain Meeting.

This dear Friend took a lively interest in the Society of which he was a life-long member, especially in the Bible class connected with the First-day school which while health permitted he regularly attended. He was an earnest and diligent reader of the Scriptures of truth, and was ever ready to give a reason for the hope that was in him. He frequently had a few words of counsel and encouragement for his friends in the meeting for worship, which were well received. For more than a year past he suffered, at times severely, with an affection of the heart and lung trouble; but throughout all he manifested a meek and quiet spirit, in entire submission to the will of his Heavenly Father, giving evidence to those around him that his peace was made with his Creator, and whether he should be restored to health or otherwise, he was content.

B.

SMITH.—Eighth month 26th, 1888, near Lincoln, Va., Harvey T., son of Thomas R. and Ellen H. Smith, in his 22d year; a consistent member of Goose Creek Monthly Meeting, and a young man of great promise.

TEMPLE.—Eighth month 30th, 1888, at the residence of S. Howell Mifflin, Camden, Kent county, Del., Harriet Jenkins Temple, widow of Henry M. Temple, in her 71st year; a member of Camden Monthly Meeting.

TOMLIN.—At the residence of her sister-in-law, Milicent Tomlin, Glassboro', N. J., Ninth month 14th, Abigail Tomlin, formerly of Philadelphia, in her 85th year; a member of the Monthly Meeting of Friends held at Green street, Philadelphia.

TWINING.—Third-day, Ninth month 11th, 1888, in Newtown township, Bucks county, Pa., of consumption, Anna T., wife of George H. Betts, and daughter of Aaron and Emily Twining; member of Wrightstown Monthly Meeting of Friends.

For Friends' Intelligencer and Journal.

THE GENERAL CONFERENCE OF FRIENDS' FIRST-DAY SCHOOLS.

Near the hour appointed, on the morning of Eighth month 20th, the Sixteenth General Conference of Friends' First-day Schools of the seven yearly meetings assembled at Yarmouth meeting-house, Ontario, Canada. After the usual period of devotional silence, Louisa J. Roberts spoke of being the only one present of a little company who first introduced the subject of First-day schools before Genesee Yearly Meeting, held at Pickering many years ago. Some Friends then objected, but all treated them kindly. (It was afterward discovered that Lavinia Yeatman, who was also a member of that company, was present with us now.) Isaac Wilson spoke of the same meeting, when he was but a boy: he rejoiced in the good which grew from a little seed. A message of greeting to be sent by telegram, was here introduced, to go from this Conference to Friends of Peace street meeting, at Plainfield, New Jersey, who were celebrating the one hundredth anniversary of the erection of their meeting-house; it was heartily united with, and sent at once. [This has been printed.—Eds. Intelligencer and Journal.]

In connection with the greeting Eli M. Lamb spoke of the large and earnest gathering now assembled here; of another over the Potomac (a Temperance and Quarterly Meeting), and of the Plainfield Meeting: all working as Friends. This made him think something was going on; and he felt we could all work in hopes of accomplishing results we may be proud of. Isaac Wilson said he was glad the Good Father had inspired the thought, and he was glad to find Friends looking on the bright side. Names of delegates were now called and responded to as follows: 6 from Indiana, 3 from Ohio, 1 from Baltimore, 11 from Philadelphia, 6 from Genesee, and 6 from New York; also, 6 of the absent delegates sent excuses.

The Executive Committee reported five meetings since last Conference, two in Philadelphia, one in West Chester, one in New York, and one in Yarmouth. They reported that $2,000 out of the $3,000 they were allowed to call for would be sufficient to complete the work of the present year. The programme of business as arranged by the clerk for the Conference was read and approved. Reports of Executive Committee, Literature Committee, and Treasurer came in due order. There was a profitable and careful consideration of the subject of Lesson Leaves as embraced in the report of the Literature Committee; this Committee have an arduous duty to perform, and find it much more difficult to adjust their Lesson Leaves to the International Series subjects, than if they were allowed to choose their own texts by which to give lessons on Friends' cardinal doctrines; but it was decided that while the prevailing sentiment is as it is, the committee would continue to follow the International Series as to subjects. We were told that in some parts of the West they have Union Schools, Friends and others meeting together, where they were not strong enough to carry on schools alone; that Friends take our Lesson Leaves there, and read them in connection with the International and feel they are quietly, but surely, turning the thoughts of those mixed schools to a higher and more spiritual interpretation of Scripture and religious truth. The labors of the Literature Committee were fully appreciated and approved.

Second day Afternoon.

Reports were read from Indiana, Genesee, Ohio and Baltimore Associations, and papers from Indiana and New York, the former on the Discipline. These all gave encouraging accounts of the First-day School work in their different localities and were, in short, living papers.

Third-day Morning.

After the opening silence a paper was read from Illinois Association entitled "What Effect has the First-day School on our Society?" It was an earnest paper, full of life; coming as it did from our youngest and weakest association in numbers, though not in power. It was in this Yearly Meeting the Philanthropic Labor Union, which is now worked in by all the yearly meetings except Philadelphia and Genesee, had its birth. A question came up this morning whether those who take part in these Union Schools are not doing more towards spreading a more spiritual life and religion, than those of us who are more conservative. We were also cautioned

not to be looking too much for the fruits of our labors; but to go on doing our duty as made clear to us, and be thankful for what we have; and the time will come when all true efforts toward the right will be known and felt. Other papers were read from New York and Baltimore, the latter entitled "What shall we Teach?" Among other points touched, it said the tendency of religious thought is away from Trinitarian doctrine. We stand for the Oneness of God, His justice tempered with mercy; and protest against the penalty of wrong doing being shifted from the wrong-doer to an innocent victim. We were urged in preparing our papers to be practical. In New York's report the Mission School work was made an important feature. Philadelphia delegates asked for three more representatives on the Executive Committee of the General Conference. The home association having left off names we could not well spare, the request was granted, and resulted in other yearly meetings, adding more names to their representation, which was felt to be desirable as the members of this committee living so far apart, necessarily there would be many meetings which all could not attend, and with a full executive committee we might reasonably hope for all the meetings to be fairly attended.

THIRD-DAY AFTERNOON.

The Executive Committee reported the sum to be raised next year $1,000, on the same basis as heretofore. William J. Hall of Swarthmore was reäppointed treasurer of the General Conference. Philadelphia Association's report was then read: it was largely statistical. A paper which should have come from Philadelphia Association was not received in time.

A paper, "Hints on Conducting a Bible Class," prepared by Edgar J. Zavitz for Genesee Association, though not submitted to that body before coming to us, was one of the best papers brought before the Conference. A few quotations from it are here given: "Right methods in study will secure success more certainly than talent or genius." "He lives most truly and wisely who lives near the great source of knowledge, God." "The mind should not act like a sponge, but like the human body itself, assimilate." "Require the class to condense the subject or leading thought of the lesson." "Not to leave a subject because we did not understand it, not to skip over deep things; I do not believe in this method, if any dark places are found, turn the different minds of the class on them. Half a dozen candles give more light than one." "Do not be timidly afraid of our principles; they are founded on the everlasting and indestructible truth." "If we shut out the doctrine of the Inner Life, schools will suffer, and our Society die." This paper, which closed the business of the Conference, brought out considerable expression. I forgot to mention as included in Third-day morning's proceedings a paper from Illinois entitled "Sure Foundation," also a New York paper on the sayings of Jesus as contained in the book Matthew.

I have endeavored in a very imperfect manner to give some idea of the proceedings of the Conference. Would I could give with the words a portion of the spirit that was around and covered that meeting,—commencing at the Half-yearly Meeting held on Seventh-day, the meeting for worship, the First-day school and youths' meeting on First-day, and with us all through the different sessions on Second-and Third-days: it felt to me that our Father was indeed there, in the hearts of his children both old and young.

M. B. PYLE.

THE FIRST-DAY SCHOOLS.

WITH encouragement derived from the recent meeting of the General First-day School Conference, some earnest Friends have felt impelled to undertake the establishment of a First-day School at St. Thomas, (a large town, a few miles from Sparta). A private letter from one of those engaged in the work is especially interesting as indicating the zeal with which they have begun, and also as suggesting what might be done as well in many other places. The writer says: "We have actually commenced with eighteen, and with good promises of others yet. We really feel it will prove a success, as we have received so much encouragement from nearly every quarter. Starting as we have, in our own rooms, we shall soon be compelled to seek larger space, which must be met by as little expense as possible. There are but two complete families of Friends and one other with an aged woman Friend with her two granddaughters in St. Thomas. T. has the primary class of seven little folks, and expects to treble its size very soon, as she not only insists on each one bringing a new scholar, but is herself still going out to gather in others,—being very careful always to enquire if they are attending any other school.

"The next class of older ones has six in it, and has been taken by our Superintendent's wife, and she already proves a very efficient teacher, having had experience, besides the five children of her own. She calls it the "Topic Class," and it is likely to grow also. As to the Bible class, we have not yet organized it, but intend to on next First-day with probably eight members. William Shaw has been appointed Superintendent."

—A friend, E. H. B., sends us the notice, printed below, of the death of a young man who had been zealously engaged in the work of the First-day schools, and in a private note says: "This remarkable young man had always attended another church, but becoming dissatisfied with its doctrine, and the minister insisting on him to become a member, which he constantly declined, he finally said, 'Mother, I can go no longer with them.' She then queried with him if he would like to go to the Quaker meeting, to which he replied in the affirmative; so she with his two little sisters accompanied him. Upon his return home, he said, 'O mother, I never had such quiet, peaceful feelings in all my life, and I wish to continue going there.'"

A tribute of remembrance seems due to the memory of one of our First-day school scholars, who was a member of our little band, held in the old meeting-house in Flushing, that the youthful readers of the INTELLIGENCER AND JOURNAL may realize how sweetly

the young can give up all the endearments of life at an early age, and feel that there is a place prepared for them in the Heavenly Mansions. This was the case of Frederick, son of I. and A. L. Kinney, in Flushing, whose death occurred a short time since, of consumption, in the 18th year of his age.

During his painful attacks, he so often exclaimed, "Oh Lord, help me to bear this pain," and after it had ceased, he would say to his mother, "I could not have borne it if the Lord had not helped me." The passages in Scripture and lines of familiar hymns, that were found marked by his hand, gave evidence that his faith was placed on a Higher Power than man, and although it was a sore trial to leave all the loved ones in his home circle, he was quite ready to go when the Heavenly Messenger came.

His farewell to his two young sisters was most touching, wishing them to so live, that they could meet him in Heaven. He was not a member of our Society, yet he attended our First-day school, remaining to meeting, as long as he was able to attend. He expressed himself as having felt much sweet peace of mind in the quiet communion of Friends.

The last two years of his life, a sweet spirit of peace seemed to have taken possession of his mind, and when stricken with disease, no word of complaint escaped his lips—he was always cheerful and happy, often spoke of the goodness of his Heavenly Father, and was sure the pain and sickness had been sent for a good and wise purpose. He felt that prayer would always overcome difficulties for him.

He thought of death as going on a pleasant journey, and seemed to count upon the joy of meeting with loved ones gone before. He said, "I am not afraid to die, for His grace will be sufficient to sustain me; even if there comes a painful struggle, the Lord will bear me safely through."

The instructions and watchful care of his pious mother had a favorable influence upon his character, and with tender solicitude for her comfort, his last words were "Take care of mother."

For Friends' Intelligencer and Journal.

AN OLD FASHIONED FAMILY.

The sun shines hot on the dusty road. The air is filled with the droning of bumble-bees gathering sweets from the late summer flowers. The composites are in their prime, and

The aster and the golden-rod

flaunt their gay colors on every hand. But they do not hold exclusive sway, for over there among the hazel brush, where the bumble-bees are thickest, is a bank rosy with the bloom of quite another family. A pungent aromatic odor pervades the air as you approach. Grasp the plant and you notice the square stem. Taste it—no danger in that, for the family to which it belongs contains no members which are poisonous either to touch or taste—and you have a biting but pleasant sensation on the tongue. Notice the opposite leaves, the rounded head of two-lipped, pinkish flowers. Finally, if these marks do not distinguish the plant, tear the corolla open and observe the single pistil which looks as though it were split at the end, the four little nutlets which are forming at its base, and the two long stamens half hidden beneath the upper lobe of the corolla. Evidently our plant is a labiate—a member of the well-known mint family. Long ago Linnæus named it, in honor of a Spaniard who wrote learned treatises on the plants of the New World, *Monarda*, and with its common name, horsemint, we are all familiar. The species so abundant on our Iowa roadsides is the *Monarda fistulosa*, or wild bergamot.

But familiar as this plant is, some of its relatives are even better known to us. There are the sweet scented herbs which flourished in our grandmothers' gardens, the marjoram, thyme, and sage, so needful to the culinary artist of earlier days, and the fragrant lavender; there are the peppermint, the catnip, the pennyroyal, and the horehound, domestic remedies which, if they are not especially valuable as medicines, have at least the virtue of being harmless and feebly operative; there is the beautiful scarlet salvia of our flower gardens which is a very near relative of our common sage though we might not at first suspect the brilliant hued tropical plant of so vulgar an alliance; then there are numerous less familiar wild plants. The basil with its crowded whitish flowers, the pretty blue Brunella which spreads beneath the shade of hazel brush and low woods, and the hedge-nettle with its long spike of purplish blossoms, are members of this order, common to our Iowa woods and fields.

The labiates nearly all belong to warm and temperate climates. They are more abundant in the Old World than in the New and many of the species which we now possess have been introduced from Europe. According to Bessey there are about two hundred native species in North America.

The economic value of this order is due to a volatile oil which is stored up in little glands in the leaves of many of the plants. The oil of peppermint is a good example and is obtained by distilling the leaves of the plant with water. On condensing the steam most of the oil floats upon the surface of the water, but a small portion remains in solution; this is the essence of peppermint and is simply the oil diluted with water.

I have been much interested in observing the stamens of some of the plants belonging to the labiates. The curiously shaped anthers of the sage and others are noticeable but the variation in the number of stamens was still more interesting. Four is the usual number but some of the species have only two, while still others have one pair perfect and the other consisting of sterile filaments without anthers. I noticed this especially in the *Monarda fistulosa* and wondered why this plant which seems so abundantly able to survive in the contest for life should have concluded to dispense with two of the organs which seem properly to belong to its order. Finding two stamens sufficient for fertilization, it must have reduced the other pair, by natural selection, to rudiments.

LETTERS FROM EUROPE.—XXVII. LEAMINGTON AND RUGBY.

Leamington, England, August 3.

On leaving London we came hither and have now been for nearly four weeks in the heart of the most thoroughly English district. The county, Warwickshire, is the most central in England, and a fine oak on the roadside, protected by an iron railing, is pointed out as the actual center of the kingdom. Within a circuit of a dozen miles are many noted places: the cities of Stratford-on-Avon and Coventry, the castles of Warwick and Kenilworth, the lordly mansions of Guy's Cliff and Stoneleigh Abbey, and the celebrated public school of Rugby. Leamington itself is a watering place of considerable reputation, possessing mineral waters of recognized medicinal virtue. These are resorted to in winter, and hundreds of handsome houses now vacant, are then rented, furnished or not, at the option of the tenant. The permanent population is about 20,000; and across an imaginary line is the village of Warwick with as many more. The latter, however, is a manufacturing place, while Leamington aspires to higher things, such as shop keeping, and rather turns up its nose at work-people. At least it looks coldly on those who would pollute its atmosphere with smokes and sulphurous odors, and endeavors to keep everything in pleasant shape for the winter visitor. And it has fallen upon one good idea which would be admirable for its simplicity and cheapness if for nothing else. There are many pretty walks around Leamington, among them the most frequented and pleasant being paths through private fields, which, having been used "from a time of which the memory of man runneth not to the contrary," cannot now be closed by the landowner himself. Naturally since land has become valuable, he has wished to keep out the public, and used to and occasionally still does nail up a gate or so fasten a turnstile that it cannot revolve; for by the same law if he can keep the path closed for twenty years, which is supposed to be as far back as any one can remember, he can plead that from time out of mind no one has ever had a right to enter that field, and consequently no one can have a right to do so now. But then there has been for a good many years back an association with a title implying that they take care of the people's right of access to lakes, mountains, and scenery generally; and whenever a churl wishes to shut out the public from some pretty spot, this association employs counsel and bears the expense of a suit to vindicate the right. Then in many parts of the country, and in this among the rest, there are local associations which undertake to improve and beautify the road or path itself; and at frequent intervals, under a pine tree or on a commanding spot, the wayfarer will find a plain bench where he may rest in comfort and generally may enjoy a fine view at the same time. In things of this kind a little expense goes a great way. A few trees planted or saved from the axe, a few square-yards of turf, a few plain benches, all surrounded by a plain fence, make, in time, a little park which will give pleasure to a hundred or two people at once. A broad, irregular street here, treated in that way, has developed into a charming walk; and such could be made in any one of the ten thousand little towns at home at an expense of twenty dollars each.

A pleasant feature of the English landscape is the parish church with its tapering spire from which the clock sends forth its hourly warning, and frequently, also, a chime of bells floats its music over the fields every quarter-hour. It was a beautiful thought, when the whole people were of one religion, to divide up the land into parishes, and build a meeting-house accessible to all, and put there a man who should be fitted to guide, instruct, and help every one who should come to him for aid. That the institution failed at length is no proof that it did not work well at first. Every institution has its time of existence marked out by a law, occult, indeed, but unmistakable, which condemns it to decay and in decay to become a nuisance. The religions which we find now oppressing and degrading mankind, Buddhism, Brahminism, Mohammedanism, were at their inception far superior to the systems they superseded, and to the systems into which they have been themselves perverted. And I am inclined to think the same may be said, and with equal truth, of Christianity, if I state the proposition in this way: that the organized Christianity of the present day is as far below the ideal of its founder as the other systems are below the ideal of their respective founders. All have deteriorated in proportion. I cannot doubt that the established church has turned out a failure, not because it maintains in wealth and idleness a great number of educated and scholarly men; for if wealthy men choose to endow prebends and church offices of all kinds, I don't see that according to the present organization of society any one has a right to object. But the church was for several centuries arrogant and oppressive; and complaint is made that even yet the parish priest has, to some extent, on some occasions, a measure of control over the marriages and burials of dissenters, and that he uses it to annoy them. If this be true, and I do not doubt it, I think it demonstrates that under no possible circumstances can man be entrusted with authority over another in any way, even the most remotely connected with spiritual considerations.

Warwick castle is said to be the finest old baronial residence in England, and while many such places have fallen into ruin this is still kept in habitable order. But the family seldom resides there. The expense of a proper establishment and retinue for such a place is so enormous that the Earl limits himself to a month or so of mediæval grandeur. The halls and chambers are of noble dimensions; and there are collections of armor and relics of the heroic ages; and in a greenhouse among the plants is the celebrated Warwick vase, renowned for its exquisite shape. One generally thinks of it as something won by a crusader in battle with the infidels; but, in fact, it was found in Italy and acquired by the mean method of purchase. The public are shown over the castle for the fee of one shilling per head, which has not a very noble air of chivalry, but which is really a reasonable compromise between turning in all the rab-

ble of a dense population, and keeping every one out The present fee seems to restrict the influx to manageable dimensions.

In the village of Warwick and near the Castle is the parish church of St. Mary's, and attached to this the Beauchamp chapel. Both the church and chapel are beautiful in architecture and stained glass; but I have said so much about churches that I have exhausted my limited vocabulary. In the chapel is the tomb of Robert Dudley, Earl of Leicestershire, Lord of Kenilworth castle and manor, and prime favorite of Queen Elizabeth. On his tomb are the effigies of himself and his countess, he clad in armor, she in the queer fashion of the day. Near by is the tomb of their only child, a boy, deformed, but also represented in effigy as clad in mail. The keeper of the chapel told us that Leicester had three wives: the first two he poisoned, the third poisoned him—by mistake. Their boy also died by poison. I would not advise your readers to adopt this legend as history, though it is probably true as it accords so well with what we know of the "good old times."

Guy's Cliff and Stoneleigh Abbey are beautiful rural residences; the one of Earl Percy, the other of Lord Leigh. The families being at home, we could only walk through the grounds which, like the grounds of every mansion of any pretensions, are exquisitely beautiful. Persons even of the middle class, and even of the lower section of that, give thought to the cultivation of flowers and the forming of grass-plots to an extent of which at home we see no examples. One reason for this may be the climate here which ensures the success of every effort. The summer has been unusually wet, the rainfall in July exceeding by more than an inch the rainfall of that month in any year recorded; still the heavy foliage on tree and shrub and the thick verdure of the field cannot be due only to this year's excess.

Belonging to Stoneleigh Abbey is a mill which was assessed and taxed in the Domesday Book of William the Conqueror, A. D. 1086. It is still grinding wheat.

We "waited for the train at Coventry," and sought out "the three tall spires" which Tennyson has celebrated in his ballad. We did not inquire for the street adown the which rode the Lady Godiva clothed only in modest purity and her own flowing hair to win for her cruel lord's wretched serfs relief from the crushing tax he had imposed. Had we inquired for it, it would surely have been shown us, as well as the hole bored in the shutter by Peeping Tom, through which he purposed gazing on the devoted lady, had not his eye been withered in his head "before it had its will." In the land of legend it always turns out that if the story be not founded on facts, the facts will be founded on the story. And so there is at Coventry a statue of Peeping Tom, said to be a wonderful likeness. Besides one or two really beautiful old churches, there are here two hospitals, as they are called, but for the poor and not the sick. Besides shelter and warmth, each inmate receives a small cash payment weekly for food and clothing. The revenue, derived from endowments in old Catholic times, has recently fallen off greatly on account of the agricultural depression, but still supports forty inmates

Most of us had visited Stratford-on-Avon several years ago, and only the younger pair went over. They sat in Shakespeare's seat, saw his manuscripts, and handled some objects that had been honored by his touch. The visitor's book is full of autographs, some of men almost as famous as Shakespeare himself. On a window-pane Walter Scott had scratched his name with a diamond. In the chapel where Shakespeare lies buried is a beautiful stained-glass window illustrating his seven ages of man. It was the gift of an American; and of 17,000 visitors last year to the shrine, 5,000 were of that nationality.

Our last visit was made, not many days ago, to the public school at Rugby, made famous by the great head-master, Dr. Thomas Arnold, by the popular book of "Tom Brown at Rugby," and by numbers of eminent men who received great part of their education at the school. It is vacation now, and we were lucky in lighting upon an old verger who showed us through the buildings and grounds and told anecdotes of well-known persons whom he had known there in the last twenty-five years. Of course, there is every provision for mental and physical exercise, and a chapel for the education of the moral faculties: this is all I shall say on this head. I bring up the subject in order to express my surprise at the prevalence till very late years in these schools, of some brutal practices. We were shown the flogging place, where every morning some unhappy boys were brought up to undergo at the hands of the master, or some one of his assistants, a beating with the rod; and some of these punishments were excessive, depending for their severity not only upon the pupils' deficiencies but also upon the irritation of the executioner's temper. The great doctor himself did not err on the side of mercy. But a still more detestable custom was that of fagging, by which a small boy on entering the school was liable to be seized upon and made the fag of a boy of a more advanced class. The fag was in fact the slave of his master, who might be in bed while the fag made his fire, blacked his shoes, and got his breakfast. He attended his master in all his sports; and at times when not so employed, he might prepare his own lessons or pick up such crumbs of pleasure as could not be appropriated in the higher quarter. One well-known baronet whose name I do not know, certainly, and will not venture to give, when a fag was compelled to toast his master's bread holding it in his fingers. His mother hearing of this sent him a toasting-fork which his master, despising such an attempt to skulk, took away from him and beat him with it over the head. The great ideal of the English is manliness; they despise a mere grumbler, and still more one that whines. They think that the independence and self-reliance which they seek to inculcate has been the cause of the great success they have had in building up their foreign empire.

No doubt the English in difficult and dangerous situations have displayed wonderful pluck; but it may be doubted whether such pluck is acquired at the public schools, or, if acquired there, whether the attainment is worth the sacrifice. For the chance of making a hero once in a generation, it seems too

much to take thousands of boys at ten years of age, remove them from the refining and unselfish influences of home, mother, and sisters, and toss them into the midst of a mob of boys to be tyrant or slave as circumstances and their own capacity may determine. Fighting in these schools, if not approved, was certainly condoned. Betting in English society has never been considered immoral. My son went to a boarding-school in Brussels kept by an English clergyman. The boys there played cards for money and the assistant master joined in the play. On the other hand, it is said that the sons of wealthy parents escape at public school the enervating influence of luxury. It may be that there is something in this; I am not competent to form an opinion; but all that I know inclines me to believe the influences of these schools injurious.

J. D. McPherson.

THE LIBRARY.

Down the Great River; Embracing an Account of the Discovery of the True Sources of the Mississippi, [etc. By Willard Glazier.] Illustrated. Pp. 443. Philadelphia: Hubbard Brothers. 1888.

It is remarkable that though the acquaintance of white men with the Mississippi River began, (with the discovery by De Soto), so far back in the past as 1541, it was nearly three centuries and a half before they had completely explored it. Connected with its examination are the names of many famous explorers,—Marquette, Joliet, La Salle, Hennepin, Charlevoix,—but after all their voyages and expeditions, and those of Cass and Schoolcraft and others in the present century, it remained for one more effort to be made in 1881 to ascertain the true source of this great river. This volume describes the expedition made by Captain Willard Glazier, in the summer of that year, to the utmost of the Mississippi's head waters, and it records his discovery that beyond Lake Itasca, which had been considered the head of the river ever since Schoolcraft's expedition in the summer of 1832, there lay another lake, with three small feeders entering it, this being the actual source of the Mississippi.

Captain Glazier, with his brother and another companion, went in boats, in the summer of 1881, from Leach Lake, (about forty miles above Brainerd, on the Mississippi), to Lake Itasca. They were accompanied by a Chippewa Indian, Che-no-wa-ge-sic, as guide, and after exploring Itasca, they found a stream entering it from the south. Passing up this a short distance they found themselves in another lake, about a mile and a half in its greatest diameter. This is the source of the river, and in all the recent maps it is so designated, called after the name of the discoverer, Lake Glazier. Its latitude is about 47 degrees, north, and its elevation estimated to be seven feet above Lake Itasca, making it 1582 feet above the sea level. The Mississippi flowing thence pursues a course of 3,184 miles to the Gulf of Mexico.

The book under notice describes the trip to Lake Glazier in five chapters: it then gives a narrative of the canoe voyage of the writer and his companions through the entire length of the Mississippi down to the Gulf. This occupied a hundred and seventeen days, and ended the middle of Eleventh month at Port Eads, the little town of the pilots and others, at the mouth of the river, where the "jetties" were constructed under the direction of Captain Eads. The author's account of this long trip is very interesting, and will please both young and old readers. He gives many historical and geographical details, description of places, scenery, etc., as well as a narrative of his personal experiences on the voyage.

For Friends' Intelligencer and Journal.

NUMBERING AND MARKING IN SCHOOLS.

If all could realize that the object of education and training is to promote the development and growth of character, parents, teachers, and school committees would find themselves seriously considering the educational value of every act done in connection with the work of the school. After the proper course of study is marked out, everybody would be concerned to see that all the work is properly and timely done. If, as was suggested last week, we "open an account with each pupil, and at convenient times,—once a week or oftener,—make entries in it as to the standing of the pupil in every department to which he belongs," and we do this *carefully*, there can be no doubt that we will soon have a better idea of each child's capabilities and work than we have ever had before. To do this wisely and well, will require the exercise of the best qualities of the teacher's mind. It may be feared by some that the young and inexperienced will not be equal to the task. But they will learn to do it by doing it, and perhaps there is nothing better calculated to give them clear ideas of what it is to educate children, and what should be expected of them, than this kind of an examination of their work and worth, and numbering and marking it accordingly.

Let no teacher feel that they would not be able to keep a record of their schools in this way. It may not be possible without some other changes; but other changes may be needed that our work may be better done; and if more attention were given to the *quality* of the work done, and less to the *quantity*, there would doubtless be a great improvement in the former, and eventually, a great increase in the latter.

On the subject of written exercises in relation to this subject something needs to be said.

H. R. R.

SWARTHMORE NOTES.

—There will be representatives from the Alumni of the College pursuing post graduate work this year in Harvard, Yale, Cornell, and Bryn Mawr. Swarthmore is, year by year, producing in the minds of her graduates a desire for still higher work.

—The new college classes are large, the Junior class being the largest in the history of the college; and nearly all of its members expect to graduate.

—The Third Preparatory class, (formerly class B), is very small, and it is hoped that this may be dropped after the present year, and that grade of work be left entirely to our excellent preparatory schools.

—The first meeting for the year, on the 16th, was a very satisfactory one; and the afternoon class for the study of Friends' principles, was again organized by Prof. Smith. The morning meeting was preceded, as usual, by the recitation of selected passages from the Scriptures, and other sources, and by reading, and at the close of the meeting the neighborhood First-day school was held in the meeting-house. This school was organized early in the summer, and is likely to be productive of good.

MEETING-HOUSE AT BIRD-IN-HAND DESTROYED.

The meeting-house of Friends, at Bird-in-Hand, (Lampeter), Lancaster county, Pa., (belonging to Caln Quarterly Meeting), was destroyed by fire at an early hour on the morning of the 31st ult. The fire is presumed to have been the work of an incendiary. An article contributed to the *Times* newspaper of this city says:

"The quaintly named village Bird-in-Hand, about six miles east of Lancaster, is called from an old tavern stand, whose sign still shows the man with the bird in his hand and the two in the bush near by. The local historian tells us that this was an old inn from the earliest remembered times, and was the headquarters of the first surveyors of 'the old road' in 1734. Four buildings, he says, have been erected successively upon the same site and the same cellar walls. Doubtless they have been much enlarged in 154 years.

"The first Friends' meeting-house was built two years before this, in 1732, and not in this immediate locality. But in 1749 it was moved to a more convenient spot on the great provincial road just mentioned. It was built of logs. Friends occupied it until 1790, when the brick one was built, which was consequently nearly one hundred years old when it was destroyed. 'It was built around and over the old log building, and after the new one was erected the old one was taken out log by log. Friends wished to occupy the same site and did not wish to disturb the weekly meetings.' We are told by a member that the meeting continued prosperous until the schism of 1829, 'but so large a majority remained as Friends and so few split off with the Orthodox that the meeting still held its own.'

"Orthodox Friends met in the large stone building near by, built for a school and for a teachers' dwelling. Their meetings were discontinued some years ago, and quite lately, Friends having decreased in numbers, meetings have not been regularly held in the brick meeting-house.

"One of the heirlooms, which the fire could scarcely destroy, was a great cast-iron stove, which was long in use in the meeting-house, bearing the date 1764 and the name W. H. Stiegel. It is probable that this was one of the oldest stoves in existance here. One reported some years ago as in the Virginia House of Delegates, dated 1770, would be newer by six years.

"The graveyard at the meeting-house is not older than 1749. There are but few gravestones in it, for Friends at that early date did not erect such memorials. There is sufficient property belonging to the meeting-house to keep the graveyard in order forever. In money and land the meeting possessed several thousand dollars, and it has been suggested that steps should be taken to give its funds to Philadelphia Yearly Meeting for educational purposes. The stipulation could be made that the Yearly Meeting should keep the graveyard in order."

MISQUOTING THE BIBLE.

Every one who has given any attention to our English colloquial speech is well aware how much it is indebted to our English Bible. Consciously or unconsciously every day and hour of our lives we are making use of the phrases and expressions of the Old and New Testaments. They form the very warp and woof of our ordinary speech. That under these circumstances a passage from the Bible should be occasionally misquoted would be but natural; but that with our Bibles daily, or at least weekly, in our hands, any passage could be continually and universally misquoted may well seem incredible. It is, however, true. Who has not heard, nay, who has not again and again employed the hackneyed quotation, "He who runs may read"? It is not only constantly used in common conversation, but it is also a favorite commonplace of poets, prose writers, and public speakers. And who has ever seen or heard the words used in any sense but this—"that the writing is so legible that a man can read it as he runs"? But assuredly the Hebrew prophet from whom the quotation is taken neither said nor thought of saying anything of the kind. Habakkuk is foretelling the vengeance which the Chaldeans would inflict upon the land because of its ungodliness, and writes (Hab. 2: 2): "And the Lord answered me, and said: Write the vision and make it plain upon tables that he may run that readeth it." Obviously the prophet is to write so plainly that any one who reads it may understand it, and run away and escape from the coming vengeance. It is not that he may run and read, but that he may read and run. Strangely enough the learned theologian Dr. Wordsworth seems to give the sanction of his high authority to the vulgar but certainly erroneous use of this quotation from Habakkuk.—*E. A. Meredith.*

Sorrow is not an accident, occuring now and then—it is the very woof which is woven into the warp of life. The account of it which represents it as probation is inadequate; so is that which regards it chiefly as a system of rewards and punishments. The truest account of this mysterious existence seems to be that it is intended for the development of the soul's life, for which sorrow is indispensable.

Every son of man who would attain the true end of his being must be baptized with fire. It is the law of our humanity, as that of Christ, that we must be perfect through suffering. And he who has not discerned the Divine sacredness of sorrow, and the profound meaning which is concealed in pain, has yet to learn what life is. The cross manifested as the necessity of the highest life, alone interprets it. —*F. W. Robertson.*

SLEEPING-TIME.

"So He giveth his beloved sleep."—Ps. cxxvii : 2.

When the summer's day has ended, and its duties all are done,
And the eastern hills are gilded by the slowly setting sun,
Then the songbird seeks the quiet and the shelter of its nest,
While the flowers close their eyes in sleep upon their mother's breast.

When his day of toil is over, then the laborer seeks his home,
And his frame is worn and weary, but his rest has yet to come;
There are those at home to greet him well, with many a loving cheer,
And the thought doth urge him onward to the home he holds so dear.

When the gentle twilight falleth, then the children gather home,
For their little feet are weary and their sleeping time has come;
And in peace they lay unconscious, though in safety all the while,
Till they rise to greet the sunlight and their father's loving smile.

When the Christian's day has ended, and his work on earth is o'er,
And he longs to meet his loved ones, who have gathered home before—
Then the Father calls His children to the quiet of his home,
For the twilight shades have gathered and their sleeping-time has come.

—*William H. Ross, in the Christian.*

THE FALLING LEAVES.

A mass of stones by the roadside
Half covered with fleecy balls,
And delicate sprays of beauty
Where clematis softly falls
Like drapery fine and sheeny
On the stones of the orchard walls.

In the orchard old trees are holding
All their crooked limbs widespread,
Where globes of fragrance and sweetness,
By the air and sunshine fed,
Hang out from the boughs like lanterns,
With a fire of gold and red.

A squirrel from yonder woodland
Flits in and out 'mong the trees,
And the song of the autumn's coming
Is chanted by every breeze.
A pang that summer is dying
Thrills nature in days like these.

And the trees whose dainty blossoms
Grew pink in the early May
Yield now their treasures of harvest
To the bright September day.
As blossoms and fruit must vanish,
So their leaves must pass away.

—*Selected.*

Art builds on sand; the works of pride
And human passions change and fall;
But that which shares the life of God
With him surviveth all.

—*Whittier.*

ENGLISH FRIENDS' FIRST-DAY SCHOOLS.

At the fortieth annual meeting of the Friends' First-day School Association, at Ackworth, England, J. B. Hodgkin said that one feature of the report struck him as calling for some remark, viz., the decrease in the number of teachers. He was sorry to hear this, but was not surprised. Up and down the land, he thought he did not find quite the same earnestness among the young as had existed awhile ago. Sometimes young men from school and college, when they come home, begin this work, but have little interest in it; they drift away and cease to be teachers. This lessens the value of our schools, does harm to these young people, and weakens the Society which owes more to First-day school work than tongue can tell. Can we do anything to enlist our active young men and women in this work, to make them feel they have gifts bestowed upon them, and that it is their duty to use them in this direction? The revival of spiritual religion, so often referred to last Yearly Meeting, would do more than anything else to revive the interest in First-day school work. May we who are interested with schools unceasingly pray for this revival! Some people would not put a young man to teach a class unless he was converted. Such may consider me a heretic, but I may say undoubtedly that if I had been shut out until I was converted, my spiritual loss would have been great indeed. It is true our schools are not playthings for the practice of teachers, but I should be sorry if a hard and fast line should be drawn. We should endeavor to pray for the conversion of unconsecrated teachers, and be their helpers in all things. It is difficult to measure the influence of one earnest First-day school teacher. J. B. H. gave as an example a case where what is now a flourishing adult school had been started by a teacher temporarily residing in the locality.

Joseph J. Neave addressed the meeting, and gave some account of the adult schools, etc., of Australia. That at Sydney was founded by Daniel Priestman in 1879, when he went out in connection with the Exhibition. It was stopped afterwards by the opposition of a Friend who resided at the meeting-house. After his death two young men came out, one of whom had been connected with the school at Birmingham. It seemed laid upon their hearts to begin a school, and they began with eleven. The Lord's blessing was sought, and rested upon the school and on the poor little Sidney meeting, which at the establishment of the school seemed on the point of death, but which has ever since revived. We have received ten or twelve individuals into membership who would not otherwise have joined us, and five individuals exercise gifts in the ministry—satisfactory in every case. We have also started a children's school, mission meeting, etc. He then gave particulars about the schools at Melbourne, Rockhampton, Hobart Town, etc. He agreed from his own experience with those who advocated the employment of the unconverted in Christian work. In his own case it was temperance work. The fact of entering on this work with the desire to do good was the means of bringing him to seek after Christ. It was probably His appointed way of drawing him to Himself.

He felt great joy on coming home after nearly twelve ears' absence to see how the Lord is stirring up mong this people, who are so near to his heart. We ave a place to fill which no other church can fill. or adult school work, temperance work, and work the cause of purity, this people is fitted as no ther is. As the Lord was with our fathers, and as e is with us, so will he be with our children, and ir children's children.—*Friends' Review.*

THE POTENCY OF FACTS.

FACT is always a fact, whatever may be the conseuences. The question is, whether it is true; the udent should recognize no other. Many of the cts encountered in our studies are obscure and ard to explain, but that does not prevent their beg facts; or, at least, the chief question should be to arn whether they are facts. Besides, contradictory cts are the ferment of science. I once asked a disnguished man of science how a certain discovery e had made was getting on. "It is not getting on," e replied. "What is the matter with it?" I anxously asked. "Why," he said, "I find no facts exept those which are favorable to it; and," he added, it takes contradictory facts to teach us." This is ue. The theory will either explain the contradictry facts and be fortified by them, as the Newtonian eory has been by all the exceptions that have been pposed to it and which have entered into it; or it ill be replaced by a vaster and more comprehenve theory. In both cases there is a gain for scince, which would not have been obtained if we had esitated, on account of vain scruples, to seek out nd verify the facts in question.—*Paul Janet.*

RABBITING.

As is well-known to most readers rabbits have beome a great pest in Australia and New Zealand. For ears past, the owners of stations, as the ranches are alled there, have been in the habit of employing rabbiters" to hunt down and destroy the pest. These men are given guns, ammunition, and a whare," or roughly built hut, to live in. Their tucker," another colonialism, which means food, is lso supplied them by their employer, and, in addion, they are either paid from two to four cents of ur money a head for each rabbit killed, or draw a egular salary.

The rabbiter has to take off and dry the skin of very rabbit worth it, and turn it over to his emloyer as evidence of the death of the animal. The narket value of these skins there is four or five cents ach, so that the proprietor nearly recoups himself or the pay of the rabbiter. When the rabbit is so oung that the pelt is worthless, the hunter receives he same pay, but is obliged to produce the ears as vidence of his work. When he rabbits on a salary, e gets from six dollars to fifteen dollars a week.

The work is of the most arduous kind. The places, articularly in New Zealand, where the rabbits most bound, are hilly in the extreme, and they scarcely eign to speak of anything as hilly that would not be alled precipitous anywhere else.

The animals can be hunted with success only at the earliest dawn, and in the twilight. Going over those hills at breakneck speed in the attempt to save half-a-dozen rabbits' skins from being mangled by as many different dogs is not romantic, and hours of it give the most enthusiastic his fill.

Each rabbit is skinned as soon as taken, almost by a turn of the wrist, and the pelt distended inside out by the insertion of an elastic twig bent double. These skins are then all taken to the whare, and hung around on bushes to dry. While drying in the hot sun they fill the whole neighborhood with a terrific stench, and any one coming on to a rabbiter's camp from the leeward is aware of the fact half a mile off.

When thoroughly dried, the pelts are packed in bundles containing twenty-five each, and carried to the station, where the rabbiter receives his pay. The skins are manufactured into various articles of wearing apparel, notably hats, and not infrequently are dyed to imitate the more expensive furs, when they bring a very fair price. The meat, although not badly flavored, is seldom eaten, at least in the neighborhoods where they abound, though the carcasses bring twenty-five cents apiece in the larger cities.

On a desirable station, rabbiting is not an unprofitable job. One man made one thousand five hundred dollars a year at it, for three successive years on a New Zealand run.—*Youth's Companion.*

HALF A CENTURY A "HIRED GIRL."

THE French papers recount an interesting incident, which, perhaps, is one of a sort which has never happened, and never could happen, in this country. It was the celebration, at the town of Beziers, of the fiftieth anniversary of the service, in a single family, of a domestic servant.

For fifty years, says the French local paper, which records the occurrence, Mlle. Helen Sapte, who is now eighty-three years old, had been employed in the Fusier family. When the anniversary of this long and honorable service arrived, the family made a brilliant holiday of it; a feast was provided, and Mlle. Sapte, the aged servant, occupied the seat of honor at the head of the table.

The honor was certainly a deserved one, for the French paper referred to, the *Southern Messenger*, says she had "served in this family with a devotion and zeal never for a moment relaxed." The individuals of the family which celebrated her "golden wedding" as a hand-maiden were by no means the same as those for whom her work was begun, but she felt her devotion to be none the less due.

NEWS AND OTHER GLEANINGS.

—"Have things come to this pass in the United States," asks E. McSweeny, a priest of the Catholic Church, in the *Catholic World*, "that our priests must have their noble dwellings and 'palaces,' must attire themselves like the rich, and wear titles of nobility? Is the Republic fallen so low that its citizens cannot recognize the truth unless its herald is called 'Your Eminence,' or 'My Lord,' or 'Your Grace,' and lives in a palatial mansion and preaches in an expensive edifice? We may, we shall, alas! come to

this in the course of time, for history repeats itself; but are we there already?"

—The great globe for the Paris exhibition, now in course of construction, will be 40 metres in diameter, and will represent the earth on a scale of one-millionth. A cast iron tower will serve as a pedestal for the globe, which will revolve on its axis once in 24 hours. Galleries running round the sphere will enable the visitors to observe it from different heights. The inside is to be fitted up as a lecture hall capable of seating 300 persons.

—There has just been buried in Montgomery county, Tennessee, "Uncle John Wright," aged 85, free man of color, and for ten years before his death blind and helpless. But want was far from him. All alone, without wife or child, he sat in the sun at his cabin door, clothed, fed, warmed, through the care of his master's only son—an ex-Confederate soldier—and his meals were brought to him, not by hireling hands, but by those of two bright little lads of seven and five, the grandsons of his former owner, who delighted to lead "Uncle John" where he would go and to hear his old-time tales, and now that he is dead mourn him as their playmate and trusted friend. —*New York Commercial Advertiser.*

—A few days ago, as a party of tourists visiting Yellowstone Park stopped to view the "Old Faithful" geyser, a lady inadvertently stepped close to the mouth of the crater just as it was about to make its periodical discharge. Becoming alarmed at the hissing steam which suddenly burst forth, she lost her balance, and fell into a large pool of almost boiling hot water. She would have fallen into the geyser had not Private John Coyle of the Twenty-second Infantry, a member of the troops stationed at the park, sprang forward through the pool of boiling water and rescued her at the risk of his own life. The lady and her deliverer were both terribly scalded.

—"On Washington Street," says a Boston letter, "today I saw Prof. Crowell of Amherst College making his way rapidly along through the crowd, guided by the faithful hand of his wife. It was a pitiful sight when one remembers how bright his eyes used to be, and how they would sparkle with fun. It is said by one who is familiar with his family life in Amherst that he has by memory all of the classics which he teaches. His wife reads over the lesson to him before he goes to the class-room, and so perfectly does he retain what was in his mind years ago that he will remind her that at such a place he made such and such comment in a note upon a particular word in the text. He is said to be very popular with the students."

—The thermometer on Mount Washington has been below the freezing point six times since the 1st of Seventh month, and there have been three snow storms there in that time. Two inches of snow fell on the 13th inst.

—In Canton, China, two hundred and fifty thousand people live continually upon boats, and many never step foot on shore from one year's end to another. The young children have a habit of continually falling overboard, and thus cause a great deal of trouble in effecting a rescue; while in many instances this is impossible, and a child is drowned.

CURRENT EVENTS.

THE situation in Jacksonville seems to be growing steadily worse. The weather has not aided the authorities in their endeavors to check the spread of the disease, and this week has begun gloomily enough for the people of Jacksonville. Up to the 17th inst. the total number of cases was 4,047; total number of deaths. 133. The 18th was the worst day yet experienced; there were 18 deaths, and 156 new cases. There had been heavy rains, and the sun shone out hot. Some cases of the fever are reported at other places.

THE Commission appointed by the English Parliament to examine into the charges made by the *London Times* against C. S. Parnell and other Irish members of the House of Commons, opened its session on the 17th inst. The *Times* will be compelled to produce the letters upon which the charges are based, and also to formulate definitely the charges it has to make. These rulings are regarded as decidedly in favor of the Parnellites. The Commission adjourned until Tenth month 22d.

IN the rains that have fallen almost continuously for two weeks in the South, over thirty inches of water have been registered. In Alabama and Georgia great damage has been done to the cotton crop, 27 per cent. of it being ruined in many great cotton-producing sections.

RICHARD A. PROCTOR, the eminent English astronomer, died in New York City of yellow fever on the 12th inst. He had arrived a few days before from Florida, where he had been summering with his family. The physicians in New York say there is not the slightest danger of the disease becoming epidemic in that city.

A PROJECT is under consideration by Congress, through a provision of the Sundry Civil Bill, to establish a Zoölogical Garden in Washington that shall represent the animal life of the United States. Such a garden would be of small cost, and would be a source of instruction to the people, and an aid to exciting interest in science.

NEWS has been received in London of the murder of Major Bartellot, the leader of the expedition in search of Henry M. Stanley. The reports state that Bartellot incurred the hostility of his Arab carriers by his enforcement of strict discipline; this resulted in his being shot by them and their immediate dispersion. Much apprehension is felt that Stanley has met a similar fate. Captain Van Gele, who has just returned from Africa, states that he is the person who has been described in the papers for some months past as the "White Pasha." This by many was confidently taken to be Stanley, and Van Gele's information throws further doubt on the fate of the African explorer.

THE steamers *Sud Americo* and *Le France* collided in the port of Luz in the Canary Islands on the 13th inst., and the former steamer sank, carrying down with her eighty-one emigrant passengers and six of her crew.

CAPTAIN PRATT, Superintendent of the Carlisle School, and chairman of the Sioux Commission, made a short visit to Carlisle on the 15th inst. In an interview with him there he states that a new conference has been ordered by Secretary Vilas, at which the leading Indians of all the agencies are expected to be present with their agents. So far, 386 signatures of the Sioux Indians have been obtained, and it is anticipated that at this meeting the Indians may be contented to accept the treaty proposed by the Government.

NOTICES.

*** The Bucks First-day School Union will meet at Makefield meeting-house, Seventh-day, Ninth month 22d, 1888, at 10.30 a. m. All interested are cordially invited.

OLIVER H. HOLCOMB,
M. ELLEN LONGSHORE, } Clerks.

*** First-day School Unions in Ninth month will occur as follows:

22. Bucks, Pa.,
29. Haddonfield, N. J.

*** Haddonfield First-day School Union will be held at Haddonfield, Seventh-day, Ninth month 29th, commencing at 10 a. m. All interested are cordially invited.

MARTHA C. DECOU, } Clerks.
MARY R. WILSON, }

*** The Executive Committee of Friends' Union for Philanthropic Labor will meet at 8 o'clock a. m., on Third-day morning, the 2d of Tenth month, 1888, at Friends' meeting-house, Waynesville, Ohio, the week of Indiana Yearly Meeting.

JOHN WM. HUTCHINSON, Chairman,
MARIANNA W. CHAPMAN, Secretary.

29. Scipio Q. M., Scipio, N. Y.

PUBLISHERS' NOTICES.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also to help avoid mistakes.

*** As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

*** Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

ROYAL

BAKING POWDER

Absolutely Pure.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans* ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

BEYOND THE CROSS.

STILL will we trust, though earth seem dark and dreary,
And the heart faint beneath his chastening rod;
Though rough and steep our pathway, worn and weary,
Still will we trust in God!

Our eyes see dimly till by faith anointed,
And our blind choosing brings us grief and pain;
Through Him alone who hath our way appointed,
We find our peace again.

Choose for us, God! nor let our weak preferring
Cheat our poor souls of good thou hast designed;
Choose for us, God! thy wisdom is unerring,
And we are fools and blind.

So from our sky the Night shall furl her shadows,
And Day pour gladness through his golden gates:
Our rough path leads to flower-enamelled meadows,
Where joy our coming waits.

Let us press on in patient self-denial,
Accept the hardship, shrink not from the loss;
Our guerdon lies beyond the hour of trial,
Our crown beyond the cross.

—*Christian Life.*

For Friends' Intelligencer and Journal.

ILLINOIS FRIENDS: THE YEARLY MEETING.

WE left Chicago on Sixth-day the 14th inst., in company with Jonathan W. Plummer and son, regretting that Hannah could not accompany us, being detained on account of indisposition in the family. We took the Chicago, Burlington, and Quincy road to Mendota, where we changed cars for the Illinois Central, meeting Friends there from Iowa, *en route* for the Yearly Meeting. Only two other Friends started with us from Chicago. At Lostant we were met by Friends from Clear Creek and conveyed to their hospitable homes, where we were conveniently distributed—our company being apportioned to Lydia Mills, where L. H. H. and I had housed nine years ago. Since then the husband and father, Pusey Mills, has been removed from the earthly home.

On Seventh-day morning we attended the meeting for ministers and elders, where familiar faces of former memories greeted us. The covering of grateful hearts was experienced and gathered as we were from distant parts of the vineyard, the feeling found expression through different instruments. Loving and wise counsel was given concerning the responsibilities of ministers and elders. Much interest was manifest in the reading and answering of the queries which differ from ours; the wording of some we thought preferable.

After dining and mingling pleasantly in the home of our friends, Joshua and Hannah Mills, meeting there with friends from Texas who had come to attend the Yearly Meeting, we returned to attend a meeting of the First-day School Association. We were surprised to find so many present, and so much interest manifest. Reports were read from different schools, which were quite encouraging; one where the members numbered 30, the average attendance was 25. Epistles from other associations were read, inciting to press forward in the good work. An essay on the subject of music was read by Thomas C. Hogue, from Iowa, treating of its influence as a factor in the First-day school work or in the religious field. While not wishing to interfere with or give judgment in regard to its place in the home, the essay yet placed it in the realm of the physical, or enjoyment through the senses, but seriously objected to its use as a help in spiritual worship. It met with hearty approval. Some speaking out of their own experience, said they had been led through pressure to adopt music in the starting of a school, but found it to weigh heavily, and to interfere with the important purposes of the Association, and having abandoned it found a growing benefit therein.

First-day morning the multitude gathered from the country surrounding Clear Creek. The meeting was somewhat unsettled for a time through late arrivals, but quiet attention was given to the spoken word. The call was given for the need of obedience to the law, the testimony, the statutes and commandment of the Lord as set forth by the Psalmist, also the righteousness of the Lord's judgment, and the necessity after having given counsel to the law, of patiently abiding under the chastening hand Divine. This was followed by service somewhat in the same line of thought by B. F. Nichols, most especially emphasizing the power of love. The meeting closed, we felt, under a covering largely imbued with this attribute. We did not leave the grounds in the recess, dinner being provided in a building near by, which somewhat lifted the burden of travel and care from those who entertain visiting Friends, and afforded time for pleasant social mingling in a more extended manner than could otherwise be obtained.

In the afternoon the meeting was quite crowded. The feeling was voiced of thankfulness for the common tie of union and purpose which had so largely drawn us together—the hungering for righteousness, and search after truth—embracing every sect and those outside the pale of any, who yet recognize the call to a better life—and the relation we bear to the One Source of life, love, and strength. Emphasis

was placed upon pure and righteous living rather than a dependence upon human schemes for salvation; fervent prayer was offered that we might be able to live such lives and keep near in loving obedience to the Father.

We made a little visit to Carver and Mary Ann Tomlinson, and in the evening attended a meeting of the Illinois Peace Association, which was a larger gathering than we had anticipated. After the business was transacted, an address was given by Moses Gunn, a Baptist minister from La Salle, who recognized the injunction "Resist not evil," and the good fruits which would result from its observance in all the differences which might arise, private or national. The day had been very full and we were glad to rest.

Second-day morning, the 17th inst., the Yearly Meeting opened, a larger number gathering than at Ohio. The day was cloudy and some rain fell, but within there was life and interest manifested. Some of the Epistles were read and committees appointed. We dined as on the day previous in the hall adjacent, and at 2 o'clock again assembled. Minutes which were not at hand in the morning, for visiting Friends, were read,—one for Samuel Smith, a Minister, and Sally, his wife, an Elder, from Neversink Monthly Meeting, N. Y.; one for Lydia H. Price, from Birmingham Monthly Meeting, Pa., and one for Phebe Griffith, her companion, from the same meeting. The remaining Epistles were read and elicited expressions of encouragement and thankfulness for the help and comfort derived from such correspondence. Life seems to abound in the meeting, and a feeling was present that we had come to learn and be strengthened or incited to greater faithfulness by mingling with friends in this Yearly Meeting. It was raining when meeting closed, and a gathering which had been planned for the children and young people in the evening was postponed for a future time.

On Third-day morning it was still raining, but the wells are low in this section, so that we can make no complaint about the weather, but rather be exceedingly thankful for our many favors. The meeting gathered at 10 o'clock, the usual hour. The First, Second and Third Queries were read and answered, calling forth much earnest and feeling expression, in reference to the importance of assembling for spiritual worship, the need of making sacrifices, thus manifesting our love for each other,—a love which will exclude the tale bearing and detracting spirit; also in reference to simplicity of dress and speech, and in all our appointments. While the reading of the Scriptures was recommended and the grand truths therein contained emphasized, a caution was extended not to lose sight of the power which inspired those writers in the past, and is as potent today as ever it was if we hold ourselves receptive to its influence. After our lunch and the social converse, we convened again at 2 o'clock and considered the remaining Queries. Satisfaction was expressed with the fulness of the answers to the Fourth Query —which also embraces the renting of property for the sale of liquor, and selling grain to be distilled.

The Ninth Query called forth a concern for a Friends' school among them, but they are so remotely situated as to render it difficult; and some felt that the public school in this section being so largely in the care of Friends precluded in a measure the pressing need. One Friend encouraged home study with the parents, taking up subjects in natural history and creating an interest in scientific pursuits. After some further business the yearly meeting adjourned until Fourth-day afternoon.

A session of the First-day School Association was held in the evening, (Third-day). The epistles prepared to be sent in reply to those received were read, some words of encouragement given, and experience in the conducting of schools recited, which elicited interest and free expression. Though some of us took the period for rest, we had made a visit in the interval to Anna Wilson, widow of Amos, where I had made a very pleasant visit nine years ago. Since then the husband had been removed from their midst. He and his wife had removed from New Garden, Chester Co., in 1826, to Ohio, near St. Clairsville, improving the land and building up a comfortable home; then in 1851 they moved to their present home near Mt. Palatine, where their son Amos and wife now reside, with other children settled near and farther west.

On Fourth-day morning a meeting for worship was held in which several testimonies were borne to the sufficiency of the Inner Light and the power of love to direct and cement in the bonds of harmonious labor and union. Sidney Averill and wife, lifelong workers in the field of education and testimony-bearers to the efficacy of peace and love, have been in attendance, he leaving before the close to attend Indiana Yearly Meeting. The afternoon session was short, leaving time for a children's meeting. Allen Flitcraft, Jr., gave an object lesson which the children took part in and was instructive and enjoyable, after which remarks were made suited to the occasion, and it was thought to be a profitable opportunity. In the evening a parlor meeting was held at the house of Oliver and Mattie Mills, which was a deeply humbling and baptizing occasion, many among both older and younger Friends being gathered. It was a season some of us will not soon forget. We rode in the bright moonlight to our different homes with a sense of the overshadowing of Divine Goodness and Love, and with thankfulness for the fresh evidence we had experienced thereof.

Fifth-day morning was bright and mild. At 8 o'clock an adjourned session of the meeting for ministers and elders was held, in which great freedom prevailed in recurring to personal experiences, and the loving counsel handed forth and nearness of spirit which prevailed, were both tendering and strengthening, and we felt truly it was good to be there. When we realize the great distances which separate members of this Yearly Meeting and the isolated condition of many, the sacrifices they have to make in getting to their meetings, and the deep interest they manifest, and comfort they find in these seasons of reunion and refreshment, it calls forth the tenderest sympathy and is calculated to lead to a comparison of our more favored circum-

stances at home, and to query, Are we sufficiently appreciative thereof? And do we bear fruit commensurate with our privileges? Thomas Trueblood and wife, from Blue River, Ill.; Benjamin F. Nichols and wife, and Thomas Tomlinson, from Marietta, Iowa; Thomas Hogue and wife and Elijah Hogue and others, from West Liberty, Iowa; several Friends from Nebraska, Edward Coale and wife, with others, from Benjaminville, Ill.; Jonathan W. Plummer and Allan J. Flitcraft, from Chicago, were among those present at this meeting.

At 10 o'clock the session of the Yearly Meeting begun. Reports were read from the Philanthropic Work,—first the Indian Question, including letters of interest, mostly relating to the employment of a matron in the Santee Agency. The Committee recommended coöperation in the work, which was approved by the meeting. Then the reports on Arbitration, Prison Reform, and Temperance were read, all of great interest and inciting to greater faithfulness in these fields of reform. In the afternoon, reports from the Visiting Committee and that on Isolated Friends were read, also a memorial for Charles Brooks, of Blue River, and the Epistles which had been prepared for the different yearly meetings. Then the time approached for us to separate, amid a feeling of great solemnity and deep thankfulness for the close communion and religious fellowship we had enjoyed together, and the fervent desire that the good seed sown might be watered by the dews of heaven and nurtured to the bringing forth of fruit which shall help to build up the waste places and bring fresh laborers into the Father's vineyard. L. H. P.

Clear Creek, Ill., 9th month 20.

THE EARLY FRIENDS OF PLAINFIELD MEETING.

(*Concluded from last week.*)

The Webster name has always been a familiar one in East Jersey from its primitive settlements. Among the first land-holders in Woodbridge township when title was taken in 1666 for that patent, was Nathaniel Webster, from Newbury, Mass. In 1668, when Piscataway township was settled, the name of Robert Webster is found on the list of pioneer freeholders. These were of English ancestry and identified with the English church.

The Webster family, connected with the Society of Friends and so constantly and closely identified with all their history down to the present time, was of Scotch origin. William Webster, its founder, emigrated to these hospitable shores of the Jerseys during the persecutions of non-conformists and dissenters from the established religion. He settled a few miles east of Plainfield about 1685, on a farm, where he raised a large family whose descendants have always lived here and on adjacent territory. William was scrupulously sincere in his religious convictions, which regulated all his secular actions as well. For this reason he strenuously opposed contributing towards the support of the Puritan preacher in Woodbridge. He took the first step in the colony towards resisting a taxation started to pay the minister's salary. As long as the preacher's maintenance had been by voluntary and free-will offerings, there was no objection raised. But since a recent change had been made and other religious bodies were required to assist in keeping up the "New England worship," as it was called, a great dissatisfaction was caused. This evil of union of church and state had been experienced in Old England, and a decided resistance was now made in 1695 by this member of the Webster family. The important transaction is thus referred to in the old town book: "William Webster, pretending that it is contrary to his conscience to pay anything toward the maintenance of a minister, Captain John Bishop hath engaged in open town meeting to free the said Webster from the said charge, and to pay the said Webster's part so long as the said Bishop shall live." At the beginning of the year 1700, Woodbridge township appointed a committee and empowered them "to make a final end of the difference between ourselves and our dissenting neighbors, the Quakers, concerning the payment of a general tax for sustaining the public ministry of this town." The result of this interview was a victory for the Quakers and other anti-tax men.

The oldest son of this worthy sire was William Webster, Jr., born 1692. He married Susannah Cowperthwait and soon after, about 1718–20, commenced house-keeping not far from this spot, on a large farm through which Cedar Brook coursed its way. This pioneer home was located on the south side of the stream near where Prospect Ave. now crosses the brook. In this home, one of the earliest inland settlements, were eleven children born, and here the Webster homestead remained for generations. The first child was John, born 1718, who married, 1743, Anna Taylor, a granddaughter of Richard Hartshorn, of distinguished Quaker stock. He lived on the Cedar Brook plantation, after his father's death, till the day of his own death in 1800. He and his younger brother, Hugh, who married Sarah Marsh in 1753, were discreet counsellors in the administration of discipline, and devout worshippers in all the meetings of this Society. They were prominently instrumental in 1788 in locating this meeting-house on the three-acre lot where it stands to-day, being part of the original Webster farm. As the historian has recorded, this movement was wise and timely. For more than a score of years previous, the settlers had been pushing nearer the mountains and many permanent homes were built along Green Brook. The old Plainfield Meeting-house (referred to in the records of 1739 as in the woods) was no longer a convenient place for a majority of the members worshipping there. It had ceased to accommodate the Friends to the fullest satisfaction ever since 1760, at which time an effort was made to remove from Short Hills to these Plains.

The Websters were mainly instrumental in laying out and opening this roadway in 1763, which was known then, and for half a century afterwards, as the road to Rahway. Only a few years previous they had built the first grist-mill on the bank of Green Brook, at the head of this present Peace St.,

just beyond where it crossed the old stage road, now Front St., surveyed and opened several years earlier as the road from Scotch Plains to Piscataway. This mill right has existed ever since, and the grain of the pioneer planters was ground at this original site till 1782, when Taylor Webster, a son of the builder, was granted by his father the privilege of constructing a race-way from the pond to the new mill erected on the mountain road, now Somerset St., where the City mills stand at present. As a grist-mill and a meeting-house were generally the earliest measures taken to locate a permanent settlement, the Webster family may properly be credited with localizing the town of Plainfield, since they were prominent in securing both of these original means of civilization.

There is no family name more honorably and continuously associated with the welfare of the Friends in this immediate locality than that of the Vails. From very early records of the meeting it is learned that a conspicuous and important part was always taken by some one of this family from the very beginnings of the Society. In 1687 mention is made of John Vail as an active member of the Society of Friends meeting the first time at Amboy the year before. He is regarded one of the early founders of the Quaker meeting at that place. His name is found first in the primitive annals of Salem, Mass., about 1650, and subsequently in Westchester county, New York, from whence he moved to East Jersey about the time of large accessions in this colony in 1685. The most reliable information concerning his family acquaints us with two prominent sons, John Vail, Jr., born 1685, and Samuel Vail. John married in 1712, Martha Fitz Randolph, of Woodbridge, and in 1732 bought a plantation of 619 acres from Peter Sonmans, one of the proprietors of East Jersey. This was part of the large tract of 2,500 acres surveyed for the Dutch landlord by Keith, in 1685. The farm of John Vail extended from near present Richmond St, on both sides of Green Brook to the vicinity of Netherwood Ave. In 1737 an action of ejectment was brought against the peaceful planter by Elizabethtown Associates, which was one of many similar lawsuits instituted by them to recover proprietary title since the date of their parent.

John Vail was a useful preacher among the Friends of that remote period and lived to the advanced age of 89 years. At his death, in 1774, he left a large family, most of whom were not identified with the Quakers. His descendants moved into Morris county and the British provinces and became distinguished in political life and scientific attainments.

Samuel Vail, son of the original John, married Sarah Farrington, 1725, of Westchester county, New York, where he lived and died. He was a Friend, and purchased a large plantation about the date of his marriage, on Green Brook, near where Dunellen is now situated. This land was occupied by his two sons, John and Stephen, who were the progenitors of the Vail family in this vicinity. His property has been in the possession of some of the descendants ever since, being over one hundred and fifty years.

John Vail, the oldest son of Samuel, married, 1730, Margaret Laing, daughter of John and Elizabeth Shotwell Laing, and had eight sons who lived to grow up to manhood, to each of whom he gave a farm—four at Green Brook, to John, David, Abraham, and Joseph (a son by his second wife, Mary Laing), and four farms he bought in Passaic valley, near Baskingridge for Daniel, Isaac, Jacob, and Benjamin.

Stephen Vail, the other son of Samuel, married, 1733, Esther Smith, and their children were Thomas, Benjamin, Stephen, Abigail, Abraham, and Sarah.

From these ancestors of this large and prosperous family descended numerous progeny who have been useful and industrious citizens and helped to make the history of this meeting for generations past, and here at this centennial anniversary are present as honored and worthy descendants.

The early representatives of the Thorns, Pounds and Fields, who connected with this meeting, came from Long Island. For nearly a generation previous, these and other Quaker families had lived under the Dutch government which had extended an earnest invitation to all "Christian people of tender consciences" to settle among them. Exiled from the Puritan commonwealth, many Friends took up their abode at Hempstead, Gravesend, Flushing and Jamaica, and had special privileges granted them at first in religious matters. But after the English occupied the territory, the established church was the controlling religion, and disagreeable and obnoxious rules induced the Quakers to seek other and more tolerant governments. Some came to New Jersey. The Fields of Piscataway are descended from John Fields, who came from Flushing about 1690–5 and settled on a large plantation along the Raritan river. His grandfather, Robert Field, was one of the patentees of the town of Flushing in 1645. Their original ancestry were extensive landholders in Lancashire, England. All of the members of this prominent family were not connected with the Society of Friends. A large number were faithful disciples of John Calvin and prominent members of the Presbyterian church.

The Thorns of colonial New Jersey had their immediate ancestry from Flushing, Long Island. Joseph and Mary Thorn of that place had a son, Jacob, born 1700, who married, 1723, Susannah Shotwell and settled in Middlesex county, near here. Their descendants were mostly of the faith of George Fox and always took an active interest in the prosperity of the Friends. Their occupation was that of their fathers and the same as most of the pioneer settlers of this section of the country. The tilling of the soil and clearing of the forest engaged the time and energies of those who first sought permanent homes.

The ancestor of the Pounds of New Jersey was John Pound, an early settler in Piscataway township, whose son, Elijah Pound, born 1712, was a prominent and influential member of this meeting in its early history. The representatives of this family ante-dating the American Revolution were all interested and active in the secular and religious affairs of this neighborhood. From the first beginnings of settlement on the Plains, this family and

the Thorns were identified with the Quaker meeting, and among the oldest names on the records of this Society their names are found. From generation to generation their descendants have been continuously attendant upon its weekly and monthly appointments and at its yearly meetings.

Shortly after the Quaker purchase and occupation of East Jersey, there settled in the vicinity of Woodbridge a representative of the Kinsey family who have always held an enviable position in the best society, socially, politically and religious. It was at his house, in 1709, that a monthly meeting was established for the convenience of Friends in the immediate locality. His career in public life gave him a name for successful statesmanship which is not forgotten in colonial history. Being a conscientious and earnest disciple of William Penn, he used his influence in behalf of such measures as were directly beneficial to the Society of Friends. It was mainly through his suggestion that the Quaker affirmation act was passed in 1713, and afterwards made perpetual. He was Speaker of the House of Assembly in 1716, and a member of that branch of the legislature in 1721–23 and again made speaker of the sessions of 1728 and 1733. During this last connection with the colonial government he was chiefly instrumental in having the term of assemblyman's service extended, and also started the idea of having a separate government for New Jersey distinct and independent from New York, which became an accomplished fact by 1738. In 1774, James Kinsey was a member from New Jersey of the first Continental Congress assembled in Carpenter's Hall, Philadelphia. While himself occupied in advancing the public policy of the colony, his relations and immediate descendants were closely allied to the government and welfare of the religious Society of which all of them were devout and consistent members.

The early records of this meeting mention the names of Bloomfield, Dunham, Cowperthwaite, Moore, and Smith as regular families attendant upon religious services. The Bloomfields were among the earliest settlers in Middlesex county. Ezekiel married, 1680, Hope Fitz Randolph, a sister of Nathaniel. His great-grandson, Joseph Bloomfield, was Attorney-General of New Jersey in 1783, and Governor of the State from 1801 to 1812, beginning the long line of Democratic rulers.

The Dunhams of Quaker faith were of different ancestry from the Baptist family of that name who settled in Piscataway. The founder of those who were connected with the Friends was Jonathan Dunham, who came from Massachusetts and settled in Woodbridge, and was an active citizen and faithful member of this Society.

The Cowperthwaites connected with this meeting were descendants of Hugh Cowperthwaite, who was born in the north of England in 1648 and came to America with his wife Elizabeth about 1674, settling at Flushing with other Quakers of that locality. By marriage of some of his granddaughters with the Shotwells, Websters, and Copelands, the family name was perpetuated in Christian titles, if not by the surname.

In the colonial history of Middlesex county, no less than in the early annals of the Society of Friends, the Moore family held an enviable and important position. Though the founder of the family was not a Quaker, his grandchildren and their multitudinous descendants became worthy and exemplary disciples of the faith.

Last in the list mentioned of earliest pioneers connected with this meeting of Friends, was the family of Smiths. Their number was as countless as the sands of the sea. The progenitor of this remarkable patronymic was John Smith, who himself was a citizen of Barnstable, Mass., and did not live in Jersey but a little while. He was a lay preacher and an outspoken defender of the Quakers against the persecutions from the Puritan courts. His grandson, Shobal Smith, was the most prominent member of the family belonging to the Society. In 1716 he married Prudence Fitz Randolph, granddaughter of Nathaniel, and located on a farm between here and Rahway, the property now of George Hartshorn.

These are the names of most of the Quaker families who one hundred years ago or more bought land, cleared the forests, built houses and sojourned in this locality. They have peopled it with men and women who lived here and wrought and died and many of whose descendants are gathered here to-day. There are others of the same peaceful persuasion whose names might be mentioned among the pioneer Friends of Plainfield and vicinity, "whose virtues refined by adversity, and piety invigorated by persecution in other lands, blended with a love of liberty, gave to this rising commonwealth a character which the centuries have not effaced." If time permitted it would be pleasant and profitable to make reference to other brave spirits who, in conjunction with the Friends, took an active interest in establishing this settlement. But only a passing mention of names can be given at this time: the Mannings, Drakes, Randolphs, Stelles, Runyans, Coriells, Dunns, Dunhams, Suttons, Woodens and others were included among the early settlers of this neighborhood who toiled for themselves and their posterity.

Most of these original settlers, whose names have been recited, moved inland after the last distributions of the common lands made from 1734 to 1738. Previously but few pioneers ventured beyond the town lots of Woodbridge and Piscataway. But the increase of settlers in those places and the attractions of new fields of husbandry and homes, induced many to push towards the interior and occupy the fertile farms awaiting them. So gradually one plantation after another was taken possession of from 1730, which may be called the beginning of permanent settlements on this plain.

One hundred years have passed away since the completion and first occupancy of this meeting-house. Then, at a date indicated by the figures 1788 on the venerable shingles of this building, the number of Friends in this locality greatly overshadowed all other religious worshipers for a wide extent of territory. At that time no other Christian congregation existed in this neighborhood; the Baptist church at Scotch Plains, organized in 1747, being the nearest public place for religious gathering.

The name of Quaker has always been synonomous with quietude. The vital and distinctive principles actuating their founder have been advanced and extended. Bigotry and persecution for conscience' sake are practiced no more. Freedom of worship and civil liberty are now accomplished facts for this country, obtained within the lifetime of this Society; and the moral vice of slavery, for the extermination of which the Friends have always as a body contended, has been eradicated from the land.

Finally, in the near future, with the annihilation of the liquor traffic, will be realized most of the desired benefits for mankind which this people have been laboring for centuries to accomplish. May the good time speedily come.

For Friends' Intelligencer and Journal.

WITNESS FOR TRUTH.

THOUGH we are inclined to seek the highest good, there are times when one thing after another may follow in quick succession, so disheartening that we are almost ready to conclude our efforts vain. In this condition a caution given by Jesus Christ comes in most helpfully: "Take not your flight in the winter, neither on the Sabbath-day." When coldness and indifference are evident where we had looked for a righteous zeal in maintaining our testimonies, let us pause just there and walking in the light reverently show to the world that our faith is in a Power Divine which, when possessed, will bring fruit to the praise of the Head of the Church.

Abraham believed and it was accounted unto him for righteousness; and so it will be through all time. Then the precious promises came in to gird us with strength: "There shall not an hair of your head perish; in your patience possess ye your souls." The call has gone out into all the world: "Come taste and see that the Lord is good," his name is a stronghold in the day of trouble; trust in him with all thy heart and lean not to thine own understanding. Divine intelligence comes silently in our waiting hours, settling as truth not to be questioned. When Jesus said to the fishermen "Follow me and I will make you fishers of men," they did not hesitate. Oh, the excellence of willing obedience—entering the line of duty when called! When will men sufficiently value the Unspeakable Gift—intuitive knowledge coming immediately from God himself!

When in our youth
We love the truth,
And vindicate the right,
No harm can come
Within our home,
That daily pleasures blight.

The love of God,
His peace and rod
From doubt has set us free;
We see him walking on the wave,
We know he has the power to save,
And "Peace, be still!" will say.

SARAH HUNT.

"THEY reverenced their conscience as their king,
Their glory was redressing human wrongs.
They spake no slander,—no, nor listened to it."

For Friends' Intelligencer and Journal.

EARLY RECORDS OF SOUTHERN QUARTER.

I HAD an opportunity, recently, to examine the old minute books of Friends, in the care of James Dixon. They are very interesting.

A meeting was held at Betty's Cove, (on Miles river, near Easton, Md.), in 1673. The regular minutes of the monthly meeting and the quarterly meeting, both in one book, commenced in the Ninth month, 1676. Among the statements of principles directed to the "Heads of the Meeting," the second clause reads: "If any follow drunkenness, pleasures, or gaming, or is not faithful in their calling and dealing, nor honest and just, they must be dealt with."

The currency of the country at that time was tobacco, and Friends contributed according to their means, some giving several hogsheads of this. In 1678 John Webb, having built a boat "for the service of Truth, and to accommodate Friends in ye ministry in their travels to Virginia," he offered it to the meeting, and they directed that he should be paid 2,600 pounds of tobacco for it, and that he should keep it in good order.

In 1684 they began to meet in the new meeting-house at Easton, though it was not furnished; for in 1685, "Friends agreed to give 600 pounds of tobacco for a cow for provision for the carpenters to finish the work on the meeting-house." Some Friends contributed grain for this purpose.

In 1685, "Wm. Dixon having something on his mind to sell a negro slave his freedom, desired the meeting's advice." After weighty consideration the matter was referred to the Yearly Meeting "for its advice." He was allowed to do this, although some Friends thought it was wrong, and that he should be held responsible for the care of the man.

In 1687, the meeting considered the necessity there is of a book, and a suitable Friend to keep copies of the wills and inventories of Friends' estates, etc., this was referred to the Yearly Meeting for its action. The wills and inventories of Friends' estates are frequently recorded in these minute books very minutely.

In 1687, "Wm. Lockwell and Wm. Sharp are made choice of by the meeting to go to Burlington Yearly Meeting, and John Pitt and Wm. Barry are appointed to write to said Yearly Meeting giving an account of the affairs of truth, and hand the same to the beforesaid Friends." At this meeting "1,400 pounds of tobacco were allowed for the board and education of Bryan Omelia's two children."

H. T. C.

SHE doeth little kindnesses
Which most leave undone, or despise;
And naught that sets one heart at ease,
Or bringeth happiness or peace,
Is low esteemed in her eyes.
Blessing she is, God made her so,
And deeds of week-day holiness
Fall from her noiseless as the snow;
Nor hath she ever chanced to know
That aught were easier than to bless.

—James Russell Lowell.

SCRIPTURE LESSON, No. 38.

TENTH MONTH 7, 1888.

TOPIC: COURAGE AND SUCCESS.

GOLDEN TEXT.—Stand therefore, having girded your loins with truth, and having put on the breastplate of righteousness.—Ephesians, 6 : 14.

READ Joshua 1 : 1-9.

THE name Joshua, is variously written as Hosea, Oshea, Jehoshua, Jeshua and Jesus, all having the same meaning,—"Savior,"—"whose help is in Jehovah." He belonged to the tribe of Ephraim, and is first mentioned as the leader appointed by Moses to repel the attack of Amelek. Ex. 17 : 9. The next reference to him is in Numbers 11 : 28, as the minister of Moses, one of his chosen men. He was one of the twelve chiefs sent out by Moses to explore the land of Canaan. Before his death, Moses had invested Joshua with authority over the people. Num. 27 : 18, 19. He was about eighty years old when he received the commission which forms the subject of the present lesson.

Go over this Jordan. This is the main river of Palestine, rising in the foot hills of Lebanon, and running two hundred miles southward, empties into the Dead Sea.

The Great Sea. The Mediterranean Sea.

Be strong and of good courage. This was the injunction of Moses when he invested Joshua with the leadership of the people. It was a great undertaking, that only one who is not easily discouraged could expect to carry through ; and while it was important that he should not falter or be dismayed, it was equally important that he should at all times and under all circumstances, remember that the Lord their God would be with them. Good courage, and the conviction that our cause is good, with a firm reliance upon Divine aid, will enable us now, as it did Joshua, to accomplish many things that seem difficult—almost impossible to our finite vision.

Fidelity and steadfastness of purpose are seen in a remarkable degree in the character of Joshua. While he was yet a young man, he was chosen one of the twelve, as we have seen, who were sent out to explore the land on the other side of Jordan, and while ten of the number reported the land could not be taken, Joshua and Caleb were confident that they were able, with Divine help, to enter in and take possession. This was a bold and fearless stand that few men in any age are firm enough to maintain, and Joshua, judged by our standard, must be held up as an example of what faith in the righteousness of a cause, and courage in carrying it forward, will enable us to accomplish.

Were one to attempt to define a successful life he would hardly say it is one in which great wealth has been attained, nor great fame, nor great length of years, for he could easily recall instances in which each and all of these desirable blessings had been realized, and yet they had not brought contentment to their recipient. The poet says of his hero, that he was

> "*Rich* from the very *want* of wealth
> In heaven's best treasures, peace and health."

And as truly says of Fame, that it "is no plant that grows on mortal soil;" while of age it is said that only "that life is long that answers life's great end."

If these things are so, then we should certainly strive to find some other paths in life that shall lead to surer happiness. Nor can there be any doubt in our minds as to what courses in life lead to peace and joy and sure contentment. Not alone do we see in the example of the good and pure, the noble, and the unselfish, instances of successful lives ; but we know in our own experience that the giving up of ourselves to the promptings of the gentle influences for good within our own souls leads always to perennial peace. Truly, says Benjamin Hallowell, "A heart that is obedient to the Spirit of God is under the government of God ; God reigns in that heart and where God reigns, there is his Kingdom,—there is heaven, and there is joy now and forever."

The most divine life that history informs us of was that of Jesus, "who went about doing good,—for God was with him." Acts 10 : 38. His was eminently a successful life, short though it was as to years, stinted as it was as to physical comforts, filled as it was with sorrows that were born of his sympathies and love for his erring fellow-men.

The Golden Text, in an allegorical manner, portrays the character of the person whose life is a successful one in its best and highest sense ; but in the figurative language we should not lose sight of the true nature of such conditions. A character fortified is the one that hears the inward voice speaking in the soul, and, realizing that it is the spirit of God therein, obeys it. Doing this our human nature becomes so closely assimilated with the service, that the best elements of character are developed, and all things in life work together for good.

A HOPEFUL CHANGE.

OUR days witness a recoil from the extreme inwardness of our forefathers' religion ; human affections warm us more; human duties are nobler in our view ; social interests are of deeper moment ; and the whole scene of man's visible life, no longer the mere vestibule of an invisible futurity, has a worth and dignity of its own, which philanthropy delights to honor, and only fanaticism can despise. For my own part, I think the change a sign of nature's restorative power, and see in it the stirrings of new health ; even though partially brought about by temporary scepticism, I cannot deplore it, for it shows that the conscience cannot go on living in a pretense, but, in retreating from things of which it doubts, gets its foot upon duties which it knows. In this are the first beginnings of new religion to replace the old ; if the divine earnestness within us only shifts and does not die, it matters little what becomes of our mere theology ; and deep-hearted practical faithfulness is not separable long from true-thought practical faith.—*Martineau.*

> MY autumn time and Nature's hold
> A dreamy tryst together,
> And, both grown old, about us fold
> The golden tissued weather.—*Whittier.*

PHILADELPHIA, NINTH MONTH 29, 1888.

THE REVELATION OF GOD.

DOUBTLESS there has been no time since the human race had an existence that some sense of a power regulating and controlling the universe, has not been recognized. "He left not himself without witness," was the testimony of an apostle; and this revelation of God through nature has been felt and acknowledged wherever man has risen to a conception of beauty in form and color or has taken cognizance of the variations of the seasons and of physical phenomena, which he was powerless to contend against or control. These manifestations as they were witnessed led him to accept them as the work of a being who, although not visible to his outward senses, was a living personality.

But it is not through nature that God reveals himself. Man is inspired with awe; he fears and trembles; but in no sense do the conflicts he witnesses bring him into relations with God that are beyond or above the physical process of the world. In science, through which these processes of nature are explained, there is in a measure a discovery of God, a revelation of that which is actual and governed by law.

But before science had penetrated and laid bare the secrets of the physical world, the deep intuitions of the human soul had found an answer to its unrest, and that light which lighteth every man that cometh into the world, made clear to his inner vision that in himself there was a spirit, as real as his outward existence, which was influenced by the great all-pervading spirit of the universe. The revelation that God makes of himself, is a spiritual revelation, and is only known through the mediation of the Spirit. "This revelation is its own witness," writes Mulford, in his "Republic of God," "it bears in itself its evidence, and the elements from which it is to be apprehended. It is not dependent upon that which is other than itself, for its authenticity. It is light itself and not a refraction of something apart that from thence it should become known."

But the revelation of God as it touches the life of man, and lifts the race into closer and more enduring relations with himself has its highest and fullest expression in the life of Jesus—the Christ,—in his personality as a man, living among men, taking his part as a man in the burdens, the sorrows, the privations of human existence and sharing also its joys and gladness in the social circle on festive occasions, and in the privacy of the home. In no sense did he separate himself from his kind, yet in and through all there was a consciousness of a power that enabled him to live a human life,—the life of a man among men, and through all, to maintain that close relation with God, expressed in the declaration "I and my Father are one,"—the Christ and the man,—the Divine and the human so harmoniously blended that reconciliation with God which man had sought by offerings and sacrifices, was made possible through the perfect life of the Christ as manifested in Jesus. And it is this perfect life that gives promise of the world's redemption.

"It became him, for whom are all things and through whom are all things," writes Paul to his brethren, the Hebrews, "in bringing many sons unto glory, to make the captain of their salvation perfect through suffering, for both he that sanctifieth and they that are sanctified are all one; for which cause he is not ashamed to call them brethren." As we see Jesus bearing about him the evidences of his humanity, yet in that humanity, as the Son of Man, testifying through the perfect life he lived, that he was the Son of God and that all men through his example might be raised to the life of the Son of God, we realize the possibilities of the human family. And this revelation of God in the personality of Jesus, brings us into a sense of the nearness of the Heavenly Father to all his children, and his willingness to bless and sanctify to our highest good the common things of daily life.

MARRIAGES.

PEASLEE—PEASLEE.—Ninth month 12th, 1888, at the residence of the bride's parents, under the care of Woodbury Monthly Meeting, Albert N. Peaslee, of Hyde Park, Mass., and Hannah, daughter of Amos J. and Hannah Peaslee, of Clarksboro, N. J.

ROBINSON—MENDENHALL.—Under the care of Wilmington Monthly Meeting, Ninth month 19th, 1888, at the residence of the bride's parents, No. 919 Jefferson street, Wilmington, Delaware, Frederic H. Robinson and Sarah R. Mendenhall.

DEATHS.

BALLINGER.—Near Medford, N. J., Ninth month 19th, 1888, Maggie H., wife of Thomas R. Ballinger.

CARMALT.—Ninth month 7th, 1888, at the residence of his daughter, Sarah G. Dorning, in Punxsutawney, Jefferson county, Pa., Isaac P. Carmalt, aged 94 years; a valued member of West Branch Monthly Meeting.

His parents, Jonathan and Hannah Carmalt, lived on North 4th street, Philadelphia, where he was born and grew to manhood. At 24 years of age he went forth to provide for himself and located at Punxsutawney, where he has been a resident near 70 years. His conscientious and upright life shed an influence around him; being very temperate and regular in his habits he advanced to old

age, and when the time came for him to be gathered, he quietly passed away as one going to sleep. N. M.

COATES.—At the residence of her daughter-in-law, Emeline Coates, near West Grove, Pa., Eighth month 31st, 1888, Deborah S., widow of Lindley Coates, aged 87 years; a member of New Garden Monthly Meeting, Chester county, Pa.

GORDON.—Fourth month 30th, 1888, James Gordon, aged 73 years, 10 months; a member of the Monthly Meeting of Friends held at Green street, Philadelphia.

HANCOCK.—At Fulda, Minn., 29th of Eighth month, 1888, Bertha, youngest daughter of Wm. T. and Jane Hancock, members of Abington Monthly Meeting, Pa.

On the morning of the 29th, while preparing breakfast as usual, her clothing caught fire and before the flames could be extinguished she was terribly burned. Medical aid was quickly summoned and everything done to alleviate her sufferings that human sympathy could suggest, but without avail, and she passed away about three o'clock the same afternoon. She bore her sufferings patiently and seemed not to think of herself. She was eighteen years old and just budding into usefulness; a general favorite with old and young, especially with all the children. She took an active part in Sabbath school, and was a regular attender of religious meetings. She had no inclination for attending places of amusement. R. Y. M.

HARTLEY.—On the 16th inst., at the residence of her brother, Charles L. Hartley, Ellicott City, Md., Lavinia B. Hartley, daughter of William and Tacy Hartley, aged 71 years. Interment at Diamond Ridge, Baltimore county.

The deceased was well known and highly esteemed for her many virtues, and was a member of Baltimore Monthly Meeting of Friends. H. J.

STRINGHAM.—At the residence of her nephew, Thomas Stringham, Crum Elbow, Dutchess county, N. Y., Ninth month 13th, 1888, Naomi Stringham, widow of Thomas C. Stringham, in the 78th year of her age; an elder and life-long member of Creek Monthly Meeting.

Mary Ann Price.

My mind has been impressed for many months that it was right for me to pay a little tribute of respect and remembrance to one who entered into rest when the fruitage of summer had been harvested and the mellow tints of autumn were weaving richer beauty for the eye to rest upon. The one whose beautiful life is so worthy of being held up before us as an example was Mary Ann Price, of Baltimore. Although so many months have passed by, it is hard to realize our dear friend has passed forever from our midst, whom it was a privilege to mingle with in the social and religious life, whose hand clasp was encouraging to the heavy hearted, and whose genial greeting and pleasant smile were so refreshing,—indeed to be with her was ever like being in the presence of one whose nature had a purifying effect that left its impress upon the minds of all who were in any way associated with her.

As daughter she nobly and beautifully filled her place to a dear aged widowed mother, who leaned upon her with no thought of losing such a stay in the evening of her life. Yet a sweet consolation to her aching heart was the feeling that "she had ever been to her and all around her a comfort and a blessing," A younger sister's heart reposed in trust and confidence upon her judgment so mature and good, and a devoted brother, too, feels the great void her presence in the home life filled so perfectly. The sweet fragrance of her beautiful life will be remembered for good, in the social circle where she was ever a welcome guest, in the solemn assembles where her solid deportment gave evidence of an engagement of soul with Him she came to worship. She held the position of overseer for some time, for which station she was well qualified, filling it with the dignity of an humble disciple who sought no praise from the creature, but did her duty by the light she received from her Creator.

Her sickness was not considered of a serious character by herself or friends, until a short time before the close, but there was no doubt her work had been done in the day-time, having sought her Creator in the days of her youth, performing life's duties leaning upon his unfailing arm, and following as he pointed the way.

The principles she had been educated in were very dear to her; modesty and simplicity adorned her outward person as the reflections from the purity of her inner life. Her remains were taken to Gunpowder, Baltimore county, for interment in the burial ground attached to the meeting-house, where a solemn meeting was held and tributes of deserved merit were paid to her memory, after which the form that had encased so lovely a spirit was borne by loving hands to its last rest. With this motive these lines have been given to her memory—that we who are left yet a little longer may feel the need of girding on the armor and pressing forward in the Christian path—so that we too when called may feel that victory has crowned our efforts, and we shall receive the blessed summons of "well done good and faithful servant, enter into rest."

LETTERS FROM EUROPE.—XXVIII. PLEASANT DAYS IN WALES.

Bettws-y-Coed, Wales, September 1.

When we were through with Leamington and its vicinity, the old question came up again: where next? Scotland was on the programme, and I had fully expected to go there; but I had become thoroughly satiated with sight-seeing, and longed to settle down in quiet. We had met persons from Wales who gave a favorable account of it. The part recommended to us was not far from Liverpool; if we happened to be well suited we could there await the departure of the steamer, and if not, we could still go to Scotland,—at some loss to be sure. To make the loss as small as possible, I was tempted to take tickets for one of the cheap excursions which weekly run to every part of England, and which offered to take passengers to this place,—rather more than 150 miles,—and back for 8 shillings and 6 pence,—say $2.06. But then only third-class passengers were taken, and to take my family for a whole day into such a crowd! that required consideration. While considering, we were joined by a bright young relative just made a doctor by a German University, and naturally possessed with the idea that he knew a few things. He asked me to put the matter into his hands, and I did so. Then I gathered my movables and my family around me, and in due time we reached the station. There we found a compartment marked "Engaged"; third-class, indeed, but as well upholstered as our cars ordinarily are. As each coach always contains three apartments which are generally of different classes, all run with the same speed and smoothness. The difference is in the upholstering, principally; but

whereas the third-class compartments admit twelve passengers, the second-class admits ten, and the first only eight. The third-class compartments were formerly very rough and without cushions, and still are such on a few roads; but roads which were subjected to active competition found it to their interest, especially if they lay under some disadvantage, say in length of route, to improve their third-class accommodations; and this has been done to such an extent that the travel on such roads is almost exclusively third-class, and sometimes second-class has been wholly abolished. And all the roads are now discussing the propriety of having but a single class, and putting on "parlor" cars, as in America.

Well, my young friend found that for a party of six an entire compartment could be had without additional expense—except the customary "tip." (Young men, I have always understood, learn a vast deal more at the universities than appears on the programme).

We had a charming ride of six hours to Llandudno and then stopped. Llandudno is a village on the Welsh coast scattered along a small bay which stretches between two picturesque headlands. It has a rough, shingly bathing beach along which are drawn up in line some hundreds of bathing machines such as I mentioned seeing at Folkestone, and without which the British lady never enters the water in a public place. The weather was gloomy and the season backward, and the Punch-and-Judy shows and the merry-go-rounds and the negro minstrels, besides the depressing effect which during the last half of my life it never fails to produce on me to witness that particular form of voluntary human degradation, seemed totally devoid of that exuberant spirit which only can carry off such an exposure. So, tiring speedily of Llandudno, we resumed our journey and came on to this—shall I say?—Welsh paradise. But paradise in the original sense: all its beauties and, as nearly as possible, all its comforts, are the gift of nature. Bettws-y-Coed, (which name the reader can pronounce if he will bear in mind that *w* has the sound of two *u's*) stands at the junction of two narrow valleys or rather passes, down which tumbling and gushing over and among rocks from great heights, come two rivers, the Conway and the Llugwy, which here attain the ocean level and unite into a navagable stream. The mountain system of Wales seems to consist of numbers of distinct peaks or knobs; consequently the valleys or passes between the knobs are numerous. And in each is a stream, and alongside each stream is a road carefully engineered so as to have an easy grade, and well macadamized. Coming down one of these roads a few days ago, our stage-coach was passed by a cyclist who was "coasting" with legs over the handlebar; and I was told he had five miles to run before he would have again to pedal—so regular was the grade. Bettws is a great centre for excursionists of all kinds. There are stage-coaches that meet the trains, bound on journeys of all lengths from two miles to twenty, visiting on the way innumerable water-falls. The roads afford fine walks in every direction, and every day one sees parties of pedestrians, some of both sexes and some of men only, alight from trains and strike out at once for distant places. The roads occasionally for long distances are shaded by fine trees, now in full foliage. The Lindens, especially, bear a wealth of fragrant yellow bloom, which cannot, I should think, be matched elsewhere in the world. In fact the foliage both in England and Wales has excited our admiration. It is wonderfully luxuriant and one never sees a dead leaf or brown twig. The unvarying green would, perhaps, be monotonous were it not relieved by extensive patches of heather on the mountain sides, coral and pink, and of the rich yellow gorse; besides other wild flowers whose names I do not know. I believe I have heretofore written that on this side of the Atlantic there are no insect pests. This is especially true of Wales. Where we now are I have not seen or heard an insect of any kind whatever inside the house; outside along the roads, I have seen some ordinary house flies. But no insects bear a weapon. We rent our apartment, three chambers and a sitting-room, for $15 a week, which includes service and light. We furnish our own food which is cooked and served by our landlady, who supplies table furniture, bedding, in fact everything but food, for the price stated. This is an admirable arrangement, leaving us to choose our diet at will, which is the only particular in which we would desire a choice.

Having made the stock excursions, and suffered the younger ones with many misgivings, to make the ascent of Snowden (for there was a fatal accident this spring), we definitely abandoned the Scottish trip and settled here to await the hour of departure for home. We sought out short strolls, (one indeed is ten miles out and back), which afford objects of amusement without fatigue. The nearest of these is a waterfall where the Llugwy rushes down between and over a congeries of rocks and falls into a cauldron that has a dangerous look. Just below, a few yards only, the stream is spanned by a bridge that was built before the discovery of America. From this bridge, or from the rocks on either side, one may find two or three hours' entertainment toward sunset, in watching the leaps of the salmon which try to ascend the stream, and the efforts of anglers who line the banks to ensnare the fish. Some of these appear to be at least 18 inches in length. Many must succeed in passing, for large fish are caught above the falls; but so far as we could perceive all failed and fell back. The anglers were not more successful; and I computed that the five shillings a week which they pay for license would purchase more fish than they could catch. The fishing, however, is not everywhere so unsuccessful, for fine salmon may be had in any quantity at thirty-six cents a pound.

The houses in Bettws-y-Coed and the country around are built of bluish greystone, and being covered with blue slate are pleasant to the eye.

There are in this vicinity numbers of villas occupied by men of means and some by titled personages. Such villas are found all over Wales. Indeed it is rather the fashion among a certain class to have a castle in Wales. Hawarden, Mr. Gladstone's resi-

dence, where he is now stopping, is within twenty miles of us. It would be difficult to imagine a region better adapted to be sprinkled with summer retreats. Water is plentiful, streams course everywhere and consequently little lakes are frequent. And the number of small mountains and necessarily of valleys furnishes an infinity of agreeable sites, while the conformation of the ground is such that roads can reach every point. Rain falls at least once a day and keeps the dust down, and makes walking delightful.

This is the country whence roofing slates are exported all over the world. The quarries are enormous. One I think extends a mile along the mountain-side and is worked for a height of two hundred yards on different levels. Slate is quarried for many other purposes, and there are also valuable building stones got out. The coal mines, which employ vast numbers of people, are not in this part of the country. All the people seem to be quarry-men and stone-cutters. There is too little cultivable land to employ much of the population. Indeed all is in grass, meadow, and pasture, except a few garden spots, and a rare field, occasionally, of small grain. The land is the property of large owners. The country around here for miles belongs to a Lady Willoughby, who has the reputation of being close and not at all liberal. But though Wales with Ireland and Scotland claims a nationality distinct from the English, and complains of foreign domination, we have not seen here any of the extreme poverty which renders the last two mentioned countries so sad to visit. Undoubtedly the reason is that there are other industries than agriculture, and consequently the people are not wholly at the mercy of the land-owners. But the rents they do pay appear to us enormous. I judge that those I heard of amount to half the produce of the land.

The Welsh language is commonly used by the natives, and there are some about here who speak no English. And I am told the Welsh language is even more used than formerly since there are newspapers published in Welsh, and gradually a stock of books is being accumulated, principally of a religious nature.

The church establishment of England extends over Wales, with the system of parishes and ministers independent of the people. And this is regarded as a great grievance and is really such. For by some arrangement which I do not understand, the tithes originally set apart for the support of the ministers, belong to private persons or to institutions in England; and a large amount of money is thus every year withdrawn from the country and spent elsewhere. Of course a part of it goes to support the ministry. But leaving the religious aspect of the question out of view, absenteeism on any large scale must ruin any country; and this is the great curse of Ireland and Scotland, where all the land belongs to absentees and none of the rent is spent at home. And yet under the existing system of property, what is the remedy? May I not do as I please with my own?

The tithe system is, of course, the more obnoxious on account of its religious aspects; for at least four-fifths of the people are dissenters, Baptists, Congregationalists, Wesleyans, and a good many Calvinistic Methodists. These last hold the doctrines of Calvin in their baldest and most revolting form; and it is fortunate indeed that this creed has so little influence upon character when it ceases to deal with what is to be done and deals only with what is to be believed.

The Calvinistic Methodist who lent me his Confession of Faith and who I doubt not believes every one of its hideous dogmas, could not be distinguished by his walk and conversation from the most liberal of Universalists or Unitarians; although he professes to believe that ages before the world was created, his fate for eternal happiness or eternal misery was settled by an unalterable decree, and nothing that he can do can change it. Nor does he indeed know what his fate is to be, though experts profess to be able to indicate the signs of one or the other distinction. The same confession enjoins upon the Society, to honor the authorities, obey their laws, and pay whatever tax or tribute they impose, without "murmur, concealment, or fraud." But this does not prevent them from resisting to the utmost the collection of the tithes, and pushing that resistance to the verge of violence.

The Welsh seem to me an honest, kindly, hard-working people, brighter and more active than the English. The children, too, are better looking and more engaging. Their cottages seem to be clean and comfortable, not squalid and disorderly, and it is rare that we miss a little flower-plat at the door, signifying at least that their minds are not wholly absorbed in the contemplation of their own misery.

HOME EMPLOYEES: AMERICAN VERSUS FRENCH.

In the Intelligencer of 22nd inst. there is copied from "the French papers," the case of a domestic servant living for fifty years in a single family, with the editorial comment thereon, "this interesting incident, perhaps, is one of a sort which has never happened, and never could happen in this country." And why not? Are American matrons less skilled than the French, in the instruction and management of household assistants, indispensable for the proper conduct and economy of the home and the comfort of the family? Are the heads of families in this country so incapable in administrative ability that they cannot attach to themselves in the various positions of household trust, trained servants, who will continue faithful to duty during years of service?

Factory managers, fruit-growers, seamstresses, milliners and most other employers of female labor in this country, have no difficulty in procuring and retaining female laborers. Why should the matron of the home desiring assistance in her family, where more important trusts and confinences must necessarily be confided with them, be compelled to make monthly rounds of the intelligence offices for Bridgets and Gretchens, while the French matron serenely

enjoys the services of one domestic servant during fifty years? To solve the difficulty and provide a remedy, I leave to others. My object in taking up the pen, is merely to narrate another "interesting incident," to prove that the French case of extended hired girl service, can happen, has happened, and has been exceeded in length of years in this country. In the year 1804, Jacob and Beulah Lamb, husband and wife, farmers in Springfield township, Burlington county, New Jersey, took into their family Elizabeth Cox, aged eight years, with consent of her parents,—probably by verbal contract, no indentures appearing,—agreeing to teach her the art and mystery of housewifery, the said Beulah being a notable housekeeper. Beulah Lamb having long survived her husband, died in 1848, in her eighty-ninth year; during the last forty-years of her life she retained the continuous personal service of Elizabeth Cox.

The latter years of the life of Beulah Lamb were passed in the family of her stepson, Restore S. Lamb, with whom Elizabeth afterward coutinued her service.

Upon the death of the daughter of Restore S. Lamb (my wife) in 1850, Elizabeth Cox entered my service, and continued thenceforward in my own and son's family, as hired servant, companion and friend, with very little intermission, until her death 5th mo. 27, 1878, having been the trusted employé of four, and served the fifth generation of one family, which she entered at eight, and left at eighty years of age.

"Aunt Elizabeth" was a good and industrious housekeeper, faithful in the performance of her various duties, was loved and respected by all, and fully entered into the various interests, joys and griefs of the family, as one of its members.

A zealous member of the Baptist Church, she attended its services in apparently usual health, the evening before her death.

BARCLAY WHITE.

Mount Holly, N. J., 9th mo. 24.

A GLIMPSE OF BERMUDA.

[We are permitted to make some extracts from a private letter written by a Friend who went with Professor Heilprin's scientific expedition to Bermuda in Sixth month last.—EDS. INTELLIGENCER AND JOURNAL.]

I SUPPOSE thee has seen by the newspaper accounts that our expedition to Bermuda was a success; but that poorly expresses the actual facts. I feel as if I had visited another world; the beauty of everything on land and sea far surpassed my expectations. The weather was delightful, the thermometer ranging from 72° to 86°, and the latter figure does not seem so warm as the same degree in Phila., for the breezs is constant and cool and the air so full of vigor. There is only a difference of 4° between night and day.

Our headquarters at "Villa Frascaiti" were well chosen; being on the bank of an inlet which forms the entrance to Harrington Sound, we had only to peep over the edge of the wall to see great sea-anemones and living corals, lazy holothurians, and exquisite jelly fish. But the wonder of wonders is a coral reef! You look down, down, through the deep, clear water and see a snow white floor without speck or stain or any decaying or unsightly thing. For a space it is smooth as a table top, then snow white rocks are piled up one above another, on these and on the floor, placed as daintily as if some landscape gardener had studied where each could grow best without crowding the other and at the same time show off the form and color to the best advantage; and the corals and gorgonias are of bewildering form, size, color and variety, some waving all their branches gently in the deep as a tree in the breeze, some only waving their multitude of tentacles; from the corners peep great anemones with scarlet bodies and long green or brown tentacles eight or ten inches long, each tipped with a bright pink eye; giant urchins with long black spines or pure white ones on a dark ground; while darting in and out among the fixed life are the wonderful fishes, as gorgeous as the tropical birds in color, and of the most wonderful forms: a world so teeming with life that ours seems scanty. This is a "coral reef" a sight to be thankful for all your life afterward.

We camped out one night at the level of the sea, just beyond the grasp of the high tide under the shadow of arches seaworn in the cliffs of the south shore, where the great waves thunder in from the south Atlantic, and break on the fringing reef, which is but a few hundred yards from shore.

All the rocks of Bermuda, with trifling exception are wind formed, a remarkable exception to "all stratified rocks that are formed under water." Bermuda is a true atoll. It seems strange that within sixty-six hours of New York lies such a strange land, whose waters teem with life so little known. The vegetation of the island, the buildings, the people and their ways were all a strange mingling of familiar and unfamiliar things.

Our expedition was a great success scientifically not only in the amount of specimens we brought home, but in the variety of species represented, and the number of entirely new and undescribed forms.

OCCASIONAL THOUGHTS.

TRUTH is the centre of a circle and exerts a centripetal force upon conduct that would move it ever toward the centre; but start us at any point of the circumference and, through the impression that the line of duty is straight, off we go at a tangent.

No two successive points of a circumference tend in the same direction, for at each move, as it were, there is a fresh exertion of centripetal force. Our misunderstanding of this is the cause of failure in so many reforms. They must receive their first direction, not as a permanent one, but as one step only, and wait for new drawing-power before taking another.

* * *

The legend of Lohengrin, a type of the experience of materialism,—in trying to wrest from the spiritual life its secret, communication with it is lost and nothing is left but vain regret.

* * *

One of the great apprehensions felt by the soul that is asked and that wishes to yield itself up to Di-

vine guidance, is that of loneliness; it forebodes the probable loss of companionship on a level with a whole world of comfortable people whose consciences, to all appearances, allow them to enjoy life without any spiritual uneasiness. While it does not mean to turn its back upon them, the very nature of its new interests and pursuits makes it likely that the old circle will abandon it. It knows without having tasted of it that there is a spiritual loneliness of which physical loneliness is but a faint type. It forgets that "I am not alone for the Father is with me."

* * *

Every one who submits to a hard rule for the sake of example, who wears an unnecessary yoke that those who need it may be kept in check,—suffers vicariously.

The world is full of such suffering and ransoming, and in quarters where we least expect it. Each of us has an opportunity to try it in one way or another at some period in our lives.

NEWS OF FRIENDS.

EASTON AND SARATOGA QUARTERLY MEETING.

Easton and Saratoga Quarterly Meeting, held at Granville, N. Y., Eighth month 29, was well attended. We were highly favored with visitors from other meetings. From Canada, our dear friend Isaac Wilson, with his wife; also George T. Powell, Ghent, N. Y.; Frances Hoag and wife, Quaker St., N. Y.; Ethan Browning and wife, Crum Elbow, N. Y.; and Rhoda Corbin, Roxbury, N. Y., were present. Not only were we favored by their presence but also by their loving counsel. Isaac's heart overflowed with divine ministrations. As we listened to his voice each day, we believed that the Christian course he pointed out was indeed a progressive one. George T. Powell (owing to previous engagement) was with us but one day; we greatly enjoyed his impressive remarks after the reading of Fourth query. At the evening meeting, Mary Jane Hoag addressed us in her tender way, as a true sister in Christ.

Our meetings were marked by order and solemnity. We realized that He who ruleth over all well regulated assemblies was with us and we hope as he permits us to live he will grant us many more like occasions.

Granville. H. B. A.

SWARTHMORE NOTES.

—The historical department is well organized, and doing a good work under Prof. Holcomb. It requires no change in the management to comply with the reasonable and liberal conditions of Joseph Wharton, who has endowed the professorship.

—Prof. Appleton's course in English Literature is, as always, among the most popular and largely attended. He has also large classes in Greek, which is now a requirement in the course in Arts. In connection with his English course he will also open, the present year, a course in Anglo-Saxon.

—The new instructor in Elocution, M. E. Furman, B. O., is doing well, and this important department bids fair to become one of the most popular. Her blindness seems to be no obstacle to her success; and she presents to her students a living example of what may be accomplished by resolution and perseverance.

—The classes in Manual Training under the new Instructor, Frank Cawley, of last year's graduating class, are doing good work. The classes are so large that some of them have to be divided.

—Dr. Spencer Trotter, the successor of Dr. Chas. S. Dolley, in the Chair of Natural History, bids fair to keep up the deserved reputation of the department under Dr. Leidy, and his successor Dr. Dolley.

—The President has again resumed the instruction in French in the College classes, in place of Prof. Paulin.

CANADIAN INTERESTS.

From Young Friends' Review, for 9th Month.

We hardly feel jusfied in passing without comment a statement or two by our Friend Louisa J. Roberts in her article in the Intelligencer and Journal of 9th mo. 1st. entitled "Friends in Canada." She says: "The social intercourse here, as elsewhere among Friends of the Province of Ontario, indicates a warm feeling towards 'the States,' and an earnest desire for closer bonds in civil matters; some advocating union, and others separate government with reciprocity; not one, so far as I heard, being in favor of continuing the present relations with Great Britain." That we have a warm feeling towards "the States" is true, as we think we should have towards all nations and especially to those at our doors. We hope to have this "warm feeling" reciprocated by our American Friends. That there is an "earnest desire for closer bonds in civil matters" is true of very a few indeed in Canada. That Canadians wish closer relations in *commercial* matters is, we believe, true of a large majority. The statement that "not one, so far as I heard, being in favor of continuing the present relations with Great Britain" is very misleading, and is likely to leave on the minds of readers very erroneous impressions. If Canada is not in favor of continuing the present relations with Great Britain, it is on account of a desire for *closer* relationship. Our present Premier, Sir John A. Macdonald, the Hon. Edward Blake, late leader of the Liberals in the House of Commons, and the Hon. Wilfred Laurier, the present leader, and many others of our most noted public men, are strong advocates of closer relationship with Great Britain, in the shape of Imperial Federation, and in this they are supported by the masses. We believe Canadians are loyal to their native land, and to their mother land; and we think that Canadian Friends are no exception. Canadian thought is at present reaching out in two directions in civil matters toward Imperial Federation—in *commercial* matters towards unrestricted reciprocity with the United States; and we hope in time to accomplish both.

Never be grandiloquent when you want to drive home a searching truth. Don't whip with a switch that has the leaves on, if you want it to tingle.—*Exchange*

ORTHODOX FRIENDS.

The opening sessions of Iowa Yearly Meeting, (begun on 9th mo. 4, at Oskaloosa), are reported in *Friends Review*, (Philadelphia). The report states that "the meeting commenced with a seasion of prayer and song." In the evening a meeting "of all ministers and special workers," was held at Penn College, and after a season of prayer and song, John Henry Douglas, Superintendent of the Evangelistic work of the yearly meeting, took charge of the meeting. "The list of ministers was called and revised, which showed that there are 150 now among us, but not more than 100 are active in the ministry; as several are aged and not a few have no time aside from daily duties for ministerial work. About 40 were present. Last year there were four regularly supported pastors reported; this year 16, together with about 20 who spend quite a portion of their time in pastoral work." The quarterly meeting superintendents gave in their reports. "No consultation had been held, yet the voice of the fifteen was unanimous . . . that Iowa's plan of pastoral work must be maintained."

On Fourth-day morning, in the yearly meeting, "C. C. Reynolds arose and sang alone, 'Is my name written there?' Father Wm. Hobsonarose, smiling, and said, 'let us pray that God's kingdom may come now upon this earth, keeping ever in view glory to God and good to men.' Wm. Allen, of Ohio, led in prayer at this juncture of the meeting. Mary Batty, a young woman, walked to the platform and publicly gave herself for soul-saving. The meeting was broken down. An 'altar' was formed, and about a dozen responded to the invitation, amid sobs and prayers." In the afternoon, at the session for business the Epistles from London Yearly Meeting were discussed. Of the General Epistle Benjamin Trueblood said it should be received and circulated, "not because London Yearly Meeting has a right to send an authoritative document, but for its admirable advice. If the expressions in it of 'Our dear children,' etc., are put in to show her love and affection toward us, very well, but as to any authority over us our church polity forbids it. Each yearly meeting has complete control over its own territory. Many phases of Christian work London Yearly Meeting has no adequate idea of, and in these her Epistle cannot instruct us. The meeting at the close of his remarks responded in one voice, Amen." As to the special Epistle from London, Charles Hutchinson "explained the expressions of London Yearly Meeting at her last session in reference to our work, saying 'Friends in England are very largely in sympathy with us.'" Benjamin Trueblood read a letter from Henry Stanley Newman, who was also in sympathy with the work, and promises to be present next year. "Allen Jay spoke very kindly of London Yearly Meeting and her people. Several Friends expressed a regret that the English papers do not give us as impartial an account of their church movements as we would like."

He that cannot forgive others breaks the bridge over which he must pass himself; for every man has need to be forgiven.—*Lord Herbert of Cherbury.*

THE INALIENABLE BOND.

What is the best a friend can be
To any soul, to you or me?
Not only shelter, comfort, rest,—
Inmost refreshment unexpressed;
Not only a beloved guide
To thread life's labyrinth at our side,
Or with love's torch lead on before;

The best friend is an atmosphere
Warm with all inspirations dear,
Wherein we breathe the large, free breath
Of life that hath no taint of death.
Our friend is an unconscious part
Of every true beat of our heart;
A strength, a growth, whence we derive
God's health, that keeps the world alive.

The best friend is horizon, too,
Lifting unseen things into view,
And widening every petty claim
Till lost in some sublimer aim;
Blending all barriers in the great
Infinities that round us wait.
Friendship is an eternity
Where soul with soul walks, heavenly free.

Can friend lose friend? Believe it not!
The tissue whereof life is wrought,
Weaving the separate into one,
Nor end hath, nor beginning; spun
From subtle threads of destiny,
Finer than thought of man can see.
God takes not back his gifts divine;
While thy soul lives, thy friend is thine.

If but one friend has crossed thy way,
Once only, in thy mortal day;
If only once life's best surprise
Has opened on thy human eyes,
Ingrate thou wert, indeed, if thou
Didst not in that rare presence bow;
And on earth's holy ground, unshod,
Speak softlier the dear name of God.

—*Lucy Larcom, in The Independent.*

BEYOND.

The stranger wandering in the Switzer's land,
Before its awful mountain-tops afraid—
Who yet with patient toil hath gained his stand
On the bare summit where all life is stayed—

Sees far, far down, beneath his blood-dimmed eyes,
Another country, golden to the shore,
Where a new passion and new hopes arise,
Where Southern blooms unfold forevermore.

And I, lone sitting by the twilight blaze,
Think of another wanderer in the snows,
And on more perilous mountain-tops I gaze
Than ever frowned above the vine and rose.

Yet courage, soul! nor hold thy strength in vain;
In hope o'ercome the steeps God set for thee;
For past the Alpine summits of great pain
Lieth thine Italy.

—*Rose Terry Cooke.*

Your nature, which, through fire and blood
To place or gain can find its way,
Has power to seek the highest good,
And Duty's holiest call obey.

A TOWN AND FARM IN ICELAND.

Reykjavik, poor little metropolis of two thousand inhabitants, has, nevertheless, its sights and sounds. Its houses, with but few exceptions of wood, consist usually of a single story, but in isolated instances rise to the dignity of two. Through the town runs a wide and tolerably straight street, on which live several of the dignitaries of the island, the Bishop, the Governor, the Chief-Justice, and other members of the government. Upon one side, surrounded by wooden palings, is the public square, in the centre of which stands a bronze statue of Thorwaldsen, presented by the Danish government to the native country of the sculptor. At the farther end is the little cathedral, which contains a marble font by the artist himself. Around the different sides of the square are grouped the new parliament house, the post-office, and a school for girls, which draws its pupils from all parts of the country. One of the most imposing buildings of the capital is the jail, and two of the most awe-inspiring of her citizens are the policemen, who in turn patrol the streets in felt helmets and uniform. It was not discovered, however, that they ever arrested anybody, because nobody ever so far forgot himself as to warrant arrest. The jail consequently is always empty, a fact that can be but imperfectly understood when one sees its manifest superiority to all other dwellings. One of the policemen exercises, in addition to his function of guardian of the public weal, that of librarian of the Icelandic Literary Society, which was established as long ago as 1816, and has published many works. He is also an author, and has written at least one valuable book.

The streets of Reykjavik are unpaved, but at certain corners, wide apart, stands lamp-posts whereon burn kerosene lamps to light the belated citizen to his door. One of the most characteristic of street sights is the long lines of ponies that almost continually come and go, bringing loads of dried fish, and carrying back the necessaries of life; and almost all of life's necessary demands in Iceland must be supplied from without. Even the wood with which the houses are framed comes from Norway, and must be taken into the interior on the backs of horses. A frequent sight is a procession of ponies, each with a board on either side, fastened at one end to the pack-saddle, while the other end is left to trail and bump along the uneven road. On pleasant mornings another kind of procession is often seen. It is composed of women and girls, each with a wooden tub, and all going to the warm springs to do the household washing. The water can be had at all temperatures, from boiling hot, where it bubbles up out of the earth, to tepid, farther down the little stream formed from the overflow. Dipping up a tubful of hot water, the washerwoman puts her washing to soak and then selects a convenient place upon the bank near the water's edge, where she kneels and rubs and wrings piece by piece.

* * * * * * * *

The buildings of a farm usually are under one roof and stand in a row, with their gable ends facing the court. They are peculiarly constructed: economy of timber and the exigencies of the climate furnish, however, a key to their architecture. Ordinarily they are but one story in height. They are framed of wood, and their gables also are wooden; their sides and backs, which usually slope to the ground, are commonly of lava and turf; the roof always is thatched with turf, which quickly grows together and forms a continuous covering, through which wet and cold scarcely can penetrate. Seen from a distance a group of farm buildings bears the appearance of an irregular grass-grown hillock, upon which, to heighten the illusion, sheep are calmly grazing. The farm-house proper consists of two or three gables: next it is the byre for the winter shelter of the cows, if the farmer is sufficiently well-to-do to possess any, and next the smithy with its forge and anvil: the Icelander in his isolation is thrown upon his own resources, and is obliged still to exercise, upon occasion, a calling that has descended to him from the immemorial past. Entering the house through the low doorway in one of the gables, you find yourself in a long straight passage, through which, even in broad daylight, you must commonly grope your way. The floor is sometimes of boards, sometimes of earth; on each side doors open into the adjoining buildings, separated from each other only by wooden partitions. Usually the door on one side leads into the common living-room of the house, which occupies the whole of the building in which it is situated. A quaint and picturesque interior meets your eye. It is a long, low room, lighted at either end by a square window. Above, the beams are visible, and have been made the place of deposit for an indescribable variety of household articles. Along one side stands the low stationary bed which serves also as a lounging place by day; some square wooden chests are ranged along the opposite side; at the end, particularly in winter, several women are carding and spinning wool. This common room always indicates the thrift or poverty of the farmer. Sometimes it is scrupulously neat and orderly, and its furniture is good and substantial, if not costly. Frequently, however, everything about the place is of the most primitive kind, and comfort, convenience, and cleanliness are unknown. The bed looks as if it were never made up; and dirt, fleas, children, and dogs are distributed in equal, though inordinate, proportions.

If you enter the door on the opposite side of the hall-way, you find a smaller room, usually furnished with chairs and a table, and sometimes with a bed. This, in the larger houses, is the spare room of the house, and, after the various saddles and Sunday garments placed here for safe keeping have been removed, it is assigned to the chance guest. If, instead of turning to the right or to the left, you continue your way along the passage to the end, you arrive at the kitchen, which usually is in a separate building. Its floor is of earth. In a fire-place flickers an uncertain fire of peat, and over it hangs an iron pot from a crane. Everything is dark and smoke-begrimed, for much of the smoke does not escape through the open chimney, and the only light is from the fire. Perhaps an old woman with her black garments and her tasselled *hufa* bends over the kettle and stirs its con-

tents. The unsteady light gives it all a weird appearance, and you wonder if the crone is not muttering an incantation. It is such an interior as Gerard Douw would have loved to paint.

Small as is the kitchen fire, it is often the only one in the house, for fuel in some parts of the island is exceedingly scarce, and must be used with the strictest economy for cooking purposes alone. It is customary to close the houses when the cold winter weather comes on, for then the atmosphere becomes at least warmer than the outside air, if not quite so well adapted for breathing purposes. The houses of the clergy often are better than those described, in that they have more rooms or better accommodations; sometimes, however, they are worse, or the guest chamber already has been allotted, and in that case you retire to the neighboring church.—*William H. Carpenter in Atlantic Monthly.*

CRITICISMS OF LONDON CONDITIONS.

For a city which is in some respects the greatest capital of the world, the approaches to London are of singular and painful unsightliness. What can the Indian prince, the Asiatic monarch, the Continental ambassador, or the Oriental envoy, think when his first acquaintance with it is made in the confusion and hideousness of Cannon street, or in the disorder and nakedness of Charing Cross Station? whilst, if his arrival take place at night, what impression can be received from the ill-lighted thoroughfares through which he is driven? It is not too much to say that London is the worse-lighted capital in the whole of Europe. All its squares and streets lie all night in semi-darkness, and some vague memories of the Curfew laws seem to haunt the minds of its hotel keepers, who turn down their gas inside their establishment just at the hour when people returning from dinner-parties and theatres need it the most.

Certainly, to any one long accustomed to the superb cities of the Continent, London has a curiously provincial appearance. Notwithstanding its vast extent and its immense population it has in many ways the aspect of a third-rate town, since in no part whatever of it does its architecture correspond with the number and splendor of its equipages, the rank and fortune of many of its landlords and tenants, and the splendor of the arts gathered in its galleries. Improved though the City is of late years, the outlook which it affords to those who reside in it is still too often like that dismal picture of it drawn by Shelley:

"But what see you beside? A shabby stand
Of hackney coaches, a brick house or wall
Fencing some lonely court, white with the scrawl
Of our unhappy politics; or worse—
A wretched woman reeling by, whose curse,
Mixed with the watchman's, partner of her trade,
You must accept in place of serenade."

The hackney coach is replaced by the smarter hansom, with its horse's jaw sawed savagely by the cruel curb; and the watchman is replaced by the police officer, who is considered a superior being to the Dogberry of old. But the shabby stand, the dreary wall, the gin-soaked creatures remain, and little is as we could wish it in the outer world of London. The streets are dreary, although so peopled; the sellers of fruit or flowers sit huddled in melancholy over their baskets, the coster-monger bawls, the newsboy shrieks, the organ grinders gloomily exhibit a sad-faced monkey or a still sadder little dog; a laugh is rarely heard; the crossing sweeper at the roadside smells of whiskey; a mangy cat steals timidly through the railings of those area-barriers that give to almost every London house the aspect of a menagerie combined with a mad-house.

Why do they exist, these dreadful subterranean places in which nothing but the soul of a blackbeetle can possibly delight? The reply is invariable; without them there could be no kitchens. Why is this taken for granted? If the basements were abolished you would at once get rid of the flight of steps to your hall door which is a snare in frosty weather, a misery in rainy weather, and an eyesore in all weathers. Steps of every kind are an abomination; and to women coming out from parties in the ill-lit darkness of the streets they are, in frost and snow, an absolute danger, despite all the services of footmen and of link-boys. You would also get rid of those odors of cooking and eating which so oppressively pervade even large London houses. In an apartment scarcely bigger than a bonbon box in Paris the scents from the kitchen are seldom perceived. But in a mansion in London these odors meet you on the threshold, accompany you up the staircase, and banish any appetite which you may have brought with you for either luncheon or dinner. This discomfort would be effectually removed if the kitchens were placed on the top-most floor, with a small lift running up and down to them. There is too much eating in all London houses; too many servants sleep in them; the air is not admitted freely enough; fear of burglars keeps the whole dwelling hermetically sealed and shuttered all night, and the atmosphere cannot be freshened even by all the incense burnt and perfumed waters blown about the reception rooms. Without fresh air, and fine and true lines of architecture in a house, no decoration avails anything; its ornament is only like gold and silver brocade on a hunchback's shoulders. —*Woman's World, (London).*

Future state is an illusion for the ever-present state. It is not length of life, but depth of life. It is not duration, but a taking of the soul out of time, as all high action of the mind does, . . not immortality, but eternity,—a state of abandonment to the Highest, and so the sharing of his perfection. . . . Jesus explained nothing, but the influence of him took people out of time, and they felt eternal. A great integrity makes us immortal; an admiration, a deep love, a strong will, arms us above fear. . . The love that will be annihilated sooner than be treacherous has already made death impossible, and affirms istelf no mortal, but a native of the deeps of absolute and inextinguishable being.—*Emerson.*

Life is for labor, not for ecstacy. We are here to win mastery through endeavor. And here we must use our eyes, our brains, our hands.

From Harper's Magazine for 10th month.

SMALL-POX IN ST. PIERRE, MARTINIQUE.

March 19, 1888.

THE death-rate in St. Pierre is now between three hundred and fifty and four hundred a month. Our street is being depopulated. Every day men come with immense stretchers—covered with a sort of canvas awning—to take somebody away to the *lazaretto*. At brief intervals, also, coffins are carried into houses empty, and carried out again, followed by women who cry so loud that their sobbing can be heard a great way off.

Before the visitation few quarters were so densely peopled: there were living often in one small house as many as fifty. The poorer classes had been accustomed from birth to live as simply as animals—wearing scarcely any clothing, sleeping on bare floors, exposing themselves to all changes of weather, eating the cheapest and coarsest food. Yet, though living under such adverse conditions, no healthier people could be found, perhaps, in the world, nor a more cleanly. Every yard having its fountain, almost everybody could bathe daily; and with hundreds it was the custom to enter the river every morning at daybreak, or to take a swim in the bay (the young women here swim as well as the men). But the pestilence, entering among so dense and unprotected a life, made extraordinarily rapid havoc; and bodily cleanliness availed little against the contagion. Now all the bathing resorts are deserted, because the *lazarettos* infect the bay with refuse, and because the linen of the sick is washed in the Roxelane.

Guadeloupe, the sister colony, now sends aid—the sum total is less than a single American merchant might give to a charitable undertaking; but it is a great deal for Guadeloupe to give. And far Cayenne sends money too; and the mother-country will send one hundred thousand francs.

The infinite goodness of this colored population to one another is something which impresses with astonishment those accustomed to the selfishness of the world's great cities. No one is suffered to go to the pest-house who has a bed to lie upon, and a single relative or tried friend to administer remedies; the multitude who pass through the *lazarettos* are strangers—persons from the country who have no home of their own, or servants who are not permitted to remain sick in houses of employers. There are, however, many cases where a mistress will not suffer her *bonne* to take the risks of the pest-house, especially in families where there are no children; the domestic is carefully nursed, a physician hired for her, remedies purchased for her.

But among the colored people themselves the heroism displayed is beautiful, is touching—something which makes one doubt all accepted theories about the natural egotism of mankind, and would compel the most hardened pessimist to conceive a higher idea of humanity. There is never a moment's hesitation in visiting a stricken individual; every relative, and even the most intimate friends of every relative, may be seen hurrying to the bedside. They take turns at nursing, sitting up all night, securing medical attendance and medicines, without ever a thought of the danger—nay, of the almost absolute certainty of contagion. If the patient have no means, all contribute; what the sister or brother has not, the uncle or the aunt, the godfather or godmother, the cousin, brother-in-law, or sister-in-law, may be able to give. No one dreams of refusing money or linen or wine or anything possible to give, lend, or procure on credit. Women seem to forget that they are beautiful, that they are young, that they are loved, to forget everything but the sense of that which they hold to be duty. You see young girls of remarkably elegant presence, young colored girls well educated and *élévées-en-chapeau* (that is to say, brought up like white creole girls, dressed and accomplished like them), voluntarily leave rich homes to nurse some poor mulattress or capresse in the indigent quarters of the town, because the sick one happens to be a distant relative. They will not trust others to perform this for them; they feel bound to do it in person.

But without any sanitary law to check this self-immolation, and with the conviction that in the presence of duty, or what is believed to be duty, "life or death is the same thing," or ought to be so considered, you can readily imagine how soon the city must become one vast hospital.

LAFCADIO HEARN.

THE ENGLISH SPARROW.

WHATEVER doubt in regard to the wholly injurious habits of the English Sparrow, *Passer Dometica*, may have remained in the minds of farmers and gardeners, it must now be dispelled, when the mass of facts are fully known which have been collected by the Department of Agriculture, and published in the Report of 1886, recently distributed.

The information on this subject in the possession of the Department was obtained in answer to circulars which it had distributed in all parts of the country. Thirty-two hundred replies have been received.

The ravages of the English sparrow affect almost every crop produced by the farmer, fruit-grower and truck gardener, and extend over the entire year. Indeed, it is safe to say that it now exerts a more marked effect upon the agricultural interests of this country than any other species of bird; and its unprecedented increase and spread, taken in connection with the extent of its ravages in certain districts, may be regarded with grave apprehension. In the early spring it prevents the growth of a vast quantity of fruit by eating the germs from the fruit buds of trees, bushes and vines, of which the peach, pear, plum, cherry, apple, apricot, currant and grape suffer most.

But it is not only the buds, but the fruit itself which is eaten or mutilated so as to make it worthless.

Detailed accounts are given of its destroying lettuce, peas, beets, radishes, cabbages, cauliflower, blackberries, raspberries, strawberries, grapes, tomatoes, plums, peaches, pears and apples. It appears to be particularly destructive to grapes.

The report recommends to the legislative bodies

of the various States and Territories "the immediate repeal of all existing laws which afford protection to the English Sparrow, the enactment of laws legalizing the killing of the English Sparrow at all seasons of the year, and the destruction of its nests, eggs and young," and other legislation providing for the destruction of the birds by persons appointed for the purpose.—*Vick's Magazine.*

THERE has been no nation but in the beginning of its history there was a consciousness of a relation to a world which it did not conquer with its swords, and whose fruits it did not gather in its barns nor exchange in its markets. There has been none which in the greater periods of its history did not recognize ends whose worth had no estimate in material values, and in the crisis of its history did not call for an effort for which its economists could find no rate of compensation in the wages of labor.—*Mulford.*

WHO, looking backward o'er his years,
Feels not his eyelids wet with grateful tears,
If he hath been
Permitted, weak and sinful as he was,
To cheer and aid, in some ennobling cause,
His fellow-men?

He has not lived in vain, and while he gives
The praise to Him, in whom he moves and lives,
With thankful heart,
He gazes backward, and with hope before,
Knowing that from his works he nevermore
Can henceforth part.

—*Longfellow.*

NEWS AND OTHER GLEANINGS.

—Berlin, it seems, has gradually become the headquarters of the carved wood industry, supplanting Switzerland. Six hundred artists in wood carving, the same number of turners, and 700 carpenters are engaged in manufacturing such articles as cigar cases, newspaper and picture frames, napkin rings, etc. The value of the annual export of these articles is given are 5,000,000 marks, and this is exclusive of the costly carved wood furniture, the manufacture and export of which are assuming large proportions.

—There are reported to be fourteen thousand people in London who make a living by writing books and by contributing to magazines and the daily newspapers.

—Rosa Bonheur having asked leave to paint in the Hagenbeck Menagerie at Homburg, Herr Hagenbeck sent her three panthers and a keeper to look after them. She now has them at the seaside, and more animals will be lent her whenever she wants to have them.

—Libby Prison was sold at public auction, in Richmond, Virginia, Sept. 20, for $11,000. It was sold privately some months ago to W. H. Gray, of Chicago. for $23,000. He paid one-fourth cash and resold it to a Chicago syndicate, who failed to make the second payment, hence yesterday's sale.

—Prof. Lewis Boss of the Dudley Observatory at Albany has completed calculations of the orbit of the new comet. It is twice as far away from the earth as the sun is, or about 190,000,0000 miles, and is about 170,000,000 miles from the sun. It is moving towards the earth at the rate of about 3,000,000 miles a day. Calculations indicate its nearest distance to the sun at 125,000,000 miles. Should it fall below this the comet will be a brilliant object in November.

—Detroit is proud of its new Museum of Art, a handsome stone building, fire-proof, which has just been completed at a cost of $100,000. The money for the building was raised among the citizens by popular subscription, and it is a credit to that beautiful and progressive city. The museum was opened September 1, with a collection of modern paintings loaned by George I. Seney, of New York.

—The man who is not prevented from turning book leaves with a wet finger by fastidious refinement may well pause from fear of microbes. The authorities at Dresden have been investigating the question whether circulating libraries are a medium for the spread of infectious diseases. They rubbed the dirtiest leaves of the books, first with a dry finger and then with a wet, microscopically examining the product in each case. In the first case, scarcely any microbes were found on the finger; in the second case plenty! Though all these appeared to be of a non-infectious character, the committee winds up with a recommendation to readers not to wet the finger in the mouth for the purpose of turning over the leaves.—*Exchange.*

—The new waterway in Siberia, says the London *Standard*, will connect the rivers Obi and Yenissei, and will utilize the river Obi and its branches, Ket, Osernaja, Lomowotaja, and Jasswaja—an outlet of the "Great Lake"—on one side, and on the other, the Yenissei with its tributaries, the Great and Little Kass. A cutting 4¾ miles long, between the Great Lake and the Little Kass, will complete the connection between the two rivers. The difference of level between the Great Lake and the river Obi is 65½ feet, and will necessitate eight locks being built, while between the Great Lake and the Yenissei there is a fall of nearly 174 feet, which will be got over by 25 locks. The Great Lake is 6½ feet deep. The cutting, or canal, out of it is 42.6 feet wide, and 4.1 feet deep. The total amount of excavation is 719,680 cubic yards, of which 78,000 cubic yards have yet to be dug out. The works were commenced in 1883, and will be finished this year, the estimated cost being 8,000,000 rubles.

CURRENT EVENTS.

THE Republican Tariff bill, which for some time past has been in course of preparation as a substitute for the Mills bill, was reported to the Finance Committee on the 25 inst. The bill is very elaborate, containing 159 printed pages, and would effect, if passed, a reduction in the revenue of some 65 millions of dollars. The bill will come before the Senate for consideration early next week.

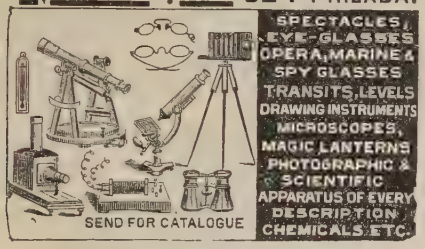
THE yellow fever epidemic at Jacksonville and other Southern towns is still a centre of public attention. At this writing (9th mo. 24), the outlook is more encouraging as the death roll has diminished considerably. The fever has almost disappeared from Decatur, Ala., and no new cases are reported from Jackson, Miss. The strict quarantine at Memphis, Tenn., during the continuance for which every road leading to the city was strictly guarded, has been relaxed far enough to allow persons to enter the city on a certificate issued by the Board of Health. It is said a new relief bill will be introduced into Congress this week.

The total contributions up to date of writing are $15,995.60. The fear of the fever has caused serious panics in several Southern cities. The city of Meridian, Miss., (12,000 inhabitants), was almost depopulated by crowds of people rushing to the depots to escape to the country round about. Boats full of refugees bound for the North are passing up the Mississippi, but receive little sympathy or assistance from people along the banks. Besides the appropriation bill mentioned above, Mr. Wheeler of Alabama

FOR DRY GOODS

—THE BEST PLACE IS—

STRAWBRIDGE & CLOTHIER'S,



MARKET
EIGHTH } STREETS.
FILBERT

One of the largest buildings in the city, and the largest Establishment in America devoted exclusively to

DRY GOODS.

The stock includes Silks, Dress Goods, Trimmings, Millinery, Hosiery, and Underwear, Gloves, House-Furnishing Goods, Carpets, Ready-Made Dresses and Wraps, and everything that may be needed either for dress or house-furnishing purposes. It is believed that unusual inducements are offered, as the stock is among the largest to be found in the American market, and the prices are guaranteed to be uniformly as low as elsewhere on similar qualities of goods.

has introduced a bill in the House authorizing the President to establish camps of refuge provided with necessaries at the public expense.

A LARGE gathering of the Sioux Indians took place on the 22d inst., in an open hollow a few miles below Standing Rock Agency, (Dakota), to consider the question of the Treaty. In the absence of Chief Grass, Sitting Bull assumed the leadership and made a speech in which he exerted all his powers for the defeat of the treaty. The speech was applauded loudly at its close. The Commissioners, at this writing, have not given up the effort to procure the approval of the treaty.

A TELEGRAM asking for military aid has been received at Washington from Brownsville, Texas. The town called Rio Grande City, in Texas, is in the possession of a mob of Mexicans who demand the surrender of a United States Customs Officer who recently shot a Mexican editor for alleged libels published in the paper belonging to the latter. The Customs Officer has taken refuge at Fort Ringgold, and the commandant there has threatened to fire upon the mob. (Later dispatches say that order is restored by the recovery of the Mexican becoming probable.)

NOTICES.

*** The committee appointed by Prairie Grove Quarterly Meeting has fixed the date of Tenth month 7th, 1888, for the organization of an Executive meeting at Lincoln, Nebraska.

BENJ. F. NICHOLS, Chairman Com.

*** At Radnor meeting-house on First-day, Tenth month 7th, at 3 o'clock p. m., a meeting for worship appointed by Samuel S. Ash, of Philadelphia, will be held, to which all interested are cordially invited.

*** The Executive Committee of Friends' Union for Philanthropic Labor will meet at 8 o'clock a. m., on Third-day morning, the 2d of Tenth month, 1888, at Friends' meeting-house, Waynesville, Ohio, the week of Indiana Yearly Meeting.

JOHN WM. HUTCHINSON, Chairman,
MARIANNA W. CHAPMAN, Secretary.

*** First day School Unions in Ninth month will occur as follows:

29. Haddonfield, N. J.

*** PHILADELPHIA, Ninth month 24th, 1888.

To FRIENDS' INTELLIGENCER AND JOURNAL:

We have received additional contributions for the Children's Country Week Association from

E. T.,	$ 2.00
Baby Alice,	1.00
Total,	$3.00
Previously Acknowledged,	279.00
Total,	$282.00

We have also received a contribution towards a fund for rebuilding a meeting-house at Columbia, Pa. From a Friend in New York, $25.00.

FRIENDS' BOOK ASSOCIATION,
John Comly, Superintendent.

*** Quarterly meetings in the Ninth month will be held as follows:

29. Scipio Q. M., Scipio, N. Y.

PUBLISHERS' NOTICES.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also to help avoid mistakes.

***As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

***Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only n cans* ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

LOOKING TO GOD.

I LOOK to Thee in every need,
And never look in vain;
I feel Thy touch, Eternal love,
And all is well again;
The thought of Thee is mightier far
Than sin and pain and sorrow are.

Discouraged in the work of life,
Disheartened by its load,
Shamed by its failures or its fears,
I sink beside the road,—
But let me only think of Thee
And then new heart springs up in me.

Thy calmness bends serene above,
My restlessness to still;
Around me flows Thy quickening life,
To nerve my faltering will;
Thy presence fills my solitude;
Thy providence turns all to good.

Embosomed deep in Thy dear love,
Held in Thy law I stand;
Thy hand in all things I behold,
And all things in Thy hand;
Thou leadest me by unsought ways,
And turns't my mourning into praise.

For Friends Intelligencer and Journal.

BIBLE STUDY.

THE systematic study of the Scriptures that has been pursued now for many years in Sabbath Schools and Bible Classes, and the scholarship that has been enlisted in the work of providing explanatory material suited to such study, is doing much to increase the interest in the history and literature of the Bible, and in no small degree to prepare the way for the present agitation of the subject as relates to the scientific study of its pages in our colleges and universities, giving it a place beside the Greek and Roman classics. Lacking the sensuousness of these, the Hebrew, in its exalted conception of Jehovah, the Supreme Ruler of the Universe, the Creator and Upholder of all things, is far more in consonance with the moral and religious thought of our civilization as contrasted with that of Greece and Rome in the best age of their literature; yet the unique place the Bible has always held in the church at large, has taken it entirely out of the schools except as its hortatory portions have been read, not always wisely chosen or adapted to the needs of the youth assembled. Rarely, except in the theological schools of this country, has any other educational use been made of it, hence the knowledge of God, and of his relations to man, that our students, in the most impressible and inquiring period of their lives, have presented to their understanding, is almost entirely gathered from the writings of the philosophers who spoke and wrote in an age and among peoples, cultured indeed in a very high degree, in many lines of thought and development, yet holding gross and corrupting ideas of their gods, whom they multiplied to meet every condition of human life, peopling the groves and streams with nymphs and dryads, and attributing every calamity to some remorseless deity whose anger it was necessary to placate.

It is quite time that our sons and daughters who go from Christian homes to prepare themselves through complete culture for assuming the responsibility and taking their part in the work and endeavor of a free and independent nation, should be made familiar through critical study and investigation, with the foundation principles upon which our national fabric is reared. Dr. T. T. Munger, in the *Century Magazine* for June, ably presents the subject in an article entitled "The University and the Bible." He writes: "As the great facts and forces of human society are those which an educated man must understand, it becomes a question whether he can claim to be such unless he has a thorough scientific knowledge of the Christian religion. A mere sense of proportion would suggest that of the three forces which have entered into civilization—the Hebraic, the Greek, the Roman—he should understand the first as thoroughly as the other two; or that he should have as thorough a knowledge of the Christian as of the heathen classics; or that he should get as clear an insight into the nature of the force which Christianity lodged in the Roman empire, and by which it took possession of it, as he gets of the nature of the Empire itself. It is clear that education at present has no true proportion; there is no proper coördination of its studies, and as the result we get a set of one-sided, partial thinkers." The point our essayist makes is, "That such education should be dissociated from worship and conducted in the same thorough and scientific way as the study of Greek or history, that if religion is taught in the University, it should be taught in the class-room and for the single end of education." He defines education as "a training of the mind by study of the laws of nature and of the chief forces, facts, and processes of human society." The University does not aim primarily to secure conviction on these subjects, but to impart accurate knowledge of them, leaving the student to form his own opinions. The very func-

tion of education is to teach a man to think for himself upon the basis of full knowledge; and it is the opposite of its function to seek to impart opinions and convictions as such.

It is no part of an educational institution except it be a denominational one established for that purpose, to so shape its line of study as to secure a special religious belief. In no other than a critical study of the Scriptures, can an intelligent and unbiased knowledge of what is therein written be gained, and with the present attitude of a large class of intelligent inquirers who will not accept their traditional sacredness and infallibility, it will be a great movement in the direction of a better understanding of the true place that the Bible holds in the Christian church and in the literature upon which the religion it teaches is authenticated.

And we do need some wiser and more intelligent way of understanding the records of the nations and peoples of the Bible whose lives were passed under totally different conditions from our own; whose knowledge of the forces and processes of nature were so imperfect, and whose statements in regard to cosmic phenomena, are so at variance with what the scientific investigations of our own age have disclosed. Let the Bible, so dear to the heart of the Christian, because it bears testimony to the unfailing love of our Heavenly Father and the ministrations of his Holy Spirit to the soul's need,—let this Book stand the crucial test of scientific investigation; whatever it loses will be the dross of human judgment as relates to the dealings of God with his human creatures. The truest and loftiest conceptions of the Divine relationship, like the fine gold of the crucible reflecting the Divine image and bearing the internal evidence of its worth, will lose none of its value to the lives of men. In the close of the essay, T. T. M. writes "There is now no public sentiment that needs to be regarded, which complains of the scientific study of any subject. If in some regions and from some sources, there should be complaint at treating sacred themes in a scientific way it is a complaint that the university must be ready to meet and endure. It will lessen as the conception now rapidly growing gains ground, that all education is conducted in the scientific or inductive method. . . . The true teacher is one who gives the facts, the principles, and the laws of his subject. . . . He may hide as much conviction as he sees fit within such teaching, but he must not contradict the very law of education—namely, teaching the student to think and giving him matter for thought."

L. J. R.

Gone are the dewdrops from the rose's heart—
Gone with the freshness of the early hours;
The songs that filled the air with silver showers,
The lovely dreams that were of morn a part.

Yet still in tender light the garden lies,
The warm, sweet winds are whispering soft and low,
Brown bees and butterflies flit to and fro,
The peace of heaven is in the over-arching skies.

—*Julia C. R. Dorr.*

THE PAST AND FUTURE OF THE SOCIETY OF FRIENDS.[1]

The Society of Friends, never numerically a large body, has nevertheless filled an important place in the religious history of the past two centuries. It appeared as a protest against a cold and selfish religious formalism which was, at the time of its origin, well nigh supreme. Its mission was to voice a more simple spiritual faith.

The distinctive doctrine of the Society of Friends is the affirmation of "the immediate teaching and influence of the Holy Spirit" in the human soul. There is among Friends a general unity of belief concerning the inward teaching of the Spirit, but a diversity of opinion in relation to other points of doctrine. The capacity to receive this Divine Light in the soul is by no means limited to Friends. *All* are children of the Divine Father, and joint heirs in his divinely-human household. Acting upon this belief, Friends have borne an honorable part in almost all the great missionary and humane movements of the past two hundred years. Even with the untutored savages, since the time of William Penn, where others have failed, they have been enabled to establish peaceful, harmonious relations. Quakerism has produced relatively few books; its literature is limited in extent. Theological seminaries and ministerial colleges are to it wholly unknown. But its record in the sphere of good works for the elevation of mankind challenges comparison. It has said:

"O brother man; fold to thy heart thy brother;
Where pity dwells, the peace of God is there;
To worship rightly is to love each other,
Each smile a hymn, each kindly deed a prayer."

* * * * * * * *

George Fox was an early defender of the right of women to speak in churches. At the beginning of his itinerant missionary labors, hearing of a great union meeting to be held at Leicester, in England, wherein representatives of several religious denominations were to unite in the discussion of religious topics, he attended it. During the progress of the meeting, a woman started a question about some saying by the Apostle Peter. The presiding priest, though he had before given liberty for any one to speak, said to her, "I permit not a woman to speak in the church." With his sense of injustice and propriety outraged, Fox stepped up and asked the priest, "Dost thou call this place (the steeple house) a church? Or dost thou call this mixed multitude a church?" But the priest answered by asking what a church was, when Fox replied that "The church was the pillar and ground of truth, made up of living stones, living members, a spiritual household, which Christ was the head of; but he was not the head of a mixed multitude, or of an old house made of lime, stones and wood." This incident caused a great stir. The priest came down out of his pulpit, others came out of their pews, and the meeting broke up in confusion. Many followed Fox to an inn where the discussion was continued and several were converted by

[1] An Address by Aaron M. Powell at the Plainfield Centenary, 8th mo., 20, 1888. (As the article is long, we have omitted the sketch of George Fox's earlier career, and of the New England persecutions of Friends.)

him to Quakerism, among them the woman who asked the question and was forbidden to speak in the church, and who subsequently became an effective minister among Friends. Other women were early convinced by his teaching and became themselves in turn, influential preachers of spiritual truth. They shared with men, with quiet courage and rare moral heroism, the fearful persecution, the untold sufferings in which all were then involved by devotion to truth as it became known to them. More than is usually apprehended do women in general, with the enlarged opportunities of the present, owe to the pioneer, unostentatious labors of Quaker women. The equal status of women in the church and ministry, which Friends have recognized from the outset, our Methodist brethren are just now seriously deliberating upon, and many other denominations have not even yet begun to consider.

The past of the Society of Friends may be best judged by the Christian standard of judgment,—the fruit borne.

The voices of Friends were early heard against slavery. Such was the character of the preaching in the early Friends' meetings by Fox and others, that the slave-holders of Barbadoes, as early as 1676, moved by the slave-holder's shrewd instinct, were so much alarmed as to make a law to prevent the attendance of negroes at these meetings.

Clarkson, in speaking of his preaching against negro slavery in the West Indies, says, "Thus was George Fox probably the first person who publicly declared against this species of slavery." Clarkson, who was not himself a Friend, also pays to Friends a most hearty, affectionate tribute, for their faithful and generous help in the anti-slavery and anti-slave trade struggle in England.

In this country, as early as 1716–20, Elihu Coleman and other Friends in Nantucket, and Friends in Pennsylvania, at about the same, or a little later date, commenced the preliminary labor within the Society, which ended in making it a disciplinary offense for a Friend to own or hire a slave, and incorporated it as a standing counsel to Friends in the Book of Discipline to abstain from the use or purchase of anything wrought by the labor of slaves. John Woolman and Benjamin Lundy bore an important part in anti-slavery labors, both within and beyond the limits of the Society of Friends, antedating the work of William Lloyd Garrison, Wendell Phillips and modern abolitionists of the American Anti-Slavery Society. Among Garrison's most efficient coadjutors were John G. Whittier, James and Lucretia Mott, Abby Kelley Foster, Isaac T. Hopper, and many others less publicly known from among Friends. I do not forget that, under the spell of unhallowed pro-slavery influence, which dominated our country in the decades immediately preceding the abolition of slavery, many Friends held aloof from, and in some instances actively opposed, the modern anti-slavery movement. It was in the dark hours of 1850, the fugitive slave law era, that Whittier wrote:

"O clear eyed Faith, and Patience, thou
So calm and strong!
Lend strength to weakness, teach us how
The sleepless eyes of God look through
This night of wrong!"

To the Indian, in his great need, Friends have been friends indeed. Just and humane treatment, such as Friends from the days of William Penn to the present time have been wont to extend to the Indians, has always sufficed to secure peaceful, harmonious relations which force with injustice has been inadequate to achieve. It is because Friends have taught among them simple lessons of right and wrong, of mutual obligations and duties in human relations, and have been scrupulously careful in both making and fulfilling promises, that they have been more successful than others in dealing with the Indians. How lamentable has been the opposite Indian policy so long in vogue, the decimated tribes, the broken treaties, and the many disgraceful Indian wars, costly in blood and treasure, are but too sad a commentary. Fortunate would it be for the Indian and for the nation, if what has been called the "Quaker policy" might be generally adopted and maintained until the Indians are peacefully settled upon permanent homesteads, recognized and protected as citizens, to be instructed and encouraged in agricultural industry and their children to receive education and training for good citizenship.

From the beginning Friends have been advocates of peace. A Quaker civilization would abolish armies and navies; do away with all war and preparations for war; eliminate altogether the principles of destructive force from governmental organizations. There would be respect on the part of each for the rights of all. By much suffering in times past have Friends attested the sincerity of their faith in the peace principle. One "query" of "the Book of Discipline," read periodically, to be officially answered by the subordinate meetings for business, asks: "Are love and unity maintained as becomes brethren; and if differences arise, is due care taken speedily to end them?" Where differences have arisen, *arbitration* has been from the beginning the method of adjusting them. Instances of violence or of recourse to litigation between Friends, have been of rare occurrence. The growth of a general, popular interest in arbitration in our own and in other countries, is a gratifying tribute to the wisdom of a principle which has always been fundamental with Friends, and which as they believe, comports with the teachings of Jesus.

From kindred considerations Friends have been earnest and constant in opposition to the yet lingering relic of barbarism, the gallows. So, too, in prison reform their influence has been extensively exerted in behalf of a more humane, kindly, and rational treatment of criminals. Elizabeth Fry is conspicuous in the world's calendar of saints.

Friends have long borne an emphatic testimony against strong drink. Another of the "queries" to be regularly answered for all the membership, is: "Are Friends careful to avoid the unnecessary use of spirituous liquors, and all other beverages of an intoxicating character, and frequenting places where they are sold?"—and in the "Advices": "All are most ardently desired to abstain from partaking of

any intoxicating liquors and stimulating or narcotic preparations; and to avoid the use of tobacco in any form whatever."

Furthermore, concerning intemperance, the book of Discipline says: "It is earnestly to be desired that none of our members may contribute to this great evil, by being concerned in importing, distilling, or vending ardent spirits; or by renting their premises to be used for the purpose of selling or manufacturing them; or by selling their grain or other produce for the purpose of distillation." All Friends are not total abstainers, but the proportion of those who use intoxicants even "moderately" is relatively small, and the cases of habitual inebriety very rare. The tobacco "fiend" has gained a stronger foothold among Friends than alcohol!

Disciplinary caution is extended against amusements of a "hurtful tendency." Provision is made for the care of the poor of the denomination. An instance of a Quaker inmate of a public poor-house I have never known. It is held that the gospel ministry should be free, a free gift of the Spirit. Testimony against oaths is borne, and one result thereof is that provision is now made by the State for conscientious Friends and others to "affirm" instead of swearing. Caution is given to Friends to avoid extending their business beyond their ability to manage; to be careful in the performance of promises, and in the payment of just debts. The "Advices," read at stated times in meetings for business, say: "Friends are advised frequently to read the Scriptures of Truth, and to encourage the practice in others: and to endeavor to influence their families to read such books as will be profitable and instructive; to be guarded in their conduct and conversation; to avoid the vain fashions and customs of the world; to observe simplicity and moderation in all things, and to inspect frequently the state of their temporal affairs."

These are some of the testimonies, qualities, and characteristics by which Quakerism hitherto has been distinguished. What of its future?

In this, as in other generations, God needs witnesses for his truth. He

> ——"blesses still the generous thought,
> And still the fitting word He speeds,
> And Truth, at his requiring taught,
> He quickens into deeds."

To birthright Friends has come down a rich legacy as an inheritance from the past. The value of this, as of all other inheritances, will depend upon the use made of it. The intellectual and spiritual freedom purchased by the sufferings and the martyrdom of early Friends ought not indeed to be lightly valued. The conditions of human society have in many particulars changed, and greatly for the better. The 'Inner Light" which George Fox, amid much persecution, recognized and taught, is now accepted by multitudes who are not of the Society of Friends. Many of the principles and testimonies which were once peculiar to Friends are now cordially welcomed by others. In the early period, when despised and persecuted, Friends were active and aggressive. Latterly they have become an "eminently respectable" people. Thriving upon persecution, can they survive the later quiet "respectability?" There has in later years been a decline in numbers. Activity and life are synonymous. Sluggishness is the precursor of death. This numerical decline, which the statistics of Friends proclaim, can be permanently arrested only by the renewing of life,—by the doing of the work of the Master which still waits to be done. The Friend of to-day cannot long survive upon the reputation of his ancestors. He must be and do for himself or his inheritance will soon come to nought. The gross externalism of two centuries ago no longer obtains, at least in this portion of the vineyard. But, alas! there is yet much to divert from the still, small voice of God in the human soul. In the early days of Friends certain lordly characters, as a class distinction, demanded to be addressed in the plural, as "you." Against this assumption Friends protested by adhering to the "thee" and "thou." This peculiarity of speech had therefore originally an important significance. Though in these times no one supposes himself or herself to be of any more consequence because addressed as "you," there is still, in other ways, a testimony to be borne against the spirit of caste on account, it may be, of wealth, race, or sex. So the peculiarity of dress was originally a protest against the despotism of fashion, and the extravagance of a privileged social class. When fashions changed Friends refused to change with them. That there is still a need, without conventional peculiarity, of the lesson, by example and precept, of inexpensive simplicity in dress, is obvious.

Many tasks, philanthropic and humane, remain for some one to perform, for the promotion of the true, higher, Christian civilization. The cause of temperance, of purity, the reclamation of the criminal, the civilization of the Indian, the education of the negro, equitable relations for labor and capital, arbitration as a substitute for the war method of adjusting differences, national and international; abolition of the gallows—these are some of the factors of the great problem of civilization which Quakerism in the future, may, if it will, greatly aid in the practical solution of. Above all, there is still the great need of a conscious recognition of the nearness of the Divine. In the hurry of modern life, in the eager pursuit of wealth as a badge of distinction and the popular measure of success in life, the still, small voice—"God's witness in the mind and heart of man"—is too seldom heard and heeded. With the multitude, even with many who are religiously inclined, Christianity is too much an intellectual theory for *belief*, and too little a life to be *lived*. As in the days of George Fox, two centuries ago, so now, missionaries are yet needed to proclaim to a people spiritually hungry, the glad tidings of the gospel of the indwelling Christ in the human soul. If faithfully dedicated to this service of the Master, no one need doubt that there will be a useful future for the Society of Friends. Our chief concern, however, should be, not so much for the preservation of any mere form of organization, as the promotion of fundamental spiritual truth. We may rest assured, as Whittier phrases it, that

"The Lord of the seed-field takes care of his own,
And the world shall yet reap what the sowers have sown.
The last of the sect to his fathers may go,
Leaving only his coat for some Barnum to show;
But the Truth will outlive him and broaden with years,
Till the false dies away, and the wrong disappears."

For Friends Intelligencer and Journal.

AMONG FRIENDS IN IOWA.

We left Clear Creek the 21st of 9th mo., in care of Joshua L. Mills, to meet the train at Lostant, calling by the way to see his daughter and interesting family. We met several Friends on their way home, and Clear Creek Friends at the station who had brought them, which was a very pleasant meeting after the kindly relations we had known in the past week.

We arrived at La Salle about noon, and had over four hours to wait, being too late for a train which would have taken us as far as Rock Island, and was very desirable, as my companion, Phebe Griffith, was to leave us at that place, and it was not pleasant to drop her in the dusk of the evening at a strange city with several miles to travel before reaching her relatives; but we endeavored to find comfort in the overshadowing wing of Divine goodness and love present everywhere. We crossed Rock Island and the Mississippi river before it was quite dark, wishing so much for daylight to enjoy the beauty of the scene,—peering into the growing darkness as we passed through Davenport which seemed quite an extended city. We ascended quite a steep grade to reach the higher land beyond the city, and had still 40 miles to West Liberty, where we arrived about 8.30 p. m. Friends were met by members of their families from different localities. Edward Harrison took me to his home in the suburbs of the town, where it was indeed good to rest after a full day, and recount with gratitude the many favors encountered by the way.

On Seventh-day morning, in company with Thomas and Ann Hogue, we started for Highland, about eight miles distant, calling on the way to dine at Elijah Hogue's. The country is fine here,—the same rich soil, but more rolling than Illinois. It seems strange to think of the distance from home; and yet the comforting sense of being surrounded by kind friends tends to lessen the sense of the great space between. We lodged at the home of Ann Welch, not far from the meeting-house. First-day was bright and mild. Quite a number of Friends gathered at the place of meeting, and there was a feeling of thankfulness that here too was to be found the quiet meeting, which met for the one purpose of spiritual, religious worship, however differently manifested,—a response to the universal need for bread to nourish our immortal nature; and we realize the profit accruing to those who make the effort, even through difficulties to gather for this purpose, thus acknowledging the need and recognizing the bond of fellowship. They have a First-day school at Highland, where all who attend the meeting remain for the school, Thomas Hogue, a minister, leading the Bible or adult class. On account of an appointed meeting at 3 o'clock in the same place, they dispensed with the school this morning, but the boys and girls were at the meeting and their presence was inspiring. We dined at the home of Edward and Eliza Whitacre, two miles distant, returning in the afternoon to find a large company gathered,—the house full,—which while humbling to the instrument from whom service was expected, was yet encouraging and strengthening. The text reviewed: "He hath shown thee, O man, what is good and what the Lord thy God doth require; to do justly, to love mercy, and walk humbly with thy God,"—opening a view of the practical nature of the religious life, as exemplified in Scripture record and the teachings of Jesus. It was a season for searching of hearts and deep thanksgiving. We came home with Thomas and Ann Hogue, having a refreshing rest, and leaving the next morning with Ann Welch for a ride of 13 miles to Springdale to the home of Levi and Mary Pilkington, she a daughter of Reuben and Sarah Wilson, of Fishing Creek. There are some features of this country different from ours, one of which is the planting of groves—some of them from the seed and in regular rows, looking so different from our woodlands. The catalpa, larch, soft maple, and box elder are largely in use. Many of those owning land here say there was not a single tree or aught approximating to it when they came. Along the stream is to be found what they call "timber." I was quite surprised to hear the farmers telling of the loss in their flocks by the wolves, and as many of the lodging rooms are on the lower floor, was interested to know their nature, but found they did not attack human prey—unless in droves when they were very hungry. We passed through a still more rolling section of the state, the hills with groves dotted here and there making a marked contrast with the thought of the unobstructed sweep which once prevailed. These wind-breaks must be a great protection. The autumn flowers are in great profusion, among them the asters, of different shades and the golden-rod—also one with white blossoms so resembling it that we thought that it must be a species of solidago. Then there was the same tall plant, or at least one similar to that growing in Illinois and Indiana, all along the road sides; a very bright yellow blossom and so profuse—yet we were not able to learn either its common or scientific name. Some say it is the rosin plant or a species of it. We passed through Downey, three miles from Highland, where they get the mail, then through West Branch, where Sarah Wilson lives, who had already gone to meet us at Springdale.

Quite a number of Wilbur and Gurney Friends live there. We saw a snug new meeting-house just being finished for those who have left the Gurneyites; they call them "Conservative Friends." They tell us that in this section there are five different divisions of Friends, one of them being ours and what they designate as "Hicksite." We reached our destination after 12 o'clock glad to rest and be refreshed, and feeling quite at home with Friends from Fishing Creek—now thoroughly planted in this Western soil. A meeting was appointed in the Gurney meeting-house close by at 7.30 in the evening. One of the members called before meeting to accompany us and make us welcome. There had been a covering of anxiety in thought of it, which all passed

away as we gathered in the stillness—bringing instead deep thankfulness for the lowering of dividing walls, and the building up of a truer sense of the universal Fatherhood of God and brotherhood of man, which feeling was voiced, citing to a greater dependence on essentials in our search after truth. Several Wilbur Friends were present, and it was an unaffected pleasure to find many relations in this section, among both the Wilbur and Gurney Friends, by the name of Heald, (pronounced Hale), or their descendants. I felt a regret not to have more time to make their acquaintance. One of them called the next morning, Lucinda Heald Michener, wife of John E., taking me to their home which was greatly enjoyed, and where her parents, Thomas and Miriam Heald, had closed their earthly lives in Fourth month last, within three days of each other, one grave receiving both their clay tenements. They had lived together 66 years, part of their lives in Columbiana county, Ohio. We called to see another cousin, Solomon Heald and wife, and greatly desired to visit others but neither time nor strength permitted. Septimus Davis, an English Friend who has lived here several years, and had been at the meeting, called to see us. He had been in England an earnest worker in the temperance field, and still greatly interested, but thinks there are more active, devoted workers for the cause there than here. Perhaps he had reference to those who make a life-work of it in the lecture field, etc.

Fourth-day morning was cloudy, looking like rain. We started for West Liberty with Levi and Mary Pilkington, and her sister Sarah Wilson, calling on the way to see Benjamin Wood and wife, originally from Doe Run, Pa., now living in their unfinished barn, both house and barn having been burned in the spring. We could but hope they would be comfortably housed before the cold winter sets in. The wind was very strong that day. Then we proceeded two miles farther to the home of Henry and Massey Wilson, he a son of Peter and Mary, formerly of Chester Co., Pa. We enjoyed our visit with them very much, B. W.'s wife being with us, and they so glad to see Friends from the East. We crossed Wapsinonoc Creek, so named by the Indians on account of its meandering course and smooth even flow. The roads in this vicinity are very straight and intersected at right angles about every mile, and are much wider than ours. Among the rich display of autumn flowers is that they call a species of iron weed, very luxuriant and a bright, dark purple. One of our party seeing fifteen or twenty calves in a corn field, wondered if the owner knew it. Yes, was the reply, they have been raised there. It would have looked strange in Pennsylvania. They husk the corn standing, turning pigs or other stock in to feed on the stalks. We saw over one hundred Shetland ponies in a large field skirted by timber, an attractive sight for some of our boys. I wondered how they would be housed in winter, but was informed they would live out in the timber, many of them being sold perhaps before the cold weather comes.

We reached West Liberty about 4 p. m., stopping at the house of Benjamin and A. E. Mead. Had a meeting at 7.30 that evening in Friends' meeting-house, which was well attended, though a small meeting usually. An earnest call went forth for greater faithfulness, and the blessing which would follow an understanding and acceptance of the "new commandment" now so old, yet so little understood by many. The need is as pressing now as ever of the devotion of our early fathers, not necessarily the same line of action in the Church more than in the appointments of our home life. A Methodist minister made some fitting remarks at the close. We lodged at Sylvanus and Addie Hogue's, and arose early to take the 6 o'clock train for Columbus junction, a distance of twenty miles, where we were met by Edward Cooper, and had 18 miles to ride. The sky, which was so bright in the early morning, was obscured by clouds, and it was very cold and windy, giving some idea of the severe cold to come and strong winds encountered in this section. We passed over some very hilly country, rougher than any seen in Iowa, crossed Iowa River before leaving the train, and after reaching the bluffs between Columbus Junction and Columbus City had an extended view of the country in the distance. There is more timber in this section than we had seen, the soil not being so rich where it abounds.

We called at E. C.'s home to warm and be refreshed, and came on to Priarie Grove Monthly Meeting at 11 o'clock. There we were surprised to see Joseph and Ruth Dugdale, both frail and advanced in years, yet looking very natural. A deep travail of spirit was experienced, and the close service which seemed required, we can only hope found a lodgement in some hearts. "Though Paul may plant and Apollos water, God alone giveth the increase." We met here many Friends named Cooper and Russell originally from Virginia, and Lancaster county, Pa. Came home with Jesse and Mary Cooper, he a son of John Cooper of Sadsbury, long deceased. They have six sons settled around them.

Prairie Grove, Iowa, Ninth month 27. L. H. P.

SCRIPTURE LESSON, No. 39.

TENTH MONTH 14, 1888.

TOPIC: DIVINE PROTECTION.

GOLDEN TEXT.—When thou passest through the waters, I will be with thee; and through the rivers, they shall not overflow thee: when thou walkest through the fire, thou shalt not be burned. neither shall the flame kindle upon thee.—Isaiah 43: 2.

Read Joshua 3: 5-17.

THE place of crossing was at the fords of Jericho. There is but one other place mentioned where the river was fordable, at Bethbara, supposed to be the Bethabara of the New Testament, and farther north than Jericho. The first mention of fording the Jordan is in Gen. 32: 10, believed to be at the latter place. The springs from which the Jordan takes its rise are 1,700 feet above the level of the Mediterranean Sea; and the northern end of the Dead Sea, into which it flows, is 1,317 feet below it, so that from the mountain of Lebanon to its mouth it has a fall of more than 3,000 feet. In its course it widens into two lakes: Merom, in the northern part, and Tiberias or Galilee, as it is variously called, which is ten miles further south.

Sanctify yourselves. Make yourselves clean, pure and holy; wash your clothes. Ex. 19: 10. Be holy in all manner of conversation (1 Peter 1: 15), refrain from everything that will turn the thought from the Divine purpose in your behalf, as the Lord your God has revealed it to you through me, whom he has commissioned to be your leader.

The Ark of the Covenant. A chest made of Shittim wood (acacia), overlaid within and without with pure gold. It contained the two tables of stone upon which the Law was engraved. The pot of manna and the rod of Aaron were said to be deposited in it. It formed part of the furniture of the Tabernacle which was set up in the Tent of Meeting.

All Israel passed over on dry ground. This corresponds with the record of the crossing of the Red Sea. The latter has been accounted for by natural phenomena, the winds when in certain directions blowing so strong as to lay bare the bottom of the sea, as has been known in modern times. No such explanation has been made of this crossing of Jordan, and the time is too remote for any definite solution to be attempted. In whatever way it was accomplished, it was in accordance with the will of God, who has ever made a way for his people, even where there seemed no way.

One of the most prominent arguments of those that try to unsettle human faith in the Divine Father who overrules the universe, is that the trials of life, the sorrows, disappointments, misfortunes, and accidents, that bring bitter anguish into human hearts, come just as surely upon the pure, the noble and the good, as they do into the lives of the evil and degenerate. The lingering tortures of disease, the agonizing loss of dearest child or friend, the removal of the only apparent support of enfeebled old age,—full often are experienced by those whose lives have seemed to be entirely ruled by the Spirit of the Divine, so good and true and pure are they. And because of this there are those that ask how can a good Father be so unmindful of the happiness of his deserving children?

Such a question arises from the misconception of the nature of the Divine protection. They are crude and material views, excusably held by the semi-enlightened people of whom our lesson for to-day treats, but which reflecting and intelligent minds should rise above. Surely the best things of life are not material blessings, and the best influences that come into our lives do not arise from possessions that have been attained without a struggle for their getting. He who looks back over his past life, views with greatest satisfaction the experiences that mark difficulties overcome, temptations avoided, disappointments surmounted, evil-doing put aside. In the summing up, those events in life that have proved most beneficial in the building up of character seem far beyond comparison, more valuable than any other. And it is here where Divine protection is always apparent. The Apostle Paul, in his letter to to the Romans (Rom. 8: 28), says: "And we know that to them that love God all things work together for good." We know this is so, we know full well that every trial in life, if properly borne, does affect our character for good, however sharp and heart-breaking it may have been at first, if our best instincts are obeyed, we shall find our sorrow has purified our lives. But more than that there comes, too, a realization of a supporting Power, that before we knew not of. As is beautifully portrayed by James Freeman Clark: "Sometimes there dawns in the soul the sense of an infinite tenderness, the consciousness that God is not far off, but near; that all we think and do and say aright, comes from his help. In the depths of our sorrow, in the loneliness of our bereavement, when disappointment and failure meet us, we wonder that we are somehow still upheld, and we know that it is because we are indeed God's children."

THE GEM OF GREAT VALUE.

The utmost care on the part of the housewife is the price paid for the health of the family. We have all heard the story of the father of the German bride who gave his daughter a golden casket, with the injunction not to pass it to any other hands, for it held a charm which, in her keeping, would be of inestimable value to her as the mistress of a house. Not only was she to have the entire care of it, but she was to take it every morning to the cellar, the kitchen, and the stable, and to remain with it in each place for three minutes. After the lapse of three years the father was to send the key, that the secret of the talisman might be discovered. Directions were followed, the key sent, and the casket opened, when it was found to contain an old parchment upon which was written: "The eye of the mistress is worth a hundred pairs of servants' hands." The wise father knew that a practice of inspection followed faithfully for a period of three years, with such results as we may reasonably believe followed, would be perpetuated—that the casket and hidden charm would have accomplished their mission.

Into the hands of every housewife is committed a casket far more precious than the results of any jeweler's skill. Unseen thieves are continually lurking about that threaten its safety, never so numerous as at this season of the year. The casket is the health of the family; the dangers that threaten it, disease. Its preservation depends on watchfulness born of love.—*Christian Union.*

For life to cease to be poor and commonplace and become intrinsically rich and wonderful, we must realize that if it is, as a whole, a gift of God, then all its parts must so be. . . . How grand and majestic, then, is this every-day life! It is inlaid with divinity; . . . . and David utters a literal fact when he speaks of his down-sitting and uprising as encompassed by God.

I call that mind free which escapes the bondage of matter, which, instead of stopping at the material universe and making it a prison wall, passes beyond it to its Author, and finds in the radiant signatures which it everywhere bears of the Infinite Spirit, helps to its own spiritual enlargement.—*Channing.*

PHILADELPHIA, TENTH MONTH 6, 1888.

AFTER VACATION.

WITH the closing of the month just past came the final closing of the vacation season, and now the schools and colleges are fully at work; a multitude of eager, receptive minds on the one side and a solid front of professors and teachers, fresh from their summer rest, on the other. In business circles too, there is renewed activity, and what may be termed the indoor season, is well under way. A few persons may yet linger at sea-side or mountain homes, for the glory of the autumn weather, ere they are ready for wrestling with our inclement winter; and these are indeed the fortunate ones, for our late autumn days are the real restful days, with their bracing mornings and evenings just cool enough to enjoy the moderate fire.

But very generally the languid pulses of all are waking up from the summer lethargy getting ready for the stress and strain to which they are soon to be subjected. It requires, however, something of a struggle to again return to regular work, for the indulgence of rest "grows upon what it is fed," and we would fain prolong the season. This struggle once over the renewed vitality asserts itself and we are ready for service, service into which we should infuse the strength and knowledge gained by leisure; for these vacations when wisely spent are so much added capital for future use, as there must be some growth of mind and spirit with those whose privilege it has been to visit new spots, seeing nature in her varied colors and mingling with new people. Even to such as have enjoyed their leisure at home in the quiet, there must have been some fresh revealing of thought or action from book or paper, or direct impression from the great Teacher, on the mind ready and willing to receive it.

During the hours freed from our usual employment there has been time perhaps to forecast a little for future action; to think over new plans for our own advancement and that of others; to determine how much time shall be spent in work, and how better to use the unoccupied moments than in the past; to think of the Religious Society to which we belong, and to which we owe our steadfast adherence, and how to promote its best interests. Having been thrown upon our own resources, have we found ourselves equal to self dependence by a consciousness of inward spiritual growth? And if so how can we share this with others? For we take it for granted that no professed follower of the Christ would wish to live as to himself alone.

If these vacation seasons have been times of growth to body, mind, and spirit shall we not look around to see with whom we shall divide the harvest? If we have been thus blessed there are so many ways in which we can share our blessings that it only needs the desire to be aroused to find openings for action which will scatter only to increase our own storehouses of good things and glorify Him who is such a beneficent Giver. And if in the retrospect we find ourselves but poor, having gained nothing, let us not be too proud to be present as gleaners in the fields enriched by the labor of others, for in the harvest fields of the Lord, the humblest gleaner is welcomed, all rejoicing together in his bounty.

MARRIAGES.

BALLINGER—EVANS.—At Camden, N. J., Ninth month 26th, 1888, by Friends' ceremony, before Mayor Pratt, Chalkley M. Ballinger and Priscilla C. Evans, both of Hartford, N. J.

COFFIN—FUSSELL.—On Ninth month 27th, 1888, at the residence of the bride's parents, by Friends' ceremony, John Coffin, of Johnstown, Penna., and Elizabeth H. Fussell, daughter of Milton and Tamar J. Fussell, of Radnor, Delaware county, Pa.

HOWELL—COMLY.—At their residence, West Philadelphia, Ninth month 27th, 1888, by Friends' ceremony, Joshua R. Howell and Elizabeth Howell Comly, M. D., daughter of Emmor Comly.

DEATHS.

BARNARD.—At his residence, in West Marlborough, John Barnard, in his 90th year; an esteemed member and for many years an elder of London Grove Monthly Meeting. He was a diligent attender of meeting and careful to live consistently with his profession.

BUNTING.—Ninth month 26th, 1888, Sarah Sellers, wife of Josiah Bunting, of Philadelphia, in her 41st year.

FOULKE.—At Quakertown, Pa., Ninth month 23d, 1888, Joshua Foulke, aged 90 years, 11 months and 11 days; a member of Richland Monthly Meeting.

ROBERTS.—At her home, near Montgomery Square, Ninth month 16th, 1888, after a lingering illness, Elizabeth H. Roberts, wife of Aaron Roberts, in her 76th year; an approved minister of Gwynedd Monthly Meeting.

TAYLOR.—In Hamilton, Loudoun county, Va., the 27th of Fifth month, 1888, Hannah J. Taylor, aged 82 years; a beloved member and elder of Goose Creek Monthly Meeting.

EYRE.—At her home, near Dolington, Bucks county, Pa., the 9th of Ninth month, 1888, Florence H., daughter of Barclay and Emma D. Eyre, in the 14th year of her age. She was the granddaughter and namesake of Hannah J. Taylor, so recently gone before.

THE power of God . . the Divine Nature . . . is a yoke to the transgressing nature; but it is the ease, the pleasure, the rest, the peace, the joy, the natural centre,—of that which is born of God.—*George Fox.*

For Friends' Intelligencer and Journal.

EARLY FRIENDS OF MIAMI MONTHLY MEETING, OHIO.

Joseph Cloud, the Friend and minister of whom I spoke in a previous paper, [Intelligencer and Journal, Ninth month 15), was a quaint character. At one of their business meetings some matter of a pecuniary nature claimed attention. Joseph, speaking upon it, said "it might go to a committee, and as it would not require much religion he had thought of N. H. and I. L. for it." They were reputable Friends, but more engaged in business matters than in religious exercises. The remark made deep impression on N. H., who became a valuable Friend and long was an esteemed elder.

A Friend of German descent (of which class there was quite a number), sometimes spoke in public meetings. On one occasion he made some remarks on Contrivance. Joseph, who was sitting just behind him absorbed in his own meditations, did not comprehend the remarks, and said to him, "What is it thou sayest, Michael?" The speaker turned towards him and replied with German accent, "I say a good contrivance is part of a good machine; that is what I say, Joseph." "*Poh*," responded Joseph. "Do contrive to sit down," with which request the other meekly complied.

In 1802, Joseph Cloud, while resident in Carolina, visited England on a religious service, from which he returned in 1804, attending Baltimore Yearly Meeting on his way home in the Tenth month. Of the extent of this visit I have no account.

His constitution was not robust, and not being in affluent circumstances he labored hard for a living, and closed his life without attaining old age. He was faithful until death, and doubtless received his reward. Strongly assured by his own experience of the truth that the writings of holy men of old were profitable he earnestly encouraged the reading of them.

Robert Furnas was also from the South. His location was some three miles or more northeast, and on the east side of the stream. He was plain, unassuming, hospitable, and highly esteemed. I think he was an attender of Cæsar's Creek Meeting after its opening. He lived to advanced age. Of his plain manner it was told that a person visited him on business; when it was ended he told a boy to get a basket and bring some fruit. When the boy returned he told him to set the basket by his visitor and invited him to eat by simply saying, "There are some apples." Robert Furnas's sons were noted for height and muscular strength, and several of the neighbors were similarly formed. At a gathering for the purpose of "raising" a building, which was then done by manly force, over twenty of the residents in the immediate vicinity collected, none of them less than six feet in stature.

Margaret Kindly or Kindley, with her husband, whose name I now do not remember, came from Carolina in far from affluent circumstances. Like many of the others from the Southern States they had not the benefit of schools, their acquirements in literature being very limited. The family was of German extraction. Their property was about two miles nearly east of the meeting-house. Much privation was endured for a few years, and their living was very primitive. Margaret was a minister, meek and lowly, without doubt endeavoring in her humble walk to occupy the talent to the profit of the Great Giver. She at one time opened to and obtained the unity of the monthly meeting, with a prospect to pay a visit to Carolina, but objections were made in the quarterly meeting. In speaking of it afterward she expressed how grateful she was to be relieved of her concern, and that Friends had taken a great weight off her mind, and said that in going home from the quarterly meeting even the little birds on the trees seemed to rejoice with her in the exercise being taken by the meeting. She was opposed to every ostentatious show, and careful in dress to limit it to what was necessary and useful, not making "*one unnecessary stitch.*" She lived to advanced age, and though bent from hard labor the sweetness of her spirit diffused itself to others. She was the mother of Dinah Furnas, who may be remembered by some Friends of Philadelphia as having attended their yearly meeting; and also of our aged Mary Ratliff, of Richmond, Ind., whose manners and disposition remind us of her excellent mother, and who like her eschews the strong tea and coffee, being sinless of Rio or Cathay.

Anna Dukeminear was a prominent Friend in the meeting, her name frequently appearing on important committees.

Joel Wright was from Pennsylvania and was useful as a surveyor, school teacher, and in other services. His descendants are in the vicinity. His brother Jonathan was also well esteemed.

Amos Cook, the elder, came from Carolina with a large family, purchasing a section (640 acres) two miles westerly from the meeting-house. He was noted for blunt honesty, and the firmness with which he maintained his opinions. His neighbor, Benjamin Evans, was also from the South, though a native of Pennsylvania. His sons were of more than ordinary talent and Thomas and David acquired the art of making augers of excellent boring quality, by which their pecuniary resources were improved.

Asher Brown, with his brother-in-law, Noah Haines, and ——— Ward, were from New Jersey, also the large family of Stokes (none now members), Benjamin Hopkins and others. Benjamin Hopkins was a youngish man of business qualifications. He moved early to Cincinnati, and with two sons and three daughters died of cholera within a few days.

Asher Brown was a "goodly elder," worthy of honor, who lived in patriarchal simplicity. At his request, as expressed in a paper he wrote and which was read at the funeral, his coffin was of oak and without ornament and the sum thus saved, though small, was applied to relieve the indigent.

Benjamin and Rachel Butterworth, and their family of large children, were from Virginia. It was said the parents and one of the daughters would weigh near one thousand pounds, and when going to the monthy meeting, about sixteen miles from his residence, at Salt Run (now Hopewell), it was need-

ful to use the farm wagon with an additional horse in muddy roads. His sons were over six feet in height, of large proportion and fortunately, for lesser bodies, of peculiarly amiable dispositions. Mormon, one of them, who died in middle life,(as we term it), was nearly to the height of seven feet, and of herculean strength.

In tracing the annals of pioneer life, scanty though they may be, a difficulty arises to say enough and not too much. Our every-day life has much in common, but is it not this commonness that makes it so applicable in its instruction to all? Were the circumstances differing, the lesson would be short, and when an incident is noted of how they toiled and laughed, gathered at the wide hearth, and rehearsed the tales of woe or of weal, of success or of disappointed hopes, we may see in it something like a shred of a garment on the thorn, or the print of the foot on the sand to assure us others have before our day passed by the path we are now ourselves treading.

R. Hatton.

Haddonfield, N. J.

[The records of Miami Quarterly Meeting prior to 1828 are in possession of the other branch; those of the Monthly Meeting are with Friends. The late David Evans, (d. in 185–) had a copy of the former records. A. Pugh, an "Orthodox" Friend, printed some notes of the early times of the meeting.]

EARLY SCHOOLS AMONG FRIENDS.

[Our readers will be interested in the following article from the first volume of *Friends' Miscellany*, published 11th month, 1831. It is doubtless from the pen of John Comly.—Eds. Intelligencer and Journal.]

In 1746, the Yearly Meeting of Philadelphia "desired Friends, in their several monthly meetings to encourage and assist each other in the settlement and support of schools for the instruction of their children, at least to read and write, and some further useful learning, when circumstances will permit it; and that they observe as much as possible to employ such masters and mistresses as are concerned, not only to instruct their children, in their learning, but are likewise careful in a spirit of meekness, gradually to bring them to the knowledge of their duty to God, and to one another."

Many of the children of Friends, previous to that time, were brought up without school instruction; and even those in comfortable circumstances in some country places, for want of convenient schools, never learned either to read or write. It is probable the advice of the yearly meeting had a beneficial effect; as instances of total deficiency in school learning are not so frequently noticed among those who were then the objects of this concern.

The yearly meeting in 1750, and divers times afterwards, manifested a lively interest in the "importance of training up our youth in useful learning, under the tuition of religious, prudent persons, suitably qualified for that purpose," and recommended that "Friends should exert themselves therein, as fully as their circumstances would permit;" and that monthly meetings should appoint committees to have the oversight and care of schools.

In 1778, a united concern is expressed for the establishment of schools for the instruction of youth in useful learning. It is stated that, notwithstanding the pressing recommendations before mentioned, very little had been done effectually therein. The raising of funds for the support of schools had been proposed, and was afresh recommended to the notice of Friends; and that an account of the progress made in the several meetings be sent to the yearly meeting. It was also proposed, "that within the compass of each meeting, where the settlement of a school is necessary, a lot of ground be provided sufficient for a garden, orchard, grass for a cow, etc., and that a suitable house, stable, etc., be erected thereon. Such a provision would be an encouragement for a staid person with a family, who will be likely to remain a considerable time, perhaps his whole life in the service to engage therein." It was further advised that Friends promote subscriptions towards a fund, the increase of which might be employed in paying the master's salary if necessary, and promoting the education of the poorer Friends' children.

These earnest advices included in a report to the yearly meeting, signed by Anthony Benezet and Isaac Zane, appear to have had a good effect in stimulating Friends to a more lively concern on the subject of schools. In 1784 and '85, the minutes mention the necessity of persevering in unwearied endeavors to effect, in a greater degree than has yet been done, a liberal provision for the due instruction of youth; continued attention and further unremitted industry is renewedly urged, that Friends of the respective meetings may be enabled to give a more satisfactory account of their further progress therein.

In 1787, the establishing of well regulated schools, under the care of religious, well qualified tutors, is again recommended "to the vigilant care of concerned Friends, to be extended not only to the children of Friends of more easy circumstances in life, but also to the offspring of such as are poor, and of the black people whose condition gives them a claim to that benefit." Two years after, the yearly meeting issued pressing advices on the subject of schools, and the establishment of funds agreeable to the recommendation of 1778.

These repeated advices of the yearly meeting claimed the weighty attention of Friends; in many of the monthly and preparative meetings, funds were raised for the support of schools; and in some places a house and lot was provided for the accommodation of the teacher. Foreigners, frequently of loose principles and immoral habits had been employed as schoolmasters, but an increasing care was now manifested in the choice of teachers of exemplary life, and whose conduct was consistent with our religious profession.

About the year 1790, a concern was introduced among Friends of Philadelphia Yearly Meeting for establishing a boarding school upon a plan similar to that at Ackworth, in England. A pamphlet, written by Owen Biddle, detailing some of the proposed outlines of the institution was published,—the yearly meeting took a lively interest in promoting the

measure, which resulted in the seminary at Westtown, which was opened in 1799. This institution has been the means of diffusing improvement in Friends' schools generally, in Pennsylvania, New Jersey, Delaware, and elsewhere.

The yearly meetings of Baltimore, New York and New England have also patronized the institution of boarding schools under similar regulations.

When the subject of a yearly meeting school was under discussion, some Friends of Philadelphia and its vicinity, made some efforts to set up a boarding school on a smaller scale, for their present convenience. It was probably owing to the decease of one of the principal promoters, that the project was not carried into effect.

During the last thirty years, boarding schools have been opened in many parts of the country by Friends in their individual capacities. None of these appear to have been restricted to members of our Religious Society, and it is believed they have been the means, not only of diffusing literary information, but of extending a profitable knowledge of the principles and order of the Society of Friends.

Fifty years ago, the books used in country schools, were Benezet's primer, Dilworth's spelling book, then the New Testament, and after that the Bible. Dilworth's assistant was the standard work on arithmetic; English Grammar was very rarely taught; and it was only some uncommon genius that advanced to the study of the Mathematics. Geography, Astronomy, Natural Philosophy, History, and many other sciences that are now familiar, were probably not then thought of; and even if they had been proposed, the want of enlarged views in parents would most likely have induced them to discourage their children from entering on such studies. It is a fact, that the study of Geography was prohibited in a large boarding school, not forty years ago, because its doctrines were apprehended to be at variance with some passages of sacred scripture. An aged Friend, not 30 years back, having visited a school where the study of the globes was observed amongst the exercises, was sorry to see time spent in acquiring ideas inconsistent with those which he thought resulted from the text—"the foundations of the earth."

While Friends were ardently progressing in the concern relative to schools, making liberal provision for the support of qualified teachers, erecting suitable school houses in the room of their old gloomy buildings, the necessity of more suitable books than some that had been in use, appeared obvious. The Meetings for Sufferings furnished country schools with Barclay's Catechisms and Penn's Maxims for for the reading classes; Pierce's Spelling Book superseded the use of Dilworth's—an improved system of arithmetic, by sundry teachers, in and near Philadelphia, was brought into general use; an excellent compendium of English Grammar, compiled by James Hamton, paved the way for the more general study of that science; the higher branches of Mathematics, Geography, Natural and Civil History, and the study of other useful sciences, were encouraged. A more general expansion of mind resulted, and many of the vulgar practices and erroneous ideas of the age of ignorance were thrown much into oblivion.

The introduction of school books of an improved character had a stimulating tendency. Murray's Readers, and some of the best classic English poetry, were calculated to introduce rational habits of thinking, as well as devotional feelings. The books for children, published by the Johnsons, in Philadelphia, inculcated the duties of humanity, the numerous and valuable little works issued by Samuel Wood and Sons, of New York, furnished amusement and valuable instruction to the youthful mind, and supplanted the taste for such unprofitable romances as Tom Thumb, Giles Gingerbread, Gulliver's Travels, and Robinson Crusoe.

Less than a hundred years ago, our ancestors were urged to furnish their children with an opportunity to learn to read and write; and where circumstances would admit, some further useful learning. Under a prospect of the advancement of the present day, we may be ready to marvel that the extent of their wishes in 1746 was so limited.

We rejoice that the human mind is advancing in the proper application of its powers, to the study of truth, and the knowledge of natural science. We also rejoice in the improved order observable in schools; that teachers, more generally than formerly, are "careful," as our worthy Friends of 1746 express it, "in a spirit of meekness, to bring their scholars to the knowledge of their duty to God, and one to another."

NEWS OF FRIENDS.

FRIENDS IN IOWA AND ILLINOIS.

I LEFT my home at North Platte, Neb., on Third-day evening, the 11th inst., for the purpose of attending Illinois Yearly Meeting, and taking in Prairie Grove Quarterly Meeting held at Highlands, near West Liberty, Iowa, on my way. I arrived at West Liberty Fourth-day evening, and the next morning Elijah Hogue took me to the Quarterly Meeting, which though not large in numbers, was truly a feast to the soul. The love of God presided over the assembly, and seemed to permeate every heart.

The country in the vicinity of West Liberty is very beautiful, diversified as it is by hill and dale, and dotted all over by groves of trees.

On Sixth-day morning, in company with a delegation of Friends from the quarterly meeting, we took the train for Lostant, in the vicinity of Clear Creek, Putnam county, Ill., where Illinois Yearly Meeting is held and arrived in due time, where we were met by Friends, who gave us a cordial reception and took us to their homes, where we were entertained with the old-time hospitality usual amongst Friends.

The Yearly Meeting as a whole was one continual feast to me who am so far separated from Friends, and so seldom enjoy their society, either socially or religiously. I received fresh inspiration to press forward in the Christian life, however difficult the way, and the memory of this little visit will be a bright spot in my life to which I shall ever revert with pleasure.

MARY A. CALKINS.

Clear Creek, Ill., Ninth month 21.

MEETING DAY AT WARRINGTON, PA.

Editors INTELLIGENCER AND JOURNAL:

A company of six left Fawn Grove, (York county, Pa.), on the morning of the 22nd of 9th month, to attend a meeting held only once in the year at Warrington. It was a bright morning, and we enjoyed the sunshine after the many days of rain and dull weather; the roads were good, and lay through a rolling country, with ever changing views, and good farms and buildings, most of the way. We passed through several small towns, and York, the county town, which viewed from the hills seemed to spread over several miles; and the valley of the Codorus is very beautiful. Two ridges we passed over, but did not quite reach the mountains. We arrived at our destination a little after sundown, were warmly welcomed, and entertained by decendants of members. Of that once large meeting, very few now claim the right of membership. But we were impressed with the old, large stone house, and as we drove through the grove of large trees that surround the building, the thought would arise why such a place should be neglected. The house is old and needs repairs, but the large graveyard is in good condition, and the surroundings are pleasant, and the interest manifested by the continual arrival of people from every direction, until the house could not contain near all, seemed to indicate there might yet be a meeting revived, and be held regularly. Some Friends from Pipe Creek and some from Monallen meetings were there,—Margaretta Walton, from Chester Co., Pa., Darlington Hoopes, from Forest meeting, Md., and Mordecai Price, of Fallston, Md., the other four of our little company from Deer Creek Monthly Meeting, Md.

The spoken word was clear and convincing, and as the gospel stream flowed freely we felt it was good for us to be there; the social mingling proved we were among a good people, and the visit will long be remembered. D. H.

Mill Green, Md., 9th month 30.

THE MEETING AT RADNOR.

The meeting at Radnor, on the 23d ult., was attended by a number of Friends from other meetings, including Philadelphia. Margaret P. Howard and Richard K. Betts spoke. An article in the Philadelphia *Ledger* of the 29th ult., says:

Of the original meeting only three families, it is said, survive—Mrs. Joseph Worrall, James Paist and wife, and the Sexton, Barclay Hall. Notwithstanding the rarity of the meetings, the house is kept open every First-day the year round. It is prepared, and when necessary warmed, so that if but one should put in an appearance he or she might not go away disappointed.

The old building is located in a beautiful natural situation and is one of the most picturesque of its kind in Pennsylvania. It is upon a slight elevation on the Chester road, about ten minutes' walk from the old Lancaster pike. The main building, to which an addition was afterward added, is of stone and was erected in 1718, as a block near the apex of the gable testifies. Its style is very primitive but substantial.

Dwellings are few in the immediate neighborhood, and from the steps of the old house at either side one can look over a delightful expanse of slightly rolling country, dotted here and there with little patches of woodland, country residences and pretty ravines.

It is about six years since the Radnor "preparative" meeting ceased. There was a time, well remembered by Richard K. Betts, who is now between 80 and 90 years of age, when the old meeting-house was taxed to accommodate all who sought admittance. The commencement of the decline is placed at about twenty-five years ago. Death and the desire to find other habitations have gradually removed from the vicinity the old members until now only the three mentioned remain.

FIRST-DAY SCHOOLS.

PROCEEDINGS OF BUCKS UNION.

BUCKS First-day school Union met at Makefield meeting-house, on the 23d ultimo. Joseph Flowers acted in place of Oliver H. Holcomb as one of the clerks. From the reports from the schools, they all appear to be in an encouraging condition. The school at Bristol, which had been discontinued some time ago, has recently been revived, with a promising outlook. From notes of the proceedings, in the Newtown *Enterprise*, we select as follows:

The first exercise was an essay by Allie Rohr, entitled "Brave Hearts," which contained excellent thoughts and was well rendered. Next was a reading by Hugh Balderston, "Who are our Friends?" Next a recitation, "Say No," by Sarah B. Delany. Next was a reading by Mary D. Balderston, "A simple head of wheat." A biographical sketch of John Woolman was read by the assistant clerk, contributed by Buckingham school. The exercise from Newtown school was the answer to this question: "Is there sufficient moral teaching to be derived from the lesson leaves based on the Old Testament?" The answer, read by Anna Cernea, was favorable to these lesson leaves. Samuel Swain did not favor them. He said the Old Testament history was a record of an early era of civilization, a history of war and bloodshed, entirely different from the law of love as taught by Christ in the new dispensation. He could see no good in having these things brought into the teaching of young children. The history might be useful as a history of the Jews. Louisa Woodman said she had difficulty in interesting her class in them. She had ceased using them. Dr. Joseph Smith spoke in the same tenor. Next was a recitation "Speak Gently," and another, by a small girl, entitled "Nobody but Mother." The question assigned to Solebury and Wrightstown, to wit: "How can we keep our young men and women interested in the First-day school and in the Society of Friends?" was answered by Anna Scarborough, of Wrightstown, Solebury not responding. Introduce history; give questions to answer, something for all to do. Read extracts from standard works. Let the teacher always be present. The life and teachings of the Apostle Paul could be made very interesting. There was too little taught of Friends' belief. They are looked on as a moral, but not as a religious people, and the religious side must be more thoroughly inculcated.

Isaac Eyre had written a history of the different schools of the Quarter, which was read by Susan Buckman. The following are the dates of the founding of each school: Yardley was founded in the summer of 1866 or '67, with Lettie S. Cadwallader as superintendent. It afterwards went down, but was revived as a Bible class in 1885 by Sarah B. Knowles and others. Newtown was instituted in 1868, with Dr. Lettie A. Smith as superintendent. Wrightstown in 1869, with Mary H. Atkinson superintendent. Edgewood in 1870, James Palmer superintendent; discontinued in 1883. Langhorne in 1870, Roberts Ivins superintendent. This is the only school that has had an endowment, Mary Wildman having bequeathed it $1,000. Buckingham in 1870, Ann Eliza Smith superintendent. Makefield in 1871, Samuel C. Cadwallader superintendent. Bristol in 1872, Dr. G. W. Adams superintendent. At one time this school numbered 212 scholars, mostly children from other denominations. Was discontinued in 1882, mainly on account of opposition by the Methodists. Has recently been resumed on a new basis. Doylestown in 1873, Benjamin Smith superintendent. Solebury in 1875, Hugh B. Eastburn superintendent. Fallsington in 1865; founded under discouragement, and discontinued in 1869, when Penn's Manor school was started, with Amos S. Ellis superintendent. The names of superintendents above given were those who first established the schools.

The business committee reported the following names for officers of the ensuing year, which was concurred in: Amos S. Ellis, clerk; M. Ella Longshore, assistant; Tamer Bunting, treasurer. Next Union meets at Langhorne.

SWARTHMORE NOTES.

—Marie A. Kemp, A. B., of the class of '79, who has been spending some years in Paris, is about to be enrolled as a student in the University of Zürich, Switzerland.

—Horace L. Rossiter, A. B., of the class of '82, is Superintendent of the Public Schools of Cleveland, Ohio.

—Prof. Day has removed from the College building, and rented a house near the grounds, recently built by Charles Ogden.

—Prof. Weaver is doing excellent work in the Modern Languages. He now has charge of the entire department of German, Prof. Appleton's time being wholly occupied with Greek and English Literature.

BEGINNINGS OF TEMPERANCE REFORM IN PHILADELPHIA YEARLY MEETING.

1738.—The proposal of Philadelphia Quarterly Meeting respecting the great number of public houses, being considered, it is recommended to such of the Friends of the quarterly and monthly meetings belonging to this meeting as are magistrates, that they use their endeavors to lessen the number of persons recommended for that service, and that Friends be careful not to sign petitions to recommend any but such as are proper persons, or where there is a real necessity.

1746.—We entreat our young Friends with readiness to receive and give place to the labor of love, and wholesome admonitions bestowed on them by their parents and others, and to renew our advice not only to the young, but to those of riper years, to avoid the keeping of much company and resorting to taverns and ale houses, as great inconvenience attends this practice, not only the subjecting yourselves to the temptation of drinking to excess; but hereby an opportunity is offered for men of corrupt minds, to sow the evil seeds of loose principles, perhaps to the calling in question the great truths of religion contained in the Holy Scriptures.

1777.—Considering the snares and difficulties to our young people and others, which are attendant on keeping houses of public entertainment, beer houses, and dram shops, whereby the reputation of truth has greatly suffered, and in some places the children and families concerned herein have been brought into disgrace and loss, both spiritually and temporally, it is the united sense and judgment of this meeting, that Friends ought not to give way to the desire of outward gain arising from such employments, but keep themselves clear thereof by attending to the pointings of pure wisdom, which will lead us to seek a way of supporting ourselves and families in business more consistent with our holy profession and not liable to such snares and dangers.

1777. An increasing concern and exercise having prevailed amongst Friends in several of our quarterly meetings, respecting the unnecessary use of spirituous liquors which had greatly tended to the corruption and depravity of the morals of mankind, thereby increasing guilt in our country, under which consideration this meeting is engaged to exhort and admonish Friends to use great caution in that of distilling, or the encouraging of distilling, or using distilled or spirituous liquors of any kind. And in regard to the practice of destroying grain by distilling spirits out of it: It is the sense and judgment of this meeting, that such practice be wholly discouraged and disused amongst Friends, and that Friends ought not to sell their grain for this purpose, nor use or partake of liquors made out of grain; which this meeting directs the quarterly and monthly meetings to take proper notice of, and make report of their case to next yearly meeting.—*Friends' Review.*

SEPTEMBER.

ONCE more the liberal year laughs out,
O'er richer stores than gems or gold;
Once more with harvest-song and shout
Is nature's bloodless triumph told.
Our common mother rests and sings,
Like Ruth, among her garnered sheaves;
Her lap is full of goodly things,
Her brow is bright with autumn leaves.
O favors every year made new!
O gifts with rain and sunshine sent!
The bounty overruns our due,
The fullness shames our discontent.
We shut our eyes, the flowers bloom on:
We murmur, but the corn ears fill;
We choose the shadow; but the sun
That casts it, shines behind us still.

—*J. G. Whittier.*

PROGRESS.

LET there be many windows in your soul,
That all the glory of the universe
May beautify it. Not the narrow pane
Of one poor creed can catch the radiant rays
That shine from countless sources. Tear away
The blinds of superstition; let the light
Pour through fair windows broad as truth itself
And high as God.

Why should the spirit peer
Through some priest-curtained orifice and grope
Along dim corridors of doubt, when all
The splendor from unfathomed seas of space
Might bathe it with the golden waves of love?
Sweep up the debris of decaying faiths;
Sweep down the cobwebs of worn-out beliefs,
And throw your soul wide open to the light
Of Reason and of Knowledge. Tune your ear
To all the wordless music of the stars
And to the voice of nature, and your heart
Shall turn to truth and goodness, as the plant
Turns to the sun. A thousand unseen hands
Reach down to help you to their peace-crowned heights,
And all the forces of the firmament
Shall fortify your strength. Be not afraid
To thrust aside half truths and grasp the whole.

—*Ella Wheeler Wilcox.*

IN SORROW.

WHEN thou art sorrowful and cares around
Crowd fast upon the steps of happier days;
When thou believ'st brightest things can lend
The saddest echo to the gayest lays—
As men of old were fed with angel's food.
Go seek thy remedy in doing good.

When those to thee dearest shall have died,
And each fresh day grow weary to thine eyes;
When every hope that others build upon
Comes to thy senses with a sad surprise—
Take up the burden of another's grief;
Learn from another's pain thy woe's relief.

Mourner, believe that sorrow may be bribed
With tribute from the heart, nor sighs, nor tears,
But nobler sacrifice—of helping hands,
Of cheering smiles, of sympathetic ears,
Oft have the saddest words the sweeter strain;
In angel's music let thy soul complain.

Then grief shall stand with half-averted foot
Upon the threshold of a brighter day:
And Hope shall take her sweetly by the hand
And both kneel down with Faith to meekly pray,
Lifted from earth, Peace shall immortalize
The heart that its own anguish purifies.

—*Chambers's Journal.*

IN the soul God reveals himself to man. It is the door into the infinite presence, once opened, never shut. Deep questions must be answered by deep thought. As we live from the spirit, so flows the spirit upon us; and the soul becomes the everlasting son, the continual recipient of God.

ENDURANCE is the crowning quality,
And patience all the passion of great hearts.

—*Lowell.*

THE LATE HENRY RICHARD, M. P.

[IN the issue of this paper for Ninth month 8th, we gave from an exchange paper a brief sketch of the career of the late Henry Richard, member of the English Parliament, and a very conspicuous worker in the cause of Peace and Arbitration. We give, now, some extracts from the discourse preached on the occasion of his funeral, at London, by his friend, R. W. Dale, a minister, of Birmingham. EDS. INTELLIGENCER AND JOURNAL.]

For nearly sixty years our friend and brother lived in this great city, but he died, as it was fitting he should die, among his own people,[1] within the sound of the waters and within sight of the mountains of the land of his birth. It was fitting, I say, that he should die there, for he loved Wales with a passionate affection, and through all the labors and excitements and travels of his long public life he was under the power of the influences which surrounded him in the home of his childhood.

The traditions of that great time in the history of his country, when men of genius, inspired with Christ's faith, traveled over Wales with almost unexampled power and success, never left his mind. Wherever they preached, the people gathered and listened to them. From distant towns and hamlets, from scattered farms and lonely villages, from the valleys and hillsides, thousands and tens of thousands of men and women and children were shaken by their words, as trees are shaken by the storm. . . In the course of two generations, Wales was rescued from irreligion, and its people became filled with intense and fervid piety. Mr. Richard's father was one of the most eminent and devoted of these first teachers of truth. During his childhood and youth, he was surrounded with the men who had brought about these great reforms. He remembered their great deeds. He recalled the fire and pathos of their eloquence. He knew how wonderful their work was. To the last he loved to speak of it, and we, who knew and loved him, are here this morning to say that the faith of those early days remained with him. The strength of his truthful integrity was the central element of his being. He left Wales with a patriotic fervor which seems to characterize the children of the mountains. He loved the sons and daughters of Wales, and his love for his country was not for its native heroism, or the hereditary qualities of his race. It was not these things which filled his imagination, nor was it even a love for the genius of which he himself has been an illustration. He remembered the divine fire which glowed in the hearts of her great preachers, the divine fire which had gone out from their words, the simple faith, the patient industry, the joy in God which they had created among the people. . . . .

In his early life, he supposed he had been called by God, as his father had been, to the ministry of the Gospel. There is no reason for us to suppose that he mistook his vocation. . . . . In 1848 he accepted the Secretaryship of the Peace Society. Three years later, he retired from the ministry that he might de-

[1] At Treborth, near Bangor, Wales, Eighth month 20, 1888.

vote himself altogether to the great work with which he was then occupied.

That year, 1848, as older men amongst us remember, was a time of almost boundless hope. It seemed as if the world was passing victoriously out of its prolonged troubles into a glorious age. All the nations of Europe were springing to their feet and seeking for light and air and freedom. Ancient religions were broken, and it seemed as if a new gospel was being founded for the human race, which gospel was contained in the words, "Liberty, equality, fraternity!" They listened with wonder and delight, but most of them knew that the fair promises of the new time could never be fulfilled, except under the power of the old faith, which made all men free, all men equal, all men brothers, by making them sons of God. But it was a time when young men were sure a new glory had dawned on mankind, and when even all men were almost ready to say with Simeon, "Lord, now lettest thou thy servant depart in peace, for mine eyes have seen thy salvation."

There is little doubt that Henry Richard entered upon this new era with enthusiasm and hope, but what was with other men a passing hope, was with him a fire of God, which burnt to the end. . . . . He took the words of Christ as they stood, and told us to resist the evil, and for him, Christ's sworn servant as he was from his youth up, it seems to have been the first of his thoughts to get the will of Christ done on earth as it is done in Heaven. That the differences of nations should be settled only by the shock of arms, was an offence against the laws of God. The only method of settling disputes, according to him, to be recognized by the Supreme Power, was by Arbitration. There was something in the temper of the time, when he became Secretary of the Peace Society, which seemed to render this ideal possible, but his courage and the enthusiasm he bestowed on the work, to the end, were not derived from the temper of the time, but from his fellowship with Christ. He pursued his end alone, after the hope of 1848 had failed. The persistency with which he pursued that end was admirable.

He had a considerable measure of success in securing the adoption of his principles in the Treaty of Paris; he carried a vote in its favor in the British House of Commons; he obtained the practical recognition of Peace principles in the Geneva Arbitration over the "Alabama" claims. The audacity of his faith, therefore, achieved great victories for him.

In the year 1863 he entered the House of Commons. He was something more than a politician. He never walked in the crooked paths of time and change. He dreamed of a perfect state. Perhaps he found it hard to make sufficient allowance for the difficulty of realizing an ideal justice in human laws and human administration. I suppose that the holding of office never crossed his mind. He was Christ's servant in the House of Commons, just as he had been Christ's servant in the ministry, and Christ's servant in striving to win the hearts of men away from revenge and crime. Although he believed it was no part of the State to maintain the authority of the Christian Gospel, he also believed that it was just, and an individual duty, to cause its strength to penetrate the legislation and the life of the State. To the last he was a Radical of that early type which has almost disappeared. He believed in trusting the people in the management of their public business, and he was, therefore, in favor of the extension of the Franchise to the utmost limit of local and municipal government. He thought it much better for people to make mistakes in the conduct of their own affairs, than that they should be saved from mistakes by the perpetual interference of a central Government.

He cared for the ethical as well as the moral development of the State. He cared for the development of the national character, to be generous and self-reliant, and therefore he never wholly liked the interference of Government in education. In accepting that interference as a necessity, it was his conviction that as soon as education was recognized as one of the chief rights of the people, and one which touched them more closely than the building of bridges or the making of roads, then education should be under the control of public representative authorities.

His last considerable public work was in maintaining that principle, in the Royal Commission, which closed its labors only a few days before his death.

The relations between himself and his constituents were honorable alike to them and to him. They recognized his integrity, and had boundless faith in him. They knew his zeal in their service, and from the time he first became Member for Merthyr, his seat was never in serious danger, and in late years no one dared to think of disturbing him. He was more than Member for Merthyr; he was Member for Wales, and for many years he was the authoritative representative in the House of Commons, of English as well as Welsh Non-conformity.

Of his private life, during the last two or three years, I have seen much. I can only say he was singularly gentle, kindly, affectionate, and unselfish. He loved warmly, and he was warmly loved. I have been witness during that period of the unfaltering resoluteness and fidelity with which, in private, he has discharged his public duties.

When I first joined him on the Royal Commission, or almost immediately afterwards, he knew he was suffering from the perilous disease by which his life was at last ended. He never ascended the steps of Whitehall, into the room where the Commission sat, without knowing there was some peril to his life in attempting to do it. I remember well the very last time he addressed the Commission, at any length, during the final consideration of the Report, how obvious was the physical distress that came upon him while he was speaking, but he had to deliver his conscience, and at all peril he did so.

In public he was courteous, but he had the fortitude of granite rocks. He had a large knowledge of all subjects on which he ever attempted to influence public opinion. He was sagacious, shrewd, and persistent in the maintenance of his convictions. He had at his command a manly and serious eloquence,

and when standing before a popular audience, he spoke in vigorous words of passion and fire.

Beneath all his public life there was the religion of his childhood, which remained with him, although I don't mean to say he was altogether untroubled by the controversies of the last thirty years, which other duties prevented him from following up and investigating. But whatever else fierce winds and rising waters may have shaken, his central faith was undisturbed. He built upon a rock, and that rock was Christ. Again and again, since I have been associated with him in that public work I have just referred to, our conversation has wandered away, at night, from the business in which we had been engaged during the day, and from the political questions of the day, and he and I were of one mind on those deeper and more sacred subjects which were housed within our hearts.

THE SEWING GIRLS OF LONDON.

A YOUNG Englishwoman, Beatrice Potter by name, has recently made an interesting and instructive experiment. Dressing herself in miserable clothes and assuming the disguise of poverty, she sought work as a "plain hand" among the "sweaters" of East London. Her experiences are described in an article in the *Nineteenth Century*. After she had met refusal after refusal in her applications for work, and had become quite exhausted by her long and weary walk, she was finally engaged by a Jewess as a "trouser hand." She worked two days with some thirty women and girls. Two pairs were all she could finish in a day, but the experienced workers could finish three pairs. Her wages amounted to less than ten pence each day, and some of the experienced workers could not earn more than a shilling. The working girls are described by Miss Potter as warm-hearted and good-natured, with minds keenly alive to the enjoyments of East London life. During the day they work most industriously, and in the evenings, on holidays, and when work is slack they no less eagerly gather in the various excitements of the streets. These girls generously helped the new-comer out of their own time, and, out of sympathy for supposed forlorn condition, they urged upon her a portion of their scanty lunch. Miss Potter conclusively shows that among these hard-worked girls there is the good material of a splendid working-class womanhood which needs only protection and guidance. The labor question embraces the condition of all such women, at home and abroad, and Miss Potter's experiment was one in the right direction.—*Exchange.*

COLORS, WHERE THEY COME FROM.

FROM the cochineal insects are obtained the gorgeous carmine, as well as the crimson, scarlet, carmine, and purple lakes. Sepia is the inky fluid discharged by the cuttlefish to render the water opaque for its concealment when attacked. Indian yellow is from the camel. Ivory black and bone black are made out of ivory chips. The exquisite Prussian blue is got by fusing horses' hoofs and other refuse animal matter with impure potassium carbonate. It was discovered by an accident. In the vegetable kingdom are included the lakes, derived from roots, barks, and gums. Blue-black is from the charcoal of the vine stalk. Lampblack is soot from certain resinous substances. From the madder plant, which grows in Hindustan, is manufactured Turkey red. Gamboge comes from the yellow sap of a tree which the natives of Siam catch in cocoanut shells. Raw sienna is the natural earth from the neighborhood of Sienna, Italy. Raw umber is an earth from Umbria, and is also burned. To these vegetable pigments may probably be added India ink, which is said to be made from burned camphor. The Chinese, who alone produce it, will not reveal the secret of its composition. Mastic—the base of the varnish so called—is from the gum of the mastic tree, indigenous to the Grecian Archipelago. Bistre is the soot of wood ashes. Of real ultramarine, but little is found in the market. It is obtained from the precious lapislazuli, and commands a fabulous price. Chinese white is zinc, scarlet is iodine of mercury, and cinnabar, or native vermilion, is from quicksilver ore.—*British Journal of Photography.*

WHAT HAS SAVED THE BIRDS?

A CORRESPONDENT, Henry W. Sackett, of Riverdale-on-Hudson, thus writes to *Friends' Review:*

In your issue of Eighth month 30, is a paragraph from *Science*, raising the query as to what has caused the greatly increased number of birds this year, particularly of the small songsters. The writer suggests no explanation and remarks upon the fact that the regular organ of American ornithologists furnishes none, although it comments upon the unquestionable fact.

"Will you permit me to suggest what seems to be at least a plausible, if not a positive, explanation of the phenomenon. The Audubon Society for several years has been doing a quiet but none the less effective work throughout the country in asserting the right of these gentle, harmless and beautiful creatures to life unmolested by fear of man. The promoters of this society have actually shamed their more thoughtless sisters into an abandonment of the barbarous custom of using the heads, wings and bodies of birds as ornaments for bonnets or other articles of dress. It has been one of the rare exceptional cases where sentiment has actually changed a general fashion.

"The consequence has been marked if not extraordinary. The demand for the bodies of small birds that at one time was enormous, has now very largely fallen off. Instead of, as was the case at one time, the little songsters being killed by the hundreds of thousands, it has almost ceased to be profitable to carry them to market. The natural result has followed. All that the birds needed was to be left to themselves. They have increased and multiplied as God meant they should, and as they did in the days before the demands of a cruel fashion doomed millions of their innocent lives to meet the caprice of thoughtless or conscienceless pursuers of fashion."

TRUTH is as impossible to be soiled by any outward touch as the sunbeam.—*Milton.*

A VISIT TO A JAPANESE VOLCANO.

We left Tokio at noon on a beautiful midsummer day. Although strictly a pedestrian trip, we preferred to traverse the great Mustrasi plain, through which for the first seventy miles our road ran, in *jinrikisha*,—large baby-carriages with a man where we should expect a horse. If I seem to speak slightingly of these estimable vehicles, the fault must be laid to our own imperfect vocabulary. More delightful means of conveyance than these reminiscences of our infantile years it would be difficult to imagine. The only drawback to them lay in the fact that every five miles the coolies insisted upon stopping for rest and refreshment. I cannot find it in my heart, however, to grudge them these respites, especially in retrospect, when I reflect how limited are their opportunities. So wearing is the trade that jinrikishamen are said not to live more than five years. It is startling to think that one's fellow-travelers, if I may so describe them, have already ceased to be.

After contemplating for two days a patch-work of fields stitched by hedgerows and dikes and hemmed by the turnpike, we grew rather tired of this agricultural crazy-quilting. Even the towns, that stretched like seams in one straight line along the highway till they almost met, eventually became monotonous, and we were not sorry to find ourselves on the third morning slowly mounting the long slope that bounds the farther end of the plain. Step by step, as we toiled up, the grassy, flower-covered meadows fell away in one long sweep that became every moment grander as it curved out into the seemingly illimitable distance. Of the plain itself, no end was visible: only the mountain ranges on its sides stood out in two long lines of blue perspective, vanishing at last in faint patches of color hardly deeper than the sky itself. We seemed to be standing upon the stair-way of some vast pre-historic structure overlooking rows of colossi that sentineled the approach. It gave us much pleasure at the same time to think that we were leaving behind our friends, the mosquitoes, who had welcomed us so warmly where we had stopped the last few nights, and who are constitutionally averse to climbing above two thousand feet. In spite of man's craving for the infinite, he cannot but rejoice at times that some things have their limitations.

The day itself was all we could wish, with the morning mountain freshness still in the air. The sky was clear,—much too clear, we began to think after half an hour's walk; for by that time the sun had gained strength, and the road was without shade of any kind. The exposure, owing both to the increasing force of the sun and the increasing rarity of the air, grew every moment more pitiless. Very soon those first few minutes of delight seemed ever so so long ago, and we came to look back upon them as men do upon their lost youth. The trail we followed was the regular road over the Shibu Toge, and for the first five miles led us up outlying spurs of the mountain as barren as could be. It was one continuous ascent, commendable at least for sincerity of appearance. It never deceived us by promising the top every quarter of a mile ahead, only to disclose another summit beyond as soon as we reached the first. But it was terribly long, and none the less steep on that account. To add to the discomfort, the slopes were destitute of water, and, I am sorry to say, delusive as well; for we did come across one miserable little apology for a brook, of which the professor, in the eagerness of his thirst, drank so hastily as to swallow a quart, more or less, of it, before he realized his mistake. The liquid was simply diluted sulphur. He should have left precipitancy to the stream, as I endeavored to point out to him. But he did not appear to relish the pleasantry any more than its cause. It took him fully half a mile to recover his equanimity.

Thoroughly baked and parched by two hours, scorching under an untempered midsummer sun, we finally reached a little hut where the path up Shirane branched off from the main road over the Shibu Toge. *Toge*, the Japanese word for "pass," means literally "up-down,"—a name which, if not elaborate, is at least expressive. In English we are are obliged to write the word with a hyphen; but in most Japanese passes there is no such level stretch in the middle. The volcanic character of the country renders the transition from one side to the other peculiarly abrupt. No sooner do you cease to go up than you begin to go down. In this instance, we had not yet quite finished going up, for the pass was nearly as high as the top of the mountain,—a fact we verified experimentally later, by crossing the one after we had climbed the other. But, as the pass lay beyond, we took the peak first.

The hut stood at the lower end of a large wooded hollow on the north flank of the mountain. Near it bubbled up a spring, which, mindful of our previous mishap, we eyed suspiciously; but, on tasting it with great caution and finding it sweet, we drank immoderately of it. This hut was kept as a sort of hostelry in summer by the hermit who inhabited it, and was much patronized by travelers over the pass. Not the least of its attractions was the hermit himself.

From this point up, we had the mountain all to ourselves; for since the eruption had divested it of its religious insignia, pilgrims had ceased to visit it. For some distance the path wound about through the patch of forest,—a stunted growth of gloomy firs, with here and there a dead one, like the ghastly wraith of its former self. A pathetically picturesque spot it was, with the gray moss mantling the ashen stems, and a barren summit protruding from the woods in front. Out of the hollow the timber-belt extended about half-way up the peak, running round this whole side of the crown. The awe connected with the place no doubt gave a religious turn to my imagination, quite in keeping with the Japanese genius of the spot; for I could think of nothing with this view before me, but one of those sleek, tonsured monks, whose sanctity permits only a halo of hair. The analogy was still further borne out by the faint filament of smoke that curled up from his cranium, for in the portraits of the old Buddhist saints handed down to us it is no uncommon thing to see them despatching their spirits abroad after this fashion. As I plodded on, Fancy, in her own kaleidoscopic way,

suddenly changed the picture, and I was sitting as a small boy again in church, silently staring during the sermon at the bald pate of the old gentleman in the pew in front. A bowlder or two did very well for flies.

Twenty minutes or so from the last tree brought us to what turned out to be the outer edge of an outer crater. All the way up, the mountain had presented a singularly long front east and west; but in a most surprising manner, just as soon as we reached the summit, its greatest length seemed suddenly to have changed to north and south, a deception to which peaks are prone. The scene we found ourselves gazing down upon would, for mournful monotony, be hard to match. In the immediate foreground lay an oval crater, which might not untruthfully be called a mud-hole; for, filling it completely, lay spread out before us a billowy sea of solidified mud. A glance showed that this was not the scene of the eruption, but only a subsidiary pot into which some of the superfluous melted matter had been casually spilled. Beyond it we were aware of another depression lying to the south of its farther wall. We could see nothing as yet save dense masses of cloud rising out of the void, but we heard quite enough to quicken our pulses as well as our steps. Though the mud looked solid enough, we suspected it of being only a congealed film; so we discreetly skirted its edge till we reached the opposite end of the crater rampart, and found ourselves on the verge of a small precipice,—a portion of a wall surrounding another crater somewhat larger and much deeper than the first. This second sink was still in a semi-lively condition. It was at once evident that the last eruption had taken place here, for it was yet going on. Indeed, though it did not need history to convince us that the disturbance was in a moribund condition, enough life was still left in it to make the sight anything but tame. Through the dense steam-cloud which more than half filled the vast cavity we could occasionally make out, as the breeze lifted the curtain, a solid floor below pierced by two round holes which resembled mammoth cauldrons. One of these was simply seething, boiling up, after the manner of a huge kettle; the other was in a more interesting condition. Every few minutes it was shaken by a mighty throe, and with a report like the bursting of a gigantic boiler a column of mingled steam and water was hurled fifty feet into the air. Fortunately, the wind was not our way, so that our position, a good post of observation for what was little visible through the dense masses of steam below, was as safe and comfortable as the circumstances permitted. A confiding sense of security, however, was not the effect it produced upon us, for the explosions of the crater-geyser were really awful, and their fitful character rendered them even more so. Had they been continuous, sameness would have dulled the edge of sensibility; but as it was, each new explosion found the ears almost as unprepared as if they had not known it was coming. At these moments we could hardly believe that the volcano was really quieting down, for it produced the impression of being about to hurl us piecemeal into space. One may talk contemptuously of a mountain when one is not under its immediate influence; but the lofty desolateness of even an inanimate peak is singularly impressive. If, instead of an inert mass, the mountain be a volcano, and in eruption, the effect is terrific. In the presence of the display of such Titanic forces in all their overwhelming, irresistible strength,—forces of which we ordinarily fail even of conceiving,—it is but a part of one's humanity to be awe-struck. At each renewal of the geyser's throe I felt as if I were to end my ephemeral existence then and there. The consciousness that no such catastrophe had as yet occurred, nor was likely to happen without full preliminary warning, was but slightly reassuring to one standing on the brink of such an abyss.

Of the size of the pit left by the last eruption I cannot speak accurately. I had no means of measuring it, so that my estimate is based principally upon the camera of the memory. It was perhaps five hundred feet across and fifty feet deep on the average, for the crater's rim was very irregular in height. It was by no means an imposing crater; but its present activity made up for its want of size, and its cloak of cloud artfully covered a multitude of its shortcomings. When we reflected that it was still spurting away in this threatening manner fully twelve months after the time it first broke out, we were far from grudging it our climb. At any rate, it was the very latest thing in Japanese eruptions.—*Percival Lowell, in Appalachia.*

NEWS AND OTHER GLEANINGS.

—A geographical society has been founded at Lima, whose main object will be to promote the knowledge of the geography of Peru.

—The Queen of Sweden has been ordered by her doctors to get up early, make her own bed, take care of her own room, work in the garden, and take long walks.

—Vassar College has just received a scholarship of $6,000 from Mr. Colvin Huntington, of Fort Scott, Kan., to provide for the education in all coming time of his descendants, or of those bearing the Huntington name.

—A tunnel near Samos, which dates from about 530 B. C., has recently been explored by a German expedition. It was constructed as a water conduit, and has been driven through limestone rock to a length of 1,235 feet.

—The volcano on the island of Stromboli, in the Mediterranean, north of Sicily, is in active eruption. Instead of the usual thin vapor which arises from the crater, there is a constant column of flame. The deck of the steamer *Duchess of Sutherland*, while passing the island on her way to Naples, was covered with ashes. Clouds of dust surround the mountain for a distance of ten miles.

—One of the earliest and most intelligent of American instructors of the blind is just dead,—Dr. William Chapin, of this city, who closed his active and laborious life on the 20th inst., at the age of eighty-six. He was appointed in 1840 Superintendent of the Ohio Institution for the Blind, and from 1849 to 1881 he was at the head of the like Institution in this city. Probably no one was more familiar with the work for the blind in this country, and few if any had done more to make it successful. His name, however, continues to be worthily represented in the duty of caring for the defective classes: it is his son, Dr. John B. Chapin, who is the successor or Dr. Kirkbride in the charge of the Pennsylvania Hospital for the Insane.—*The American.*

—"In the autumn of 1887 the Bureau of Education at Washington, desirous of obtaining a knowledge of the present status of temperance instruction in the United States, addressed the following inquiry to the State superintendents: 'Is the study of physiology and hygiene with special reference to the effects of stimulants and narcotics required by law, and in what grades?' From the replies it appears that instruction in physiology and hygiene with special reference to the effects of stimulants and narcotics is made compulsory by statute, in some part of their school life, on all pupils in twenty-five out of the thirty-eight States: viz., Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, Pennsylvania, Delaware, Maryland, West Virginia, South Carolina, Florida, Alabama, Michigan, Wisconsin, Minnesota, Iowa, Nebraska, Kansas, Colorado, Nevada, Oregon and California. The same compulsion exists in all the Territories and in the District of Columbia by United States statute. In Missouri the instruction under consideration is compulsory upon the demand of patrons of the public schools, and forbidden otherwise."—*Washington Correspondent in Science.*

CURRENT EVENTS.

THE first snow-storm in the Eastern States is reported as occurring Ninth month 30th, among the Berkshire hills in Massachusetts. Snow fell also in Beaver and Schuylkill counties, Pennsylvania, on the same day.

THE cooler weather which prevailed in Florida on the 29th and 30th of last month was regarded as a hopeful change by the sufferers in Jacksonville. On those days the mortality was encouragingly small, but the report for the 1st of Tenth month again shows a considerable increase. On that day 99 new cases and 10 deaths were reported. Total number of cases 2,725; deaths, 264. For expenditure for purposes of relief, $236,867 have been received up to date. The Citizens Relief Committee of Philadelphia is still holding active sessions. $4,000 were forwarded Tenth month 1st to Fernandina and Jacksonville.

THE sixth annual meeting of the Lake Mohonk Conference of Friends of the Indians assembled for a three days' session on the 26th ult. On the first day, Dr. Lyman Abbott, editor of the *Christian Union* read a paper recommending compulsory education of the Indians at the expense of the Government. The second day was mainly taken up by the subject of providing courts and a system of law for the reservations. The third day was occupied by the discussion of the platform, which embodies the recommendations of the Conference to the legislative powers of the country.

AN industrial exhibition arranged entirely by the colored people of Baltimore was opened in that city on Tenth month 1st. The exhibits are entirely the result of negro industry, and consist of specimens of fancy work, mechanical trades work, household art and miscellaneous articles. There was also a children's table. Governor Jackson was present, and letters of approval were sent by Cardinal Gibbons and others.

THE excitement in London continues over the Whitechapel murders. Two more women of the same class fell victims to what is supposed to be a religious maniac on the 29th ult. A general panic prevails in London, especially among the lower orders of people, and several suspected persons have been put in dangerous positions. Rewards to the amount of $6,000 are offered, but the English police service is said to be ineffective and now totally at fault.

DESPATCHES from Utah give credit to the rumor that the Mormons are despairing of being able to hold their ground in that territory against the force of public opinion. Many of them therefore have made private purchases of large tracts of land in Northern Mexico, and are negotiating for more. The lands are situated near the Casas Grande River, and are already occupied by several flourishing villages of Mormon settlers.

THE Mena Reservoir of the city of Valparaiso burst on Eighth month 11th, and a volume of 60,000 cubic yards of water rushed down the narrow ravine, overwhelming the dwellings in its path, and causing a loss of seventy lives and of $3,000,000. The reservoir was formed of a simple mud dam across a narrow ravine; the immediate cause of its breaking was a landslide which made a small break in the mud wall. Much of the damage was caused by the parting of hawsers among shipping in the harbor, causing frequent collisions of the vessels.

THE weather for Ninth month in this city and vicinity was unusually cold and wet, the average temperature, 63.6 degrees, being lower than in any corresponding month since the Signal Service was established in 1871. The rainfall amounted to 5.73 inches, there being 17 rainy days.

NOTICES.

*** The annual meeting of the Association for the Promotion of First-day schools within the limits of Philadelphia Yearly Meeting will be held in Race street meeting-house, Philadelphia, Eleventh month 3d, 1888, commencing at 10 o'clock a. m.

Interested Friends are cordially invited to attend.

S. RAYMOND ROBERTS,
CLARA B. MILLER, } Clerks.

*** Clerks of unions composing Philadelphia First-day School Association and Superintendents of schools not connected with any union within its limits, will please send annual reports with as little delay as possible to

S. RAYMOND ROBERTS, Clerk,
26 West Johnson street,
Germantown, Philadelphia.

*** The committee appointed by Prairie Grove Quarterly Meeting has fixed the date of Tenth month 7th, 1888, for the organization of an Executive meeting at Lincoln, Nebraska.

BENJ. F. NICHOLS, Chairman Com.

*** At Radnor meeting-house on First-day, Tenth month 7th, at 3 o'clock p. m., a meeting for worship appointed by Samuel S. Ash, of Philadelphia, will be held, to which all interested are cordially invited.

PUBLISHERS' NOTICES.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also to help avoid mistakes.

*** As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

*** Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

ROYAL

BAKING POWDER

Absolutely Pure.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only n cans* ROYAL BAKING POWDER Co., 106 Wall-st., N. Y.

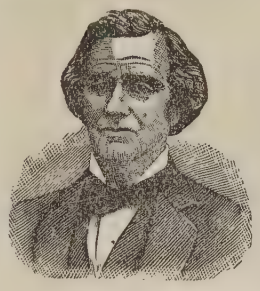
FOR DRY GOODS

——THE BEST PLACE IS——

STRAWBRIDGE & CLOTHIER'S,



MARKET
EIGHTH } STREETS.
FILBERT

One of the largest buildings in the city, and the largest Establishment in America devoted exclusively to

DRY GOODS.

The stock includes Silks, Dress Goods, Trimmings, Millinery, Hosiery, and Underwear, Gloves, House-Furnishing Goods, Carpets, Ready-Made Dresses and Wraps, and everything that may be needed either for dress or house furnishing purposes. It is believed that unusual inducements are offered, as the stock is among the largest to be found in the American market, and the prices are guaranteed to be uniformly as low as elsewhere on similar qualities of goods.

The use of the INTELLIGENCER AND JOURNAL *as a medium for advertisements will, we think, be found very satisfactory. A careful supervision is exercised, and nothing known to be unworthy is admitted. The paper now goes to about* 3300 *persons, reaching, say,* 15,000 *readers, and its size and shape, and the character of its contents give special weight to each advertisement.* ☞*When our readers answer an advertiser, please mention that they do it upon seeing the advertisement in this paper.*☜

WM. H. JONES,

INSPIRATION.

We are but organs mute, till a master touches the keys;
Verily, vessels of earth, into which God poureth the wine;
Harps are we, silent harps that have hung in the willow trees,
Dumb, till our heartstrings swell and break with a pulse divine.

Over the shadow of clouds ruleth the glory of day;
Night giveth voice unto night, through the throbbing sun-spaces between;
Are the nights and the shadows enough for our souls, that go groping alway?
This is truth: though a mighty hand sows in the dark, in the day we shall glean.

—*E. M. B., in Christian Union.*

For Friends' Intelligencer and Journal.

PERSONAL INFLUENCE.

Personal Influence is an unknown quantity capable of expansion, with a value that depends upon its quality and the force and power with which it is exercised. As an illustration of its power for good or otherwise take the lowest factors in human calculation, factors, that standing alone have no influence, but when written together, add or take from according to the place they occupy. A unit is always a unit incapable of multiplying itself; a cipher remains a cipher and is without value placed alone, but given the unit on the proper side, and it has a ten-fold multiplying power: reverse its position, with a simple point before it, and the unit loses in a corresponding ratio, the value being wholly dependent upon the place it occupies.

While the human unit is more flexible and varying, the principle of adjustment and consequent influence is very much the same. If we stand alone, a position that in society as now constituted we can scarcely consider, we are without any perceptible value to others; if that which is worthless in itself leads us, the little that we may have of influence is decimated, and goes in the wrong direction. It is only as the unit leads that its importance is recognized, and that which has nothing in itself is made to minister to its value. We may individually represent many units or we may stand for but one; or we may in our own estimation be only a cipher, of no value except as we are joined to a unit. As a cipher shall we refuse to contribute to the value of our neighbor, the unit, or placing ourself in opposition, take from him that which he already possesses and add nothing to our own store?

It is just here that so much loss to the world's best endeavor has its beginning. The Master illustrated the point very forcibly in the one who, having received but one talent, "went away and digged in the earth and hid his Lord's money." This man was not satisfied with the little that had been his portion and because it was so little, refused to use it at all. His condemnation did not rest upon the amount received, but the lack of effort to increase its value. The important lesson for us is, that no one shall fail of using the influence he may have for good because of the smallness of his gift. And here again is a point that must not be overlooked,—the sum total may be very small indeed, but the quality of its exercise may greatly enhance the value, and the most trifling thing by which we may impress the life of another for his help shall not go unrewarded. It is not for every one to occupy a large place in the world, indeed there are very few to whom this priviledge is accorded. It is on common ground that the great working world finds its level, and it is here that personal influence acts and reacts for good or for evil, and it is from this common level, that the power to increase and multiply for good must in a very large degree be derived. Jesus, as an hereditary prince or as one born to the priesthood, could not have moved the hearts of the people as he did, being an artisan with them. True there were those who objected that a "carpenter" should teach them, but the common people heard him gladly. From the throbbing heart of toil must come the power that will lift the world to its highest and best condition. It is those who have the one talent who need to be reminded of what it is capable of producing. People who live nearest the hard earth-mother, who know how to draw from her bosom the scant portion that suffices for daily needs, have a keen appreciation of the little things, that are of small value to the more fortunate. It is to these personal units, acting out the divine instincts untrammelled by the artificial restraints of society, that we must look for the world's helpers—its redeemers.

There was great significance in that saying of Jesus "and I, if I be lifted up, will draw all men unto me." His personal influence had reached down to all; the poor, the sorrowing, and the sinful, had felt the magnetism of his presence, and by so much as it had touched and influenced their lives they had arisen out of their low condition in which he found them. And this power to draw toward himself still continues.

Let us study his life as it was passed among men, let us endeavor to find where and how he ob-

tained his hold upon the multitudes, and we have not far to go; were they hungry, he fed them,—were they suffering, he healed them,—did they lack a friend to plead their cause,—he was ever ready to stand between them and the oppressor; and in and through all he made opportunity to explain and enforce the duty of man to man and the obligation of all to reverence, obey, and love their Father in Heaven. Great as was all this to the people to whom he ministered, it would have been shorn of its highest value had he not in his daily life, been the examplar of what is truest and best in the life of man; the qualities of the heart which give unmeasured value to personal influence, were his in the fulness. Tenderness and compassion and gentleness that reached out in blessing to little children characterized his brief sojourn in the world, and the sweet, forgiving spirit that always marked his intercourse with the erring never left him; even on the cross he remembered his persecutors, and with his expiring agonies was breathed the prayer "Father, forgive them, they know not what they do."

Are we who make the claim of being his followers taking him for our pattern and guide? As he lived among men ever seeking to do them good, is our personal influence going out in the same direction? These are close questions, but upon the answer we give in our own lives must depend the meaning and the quality of the influence it is ours to exert in the world. L. J. R.

MEMORIAL OF SARAH BROWN.

Believing that memorials of departed worth are useful to encourage those who are left to tread life's pathway in the performance of duty, influencing us in the right direction, we write this. The subject of this memoir having lived beyond the time allotted to most persons, and having manifested an unshaken fidelity to the truth, we feel that it is but just to offer this tribute of respect to her memory.

Sarah Moore was the daughter of Nathaniel and Bathsheba Moore, and was born in Trenton, New Jersey, on the 29th of Sixth month, 1786. She and an only brother, David Moore, late of Marshall Co., Ill., who was nearly two years younger (but died 15 months before her), had the misfortune to lose both their parents, at a very early age, thus leaving them to the care of others, instead of the training of kind and exemplary parents. On the 18th of the First month, 1806, she was married to John Brown of her native State, with whom she lived a happy, contented life for over fifty years, proving herself a true helpmeet to him and he a very kind and tender husband, ever solicitous for her welfare. Her parents were Presbyterians, but after her marriage, she felt it right to join the "Society of Friends," of which her husband was a member. Ten years of their married life were spent in their native State, (in Gloucester Co., New Jersey); during these years three children were given them, two sons and one daughter, who are still living.

In 1815 they concluded to move to the State of Ohio, starting on their journey the Second-day of the Tenth month for Waynesville, Warren Co., where they arrived the 9th of the Eleventh month, being on their journey 31 days; at this place they lived over three years, when they permanently located in Preble Co., Ohio. This location was at that time a wilderness, but by courage, energy, and industry, a home of comfort and plenty was soon made, and as pioneers, they helped to build up not only an enlightened community, but Westfield Monthly Meeting, of which meeting she and her beloved companion were consistent members until death removed them, she fulfilling faithfully the position of elder for over 56 years; her three children are now the oldest members belonging to this meeting.

Many dear friends shared the hospitalities of her home, and as she referred to those visits in declining years they afforded pleasant remembrances

The remainder of her days were spent within the borders of this county, witnessing its wonderful development and progress.

In 1856, she was bereft of her dear companion, who died after an illness of much suffering, but she calmly met this affliction with fortitude and resignation, firmly relying on the arm of our Heavenly Parent for support and comfort in this trial. After a few years of widowhood, spent at her home, she went to live with her children, where she resided until death again caused her home to be broken up, in the removal of her two daughters-in-law and son-in-law, when she went to live with her oldest granddaughter.

Faithful in all the relations of life, she and her companion, were regular attenders of meeting, never permitting social and other claims to trespass upon meeting-time. In those days, many privations were endured, traveling for miles on horseback, through dense forests, with nothing but a blazed road to guide them. The testimonies of her chosen Society were ever dear to her; but few of them she ever transgressed, and in the appointments of her home, in the daily walks of life, those of order and simplicity were ever manifest, and many good precepts on these were given to her grand-children that may be long remembered. For nearly three years previous to her death, the sense of sight became very much dimmed, depriving her of engaging in any employment, but she tried to meet this, as she did all her afflictions, with patient cheerfulness. She enjoyed socially the mingling with friends and kindred, was a true sympathizer with those in affliction, and ever ready to lend a helping hand to the poor and needy.

Her interest in the Society seemed to increase with declining years; she often requested all to go to meeting, wishing no one to stay away on her account, telling those around her that she could have a good meeting if left alone, but those caring for her could not grant her request, feeling that such might result in harm. She attended meeting several times during the last winter she remained with us, riding over two miles to meeting, thinking the weather scarcely ever too inclement.

Although physical strength failed, her mental faculties were unimpaired, and she remained conscious until the close, repeating her favorite lines of poetry a few hours before death closed her eyes forever in the last long sleep.

Her long and useful life was one worthy of imitation, and the love and respect in which she was held by those for whom she had always a smile and kind word, was manifest by the large and solemn concourse of her friends who assembled to accompany the remains to its last resting-place in the quiet little graveyard of Westfield.

She died at the home of her granddaughter, Mary H. Beall, Seventh month 31st, 1887, aged 101 years, 1 month, and 2 days.

Although our dear friend lived far beyond the time allotted to man, we feel deeply our loss in her removal, as we do also that of three others who served with her for many years in the same capacity, all of whom have been removed by death within the last few years: Sarah N. Brown, the wife of her eldest son who served as elder for near forty years; William L. Strattan, the husband of her only daughter, who served fourteen years; and Abner S. Scott, who also served near forty years, and was then released at his own request.

We feel that death has left a void in our midst that will be hard to fill, yet as we sit in our little meetings, humbly watching, we are often made to realize the promise of the blessed Jesus "That where two or three are gathered together in my name there am I in the midst of them," and that He is just as willing to feed the few as the multitude.

A REVIEW AND DISSENT.

ON page 615 of the INTELLIGENCER AND JOURNAL is an extract from [James] Martineau, entitled "A Hopeful Change." In this brief paragraph there are some expressions that seem, in an insidious way, to inculcate dangerous doctrine; even that which would lead from spiritual religion to what is merely natural; and from faith in an inward principle to a dependence upon outward works.

The "inwardness of our forefathers' religion" is just what Friends have professed to believe in; and what some of the brightest lights that have ever shone in the Society have inculcated with such earnestness, and such power, as to convince—and in many instances to convert—their hearers. Seven generations of these faithful apostles have labored, as way opened for them to do so, to promulgate the great gospel truth of an *inward religion*. There is probably no phrase more frequently used in our galleries, even at the present day, than that of the "inner light," or some equivalent expression. Those who may be called representative Friends,—present as well as past—have recognized an appreciation of this inward principle, and a belief in its superhuman origin in many enlightened Christians not of our fold. A'Kempis, Fenelon, Guion, Watts, Cowper, Upham, and many names less known to fame, might be mentioned as instances of those who by the purity of their hearts, and the inwardness of their lives, experienced a personal religion that was not limited by their denominational environment, but that lifted them above all the sects, into an atmosphere of spiritual communion. In the days of Fox and Penn an open door was found in Holland for the entrance of the doctrine which teaches the inwardness of religion; and the foothold gained by Friends in that country is an evidence that the truth which they preached met the witness in their hearers, and was gladly received by these as a confirmation of their own belief and an addition to their experience. William Penn's exhortation was, "Turn in! turn in! Where is the poison, there is the antidote."

Martineau refers to the conscience as "retreating from things of which it doubts:" perhaps he became confused in his ideas from failing to discriminate between conscience and intellect. The *inner light* is something,—according to the teachings of Friends,—that does not, that cannot *doubt*. It is obeyed, or it is disobeyed; it is followed, or it is not followed. If we follow it we find it growing brighter and brighter; but if we do not follow it, it grows more and more dim; and by oft-repeated acts of disobedience we may lose sight of it entirely. This condition may be called spiritual darkness, and if we grope too long in it there is danger, great danger, lest the Reasoner offer to be our guide, and try to persuade us that the light which we formerly saw,—or thought we saw,—was an illusion, a chimera. If we listen to his subtle sophistry we very soon begin to doubt; and if the intellect, (not the conscience), keeps on "retreating from things of which it doubts," we may, by a comparatively short journey, reach the sceptic's goal,—a state of helpless, hopeless atheism.

Again, Martineau would have us believe,—as we may infer,—that the human affections are warmer, and that beneficence is more prevalent, or more thorough, with those who "recoil" from the inward religion, than with those who follow it. If he had read the life of Fenelon, of John Woolman, of William Savery, of Elizabeth Fry, and of Eliza Gurney, he would have become acquainted with at least five admirable characters, and truly lovable persons whose good deeds were apparently as unselfish as their belief in an inward religion was unmistakable.

Just what he means by "extreme inwardness," it may be difficult to determine, but the view of Friends (if we may judge from their recorded experiences) is that the farther they penetrate into the inner temple the more clearly are they able to discern the light, and the more steadily does it shine. Can any one of modern times be named whose religion seemed to be more inward, or more pure, than did that of John Woolman? Prof. Beers, in his "American Literature," makes the following allusion to Woolman's "Journal": "The charm of this journal resides in its singular sweetness and innocence of feeling, the 'deep inward stillness' peculiar to the people called Quakers. Apart from his constant use of certain phrases peculiar to the Friend, Woolman's English is also remarkably graceful and pure, the transparent

medium of a soul absolutely sincere, and tender and humble in its sincerity. . . . . He was under a 'concern' and a 'heavy exercise' touching the keeping of slaves, and by his writing and speaking did much to influence the Quakers against slavery. His love went out to all the wretched and oppressed; to sailors, and to the Indians in particular. One of his most perilous journeys was made to the settlements of Moravian Indians in the wilderness of Western Pennsylvania," Prof. Beers goes on, and refers to the tenderness of conscience manifested by this inward Christian, and to the self-denial practiced in carrying out his scruples.

The phrase "our forefathers," as it is used by Martineau, is not definitely precise, and hence not clearly intelligible. Perhaps he had reference to those who belonged to the English Church, from the time of Queen Elizabeth down to the present century; or perchance he intended to include with the Churchmen, the prominent Dissenters; or possibly, with both of these classes to take in the fathers in the Romish church during the early centuries of our era: but, be this as it may,—whoever they were, and whenever or wherever they lived, if they were believers in inward religion, and were careful to obey what it revealed to them, they were Friends in principle, and they did good in their day and generation.

No one who is acquainted with their history will entertain the idea that Friends have been hostile to philanthropic work, or that they have been opponents to the formation of organizations for carrying it on; on the contrary, where the work was one that promised to yield good fruit, and where there was nothing in the manner of conducting it that seemed to conflict with our "Discipline," to balk a testimony, or to interfere with an individual scruple, they have been among the first and the freest, to give their money, their time, and their influence, in furtherance of the worthy object. But where such work is allowed to *take the place* of heart-religion, and comes to be regarded as a substitute for it, then they have said to their members beware! beware! When any become so occupied, so engrossed, in reforming the world, that they have not time to examine their own hearts, in order to find what should be reformed *there*, then is the time to apply Penn's earnest injunction,—"Turn in! Turn in! Where is the poison, there is the antidote."

That Friends may keep fast hold of the faith promulgated by the founders and early writers of the Society; that they may shun the dangers of skepticism in its first stages, and turn a deaf ear to every voice that would say works instead of faith; that they may be firm in the conviction that obedience to the revelations of the inner light furnishes the safest and best preparation for the performance of good works,—is the desire of an unworthy, though loyal, member of the Society, who does not regard a departure from the faith of *our* forefathers, or a "recoil" from the inwardness of their religion, as any indication of "A Hopeful Change." H.*

Tenth month 5, 1888.

[We are in full accord with what our correspondent says above. The paragraph he quotes was an extract from James Martineau, and there are one or two expressions in it which upon a careful reading, and without a more extended context, may bear an unsatisfactory construction. As between the sincere and spiritual "inwardness" of religion, as so remarkably exemplified by John Woolman, and any outward, formal and ritualistic observance which might be put forward in its place, there can be no question which is the true ground of Friends. It must be observed, however, that no example better illustrates than that of John Woolman, how a deep inwardness of religion must express itself in works for the help and betterment of our fellow pilgrims. Of all the things that are impossible that of identifying Christianity with selfishness must stand among the first.—EDS. INTELLIGENCER AND JOURNAL.]

VISITS AMONG FRIENDS IN IOWA.

WE spent the 28th and 29th (of Ninth month) visiting among Friends of Prairie Grove. Eliza Schooley Price and her husband Eli, (now deceased), were the first Friends to settle in this neighborhood. They came from Gunpowder, Maryland, and this being then but an unbroken prairie, she remained for a time with relations at Burlington, while her husband walked there, a distance of thirty miles, each Seventh-day, after his week's work of building and preparing the new home. Much of the material for it had to be hauled by ox-teams from Burlington. Before it was completed they moved into a two-roomed log-house, not so far away, with another family. And their house, when finished, was a very simple one, with but a single room plastered, and the stove-pipe thrust out the window. This was in 1854, and the description may give some idea of what the early settlers had to endure. Bennett Walter and family, Caleb Russell and family, Mahlon Schooley and family, and one or two other families came the following year from Virginia.

John Fenton and family came in 1856. They took a hack at Burlington and when within two miles of this settlement it grew dark, and was raining very fast; they could not find the road, and John having been here before when some of the Friends moved, knew there was a slough near, which would probably be filled with water—so they concluded to lodge in the hack, which had eight inmates. The young folks had been walking to lighten the load and hasten the journey, and were wet and muddy—but all were thoroughly drenched before morning. They ate their lunch in the dark, only judging by their sense of touch what they partook of. About four o'clock in the morning they heard a chicken crowing. The father thought it must be at a little house which they had hoped to find by the way, if they could not reach their destination; so they sent out some of the party, placing them at distances apart so that they could hear each other, guided by the crowing until the most advanced came within call of the house. They found only a man and his son; the stove-pipe went out the roof; and when they came to build a fire the stove was filled with water and had to be bailed out. They got warmed

but not dried, and at daylight started for Caleb Russell's. One of John's daughters, now my hostess, became years afterward the wife of Caleb's son Caleb, the interest dating from that morning when they first met under such unfavorable conditions. Soon afterward, feeling the need of spiritual and religious communion, they held meetings on First-days through the summer in a little log hut near Eli Price's, and in the winter they occupied the district school-house, and continued to do so until they built a meeting-house, the one now in use. If all our friends who have come to this western country had only gathered around centres where they could have had the advantage of religious association, we would not have such an isolated membership, and might have had many Friendly communities west of the Mississippi.

First-day morning we met with Friends at Prairie Grove in their First-day school. Seeing the children and their parents banded with them in the good work, using the Lesson Leaves mostly, brought a feeling of our all being learners together, and under this covering we gathered for worship at 11 o'clock. So many children and young people were present that it lent a hope for future usefulness and growth in our Society, so different from some of our meetings in the east. If only these could be held through an understanding and appreciation of our principles and interest for their maintenance, we thought what a center of strength and encouragement they would be. And there was the arising of prayerful desire for the cementing bonds of union to draw them yet closer together. It was to some of us a precious season not soon to be forgotten.

We dined at Thomas and Mary Price's, formerly of Gunpowder, Maryland, Bennett Walter and wife, from Mt. Pleasant, being also there. J. and R. Dugdale had returned home the previous day, partly to arrange for a meeting. We parted regretfully from friends at Prairie Grove, leaving so many homes where it would have been pleasant to have mingled with them socially in their families. Edward Price, son of T. and M., kindly took me four miles farther to Andrew and Eliza Canby's, among the more remote members of Prairie Grove, where it was good to rest and meet with still more of the young people, they having six children. The next morning Eliza took me in a conveyance drawn by two three year old colts, eight miles to Mt. Pleasant. We seldom see one horse driven in Iowa, at least outside the towns or cities, and the women are as capable in driving as in other departments. We crossed Big Creek and the Brandywine,—the latter probably named by a Pennsylvanian. The country was quite hilly part of the way; coming near timber land as the streams indicated, the land was not quite so rich. We called by the way to see Ann Gheen, widow of Enos, formerly residing on our own Brandywine. She was very glad to welcome friends from near the old home and we regretted not having more time to spend with her. Her son Enos lives near.

Reaching Mt. Pleasant we went to the house of her daughter Mary Dugdale d Joseph and Ruth in their comfortable home, surrounded by children and grandchildren. Aunt Ruth, though advanced in years, is still able to go out in the town on errands of mercy and love. We found here also Sally A. Dugdale, long the faithful attendant of their aged mother, now an invalid, who had made the exertion to meet us. We found a meeting had been appointed for the evening in the Congregational Church, and after taking tea with Bennett Walter and wife, proceeded to the place of meeting, with small expectations, as there was a popular lecture to be given in the place; but as quite a large number gathered, the minister being present to welcome us, the exclamation arose in spirit, "O, thou of little faith!" Testimony was borne to the efficacy of a religion which regulated the home-life in accordance with the golden rule,—extending to the business life, and an influence in the church which precludes all envy and jealousy, uniting in the bonds of Christian love. Mt. Pleasant is noted for its good schools, including a Methodist College which is now being enlarged to meet a demand. Third-day morning we took train for Ottumwa, parting from friends probably not to be met again in this earthly life. It was very pleasant to be greeted by relatives, J. W. Dixon and wife, arriving at this strange city, and we were conveyed up the hills to their comfortable home commanding a view of the surrounding country.

The next day we had a lovely ride to different points around the city, having extended views over and beyond from some of the high bluffs. The Des Moines river runs through the city. There are about 15,000 inhabitants, and large manufacturing interests, one of which is the Johnson Ruffling Machine Company. There are several artesian wells, one of which we saw pouring forth a strong continued stream not yet utilized. We visited the "Mineral Springs' Hotel," situated in the eastern edge of the city, in the valley and wooded bluffs of the Des Moines river. The deep mineral well is in the rotunda in the centre of the hotel, and is the resort of many in search of health. We tasted the water and did not find it as disagreeable as some. We might say that Iowa is noted for its public schools, and in Ottumwa there are five very commodious fine buildings for the benefit of the public, giving promise of large advantages for the rising generation. We went almost to the spot on Observatory Hill where the professors of Harvard University erected a building, and came to observe the total eclipse of the sun several years ago, and from which they must have had an unobstructed view.

L. H. P.

Ottumwa, Iowa, Tenth month 4.

FENELON observed, shortly before his death: "Had I viewed only the glory of this world, I would have said to death, when he presented to me the cup of bitterness, 'Let that cup pass from me.' But, happily, my thoughts were entirely taken up with Heaven, and I exclaimed to myself, 'How pleasing is this cup!'"

HE that reigns within himself and rules passions, desires, and fears, is more than a king.—*Milton.*

SCRIPTURE LESSON, No. 40.

TENTH MONTH 21, 1888.

TOPIC: TESTIMONIES.

GOLDEN TEXT.—Let your light shine before men, that they may see your good works, and glorify your Father which is in heaven.—Matt. 5 : 16.

Read Joshua 4 : 10-24.

THE custom of setting up stones to commemorate important events is almost as old as the history of the human race. We find that it was a usage among the Hebrews in their earliest history; and not among them only, but all semi-civilized peoples observed this method of keeping alive in the hearts of men events connected with their history. They were usually consecrated by some religious rite. Jacob, when fleeing from the wrath of Esau, set up the stone upon which his head had rested at night, and poured oil upon it. (Gen. 28 : 18.) Again, as a memorial of communion with God, Jacob set up a pillar and poured a drink offering upon it, and oil also. (Gen. 35 : 14.) Later on, Samuel, the prophet, after Israel had gained a victory over their enemies, took a stone and set it up, and called the name of it Ebenezer, saying, "Hitherto hath the Lord helped us."

The priests which bare the ark, etc. The Hebrew priesthood was first established in the family of Aaron, an elder brother of Moses, and the first to hold the office of High Priest. They belonged to the tribe of Levi, the third son of Jacob. All the sons of Aaron were priests. The priests stood between the High Priest and the Levites, whose duty it was to carry the ark when the Israelites were journeying. Sometimes the name Levite extends to the whole tribe, priests included, and sometimes only to those members of the tribe that were not priests; sometimes, as in Joshua 3 : 3, both names are given when the names are spoken of. The Levites as a class were not permitted to handle the sacred things belonging to the ark, and the tabernacle in which it was kept. The priests alone prepared everything for the journeyings.

We all have our memorial stones set up,—our places where we have been sensible of the Divine hand leading us on through difficulties that to our own narrow vision seemed insurmountable, and these are our Ebenezers in which we can say "Hitherto hath the Lord helped us." The remembrance of these experiences does much to brighten our lives, and give us hope and courage to continue obedient to the Divine will, as communicated through the ministrations of the Holy Spirit.

As we journey through life, we have to consider the influence of our actions in two directions,—the influence upon ourselves, and the influence upon others. Character must be our great aim; our highest duty is to do right, because it is right, not because it is politic. At the same time, we must not forget to have a care "lest we cause a brother to offend;" and avoid what may not seem to be hurtful to ourselves, but which we, for any reason, fear may make a bad example to others.

It is for this reason that the man who has no tendency to love spirituous liquors, feels it the right thing to live a life of total abstinence from that which does so great evil to other men. It is for the same reason that Friends are cautioned to live in plainness, both in their dress and in their homes. Many touching incidents are told how people inclined to show and extravagance have been saved from debt and misfortune by observing the consistent example of Friends of wealth and position, who preserved well their ancient testimony to moderation.

It is not alone, however, when we are conscious of observation, that we are an example either for good or for evil. We have each our silent influence, and we cannot know who is coming under its power, nor how many are watching us, to learn whether we bear well the trials of our life, that they may use or reject us as a guide.

In reviewing our own lives, we can trace through them the effect of the example of persons to whom we have never spoken; perhaps, of those whom we have never seen. The great of all ages, we know, affect the lives of the present; but cannot each individual acknowledge the influence of the lowly, the ignorant, and the ordinary people who have in some way been connected with him? The patient invalid, shut up from the world's sight, often by unconscious example, nerves many far away to deeds of heroic endurance.

As the pile of memorial stones was built up by a man from each tribe, each carrying one stone, so the noble life is moulded by faithful performance of many duties; and it is the accumulation that forms the grand character, that becomes the great example.

For Friends' Intelligencer and Journal.

A NATURALIST'S NOTES OF AN OCEAN VOYAGE.

WHILE passing through the banks of dense fog off Newfoundland how few of us dreamed, that within hearing perhaps of the startling shriek of our foghorn, with its mournful wailing crescendo and diminuendo, was being enacted a scene, the terrors of which were relieved only by its rapidity. It is surprising, however, that accidents like that to the *Geiser* are not even more frequent, now that the principal traffic of two continents is largely restricted to one comparatively narrow ocean thoroughfare, along nearly one-half of which the great ships go groping their way, through fog or darkness, with such life-like throbbings and breathings that they seem more like intelligent living creatures than inert masses of wood and iron. More than one of our party wondered how our good ship managed to thread her way among the numerous fishing smacks, each with from two to six boats out manipulating the nets. Scarcely a month passes without some of these smacks being sent to the bottom with their crews of hardy New England fishermen. It would seem as though the courage manifested by these men in braving the dangers of the sea, and the patience required to put up with the policy of coercion through persecution, adopted by England and Canada, deserve not only that they should have secured for them all possible rights to the fisheries; but that all the great steamships should travel in distinct ocean lanes, outside of which the fishermen would

be comparatively free from collision, and inside of which the steamships, confining themselves to one route when eastward bound and another when traveling toward the west, would run far less risk of repeating the heart-rending scenes attending the loss of the *Geiser* and the many other vessels that have perished by collision within the past year or so.

It would seem impossible that there should be anything ridiculous about a shipwreck, and yet the fishermen on the Coast of Dover found last year much to amuse them. The steamer "*W. A. Shoulton*," bound for New York with a crowded steerage, collided with another vessel at night, in sight of the lights of Dover. Great confusion followed among the passengers, and the Polish Jews, who formed a large proportion, insisted on putting their legs through the armholes of their life preservers and fastening them about their hips, with the result that their bodies washed ashore the next morning heads down, feet up, exciting the humor of the weather-beaten 'longshoremen. The poor Jews were as fortunate, however, as those who knew better, as only the second officer survived to tell of the loss of upwards of two hundred souls.

Our voyage was unusually prolific in interesting sights; scarcely a day passed that we did not have the porpoises jumping and gamboling ahead of the vessel, as a dog does ahead of a favorite horse,—or hastening from a distance out of mere curiosity, and springing high into the air to get a good look at the passing monster. It is a curious fact that the porpoises are never seen going from the ship, and that they cease their jumping after having once satisfied their curiosity, and drop quietly behind. At different times sharks swam lazily alongside, among them specimens of the curious Hammerhead species. Whales were seen blowing at a distance, and several showed themselves within gun shot. Among these was a specimen of the *Beluga* or white whale, a variety that is killed in considerable numbers in the St. Lawrence.

Nearly all the common sights of the ocean were granted us. In the Gulf Stream we passed numerous patches of *Sargassum*, that surviving relic of the lost Atlantis, which thousands of years ago floating up from the sinking land carried with it the old and young of myriads of mollusks and crustaceans, such as we know inhabit the weeds along the rocky coasts of all warm seas. These creatures and their descendants, gradually adapting themselves to their changed conditions, have at last given us a fauna peculiar to these immense floating islands of sea weed marking the eddy into which sank their former home. It was with the same interest, and the same temptation to ruminate, as on other voyages, that we watched these tangled tufts floating by with their little yellow bladders and serrated lance-like leaves. Torn by storm and current from their parent masses, they are carried along the great ocean river as a sort of olive branches to the northern lands. Who can calculate the effect on humanity that would follow the blocking of the Florida straits and the turning from its course of the stream that bears northward these yellow weeds, or by the opening of the Panama canal, and the reunion of the Atlantic with the "*Stiller Ozean*" as our un-pacific German friends term Balboa's find? What a boon must vagaries of this kind be to those who hold insufficient unto the day the evils thereof!

Mother Carey's chickens were about in great numbers, and no doubt, after the sad fate of the *Geiser*, found plenty of water-babies to help on their way to Shiny Wall by escorting them as far as Jan Meyen's land or to guide at once direct to St. Brandon's Isle.

We missed very much the gulls, who were undoubtedly gone to their nesting down at Booby Rock or Sand Key where we had seen them last summer "beyond all naming or numbering; where they could paddle and wash and splash and comb and brush themselves on the sand till the shore was white with feathers," while they "quacked and clucked and gabbled and chattered and screamed and whooped," just as dear Canon Kingsley describes them at Allfowlsness. We could well spare them, for all their clatter could not have drowned that made by the twenty or more children on board when it came time for the evening romp. I fear the combination resulting from the addition of the tongues of birds to those of the Dutch, German, and Italian infants would have led us into regretting that the tower of Babel was built with such poor foundation or that Volapük had not been in existence to unify the clamor of the builders, whose tower would certainly have stood for us as one of refuge.

All went well with us, however, and many were the happy omens that we drew from the various phenomena of heaven and sea. Of these the most distinctly in mind is when toward sunset one beautiful afternoon, after passing several showers at a distance, the

> "Soft, soft wind, from out the sweet South sliding,
> Wafted silver cloud-webs athwart the summer sea:
> Thin threads of mist on dewy fingers twining
> Wove a veil of dappled gauze."

Which, catching the rays of the setting sun formed a rainbow of most surpassing beauty, a perfect arch under the centre of which our gallant ship was proudly advancing; in the approaching dusk the tints grew softer and fainter, finally disappearing with waving streams of color as do the lights of pictured windows when one's gaze is turned up into the gloomy arches of some old cathedral nave. Leaving for the night, what was our surprise when upon reaching the deck the following morning, we beheld far in the west, painted by the rising sun, the same glorious bow under which it was our pleasure to believe we had sailed during the night and which rapidly faded as we sped on towards the Orient. Hence, disregarding the old saw that "a rainbow in the morning is a sailor's warning" and which in our case proved unfounded, we dubbed our voyage "The Voyage under a Rainbow."

The terrible rocks of the Scilly Islands present a rude welcome to England. Yet passing them under unusually pleasant circumstances we could not withhold expressions of respect at the skill and perseverance that had placed the beautifully tapering column of Bishop's Light upon an outlying reef over which

the waves were dashing with terrific force, even under the soothing influences of a perfect day. The rapidly passing panorama of the islands, with their spray-bordered cliffs, their scattered, starved, and frozen-looking villages,—the watch towers, one of which, by a waving flag, informed us that our good ship was recognized,—all furnished a relief to the eye and to the mind as well. St. Agnes, Wolf Rock, and the Lizard, Betsy's Head and Eddystone Lights, all stand as trusty sentinels, and are readily recognized by the color or peculiar method of flashing the light. A pleasant day followed with a splendid view of the undulating line of cliffs, of the Isle of Wight, of Brighton with its hotels and pier, and the Sussex downs, seen like giant sheep lying in the distance.

As evening approached and the narrowing Strait of Dover concentrated the shipping, our attention was attracted by the passing vessels, propelled by sails of all degrees of purity, from the immaculate canvas of the cutter yachts to the grimy rags of the colliers, or when under steam dashing by with such peculiarly arranged smoke-stacks and such ridiculously high sterns and bows that it seemed as though they were the result of passing experiments made by the ship-builders, a conclusion which we readily reached upon recalling the great iron-clad which a few years since, after sailing out into the Channel on a calm, sunny day, deliberately turned bottom up and extinguished some three hundred "bloomin'" British tars.

The Dover and Calais lights, twenty-four miles apart but seen simultaneously, were the last of our "calm sea scenes," and "all serene" we retired to wake up in the land of wind-mills and wooden shoes. The quiet trip in the early morning up the river Maas to Rotterdam is as refreshing after an ocean voyage as a drink of fresh, pure milk after the condensed stuff that is served aboard ship. The low-lying meadows with their grazing herds of black and white Holsteins, certainly deserve to compete with the bright green hills of Ireland, spotted with bleaching linen, for their power of furnishing repast to the eye and a satisfactory conclusion to an ocean voyage.

Speaking of sails, here is to be seen even a greater variety than in the English Channel white sails, black sails, brown, yellow, and red sails, all attached to most peculiar boats, fully as graceful and possessing as much dash and action in their movements, as the heavy-cheeked, wooden-shod men holding their massive tillers. But move they did, and one felt a sense of safety, a freedom from fear of collision or other accident; and the eye leaving the approaching vessels without a query, sought out the details of construction employed in building dykes, reclaiming swamps, and erecting massive structures on ground that was very recently mud, and now but two or three feet removed from becoming mud again. Occasional groups of storks recalled Hans Andersen's tales, and their association with certain towns. It is sometimes a test of veracity among Germans, to propose to one recounting his travels and adventures, a question as to what peculiar animal was especially venerated in the town in question, a failure to answer being considered as a sign that the account contains more of romance than narrative. Thus one who professed to have visited the Hague and did not know of the tame storks kept at public expense, or Berne with its bears, or Mainz with its peculiar emblem, receives little credit. * * *

MISSION WORK IN PHILADELPHIA.

MISSION work undertaken by Friends in our large cities, has peculiar difficulties to encounter. The large and influential denominations who occupy this field are well provided with money and appliances to carry out any plans or measures they feel justified in undertaking, and being free to work in many ways from which we as a religious body are cut off, there would seem to be but little opportunity for successful labor under Friends' supervision.

For a number of years an effort has been on trial at the corner of Beach street and Fairmount avenue, with varying success. In some directions the work has prospered, noticeably in the Third-day evening school for boys, and in the sewing school, held on Seventh-day afternoon, and with some drawbacks, the temperance effort on Fifth-day evenings. Something has also been done in the way of a reading room, open on other evenings. The greatest difficulty in the way is in finding workers; the changes which every year brings about are always perplexing, and it has been a question causing no little anxiety to those most interested in the continuance of the mission, whether it will not have to be given up. This would indeed be a great loss to the children and youth, who from year to year have been benefited by the instruction they have received; and the practical character of the labor undertaken has added greatly to its value to the waifs and strays who, by the kind but firm discipline maintained have out-grown much that was turbulent and ungovernable in the beginning of the work.

Then, too, the personal influence of the teachers has been exercised in a way that tells upon the manners and morals of their scholars who in a few years more will be the men and women of the neighborhood.

It would be a poor commentary upon the zeal and earnestness of Friends in this large city if enough workers with willing hearts and ready hands cannot be found to fill the ranks of this mis-

sion. There are such Friends amongst us and the only question to be settled is, will they respond at this juncture and come up to the help of the committee; and will those who have heretofore contributed funds to defray its expenses, increase the amount that they may not be hindered in all that is felt to be needed for a more successful prosecution of the work? The greatest factor in this is felt to be a faithful, capable superintendent, who could be always on the premises and have entire supervision of the mission. The building is free of rent, and it is only the incidental expenses that have to be provided for. The field of labor is well chosen and Friends have gained a solid foothold there. The addition to the working force of a suitable superintendent would make it easier and more desirable for our young people to lend a helping hand. Will not those among us who are interested in the various charitable and benevolent works of our city, consider the importance of this line of endeavor and help the committee to enlarge the sphere of its influence and place it on a more satisfactory basis?

MARRIAGES.

LAMB—MATTHEWS.—On Tenth month 3d, 1888, at Walnut Hills, Baltimore county, Md., by Friends' ceremony, J. Emerson Lamb and Louisa Elizabeth Matthews.

LOWTHORP—WILLETS.—On Fourth-day, Tenth mo. 3d, 1888, at Sunnycroft, the residence of the bride's father, Roslyn, Long Island, in accordance with the order of the Society of Friends, Francis C. Lowthorp, Jr., to Fannie A. Willets, daughter of Joseph Willets.

DEATHS.

BARTRAM.—At his residence at Lansdowne, Tenth month 2d, 1888, John B. Bartram, in his 69th year; an esteemed member and elder of Darby Monthly Meeting.

This valued Friend met with an accident on the railroad, being struck by a train. The loss and sorrow to his family and friends are great; the void in the meeting is most keenly felt; his quiet, solid deportment and good judgment will be greatly missed there. The neighborhood has lost a good man and useful citizen; and the "poor man" has lost a true friend. They who feel it most keenly, we trust, will find that this great sorrow has purified their lives,—for "we know that to them that love God all things work together for good." P.

CLOTHIER.—At Wynnewood, Pa., Tenth month 2d, 1888, Florence, youngest daughter of Clarkson and Agnes Clothier, in her 6th year.

ELDREDGE.—In Baltimore, Tenth month 5th, 1888, Joseph Eldredge, in the 79th year of his age; a member of Scipio Monthly Meeting, N. Y., and a brother of Edward Eldredge.

GREGG.—At his home, near Philomont, Loudon county, Va., Ninth month 21st, 1888, after an illness of several weeks, William Gregg, in the 65th year of his age.

He bore the pain and wearing of his protracted affliction with great Christian fortitude, patiently, willingly committing all into the hands of Him "who doeth all things well."

In the death of this dear friend this vicinity has lost a valued and highly respected citizens. Quiet and unassuming in his intercourse with his fellow men, he was faithful to every obligation. A kind husband, a loving father, he was ever ready to add to the comfort and happiness of his family, who have the sympathy of their many friends in their double bereavement.

May they be comforted by the assurances the loved ones gave that they felt prepared to go. On First-day the 23d, his remains, followed by a large concourse of relatives and friends, were born to Goose Creek burying ground, and laid to rest beside those of a lovely daughter who had preceded him only a few months.

LUKENS.—At his residence, Abington township, Ninth month 28th, 1888, Edward H. Lukens, formerly of Philadelphia, in his 71st year; a member of Abington Monthly Meeting.

SHARPLESS.—At Atlantic City, N. J., Ninth month 29th, 1888, Lydia, daughter of George Sharpless, of London Grove, Pa., aged 43 years.

BALTIMORE YEARLY MEETING.

Editors INTELLIGENCER AND JOURNAL:

For the information of the members of our Yearly Meeting and others interested, it may be stated that our new meeting-house on Park Avenue will *not* be ready for occupancy this fall. The stone work is finished and the building will soon be under roof, but it will be impossible to finish even the rear portion of it in time for use by the Yearly Meeting.

We have therefore made arrangements to hold the Yearly Meeting in the old meeting-house, corner Aisquith and Fayette streets. During the week, women's meeting will occupy this house, while the men will be accommodated in the "McKim Free School" building, half a block distant. The lecture room of a German church, on the opposite corner from the meeting-house, will furnish good accommodations for the lunch room, having a kitchen attached with other conveniences. While the places are not all under the same roof, the arrangement as made will be quite convenient, and we trust our Friends will not be deterred from attending the Yearly Meeting for fear our facilities will be inadequate to supply all their needs. The two meeting rooms will be as large as the Lombard street meeting-house, and there will be ample room and a cordial welcome to all who may desire to come.

E. S., Jr.

Baltimore, Tenth month 3.

THE habit of praising people is almost a lost virtue; at least, it is a virtue never extensively cultivated. There is quite enough adulation meted out to great men and women, who by pen, brush, or voice have inscribed their names high on the roll of fame. But in private life it is much more common to hear comments on an error of judgment, or a slip of the tongue, than for a helpful word, a generous deed, or a self-denying act. We could reflect sunshine for our own lives, broaden our sympathies, and make the world better by having a kind word for the deserving, an approving smile for the heroes in private life.—*Selected.*

ATHLETICS AT SWARTHMORE.

As an appointment of a Director of Physical Culture for our young men has just been made, it seems to be a suitable time to present clearly and briefly to the minds of Friends just what is meant, and what is *not* meant to be included in athletics at Swarthmore. This is all the more important as there has been a feeling of uneasiness in the minds of many Friends upon this subject. During my travels in the West and in Canada two years ago, I was, on several occasions called upon to explain in public our position with reference to athletics; and wherever I did so I felt that I satisfied the minds of those who were before fearful that we were encouraging among our young people what might lead to evil results. When there is so much that is really objectionable connected with athletics, as practiced in many places, the anxiety of the Friends of Swarthmore is but natural, and they have a right to the fullest and clearest explanation. Let me say, then, that it is our constant aim to so control and direct our exercises that they shall be made to improve the physical condition of the students, and not to allow them, by any excesses, to interfere with their studies, nor to injure those who take part in them. It is the business of the Director to examine all with care, and to so direct their exercises and sports, that they will develop in each what that individual may physically need; and to forbid any risks being incurred by unsuitable exertion of any kind. For the careful performance of this difficult and very important service, one has been selected who is himself a practiced athlete, as well as an educated physcian; who knows by long experience and observation what is needed in each particular case; and who is in full sympathy with the Faculty in their views as to the importance of keeping the whole matter under proper direction and control.

And the *moral* effect, as well as the physical, is under our guarded care, most salutary. All betting, all use of improper language, and all use of tobacco in any form, are among the forbidden things upon our ground; and our young men take these matters into their own hands, and not only here at home, but when they play elsewhere, with those of other institutions, exercise a healthful and salutary influence in these respects. With reference to the propriety of exchange games with other institutions, the Faculty exercises a guarded care, allowing these occasionally with colleges near enough to cause no serious interruption to the college work. When students leave our grounds for these exchange games, our Physical Director must always accompany them, and sometimes other of our instructors are also present. We feel that these exercises have not only a good influence upon the physical and moral condition of the students, but that the discipline of the college is also thereby materially improved. Surely, it cannot be claimed that athletic exercises, in themselves, are other than beneficial, when not carried to excess. It is only certain objectionable practices which are so frequently connected with them that cause them to be unfavorably criticized.

Now, if Swarthmore can preserve all that is good, and healthful, and really desirable, in these sports and games, and exclude the things that are not so,—as I am sure that she can,—may not her influence for good, not only among her own students, but also among the other colleges of our state and country be very great? Whatever benèficent influence we may be able to exert in these respects we expect to exert indirectly, by inspirng in the minds of our students, and especially of those who are among the leaders in the athletic sports, a desire to keep their beloved Alma Mater free from all of those wrong and objectionable practices which have sometimes caused almost all forms of athletics to be condemned.

This is the present spirit of the young men of our college, and it shall ever be the aim of our Faculty to encourage and strengthen it by all the means in our power. We believe that we can thus most effectually reach our young men, and be enabled to influence them for good, not only in this, but in all other respects.

Properly conducted games of athletics are also a most powerful means of cultivating personal self control, and when this influence is directed into proper channels, it makes strong, self-centered young men, with whom external discipline is rendered almost unnecessary because they have learned to be a law unto themselves.

By constantly exerting such an influence Swarthmore is, I believe, yet destined to be, not only a blessing to the Religious Society of Friends, in whose interest it was especially established, but to the world at large.

EDWARD H. MAGILL.

NEWS OF FRIENDS.

—A Friend traveling in the ministry amongst Friends scattered in distant localities thus writes in a private letter: "I am getting along very comfortably;—some hard work to do, but then again there are love feasts which compensate for all of it. But O, the discouragement which comes from the shipwreck wrought by want of charity,—kindly forbearance one with another,—the hard, dogmatic spirit, adhering to the letter, or some prejudice, wherein the spirit of religion is lost sight of and the flock scattered far and wide—an injury sustained by the inconsistencies of a professed religion, all of which must bear bitter rather than sweet fruit."

SWARTHMORE NOTES.

—Several distinguished lecturers will be engaged for the College course this winter. The lectures will be free to all friends of the College, and will be duly announced. Canon Wilberforce, Justin McCarthy, M. P., President White, and Mary A. Livermore are expected to be among the number.

—Elizabeth L. Beck, M. D., a graduate of the Women's Medical College of Philadelphia, and an instructor in Physiology at the Philadelphia Normal School, has been appointed lecturer on Physiology and Hygiene to the young women, in place of Dr. Susan P. Stackhouse, deceased.

—J. H. Shell, M. D., a graduate of the Medical Col-

lege of the University of Pennsylvania has been appointed director of Physical Culture for the young men

—Herbert W. Smyth, of the class of '76, has been appointed assistant professor of Greek at Bryn Mawr College.

—Florence Hall, of the class of '80, and Mary E. Gale of the class of '82, are pursuing post-graduate studies at Bryn Mawr.

THE LIBRARY.

PENOLOGICAL AND PREVENTIVE PRINCIPLES.[1] By William Tallack, Secretary of the Howard Association. London: Wertheimer, Lea & Co.

WHAT to do with criminals is a question which has long puzzled the legislators of all civilized countries; and in different places different methods of prevention and punishment have been adopted. Sometimes there has been a certain measure of success; at others, as Mr. Tallack shows in his *Penological and Preventive Principles*, dire failure has resulted. Mr. Tallack, as secretary of the Howard Association of London, has possessed unrivalled opportunities for studying the subject; he is a thinker of great power, and a careful collector and collator of facts; and he is not likely, as less experienced inquirers are, to be led away by fads or by mistaken notions of what is or is not humane. He has visited very many prisons in different countries; and he is fully acquainted with the penal systems of Europe and America. His book is full of interest; and its revelations will surprise the majority of readers who have not made a special study of prison discipline. Mr. Tallack starts from the beginning by enunciating various principles by which all systems, if they are to be effective, must, in his opinion, be guided. The first of these is that constant vigilance is necessary in order that "the proposed means of restricting social maladies do not become encouragements of the very evils to be repressed." From this it will be seen that he does not believe in cries raised by ignorant and inexperienced persons. The indiscriminate giving of alms is, as Mr. Tallack urges, an encouragement to idleness; too liberal charity in the form of institutions for adults, and even children, increases the number of improvident, intemperate, and selfish persons. The "Children's Law" enacted in New York in 1875—a law which allowed the Magistrates to send destitute children to various institutions, and to support them out of the rates—led to an increase in the number of such children far out of proportion to the increase in the population. It is stated that "out of every 1000 children supported in Californian institutions, at the public expense, at least 600 should he cared for by their own parents and relatives." In this country, Mr. Tallack considers the ease with which money, contributed mainly by the wealthier classes, can be voted away for all sorts of relief to the thriftless, is a serious danger; since it is opposed to "the essential condition of good government that the ruling classes should suffer, and not gain, by an increase of taxation." In regard to crime, an essential is that the three elements, preventism, repression, and reformation, shall go hand in hand; and here, Mr. Tallack believes, Great Britain has of late years been more successful than any other country. Legislation in 1879 and 1887 has given Magistrates the power of dealing leniently with first offenders, and of avoiding the conversion into jail-birds of those who have fallen under sudden temptation; steps have been taken for reforming vicious youths; Prisoners' Aid Societies and similar organizations assist criminals who desire to reform; while in our local prisons the system of cellular separation is general. One of the chief things upon which Mr. Tallack insists is the separation of criminals, so as to avoid the certain evils of association. He notes that in those countries where association in general—in Italy, France, and the United States—the criminal population grows at an alarming rate. The facts and testimonies which he has collected as to the merits of the various systems leaves no doubt that his theory is sound. In the United States there is no generally adopted method. From the one extreme of solitary confinement to the most atrocious forms of association, all sorts of systems are in operation in the Great Republic. At Elmira, for instance, the convicts are treated with far greater care than an ordinary artisan receives at home. They are taught all sorts of useful and ornamental knowledge—even short-hand and political science.

A paper written by a prisoner in Elmira, on a cold, snowy day in January, 1888, compassionately alluded to the wretched homes, almost visible from the walls of the establishment, where ill-clad and ill-fed children and wives of unemployed or weary men were crouching in the cold, and contrasted their lot with that of the convicts; adding, "Here, at this prison, 'tis the dinner hour; up from the great hall below rises the fragrant odor of good food, and the hum of animated voices, with rippling laughter interspersed. The food is hot, and sufficient as to quantity; the apartments are warmed with steam, and after the short day is past, the electric light brightens things for the long winter evenings; long but not dreary, for books are abundant." The convict writer complacently inquires whether, with such a contrast of reward, "is Godliness profitable?" or the contrary? But he admits that, after all, liberty has charms.

Perhaps it is not surprising that there has been a rapid growth in the inmates of Elmira jail, and that in eleven years 25 released convicts have willingly returned for re-admission. In other parts of the States convicts of both sexes, young and old, are hired out to planters and railroad constructors, and are herded in stockades, guarded by armed sentries and bloodhounds. At one establishment, in two years, "out of 1966 convicts, 237 escaped; 140 died; and 9 were killed when trying to escape." Mr. Tallack writes clearly and forcibly. His book is an extremely valuable and interesting contribution to the literature of which Howard's Itinerary has been the precursor. It should be studied by all social reformers.

[1]This review of William Tallack's recently published book, (an extract from which was given in the INTELLIGENCER AND JOURNAL of Ninth month 1), is from the *Scotsman*, Edinburgh. We print it in the place of one of our own, not yet having seen the book itself.—EDS. INTELLIGENCER AND JOURNAL.]

From The Friend (London).

BI-CENTENARY AT SWARTHMORE, (ENGLAND).

DEAR FRIEND:—I am glad that the short letter in the last *Friend* has had the desired effect—namely, that of bringing this ancient centre of Quakerism under the notice of Friends.

Last First-day (the 23d inst.) we were favored with the company of Alfred Wright, Charles Thompson, Henry Lees, Frances C. Jenkins, and Susan D. Doeg, all of whom took part in the meetings.

In the morning the meeting-house was well filled (without using the gallery), the meeting being a very impressive one. In the afternoon the meeting-house, gallery and passage were all filled, many standing in the doorway and porch, and several were unable to gain admittance. The afternoon meeting was, if possible, even more impressive and refreshing than in the morning; many seemed to take into their hearts the blessings of the Holy Spirit poured upon them from the throne of grace.

In the evening meeting, which was held in the meeting-room, Ulverstone, there was a good attendance; it was again a solemn time, and feelings of gratitude, encouragement, and thankfulness to Almighty God, generally prevailed. Many were the songs of praise at the conclusion of the day's rich blessings, such as, "This is indeed a memorable day!" "How good the Lord is!" "It hath been good for us to be here!"

I feel I cannot close this account without laying before Friends our great need of assistance in watering the seed already sown, and to which, we trust, ere long, God will give the increase. If there are any ministering Friends who feel drawn towards our meeting, we warmly give the invitation, "Come over and help us." Thy sincere friend,

Ulverstone, Ninth month 24. R. W. HAYES.

WHO HAVING EYES SEE NOT.

FIRST TRAVELER:

BELOW the burning earth;
Above the blazing sky,
My throat is parched; my heart is faint;
Would God that I might die.

SECOND TRAVELER:

I've journeyed all the day
Beside a pleasant stream,
Where lilies bloom among their pads,
And quiet cattle dream.
A fruitful, tranquil land;
Men call it Arcady,
And I will show thee where it lies,
If thou wilt come with me.
* * * * * *

FIRST TRAVELER:

Where is that pleasant land?
My heart is beating cold:
Methinks the journey there is long,
For one so weak and old.

SECOND TRAVELER:

"*Where is that pleasant land!*"
Dost thou not hear and see
These cheerful sounds, and lovely skies?
Lo, this is Arcady.

FIRST TRAVELER:

No nothing can I see
But these same brazen skies,
Nor hear, except from dusty grass
The insects' mournful cries.

SECOND TRAVELER:

Those choral sounds so sweet!
Those skies so soft and blue!
Could'st thou not see some time ago
How lush the grasses grew?
I cannot make thee hear:
I cannot make thee see.
And yet I know beyond a doubt
That this *is* Arcady.

—*Katharine Pyle, in The American.*

LITTLE MAMMA.

WHY is it the children don't love me
As they do mamma?
That they put her ever above me—
"Little mamma?"
I'm sure I do all that I can do.
What more can a rather big man do,
Who can't be mamma—
Little mamma?

Any games that the tyrants suggest,
"Logomachy,"—which I detest,—
Doll babies, hop scotch, or base ball,
I'm always on hand at the call.
When Noah and the others embark,
I'm the elephant saved in the ark.
I creep, and I climb, and I crawl—
By turns am the animals all.
For the show on the stair
I'm always the bear,
The chimpanzee, or the kangaroo.
It is never, "Mamma,—
Little mamma,—
Won't *you?*"

My umbrella's the pony, if any—
None ride on mamma's parasol;
I'm supposed to have always the penny
For bon-bons, and beggars, and all.
My room is the one where they clatter—
Am I reading, or writing, what matter!
My knee is the one for a trot,
My foot is the stirrup for Dot.
If his fractions get into a snarl
Who straightens the tangles for Karl?
Who bounds Massachusetts and Maine,
And tries to bound flimsy old Spain?
Why,
It is *I*,
Papa,—
Not little mamma!

That the youngsters are ingrates, don't say.
I think they love me—in a way—
As one does the old clock on the stair,—
Any curious, cumberous affair
That one's used to having about,
And would feel rather lonely without,
I think that they love me, I say,
In a sort of tolerant way;
But it's plain that papa
Isn't little mamma.

Thus when shadows come stealing anear,
And things in the firelight look queer;
When shadows the play-room enwrap,
They never climb into my lap
And toy with *my* head, smooth and bare,
As they do with mamma's shining hair;
Nor feel round my throat and my chin
For dimples to put fingers in;
Nor lock my neck in a loving vise
And say they're "mousies"—that's mice—
And will nibble my ears,
Will nibble and bite
With their little mice-teeth, so sharp and so white,
If I do not kiss them this very minute—
Don't-wait-a-bit-but-at-once-begin-it.—
Dear little papa!
That's what they say and do to mamma.

If, mildly hinting, I quietly say that
Kissing's a game that more can play at,
They turn up at once those innocent eyes
And I suddenly learn to my great surprise
That my face has "prickles"—
My mustache tickles.
If storming their camp I seize a pert shaver,
And take as a right what was asked as a favor,
It is, "O Papa,
How horrid you are—
You taste exactly like a cigar!"

But though the rebels protest and pout,
And make a pretense of driving me out,
I hold, after all, the main redoubt,—
Not by force of arms nor the force of will,
But the power of love, which is mightier still.
And very deep in their hearts, I know,
Under the saucy and petulant "Oh,"
The doubtful "Yes," or the naughty "No,"
They love papa.

And down in the heart that no one sees,
Where I hold my feasts and my jubilees,
I know that I would not abate one jot
Of the love that is held by my little Dot
Or my great big boy for their little mamma,
Though out in the cold it crowded papa,
I would not abate it the tiniest whit,
And I am not jealous the least little bit;
For I'll tell you a secret: Come, my dears,
And I'll whisper it—right into your ears—
I too love mamma,
Little mamma!

—*Charles Henry Webb, in the Century.*

THERE are souls in the world who have the gift of finding joy everywhere, and of leaving it behind them when they go. Joy gushes from under their fingers like jets of light. Their influence is an inevitable gladdening of the heart. It seems as if a shadow of God's own gift had passed upon them. They give light without meaning to shine. These bright hearts have a great work to do for God.—*Faber.*

CHRISTIANITY requires two things from every man who believes in it; first, to acquire property by just and righteous means, and, second, to look not only on his own things, but also on the things of others.

HABITUAL ECONOMIES.

IT is one of the most delightful things about Miss Edgeworth's immortal tales for children that the incidents they relate have a knack of remaining indelibly fixed in our memories long after we have succeeded in forgetting the more severely acquired information of our school-days. Why, for instance, do I vex my temper and break my fingernails in a vain effort to untie the knotted cord of every bundle that comes to the house, save that I have still before me the salutary example of that prudent little Ben who so conscientiously and cheerfully devoted himself to unfastening his uncle's package? "You may keep the string for your pains," says Mr. Gresham, with pleasing liberality. "Thank you, sir," replies Ben, with more effusion than I think he feels. "What an excellent whipcord it is!" And so, pocketing his fee, it wins for him, as we all know, the prize at Lady Diana Sweepstake's great archery contest, while poor Hal forfeits his shot, and loses his hat, and gets covered with mud and disgrace, and sprains his little cousin Patty's ankle, and all because he has been rash enough to cut his piece of cord. Never was moral more sternly pointed, not even in the case of Miss Jane Taylor's heedless little Emily, who will not stoop to pick up a pin, and is punished by the loss of a whole day's pleasure, because, owing to some unexplained intricacy of her toilet,

"She could not stir,
For just a pin to finish her."

. . . . . But the true gain in these minute economies is of a strictly moral nature, and serves, when we know we have been extravagant, to balance our account with conscience. The least practical of us have some petty thrift dear to our hearts, some one direction in which we love to scrimp. I have known wealthy men who grudged themselves and their families nothing that money could buy, yet were made perfectly miserable by the amount of gas burned nightly in their homes. They roamed around with manifest and pitiful uneasiness, stealthily turning down a burner here and there, whenever they could do so unperceived, dimming the glories of their glass and gilding, and reducing upper halls and familiar stairways into very pitfalls for the stumbling of the unwary. The advent of lamps has brought but scant solace to these sufferers, for their economy is in fact much older than the gas itself, and flourished exceedingly in the days of wax tapers and tallow dips. . . .

Those were times when fashions had not yet learned to change with such chameleon-like speed, and people did occasionally wear their old clothes with an unblushing effrontery that would be well-nigh disgraceful to-day. Silks and satins, laces and furbelows were all of the costliest description, and their owners were chary of discarding them, or even of lightly exposing them to ruin. Emile Souvestre's languid lady, who proves the purity of her blood somewhat after the manner of the princess and the pea, by supercilious indifference to the fate of her velvet mantle in a snowstorm, could hardly have existed a few hundred years ago. We have in Pepys's

diary a most amusing record of his disgust at being over-persuaded by his wife to wear his best suit on a certain threatening May Day, and how of course it rained, and all their pleasure was spoiled. The guilty Eve was quite as unfortunate as her husband, for she too had gone forth "extraordinary fine in her flowered tabby gown," which we are greatly relieved to learn a little later was two years old, but smartly renovated with brand new lacings. Only fancy being so careful of a two-year gown as to begrudge it to the sight of court and commoners on May Day!

The same frugal spirit extended down to the last century, and was of infinite value to the self-respecting poor. Artisans had not yet found it imperative to dress their wives and children in imitation finery, and farmers were even less awake to the exigencies of fashionable attire. We read of rural couples placidly wearing their wedding clothes into their advanced old age, and we are lost in hopeless speculation as to how they accommodated their spreading proportions to the coats and gowns which presumably had fitted the comparative slimness of their youth. With what patient ingenuity did the good dames of Miss Mitford's village, aided occasionally by an itinerant tailoress, turn and return their husband's cast-off clothing, until, from seeming ruin, they had evolved sound garments for their growing boys; and with what pardonable pride did the strutting youngsters exhibit on the village streets these baggy specimens of their mothers' skill! Among the innumerable anecdotes told of George III., it is said that, strolling once with Queen Charlotte in the woods of Windsor, he met a little red-cheeked, white-haired lad, who proved, on examination, to be the son of one of his majesty's beef-eaters. The gracious king, always well pleased with children, patted the boy's flaxen head, and bade him kneel and kiss the queen's hand, but this the sturdy young Briton declined flatly to do; not, be it said, from any desire to emulate the examples of Penn and Franklin by illustrating on a minor scale the heroic principles of democracy, but solely and entirely that he might not spoil his new breeches by contact with the grass. So thrifty a monarch, says Thackeray, should have hugged on the spot a child after his own heart; and even if the royal favor failed to manifest itself in precisely this fashion, I make no doubt that the beef-eater's wife, who had stitched those little breeches with motherly solicitude, found ample comfort in such a judicious son.—*Agnes Repplier, in Atlantic Monthly.*

CHILDREN who are honored by their parents' confidence, who are accustomed to add their share of assistance, and to bear their share of self-sacrifice whenever the good of the family requires it, will rarely be guilty of ingratitude. They are not opposed to, but are in quick sympathy with, their parents, not because they are gifted with specially sympathetic natures, but simply because they have been made sharers with their parents in the cares and hopes, the responsibilities and labor of the family. Training that does not repose confidence in children is little better than neglect. It is selfishness, which quickly bears ingratitude as one of its chief fruits.—*Selected.*

From Science.

THE DEVELOPMENT OF THE ROBIN.

THE remarkable power of the catbird as a singer is known to all those who give it a safe and welcome retreat. Yet I find even such writers as Baird describing it after this manner: "An American bird of the thrush family, whose cry resembles the mewing of a cat." In reality it is the mocking-bird of the North, possessed of ability to sing whatever notes he hears. I have them so perfectly at home in my grounds, that their delicious music is heard at all hours of the day, and often in the middle of the night. It is very curious to hear one of them warble in a low key to himself what some other bird is singing loudly. A few days since I heard one mimic a red squirrel, and he did it to perfection. If he had not enjoyed the fun so well that he could not keep from hopping about, I should not have known which was squirrel.

I did not, however, intend, except incidentally, to write about the catbird, *Mimus Carolinensis.* It, however, makes it easier for us to conceive the possibility of an evolution of superior vocalization in his relatives, when we consider his masterly ability. What I wish to record is a remarkable development in the case of his cousin the common robin, or migratory thrush. Every one knows what a clumsy singer he is, having a rough, see-saw note, that he repeats with little variation. For some reason the other birds give him precedence in the morning song with which daylight is greeted about half-past three in June. The first note comes always from the east,—a faint, far-away cry; then another cry leaps out of a tree nearer you, and then another and another. So the wave of robin-melody moves westward, over the house and over the land, preceding the rising sun, probably from the Atlantic to the Pacific.

This song is peculiarly adapted to constitute a matin cry, being clear, strong, and cordial. But it is not musical. In June of 1887, crossing one of my lawns, I heard a cry so peculiarly like articulation that I was startled: "Hear this birdie! Hear this birdie! Hear this pretty birdie!" the last notes being exquisitely rendered, with a wave and upward bend. I had never heard such a song before, and imagined a new species of bird must have arrived; but after careful examination, I found the singer to be a veritable robin-redbreast, and not a new-comer at all. The song was repeated all the summer, to the delight of myself and friends. Of course, I awaited the opening of spring with anxiety, to know if our birdie would return. Almost the first song of spring, sure enough, was one morning in April: "Hear this birdie! Hear this birdie!" But, better yet, it was apparent that the babes of this family were singing, not the old robin's see-saw, but the new song. And now about my place are three or four of our birdies. What was notable was not only the remarkable evolution of musical power, but a love for music; for our birdie, unlike the robins in general, sang all day, like the catbirds. I could hear one or more at almost any hour. This drew my attention to the cause of the unexpected variation. John Burroughs suggested that it might be the song taught to

one that had been caged and afterwards escaped; but I am more inclined to think that it is a natural variation or evolution, and that the robin has great and undeveloped power. It is a phlegmatic bird, that takes the world easy, and is not likely to exert itself in new directions. The catbird is fond of notice, likes to be whistled to, and enjoys answering back. He is likely to develop all sorts of new vocal accomplishments. But the robin is really lazy, and does as little hard work as possible. His nest is a clumsy affair, a mere daub of mud and sticks. Why has he begun this new song? Is it from being so constantly with catbirds, grossbeaks, orioles, etc.? for my nine acres is the paradise of birds; they are covered with fruits, hedges, trees. I do not know, but believe, some such cause to be at the bottom of the affair, and that we may look for other developments quite as remarkable.

Within the month of June, while driving about five miles from my home, I saw a robin sitting on a wayside fence, and singing a set of notes most charmingly unlike anything I had ever heard; neither was it at all like our birdie. It was as complex as a catbird often sings, but not apparently imitative. This has led me to a very decided conviction that an evolution in robin-music is now going on, and that some very delightful results may be looked for. I shall be glad to get notes from observers in different parts of the country. Of this I am certain, that our common thrush has a vast vocal power undeveloped. Evolution with birds must move, as it has moved, in the line of music, plumage, flight, and nest-building. Nothing in these directions need surprise us.

I subjoin a note taken from a paper published near New York City, over two hundred miles from here: "Thomas O'Donnell of Rondout has a robin which whistles like a mocking-bird. This is propably due to the fact that it was raised in company with a mocker. Its powers of mimicry are wonderful. In the early morning, when things are quiet, the whistle of the bird has been heard a quarter of a mile." I am confirmed by such reports in the belief that we shall see a remarkable evolutions of robin-music. Our homestead pet and universal favorite will then be all the more dear.

E. P. Powell.

Clinton, N. Y., Aug. 28.

TEMPERANCE AMONG THE COLORED PEOPLE.

[From an article, "Vacation Notes," by Aaron M. Powell, in *National Temperance Advocate.*]

In Virginia, through Good Templar and other agencies, temperance sentiment, we are assured, is making steady progress. As in other Southern States, the colored people are an object of much solicitude, in this particular, to their white neighbors. In many localities, notably in Leesburg and vicinity, they suffer much from the evil influence of the saloon, and, in the recurring local-option contests, many of them, unhappily by their own votes, help to fasten and perpetuate the fetters of their new alcoholic bondage. But to sympathetic, intelligent effort in their behalf, of which, alas! they have so little in comparison with their great need, they are readily responsive. In Lincoln, Loudoun county, on a Sunday evening, we addressed by invitation a meeting of the colored people in one of their churches, endeavoring to explain to them *why* alcoholic beverages, the beer, cider, whiskey, etc., in which they incline to indulge, are injurious and dangerous. Of such teaching, in many localities, they have had, and are having, almost none at all. It is not therefore surprising that in the absence of it, they should in many instances fall an easy prey to the alcoholic habit, that they suffer from the degrading influence of lax morality, and that they are careless and improvident in the use of the money they earn. They are multiplying rapidly, their little cabins are overflowing with children with a neglected appearance, but the neglect of whom the State and the Nation cannot afford to allow indefinitely to continue.

With the beauty of the natural scenery in the re gion of the Blue Ridge Mountains we were delighted The views we enjoyed from the mountain summit, overlooking the Loudoun Valley on the one side, and the Shenandoah, through which Sheridan took his famous ride, on the other, were of exceptional interest in natural beauty and in their historic associations. We have had more extended views among the White Mountains of New Hampshire, the Rocky Mountains of the Pacific slope, and the grand mountains of Switzerland, but none anywhere more picturesque and beautiful than among those of the Blue Ridge range in Virginia. In one direction in the distance was dimly visible Charlestown, where John Brown was hung, and from whence his soul has gone "marching on"!

Returning we had a few delightful days north of of the Potomac, in Maryland, at Sandy Spring. Here, too, are colored people not a few, with conditions not unlike those in Virginia, but with somewhat better opportunities for improvement. Here again, by invitation, we addressed a meeting of colored people on a Sunday evening in quite a spacious church, with good appointments. Ready to receive and welcome instruction, with their many disabilities as an inheritance from slavery, they need line upon line, and much patience with their shortcomings. Though chattel slavery is gone, and none would now have it return, it has left a legacy of ignorance and moral weakness for the former slave States and for the Nation to deal with, which calls for most prayerful consideration and much substantial help from Christian men and women throughout the land. It is indeed a national responsibility. The missionary labor which the National Temperance Society has entered into in this widely extended and very needy field merits the most generous and liberal support. A. M. P.

I call that mind free which protects itself against the usurpations of society, which does not cower to human opinion, which feels itself accountable to a higher tribunal than man's, which respects a higher law than fashion, which respects itself too much to be the slave or tool of the many or the few.—*Channing.*

WINTER IN ICELAND.

By November the winter had begun with all its rigor, and fierce storms swept over land and over the sea, which lost its blue and became dull and dark. One by one the ships left the harbor of Reykjavik; then the last mail-ship sailed, and Iceland was cut off until spring from communication with the outside world.

Although the climate of South Iceland is cold, the winter is scarcely what one would be led to expect from the northern situation. There is not much snow. A few inches usually lay upon the ground, crisp and hard, but not the piled up drifts of a New England winter. Accordingly it was possible to make horse-back excursions to the farms round about, and to see the winter life of the people in the country. This season for the Icelander is a time of comparative rest. As nothing can be done abroad he stays of necessity at home, but his life is no mere hibernation. He sleeps a great deal, for his house is insufficiently lighted and the nights are long, but by daylight he has occupations enough. He has boats to build and oars to shape; saddles and harness to make and to mend; or he sorts the wool which the women spin into yarn and then knit into stockings, or weave into coarse homespun or flannel, like *wadmal*. A busy sound of whirring wheels often greets the ear when you enter the farmhouse, and you find the women all at work at one end of the long room. Another duty devolves on the heads of the household at isolated farms. There are good elementary schools in many places throughout the island, but in remote districts the children must be taught at home. In summer the time is occupied with out-of-door work, but in the comparatively idle days of winter the father, or not infrequently the mother, teaches the children of either sex the common branches. Iceland is perhaps the best educated community on the face of the earth; throughout the length and breadth of the land there is nobody who cannot read and write, and the general knowledge of some of these obscure fisherman-farmers is sometimes well-nigh appalling. —*W. H. Carpenter in Atlantic Monthly.*

MONEY FOR THE WIFE'S USE.

There is no more common cause of trouble in families than the vexed money question. Young women who have been earning good salaries marry, and give up their opportunities of securing an income of their own, in order to make a home and to take care of it. They have been accustomed to draw their own money with their own hands and plan how to use it. But now it is all different. No money comes into their hands as their own; they have to ask some one else for every cent they require to meet personal wants. And however dear that one may be, no two people ever see things just alike, and this necessity sooner or later becomes exceedingly irksome, not to say unendurable. From this very thing arise probably most of the differences and heart-burnings of wedded life.

The English father of wealth or moderate means demands that the suitor for his daughter's hand shall settle upon her some property from which she can derive an income for her personal needs, that she may not be a genteel beggar in her husband's house. How long before American fathers will take the same ground, and protect their daughters from—not the greatest trouble in the world, though it may lead to it but—from the most continual and annoying and irritating situation a woman can be placed in? And you, husbands, who love your wives, but are thoughtless about this matter, will gain for yourselves more than you think, if you take pains to set it right by putting something into their hands to meet their own wants. Every wife earns it; then why should she be obliged to get it five cents at a time, and ask for it into the bargain? If you have no property which you can divide in that way, at least arrange that she shall have the chicken or butter money, or a share of the the week's wages after paying for food and clothing. See that she has something, if it is only twenty-five cents a week, that she can use just as she pleases. You don't know how it will increase her own self-respect and her love for you. Even looking at it selfishly, you will find that it will pay; and looking at it conscientiously, it is your duty.—*Minneapolis Housekeeper.*

HUMANER SHIPMENT OF LIVE STOCK.

A new era in transporting live stock from the far West to the Atlantic seaboard has been inaugurated by a New York company, and the first train of Idaho beef cattle to make the run through was loaded September 20 at Soda Springs by the Soda Springs Land and Cattle Company. This shipment consisted of 360 head of steers, averaging about 1,350 pounds each. The cattle were loaded in the new improved palace-cars, having a compartment for each animal. The stock is fed and watered in transit. A time schedule of twenty-five miles an hour has been figured, which would deliver the stock in the New York market in less than 120 hours, fresh from the Idaho range, 2,500 miles distant.

It is intended to establish a regular rapid transit line, each train being equipped with a dining and sleeping-car in charge of a train master and special crew. The stock will not be unloaded, and the only delays will be one or two hours in replenishing the water tanks. The animals will be feeding at all hours on the journey. The first train left Soda Springs Thursday at five p. m., Rawlins at 6.05 a. m., Friday, Laramie, 10.45, arrived at Cheyenne at 1.45 p. m., and will reach Omaha at noon to-day, making 1,025 miles in about forty-three hours. The first 500 miles was made over mountain grades, but the running speed on the Union Pacific ranges from forty to forty five miles.—*Exchange.*

He that would have friends must show himself friendly. It is meet and comely, just and equal to requite kindness, and to make them amends who have deserved well of us. Mutual offices of love and alternate help or assistance are the fruits and issues of true friendship.—*Bohn.*

He has not learned the lesson of life who does not every day surmount a fear.—*Emerson.*

ALCOHOLISM IN FRANCE.

In September of 1887 the French Minister of Finances organized an alcoholic commission, of which M. Leon Say was made president, to investigate the subject of alcoholism, and to report upon such changes of legislation as might be deemed advisable concerning the manufacture and sale of alcoholic beverages. M. Say has recently reported in part. His report covers two points: (1). State monopolies in alcoholic beverages, and (2). The effects of impure alcohol upon the human system, and occupies twelve columns of the Paris *Temps*. A previous Commission, appointed by the French Senate in 1886, made a special study of the effects of impure alcohol upon the public health, and reported that "alcoholism" threatened the people of France with rapid degeneration. The present Commission summoned experts from different countries, and took their testimony concerning the policy of government monopoly of the manufacture and sale of alcohol, but came to the conclusion, after considering the experience of Switzerland, Norway, Russia, and other countries, that such government monopoly in alcoholic liquors is not justified.

The second part of M. Say's report deals with the hygienic aspect, and represents that alcoholism is today in France one of the most serious dangers of the time. Not only men, but women and children are affected. Mental diseases hitherto unknown have become common. The impure quality of the alcohol is held to be in part the cause; that any reform must have a double object—to improve the quality of the alcohol and to reduce the quantity consumed. The Commission wrestled with the problem of restricting by law the number of drinking-places, and increasing the cost, confessedly difficult, without at the same time too much interfering with the manufacture and sale of liquors as one of the most important French industries. "M. Say remarks," says the *Evening Post's* translation, to which we are mainly indebted for these facts, "that the wine and alcohol business of France is immense, and intimately related to the life of the whole people. Wine and alcohol in moderation are necessary to the welfare and happiness of the French people. Again, it is against public policy to forbid a legitimate business, such as wine-selling." It appears that "Liquor-selling in France, as elsewhere, seems often to fall into the hands of people who are good for nothing else, and take it up as a last resort. It costs but little to open a small shop; thousands of persons take it up who would better employ their time and means in other ways."

M. Say recommends an increase of taxation to practically starve out the small grog-shops and thus lessen their number, and while conscious that this is undemocratic, argues that "Alcoholism, which threatens the people with an inability to govern themselves, is, of course, a positive danger to Democracy." He also asks "whether it would not be well to encourage the organization of temperance societies which would work for moderation without resorting to the fanaticism which characterizes our American total-abstinence enthusiasts."

The statesmen of the French alcoholic commission have yet to learn that it is not so much the impurity of alcohol as the alchohol itself, which gives rise to the impending national danger which they would fain avert. They have also to learn that "moderation" as a remedy for alcoholism is altogether illusory and disappointing. But it is encouraging that they are disposed thus to inquire, and that they are at last facing Zionward.—*Nat. Temperance Advocate.*

I call that mind free which masters the senses, which protects itself against animal appetites, which contemns pleasure and pain in comparison with its own energy, which penetrates beneath the body and recognizes its own reality and greatness, which passes life, not in asking what it shall eat or drink, but in hungering, thirsting, and seeking after righteousness. —*Channing.*

They are never alone that ar accompanied with noble thoughts.—*Sir Philip Sidney.*

NEWS AND OTHER GLEANINGS.

—Wellesley College opened with 195 freshmen this year, and turned many away because of the lack of room. The Wellesley girls are now seven hundred strong. The college has enlarged the number of its faculty and is starting earnestly forth on the year's work.

—The entering class of Smith College numbers 153, of whom 128 take the regular course, and 25 are special students. The whole number of students in the college is 450.

—A microscopic examination of a great number of specimens of ancient paper, dating back to the eighth century, has shown them to have been made, as now, from rags, and not from new fibre. The most common constructed is linen; but cotton, hemp, and animal fibres have also been detected. Furthermore, it is discovered that many of the samples are "clayed" with starch paste.

—Timber rafts on the Rhine are often fully as large and valuable as the monster American log raft, so much discussed of late. For instance, last month a raft went down the Rhine from Mayence to Holland, which was 725 feet long and 170 feet broad. It carried a crew of 120 hands, housed in some dozen huts along the raft, and the timber was worth £20,000.

—An Italian engineer, M. Bocca, has just finished estimates for a ship-canal to cross Italy. The canal would start from Castro on the Mediterranean Sea and end at Fano on the Adriatic. The length would be two hundred and eighty-two kilometres, the width one hundred metres, and the depth twelve metres, allowing large iron-clads to pass. The canal would drain Lakes Perugia and Bolsena, and would allow of a systematic irrigation of that whole region. The cost is estimated at $100,000,000. The work would occupy two hundred thousand men for five years.

—The failure of the harvests in Germany is attracting serious attention. There is a poor crop of both cereals and potatoes. The price of bread is rapidly rising. Since 1887 rye has advanced 48 marks and wheat 34 marks. In some districts the bakers have raised the price of bread 10 pfennigs per pound. Her Richter, in an article in the *Liberal Zeitung*, calculates that Germany will require 13,000,000 hectolitres of grain to meet the deficiency. The people, he says, must therefore demand an immediate diminution of the duty on cereal imports. The Progressists intend actively to agitate the question.

—The recommendations of the Mohonk Conference, which was mentioned last week as being in session, have been published more fully in the report. They are four in number:

I. That the Indian ought to be protected by federal courts, not left to the Indian agent or the state courts for protection.

II. That the United States government ought at once to establish a comprehensive system of secular education for all Indian children of school age, to be maintained at government expense and kept under government control.

III. That this education should be compulsory; but that the compulsion ought not to deny the Indians liberty to choose a private or religious school, provided it comes up to the National standard.

IV. That this duty of the government to establish such a system ought not to be made an excuse for discontinuing or lessening appropriations to religious schools, while its larger duty remains unfulfilled.

CURRENT EVENTS.

THE flight and subsequent death of President Salomon, former president of Hayti, has left that island a prey to civil war. In a battle fought Ninth month 28th, between the forces of General Thelemague and those of General Legitime, the former was killed. The fight lasted from seven in the evening till six in the morning.

THE fund raised among the friends of C. S. Parnell and his Irish policy to defray the expenses in his approaching contest with the London *Times*, has reached the sum of $29,000. A mass meeting expressing sympathy with the Parnell cause was held in Philadelphia on the night of Tenth month 8.

THE Republican Senate substitute for the Mills bill was reported to the Senate from the Finance Committee on Tenth month 3d. The bill makes reductions of duties on many articles, extends the free list, repeals the tax on tobacco, reduces that on cigars, and removes the tax on alcohol used in the arts. The importation of opium for smoking is prohibited. The bill, if passed, will make a reduction in the revenue estimated at $74.000,000.

A SERIOUS accident was caused at Reading, Pa., Tenth month 7th, by the giving way of a temporary floor in the new Polish Catholic Church in that city. Between two and three hundred people were precipitated in a mass into the cellar beneath and without a moment's warning. About seventy persons were injured, of whom three or four will probably die.

THE personal memoirs of Gen. Philip H. Sheridan are about to appear in two volumes, containing about 500 pages.

NOTICES.

*** A Temperance Conference in charge of the Committee of Abington Quarterly Meeting, will be held in the meeting-house at Quakertown, on First-day, Tenth month 21st, at 2 o'clock p. m.

SARAH C. JAMES, Clerk.

*** The Third of a series of Afternoon Meetings appointed by Samuel S. Ash, of Phila., within the limits of Radnor Monthly Meeting, will be held at Haverford on First-day, 10th month 21st, at 3 o'clock.

*** Concord First-day School Union will be held at Lionville, Pa.—Uwchlan meeting-house—on the 27th of Tenth month, 1888, commencing at 10 a. m. Conveyances will be at Whitford—Pennsylvania Railroad—on the arrival of the 7.15 train from Broad street, Philadelphia. Friends along the line of the West Chester and Philadelphia Railroad *via.* Media, will find it more convenient to go by way of West Chester, as a stage will there meet the train that leaves Broad street at 7.01 a. m., and convey persons direct to the Union.

CLARA B. MILLER, E. J. DURNALL, } Clerks.

*** Abington First-day School Union will be held at Richland meeting-house, Quakertown, on Seventh-day, Tenth month 20th, at 10 o'clock a. m. Interested Friends are invited to attend.

J. Q. ATKINSON, ANNA MOORE, } Clerks.

*** The 53d annual meeting of the Library Association of Friends will be held in the Library Room, 1520 Race street, Philadelphia, on Sixth-day evening, Tenth month 19th, at 8 o'clock. President Edward H. Magill of Swarthmore College has consented to deliver an address.

As the Library is free for the use of Friends and others, it is hoped they will evince their interest by a largely attended meeting.

WILLIAM B. WEBB, Clerk.

*** Circular Meeting at Fallowfield, (Western Quarter), on First-day, 14th inst., at 3 o'clock p. m.

*** The Western First-day School Union will be held at London Grove, on the 27th of Tenth month, at 10 o'clock a. m. All interested are cordially invited to be present.

Train leaves Broad street, Philada., at 7.25 a. m. for Toughkenamon Station. If those desiring to attend will communicate in advance with Robert L. Pyle, London Grove, Pa., conveyances will be provided from station to meeting-house.

EDWARD A. PENNOCK, LYDIA B. WALTON, } Clerks.

*** The annual meeting of the Association for the Promotion of First-day schools within the limits of Philadelphia Yearly Meeting will be held in Race street meeting-house, Philadelphia, Eleventh month 3d, 1888, commencing at 10 o'clock a. m.

Interested Friends are cordially invited to attend.

S. RAYMOND ROBERTS, CLARA B. MILLER, } Clerks.

*** Clerks of unions composing Philadelphia First-day School Association and Superintendents of schools not connected with any union within its limits, will please send annual reports with as little delay as possible to

S. RAYMOND ROBERTS, Clerk,
26 West Johnson street,
Germantown, Philadelphia.

PUBLISHERS' NOTICES.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also to help avoid mistakes.

*** As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

*** Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

ROYAL

BAKING POWDER

Absolutely Pure.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only n cans* ROYAL BAKING POWDER Co., 106 Wall-st., N. Y.

THE LESSON OF THE LEAVES.

O THOU who bearest on thy thoughtful face
The wearied calm that follows after grief,
See how the autumn guides each loosened leaf
To sure repose in its own sheltered place.
Ah, not forever whirl they in the race
Of wild forlornness round the gathered sheaf,
Or, hurrying onward in a rapture brief,
Spin o'er the moorlands into trackless space!
Some hollow captures each; some sheltering wall
Arrests the wanderer on its aimless way;
The autumn's pensive beauty needs them all,
And winter finds them warm, though sere and gray.
They nurse young blossoms for the spring's sweet call,
And shield new leaflets for the burst of May.

—*Thomas W. Higginson, in The Century.*

INDIANA Y. M. MINUTE OF EXERCISES.

[The following Minute of Exercises of Indiana Yearly Meeting, (held at Waynesville, Ohio, from the 1st to the 4th of Tenth month), is sent us by our friend, Clarkson Butterworth.—EDS. INTELLIGENCER AND JOURNAL.]

MUCH of the gospel labor on First-day was to invite to the sure foundation and Christian guide, the rock Christ Jesus, the grace and gift of God to man. The little children were assured that every drawing and motion of their hearts towards goodness was of God, their loving, divine Father, and they were entreated to yield to the precious leadings, and like the child Jesus, "be about their Father's business,"—and the meeting was largely baptized into a united travail for like faithfulness on the part of old and young, to the end that all may know of true salvation. The need of deep humility and forgetfulness of self was impressed upon us. It was declared that no true ministry can emanate from him who seeks his own fame, and honor of men. It was asserted that the religion of Jesus Christ is notable for its lack of scientific logic, and its dependence upon inward evidences—self-evident truths.

On Second-day a young Friend reminded us that in the outward we do not expect the fire to keep burning unless we supply fuel, and admonished that in the spiritual we should see to it that the fire be kept alive. The expression met a response in many minds, and comfort was felt that the Epistles from other yearly meetings brought proof that a living flame animates our Friends in all the borders of our Society, binding distant parts in fellowship and love. This pleasure, however, was not without alloy, for one yearly meeting confesses that some of its members cannot yet be prevailed upon to give up entirely the sale of alcoholic liquors, which they probably deem the otherwise innocent business they follow requires they should keep for their customers—forgetting how near to them, and how insinuating and subtle is that satan, self, who is so fruitful of expedients as often to beguile the unwary—transforming himself into an angel of light, and using his specious arguments.

During the consideration of the state of Society on Third-day we were exercised on account of reports of the neglect of meetings, especially those on week days and we were invited to remember that before long, all, and very soon, some of us, will be called to leave our business whether we will or no; wherefore wisdom's call is to begin to be weaned from it now and to seek an interest in those true riches which endure through time and perish not in eternity. Also to take notice that those faithful to meetings have not prospered less in outward affairs than others—verifying the wisdom of the loving commandment to seek first the kingdom of God, in faith that all needful things shall be added.

Christian love takes in, not our friends alone, but all men—even our enemies, and prevents detraction—the fault which we are readiest to fall into—the easiest to stain the robe of righteousness.

Christian love! How its possessors are drawn into nearness together! How delightful and easy for them to gather often for social religious worship!

While considering the Third Query, an agreeable unity of feeling and sentiment prevailed, in favor of plainness of speech, deportment, and apparel, and while differing somewhat in opinion as to what *is* plainness of speech, the subject was discussed in much kindliness of feeling and honesty of expression, some urging the unvarying employment of "thee" or "thou" to a single individual, in scripture style; others claiming that it is plain speech as well, to use, to English-speaking people, the well understood language employed by them, by common consent, for the expression of their ideas, avoiding exaggeration, and letting our "yea be yea and our nay nay," in a manner not to be misunderstood. Is there anything better than for each to be considerate, honest, and faithful to his sense of duty in the matter?

While considering the Sixth Query, we were called to be careful in avoiding "prize packages," now happily nearly excluded from railroad trains, but still used by some merchants to tempt persons whose cupidity would dishonestly take something for nothing.

As to the treatment of offenders, there have been in times past, cold and cruel visitations to them, but

happily we have improved. Let us be careful to conform more and more to the blessed example of the Master. Go down in sympathy and pity to the erring and lead them up into a better life, through confidence in Him who loves us all. Much solicitude was felt that all should avoid those business entanglements so likely to tempt to unrighteous dealing and dishonest methods, and should keep to that promptitude so favorable to good reputation, to opportunities for usefulness in the world and so honorable to truth; and many were led to hope and believe that a brighter day is dawning upon us, and a new life springing up in the Society.

The view was expressed, and widely approved, that we ought to be more earnest as evangelists, more proselyting—inviting those friendly to our principles and often at our meetings, to cast in their lot with us.

At the meeting for worship on Fourth-day there was quoted and illustrated the beautiful language of the apostle, "The wisdom that is from above, is first pure, then peaceable, gentle, easy to be entreated, full of mercy and good fruits, without partiality and without hypocrisy." Heavenly wisdom indeed! It makes good fathers, good mothers, good children, good husbands, good wives, good neighbors, good countries, and a good world. It neither gives offense nor takes any, and it smooths the way for the weary to walk.

We were encouraged in the assurance that as American slavery went down before the advancing claims of justice and humanity, so shall the devastating and ruinous saloon business, the giant curse of our land, disappear before the increasing demands of righteousness and the disfavor of God—a consummation which we ardently desire and would earnestly work for.

Our sympathies were deeply stirred by the account given by one of our members, a good Samaritan sister, of her labors in the station-houses, prisons, and haunts of vice in a Western city, among outcasts and drunken women whose ranks are filled continually by the victims of the thousands of saloons which do their awful work day and night all days of the week. "How long, O Lord, how long?"

For Friends' Intelligencer and Journal.

DEBORAH FISHER WHARTON.

Daughter of Samuel Rowland Fisher and Hannah Rodman Fisher; born Tenth month 24th, 1795, died Eighth month 16th, 1888.

An announcement of the decease of our dear friend, Deborah F. Wharton, and a tribute to her memory, have already appeared in these columns, but many of her friends have felt that something more is due to one who was so long a conspicuous leader in our Religious Society, and whose long life of consistent goodness attracted the admiration and love of so wide a circle of friends. Her life from youth to old age was a remarkable fulfilment of the wish of the poet Wordsworth, that

> "Our days should be
> Bound each to each by natural piety,"

and it was alike fruitful beneath the influence of the early and the latter rain.

This was no doubt partly due to the example and influence of her excellent parents, particularly of her mother, Hannah Rodman Fisher, to whom she was united by the strong tie of spiritual affinity, as well as by the tenderest filial affection. The mother was a woman of unusual attractions of person and manner, and of great warmth of feeling, which natural gifts and graces were held in subjection to a clear spiritual insight, and strong convictions of duty, that led her into a life of remarkable purity and simplicity, even for those early times.

Believing in the truth of William Penn's maxim that "the trappings of the vain world would feed the hungry and clothe the naked," Hannah Fisher renounced the luxuries and superfluities of life for herself and her family, and used the ample means at her command to relieve the sufferings, and supply the wants of the poor and needy. She never felt at liberty to provide costly fabric or useless ornament for the dress of her daughters, but when they were old enough to judge for themselves, she released them from obligation to her judgment and left them to the unrestricted liberty of their own choice. By this time, however, the precepts and counsels of the mother had become the convictions of the daughters Deborah and Sarah Fisher; no costly raiment was ever worn by them, and those who can remember the beautiful presence of both sisters will admit that they "needed not the foreign aid of ornament."

In this early home where "plain living and high thinking" naturally led to the consecration of life to its best uses, the good seed was sown that yielded such an abundant harvest through all the future years of the subject of this memoir. The soil was good, the plants were of the Heavenly Father's right hand planting, assiduous love and care promoted their development. Her simple religious faith, unobstructed by theological dogma, was held with absolute conviction, and became the main-spring of her life, controlling both thoughts and actions; her obedience to its revelations proved the truth of the promise that "they who do the will shall know of the doctrine."

The advantages of education in our Religious Society were more limited then than now, but Deborah Fisher's active, intelligent mind appropriated such as were at her command, enlarging them by reading and reflection, while her retentive memory stored away the treasures of poetic thought and feeling that were such an enjoyment to herself and others so long as she lived.

She was united in marriage to William Wharton on the 4th of the Sixth month, 1817. This union of faith and principle, as well as of the tenderest feeling, resulted in as complete happiness as human circumstances admit. He had early renounced the vanities and temptations of a worldly career, and dedicated the powers of a cultivated intellect and of a most cordial, attractive character to the requirements of a religious life. It is still pleasant to those who knew him to recall the habitual courtesy, the genial wit, and the gracious dignity, which, combined with his higher qualities, made him the type of a Christian gentleman.

Our friends began their married life at the house originally numbered 130 but now 336 Spruce street, Philadelphia, which for seventy-one years afterwards was the family homestead. It was the abode of an unostentatious and unstinted hospitality, which welcomed not only the large circle of relatives and friends who gathered around them, but also the stranger and wayfarer; extending also a helping hand to the poor and unfortunate. Here, and at their country home 'Bellevue,' their ten children were reared, nine of whom grew to maturity. All living at the same time beneath the family roof, they filled the house to overflowing with the activities of young life in the various stages of childhood and youth, making a busy engrossing time, during which both parents were tenderly solicitous for the best welfare of their children, and labored together in their training and education; the large province of the household and domestic management falling naturally to the mother's share. It was a broad field of daily duty, whose unceasing claims and demands were met with a conscientious fidelity that might well have filled the parents' time and thoughts to the exclusion of other interests. But our friend and her husband were at the same time active workers in the service of the church, filling places on its various committees, and upholding its testimonies with a zeal and ability that proved the sincerity of their faith. During these busy years she filled the office of Clerk of the Yearly Meeting, and performed also the work of the ministry, pointing others to the Light that was so clearly revealed to her own mind, and pleading with them for obedience to its manifestations.

From early life her sympathies had been warmly enlisted in behalf of the Indians, so that she labored for many years to promote their welfare and to redress their wrongs, making repeated journeys to Washington to advocate their cause with the national authorities, besides visiting on several occasions, distant reservations under the care of Friends. The last of these visits was made to the Nebraska reservations when she was in her seventy-eighth year.

Scarcely inferior to her interest in the Indians was her interest in the enslaved colored people of our Southern States. She never felt at liberty to participate in any action which might lead to violence, and never joined herself to the so-called abolitionists, thinking that her own Society of Friends had taken and should continue to take a sufficiently open stand against the blighting institution of slavery, but her influence and aid were felt by many of the oppreesed race. Her grandfather was one of the first Friends to take practical steps against slavery, which he did by liberating the few slaves he had held, and her father supplemented that act by purchasing from others the near relatives of those whom his father had freed, and manumitting them.

Having felt in the training of her children the want of a more advanced standard of education among Friends, she was an earnest participant in every judicious attempt to improve education in our society, and when these culminated in the establishment of Swarthmore College, her counsel, aid, and sympathies were devoted to its service, she having been one of its earliest and most efficient managers. In many other ways, and on many occasions, she made her interest in education effectively felt.

Her idea of education however was by no means confined to instruction in "book-learning." Her own children were trained to self-helpfulness, to the use of their hands and of tools and utensils; the sons were encouraged to work upon the land and in a workshop that was provided for them; the daughters to practice all the little domestic arts that go to the orderly management of a house.

So the years glided by, bringing their share of trial and sorrow, but also a large measure of favor and blessing. One son died in childhood, and one lovely daughter was taken in the bloom of her young maturity, but eight of the ten children married and passed from the home of their parents to homes of their own. The many additions to the family circle which these marriages brought were all received with a warm welcome into its fold, so that all became truly children by adoption.

After thirty-nine years of married life, the close tie that bound the husband and wife together was severed by the death of William Wharton. The loneliness and sorrow that must follow such a separation, deeply felt as they were by our dear friend, were borne with the fortitude and resignation of unshaken faith, and had all the consolations of Christian hope. The years that followed brought other bereavements, until at last the wife and mother was left alone in the home where she had so long been the centre of busy life, yet her presence still filled it with warmth and love, and no part of her life was more remarkable than that which followed the completion of her seventieth year. This period beyond the term which the Psalmist tells us is the measure of our days was to her an opportunity for beneficent activity and ever expanding love; even when "by reason of strength" she attained the age of fourscore, her days were not "labor and sorrow," but were full of comfort and enjoyment for herself and others. Her life, prolonged for more than twelve years beyond even the fourscore, was to the last favored with all the blessings that "should accompany old age, as honor, love, obedience, troops of friends." The cares and anxieties of life were laid aside; its simple joys and daily blessings were accepted with grateful love; its sorrows left no sting behind. The loss of children who had grown to maturity had been a sore trial to the warm maternal heart that had folded them so closely in its love, but it was accepted in that spirit of unquestioning resignation which excluded all corroding grief.

On each anniversary of her birth after the seventy-ninth it was her custom to receive her family and friends at her house on Spruce street. Four generations, in all the different stages of life, were latterly represented in these happy family reunions. They were truly golden milestones to herself and to those who had the satisfaction on those occasions of meeting her gracious welcome and cordial greeting.

Always a faithful steward, she derived much of the enjoyment of these latter days from the exercise of her habitual charity, and her ability to relieve

the wants of those who needed help. Her generous heart also found great pleasure in collecting a store of gifts and in distributing them to those around her as an expression of her always warm and active love.

Seldom has old age worn so attractive and benignant an aspect, and never was it more tenderly cared for. Not only did her children "arise and call her blessed;" their children and grandchildren also gathered around her, not as a duty only, but with reverent and grateful affection. Her face shone with the light of the indwelling spirit of love and peace, until it was truly

"A countenance in which did meet
Sweet records, promises as sweet"

the records of a long and well spent life, and the promise of that which is to come.

Just as the weight of years and their infirmities were becoming burdensome the release came. After an illness of eight days, with but little suffering and no struggle, she quietly "fell asleep." One of her last expressions was an exclamation of "O! joyful, joyful, joyful." Her whole life was a preparation for the end, and when it came, it was but

"A step into the open air
Out of a tent already luminous
With light that shone through its transparent walls."

How simple, how easy, after it has completed its perfect course, seems such a life of absolute integrity and rectitude. May its example encourage to others persevere in similar paths of righteousness and happiness! F.

For Friends' Intelligencer and Journal.

FRIENDS AT LINCOLN, NEBRASKA.

My last letter was closed before leaving Ottumwa. We visitetd here Jacob Millisack, in his 89th year, the oldest man in the city, and one of the old anti-slavery workers. He lived in Leesville, Ohio, and helped to run the Underground Railroad. He had entertained in his home William Lloyd Garrison, Wendell Phillips, Henry C. Wright, Abby Kelley Foster and others,and has their photographs, also that of Lucretia Mott hanging in his parlor, and took great delight in showing them, as well as recurring to the stirring times in which he had taken part. He then belonged to the Methodist Church, the Wesleyan branch, which he said was originally opposed to slavery, but had succumbed to the pro-slavery spirit. He had openly refuted again and again the false charges brought against these earnest workers in the cause of freedom, by their ministers, and had obtained the church by strenuous efforts to hold meetings in, to promote the good work. We also met with Clayton Yarnall, formerly of West Chester, and visited in the home of his daughter, Mary Garnet where he is so comfortably situated surrounded by his grandchildren. She is still a member among Friends, and seemed very glad to meet with any interested in our Society, though far removed from such association.

We left Ottumwa at 11 o'clock p. m., Sixth-day, regretting the darkness which prevented a view of the country, reached Red Oak about daybreak, crossed the Missouri river at Plattsmouth, and had a beautiful view of it and the Platte river among the high bluffs at the north, our course following the Platte for several miles. Homes seemed sparsely situated as we entered the broad prairie land of Nebraska, but doubtless it had been so in western Iowa as well. The bluffs beyond the river looked brown and bare, and there seemed little provision for the cattle browsing on the prairies. It has been very dry in this State. The country is rolling around Lincoln, but does not obstruct the distant view, only breaking the monotony and making the scene more home-like. We reached Lincoln about 9 in the morning, very glad to be met by Charles P. Walter, of whom I had no knowledge, but was recognized by him and taken to his home in the city, to find myself among friends, and not strangers. They had gone from Delaware county a few years ago, his wife a Hannum, who knew me at once and supposed I knew to whom I was coming, having been friends and schoolmates in common. It was a glad surprise,—indeed one meets with these everywhere in the West. But not having taken a sleeper the night before, I was now prepared for rest. In the afternoon a meeting was held in their parlor, (where most of their gatherings have been), for the purpose of organizing an Executive Meeting at Lincoln. Benjamin F. Nichols and Thomas Hogue, from Iowa, were present, and it was very pleasant to meet them after our association at Illinois Yearly Meeting,—also George S. Truman from Genoa, whom I had not seen for many years. It was a season of deep interest to these Friends, struggling amid difficulty and privation, and feeling so keenly the need for religious fellowship, and the privileges of an organized Society. If only they could have a meeting-house, as conveniently situated as possible, it would prove a great advantage and help to lift the burden from the one or the two who have provided the place of gathering.

Their executive meeting is to be held four times a year, and meetings for worship on alternate First-days. To those of us so differently situated this seems unsatisfying, but to these Friends it is a rich treat. And the attainment of that so long hoped for occasioned feelings of thankfulness beyond the power of language to express. Many of them have long distances to come, with many cares at home, taking turns in relieving their help on First-days, all finding it difficult to leave home; but the hope was expressed that the time would come when the necessity would press for a weekly meeting. Isaiah Lightner was also present, and others from Genoa. Fervent prayer was offered on this occasion for a building on the true foundation and the cementing bonds of love. Excellent counsel was given. J. Russell Lownes was appointed clerk, and Eveline Cook assistant, and Friends reluctantly separated to find resting places in homes in the surrounding country, all to come together the following morning to hold meeting in a public hall obtained for the purpose. At that hour many gathered with us from distant points; Joseph Starr and son formerly of Richmond, Ind., attended from near Steele City, over 60 miles away; William Dorland's widow Mary and her children, from a dis-

tance, whom we were rejoiced to see; and many others. The spirit of supplication was in our midst finding voice in the early and latter part of the meeting. Deep travail of spirit and loving sympathy were experienced for these isolated friends and the fervent desire was expressed that they might be gathered with growing convictions of the need for a close acquaintance with the golden rule, and an appreciation of the New Commandment Jesus gave to his disciples. Quite a large company were gathered beyond our expectations, and having made such an effort, many of them for the occasion overcoming difficulties in order to be present, it seemed almost impossible to separate, and the social meeting was nearly as lengthy as the preceding one had been. Some of us came to J. Russell Lownes, 5 miles from Lincoln, where a religious meeting was held in the evening, the invitation having been extended to the neighbors around them to gather with us. Isaiah Lightner and Joseph Webster from Genoa were present. We trust it was a profitable occasion, wherein the desirability of a saving and preserving religion was portrayed. Many were not Friends, but seemed grateful for the opportunity.

After a night's rest, Fanny Lownes took me to Lincoln. One is led to wonder how the farmers here gather their large crops, some raising over one thousand bushels of potatoes, one hundred acres in corn and fifty in oats. R. L. had from sixty to seventy head of full bred short horns, very fine, for which at occasional sales they have, large prices are received. We passed the large penitentiary, a fine building, on our way to the city, saw some of the inmates at work in the fields, and could but hope for the coming of a better time when such houses will be no longer needed. They have large workshops attached for the prisoners to be usefully employed. We saw also in the distance a large asylum, and passed by the "Home for the Friendless," indicating the thought and care extended to the fallen and the homeless. Moses Brinton was in Lincoln to bring me six miles to their home, he and his wife Margaret with their family having removed here eight years ago from Lancaster county, Pa. We passed by salt basins, parts of which are dry, the bottoms covered with salt, others with water from which they extract salt. In coming to M. B.'s we saw many gullies,—*draws* they call them,—generally between the slopes, and indicating that the land had been covered with water and had gradually settled or washed these places. The road was more hilly than any before traveled, not fenced in but running over the broad extent of prairie land. Their house is on high ground, commanding quite an extended view of the country 'round. We saw thousands of watermelons covering the ground, which are fed to the hogs, and some of which are still quite palatable. This has been a very prolific year. They gathered one season 300 tons of hay--stacking where it is harvested, and have raised one year over 5,000 bushels of corn. Considering the low price often received, it is not altogether cause of surprise that sometimes it is used for fuel, coal and wood being costly.

There should have been mention above of a parlor meeting held First-day evening at Moses Brinton's similar to the one at the same time at Russell Lownes, Thomas Hogue, B. F. Nichols, Mercy Hoopes, Dr. Harvey and G. S. Truman were present, together with neighbors in the vicinity, and it was felt to be an occasion of comfort and encouragement. Such opportunities for spiritual refreshment are greatly valued here, and good might arise from our more frequently making way for them.

Third-day morning Moses and Margaret Brinton took me to David and Mary A. Swaney's, five miles distant across the prairies, she a sister of Joshua L. Mills's wife, of Mt. Palatine, Ill. Their home is also on high ground, with a fine view of Lincoln. The day was pleasant, the ride and visit very enjoyable. David brought me into the city towards evening to the friends who first welcomed my arrival. C. P. Walter was absent spending the week at the farm, fifteen miles distant, where their daughter resides with her husband L. Cass Smith, formerly of Delaware county. A thunder storm in the evening, the first remembered since leaving home, followed by a fine rain, has been very refreshing. It will now be a pleasant retrospect to think of Friends in this vicinity, traveling without the clouds of dust which heretofore we have been enveloped in. I found letters awaiting me, also one to H. J. W. from our mutual friend, Louisa J. Roberts, whose visit in the West is every where spoken of as helpful and encouraging. The hospitality of these Friends, many of them so differently situated from those in the East, is cause of remark, and has led me to query in view of the great simplicity of these homes,—some one story with two rooms, others one and a half, yet making room for several guests, of course to their own discomfort,—but this borne so cheerfully and seemingly with thankful hearts,—that if the same manner of life were observed in the East would not farming "pay," and the heavy burdens be lightened for many with a real increase of true enjoyment? I will leave here 10.25 this morning for Beatrice, with feelings of gratitude for the privilege of having mingled so pleasantly with friends in social and religious fellowship. L. H. P.

Lincoln, Nebraska, Tenth month 10.

It is surprising how practical duty enriches the fancy and the heart and deepens the affections. Indeed, no one can have a true idea of right until he does it, any genuine reverence for it until he has done it often and with cost, any peace ineffable in it till he does it always and with alacrity. Does any one complain that the best affections are transient visitors with him, and the heavenly spirit a stranger to his heart? Ah! let him not go forth on any strained wing of thought in distant quest of them but rather stay at home and set his house in the true order of conscience, and of their own accord the divinest guests will enter.—*Selected.*

It is the advantage that men of slower tempers have, upon the men of lively parts,—though they do not lead, they will follow well and glean clean.—*Wm. Penn.*

THE EARLY FRIENDS OF MIAMI MONTHLY MEETING.

Editors INTELLIGENCER AND JOURNAL:

In your papers of Ninth mo. 15th and Tenth mo. 6th, Robert Hatton speaks of the early Friends of Miami Monthly Meeting, and other matters. He says Short Creek and Miami Monthly Meetings were opened simultaneously, about 1804. In the case of Miami the true date is 13th of Tenth month, 1803. The first Clerk was Samuel Linton, who came from Bucks county, or that vicinity, in Pennsylvania. He was the father of the late Elizabeth Satterthwaite, of Waynesville, and of the late Nathan Linton, long widely known as a surveyor, a public spirited citizen, and a good man, in Clinton county, Ohio. The early minutes show that its limits embraced all the territory north of the Ohio, and west of the "Hockhocken." Robert makes Hopewell and Salt Run Meetings all the same, but they were two separate meetings, and constituted Hopewell Preparative Meeting. Salt Run was about ten miles farther down the Miami than Hopewell, and was at least 20 miles by the shortest road from Waynesville. Both meetings were discontinued a good many years ago, but Hopewell was revived, and continued a few years as an indulged meeting. Salt Run meeting was composed almost entirely and during most of its duration quite entirely, of the family of Benjamin and Rachel Butterworth, with the families of most of their children, all of whom came from South River Monthly Meeting, in the vicinity of Lynchburg, Va.; most of them in the year 1812. He, his son Moorman (not Mormon, as R. H. has it), and grandson, Dr. Samuel M. Ballard, late of Iowa, were all 6½ feet high in their stockings. None of the rest were quite so tall. One daughter, Dr. Ballard's mother, was 6 feet high. It is a mistake, though, to say that they were stronger than other vigorous men. Benjamin died in 1833, but his widow survived till 1848, and died in her 84th year. She gave her maiden name to her oldest son, a name first given, as it is said, to an Englishman whose home was upon moor lands, wherefore he was called "Moor-man."

The manner in which Robert Furnas invited his neighbor to partake of fruit recalls the simple manner of his son Seth, the husband of Dinah (Kindley) Furnas, of whom R. H. speaks. A large company in carriages having gone to his house for entertainment at yearly meeting time, about the year 1846, he showed the drivers the stables, and pointing out the feed said: "there's corn and there's hay; if you can stand it I can."

The death of David Evans, as per the monthly meeting's record of births and deaths, occurred Eleventh month 17th, 1861. The copy of the minutes of Miami Quarterly Meeting prior to 1828, left by him, is in the custody of his son, Joel Evans. It is no doubt a faithful copy, and has a full and convenient index, and, if the owner is willing to part with it, ought to become the property of the quarterly meeting.

Many of the early settlers of whom R. H. speaks and others besides them were settled in the neighborhood prior to the opening of the monthly meeting, and being "charter members," so to speak, are not mentioned in the minutes as having brought certificates. Such were Robert and Hannah Furnas and family, Amos Cook, Sr. and family, Edward and Margaret Kindley and family, Samuel and Hannah Kelly and family, Samuel Linton and family, Abijah and Anna O'Neal and family, and others.

SCRIPTURE LESSON, No. 41.

TENTH MONTH 28, 1888.

TOPIC: FAITH IN THE PERFORMANCE OF SMALL REQUIREMENTS.

GOLDEN TEXT—"If the prophet had bid thee do some great thing, wouldst thou not have done it?"—2 Kings 5: 13.

READ Joshua 6: 1-16.

THE fall of Jericho is the beginning of the conquest of Canaan lying west of the Jordan river. The land on the east side was already in the possession of the Israelites, and had been assigned to the tribes of Reuben and Gad, and the half tribe of Manasseh. It is because these tribes had come into possession of their portion, that in the crossing of the Jordan mention is made of forty thousand armed men belonging to Reuben, Gad, and Manasseh as crossing with them and taking part in the attack upon Jericho. The ease with which that city was captured, as we find it recorded in the lesson for to-day, is another of those interpositions of the Divine being on behalf of the people of Israel, which cannot be explained on any known principles of science. The record comes down hoary with age, and all the value it has for us is in the lesson it teaches. We must bear in mind that forty years had passed since the servile race, that for many generations had submitted to the lash of their Egyptian taskmasters, crossed the Red Sea as free men. They had received no training that prepared them for the conquest of their Canaan; the bondage, with its hard servitude, had taken all the strength and fibre out of their lives, and had it not been for the courage and firmness of their leaders they would gladly have gone back to the "fleshpots" of Egypt, and to their bondage again. It needed the forty years of hardship in the wilderness to rear men of endurance, men to whom people living in the walled cities of Canaan, leading lives of luxurious ease and effeminacy, were but as "grasshoppers." The entire destruction of the conquered city was in accordance with the barbarous usages of that age, only the imperishable things—the silver and gold and other valuable metals—were preserved; in this instance it was all devoted to the Lord.

Here again we see what can be accomplished through faithfulness in small things, and where there is concert of action, each one performing the part assigned him without failure either in the time or service required, success is sure to follow; whether it be a work for the church, that asks of us a helping hand, or some effort for the good of others, or simply for our own welfare. The sum of duty is made up in the small integers that by themselves count for little, but when gathered into the aggregate of a life are of uncounted value.

The apostle James, endeavoring to inspire in his fellow-men a confidence in the unfailing care of the Divine Father, declared to them that "Every good gift and every perfect boon is from above, coming down from the Father of lights, with whom can be no variation, neither shadow that is cast by turning;" and Paul also declared that "Jesus Christ (meaning the revealed will of God) is the same yesterday and to-day, yea, and forever." It would seem to every thoughtful mind that these are truths so self-evident as scarcely to need the declaration of them. Every human plan, every human hope is based on the confidence that the Creator is unchangeable, and that his law is the same yesterday, to-day, and forever. The very idea of a perfect being involves the thought of his unchangeableness, for nothing can be perfect that can be changed, either for the better or worse. More than this, every condition of faith and confidence in God is necessarily based upon the belief that his law is unchangeable, and that which, oftentimes painfully, is learned through sorrow and deep contrition, to be his law of life for us to-day, shall not to-morrow prove to be a delusion and a snare. As in the material world, every addition to our knowledge of God's universal law but goes the more to prove the immutability of his rule since the "moon and stars sang together," so in the moral and spiritual life there must exist the same unchanging rule of right and truth, else were we all the creatures of despair and distrust.

We know, however, that with God *alone* exists this perfect immutability. There is no permanency in human affairs, in human plans, in human laws; here, change is the rule of life, the very essence of improvement and well-being. The glory of the human life is its susceptibility to improve, to grow more Divine, more like unto the Infinite Spirit that dwells within it. And thus, under the perfect law of life, the immutable standard of right, and under the guiding power of the indwelling Spirit of Truth that leads men *towards* the right, mankind has risen from a crude conception to a more just and true realization of the nature of the Divine.

It is not arrogance to claim that enlightened mankind to-day have nobler, truer conceptions of the Divine law than had the people of whom our lesson treats. It would be a sad commentary upon the actions of the Divinity within the human soul were we to suppose otherwise. The world has certainly grown toward the true and good, mournfully slow though its progress may have been. That which should cause the Christian world of to-day to stand abashed, is to see, by the Scripture record, in how many things the conceptions of those ancient people as to the Divine requirements rival ours in grandeur.

But let us not, in our veneration of their righteous discernment, close our minds to a realization of their mistakes. Let us not, in the contemplation of the majesty of their recognition of eternal truth, close our souls to the Divine messenger they received. Their Father is our Father; the same to-day as then; just as near, just as communicative, just as good; and we—alas! are *we* not as ready to receive the Heavenly message?

"Behold, I stand at the door and knock; if any man hear my voice and open the door, I will come in to him, and will sup with him and he with me."

EARLY FIRMNESS OF CHARACTER.

A BEAUTIFUL boy of three years, who had been most carefully trained, was, on the coming of warm weather, given the liberty of the yard. A little neighbor who had not been so carefully reared, but who was apparently kind and good, often came to play with him. The mother watched the little friend closely, anxious to decide with justice whether he was a fit playmate for the child. She saw nothing wrong, and gradually the little fellows became firm friends. Drawing a little nearer one day than was her wont, she was startled at hearing foul words, words unfit for any ears, from the mouth of the boy. Snatching up her child, she sent the offender home, telling him that he never again could come into the yard until the evil habit was conquered. Then came the slow and laborious extracting of the poison; for she discovered to her horror that her boy's innocent lips would sometimes repeat the loathsome words, though he tried hard to forget them. Weeks passed, and the child, protected by his mother's vigilance and his habits of obedience, had again the blessings of pure speech; and more than that, he had gained by the dangerous experience a knowledge of the evil and a firm conviction that he must avoid it. One day, in the absence of his mother, he was again visited by his friend. They played happily for some time, when he was seen to run suddenly and swiftly to the house. On being questioned as to the cause, the child said simply, "Willie said a bad word, and I thought I had better come in." Great was that mother's reward for her painstaking care, and great was her rejoicing over its fruits.—*Babyhood.*

THE evil of strong drink would be of comparatively small magnitude if only those addicted to its use were involved in the deplorable consequences. The editor of the *Northwestern Lancet*, in a suggestive article on "The Medical Aspect of Inebriety," says: "The close relationship of insanity, epilepsy, and inebriety is strongly shown by the remarkable manner in which, through heredity, one form of disease may pass into another, as where drunkenness in one generation is followed by epilepsy or insanity in the succeeding generations." It is this inevitable nerve or brain deterioration on the part of those of a previous generation who indulged in alcoholic beverages, and became parents, which undoubtedly would, if careful investigation should be made, account for the presence therein of many at the present time of those by whom our insane asylums and hospitals are over-crowded. The drink evil involves not only those immediately connected with the drinker here and now, but leaves a fearful legacy of suffering and incompetency to future generations.—*Nat. Temperance Advocate.*

BE content with your present crosses before you look for others.—*Selected.*

ENLARGING THE BORDERS.

WHILE in many sections of our State where formerly Friends were numerous and their meetings large there are now few that gather for worship, and it is under great discouragements that the meetings for business are kept up, this condition is not altogether owing to lukewarmness or a loss of interest in the fundamental principle and testimonies held by the Society, though it is lamentably true that in too many instances the claims of the Society are made subservient to other interests and have but a secondary place in the affections of its members. In the migrations to the West that began when Ohio and Indiana were opened to settlement, there were many Friends who left the Eastern and adjourning Southern States to make for themselves homes in the then wilderness. These early pioneers carried with them such a love and reverence for the Society, that they soon established meetings, though under great difficulties, and as the lines of civilization were pushed farther and farther West, Friends continued to share in the labors and privations consequent upon the development of a new country and many of the meetings in our own yearly meeting that are now so very small, became so through the removal of families to the outlying Western States.

And while many of these Friends are isolated and living without the helpful intercourse and association of members of their own Society, they have not to any great extent connected themselves with other denominations, but seem to be waiting and looking hopefully forward to a time when they may be strong enough to set up meetings of their own. They need the sympathy and aid of their fellow members from whom they are separated, and our yearly meeting has recently undertaken a work in this direction that ought to have claimed its attention many years before. With the help of visits from Friends who have their spiritual welfare at heart, and who encourage the "two or the three" near enough to meet together in religious fellowship to hold meetings for worship, much interest has been awakened. The meeting that for two or more years has been held in Lincoln, Nebraska, is now established as a meeting of record; and doubtless in other parts of the State where Friends have settled, the encouragement to unite in holding meetings for worship that they are receiving, will bring about similar results.

Friends in Omaha, with a little effort and some self-sacrifice, might soon gather a meeting of considerable size and exert a marked influence in that large and growing city. The same is true of Beatrice, and other towns in southeastern Nebraska.

We feel deeply impressed with the importance of this movement, and trust that every encouragement best wisdom indicates will be extended to our brethren and sisters who are building up and maintaining these centres of Friendly influence in the far western States to which they have removed.

CORRECTION—In the INTELLIGENCER AND JOURNAL of Ninth mo. 29, in the article entitled "Illinois Friends: The Yearly Meeting" second column, 20th line from the bottom, read for "given counsel," "going counter" to the law, etc.

MARRIAGES.

COLES—PANCOAST.—At the residence of the bride's father, Philadelphia, Tenth month 9th, 1888, under the care of the Monthly Meeting of Friends of Philadelphia, Thomas H. Coles, son of Isaac and Mary W. Coles, of Glen Cove, N. Y., and Sallie E., daughter of Dr. Seth and the late Sarah S. Pancoast.

NEVIN—OGDEN.—On Tenth month 11th, 1888, at Riverton, N. J., Charles W. Nevin to Harriet Middleton Ogden, daughter of Edward H. Ogden.

PASSMORE—WEST.—By Friends' ceremony, at the residence of the bride's uncle, George L. Maris, on Fifth-day, Ninth month 27th, 1888, William C. Passmore, of London, Britain, Chester county, and Anna M. West, daughter of Elizabeth J. and the late J. Peirce West, of Philadelphia.

PRINCE—JACKSON.—At Jericho, Long Island, Tenth month 4th, 1888, by Friends' ceremony, George M. Prince, of Boston, and Josephine Jackson, of the former place.

SWAYNE—McFARLAND.—Tenth month 10th, 1888, before Magistrate John F. Pole, Philadelphia, by Friends' ceremony, William Swayne, and Adaline H. McFarland, both of Kennett Square, Chester county, Pa.

WHEELER—PAXSON.—Tenth month 6th, 1888, at the office of the mayor of the city of Philadelphia, by Friends' ceremony, Edwin B. Wheeler, M. D., and Emma S. Paxson.

DEATHS.

SATTERTHWAITE.—At her residence, in Crosswicks, N. J., Ninth month 2d, 1888, Jane J., daughter of Charles Satterthwaite.

After five days of severe bodily suffering this devoted daughter and sister sleeps and rests, leaving a record full of loving memories.

The eldest of seven children, scarcely had she reached maturity when the death of her mother left her in charge of the household. Nobly and beautifully, with modest simplicity and grace, she devoted herself to securing the comforts and directing the influences that make a happy home. The name "*Sister*," as applied to her by all the children, and often by her father also, has for thirty years been the synonym for deepest love, respect, and confidence. Her life was a sweet, gentle melody from beginning to end

through trial, suffering, and disappointment, submission to the Divine will was ever manifest.

The summoning call of the Death Angel came unexpectedly, but she was ready, and when told she could not live, her resignation and composure were in full consonance with her character. The message to "come up higher" seemed only following in the path wherein her feet had trod. Her religion consisted in doing the will of her Heavenly Father.

"Blessed are the pure in heart for they shall see God."

S. S. A.

SHAW.—At Norristown, Pa., Tenth month 12th, 1888, Harvey Shaw, aged 76 years; a member of Gwynedd Monthly Meeting.

WARRINGTON.—At his residence, East Moorestown, N. J., Tenth month 11th, 1888, Dr. Joseph Warrington, aged 83 years.

An Orthodox Friend, he was liberal in his feelings towards those who differed from him. For many years he practiced medicine in Philadelphia and was instrumental in the establishment of the Nurses' Home, which has become one of our most important and useful institutions.

CORRECTION. In giving the age of Elizabeth H. Roberts, last week, it should have been 70, not 76.

NEWS OF FRIENDS.

THE LINCOLN, NEB., MEETING.

TENTH month 6, 1888, Lincoln Executive Meeting was organized as a branch of Prairie Grove Quarterly Meeting in the presence of the joint committees of that and of Genoa Monthly Meetings and will be held hereafter on the second Fifth-day in the Second, Fifth, Eighth, and Eleventh months, at 2 p. m. The meetings for worship remain for the present as heretofore on the second and fourth First-days at 11 a. m. The occasion was one of deep interest, and marks an era in the growth of Friends in Nebraska. The foundation principle professed by Friends was set forth in great clearness, and obedience to its leadings and teachings enjoined as the means of growth in the right direction. On First-day a company of about 100 persons, mostly Friends or their descendants, assembled in one of the public halls of the city for the purpose of divine worship. Lydia H. Price, of Philadelphia, was among those present, and Genoa, Garrison, Bennett, Beatrice, Steele City, and Northern Kansas were also represented.

The voice of exhortation, mingled with prayer and thanksgiving was heard, baptizing the assembly into one spirit, that with the Psalmist we could exclaim, "thou hast anointed my head with oil, my cup runneth over," and at the close of the opportunity it seemed hard to separate from each other. In the evening parlor meetings were held at the house of J. Russell Lownes, five miles southeast of Lincoln, and at Moses Brinton's six miles northwest of the same place, which were favored opportunities, stirring up the pure mind in each other by way of remembrance.

And now in closing I desire to suggest to monthly meetings who may have members in this section of the country that they forward certificates for the same to Charles P. Walter, Correspondent of Lincoln Executive Meeting, 1301 C st., Lincoln, Lancaster Co., Nebraska.

G. S. T.

A Friend from Chicago writes: "We had Sidney Averill with us at our meeting yesterday, (Tenth month 7.) He spoke very earnestly and feelingly on the subject of inspiration. He said that reason only comprehended those things which could be known or perceived by the senses, but inspiration added to reason enabled men to understand and communicate with God. Beyond the bounds of reason is an illimitable region no more to be compassed than the regions of space. A week ago we had two Friends from Jericho, L. I., (A. and M. Bunker), who participated in our Bible class to our edification, feeling free to express their convictions. We like to hear the genuine sentiments of any if given without desire to press them unduly upon others, realizing that "he is the free man whom the truth makes free, and all are slaves beside." We enjoyed the company of L. H. Price and companion P. G., and the comforting and encouraging ministrations of the former. A Green St., Philadelphia, Friend has also been very pleasantly with us in our little meeting this summer."

Five of the Committee of Philadelphia Quarterly Meeting to visit the meetings composing that body were in attendance at the Valley Meeting on First-day, the 14th instant. The gathering was small, but the presence of a number of young people gave encouragement to believe that the places of the aged ones who are being called away by death, will in due time be filled by their successors who, in the First-day school, are being trained to love and revere the Society. The spoken word was heard with close attention, and after a brief supplication the meeting separated.

The First-day school has not yet resumed its sessions, but will be opened on next First-day.

FIRST-DAY SCHOOLS.

CELEBRATION AT BART SCHOOL.

THE First-day school at Bart, (Lancaster Co., Pa.), had special exercises on the 29th of Ninth month. They were conducted by the Superintendent, Esther K. Bushong, and Secretary Florence A. Webster. Quite a large number of the pupils and patrons of the school for the past summer participated as well as several strangers who were present.

The school was conducted at the close of the meeting in three classes,—a Bible class with First-day school lessons, one for pupils not so well advanced, and one for the juvenile portion of the school. In all nearly fifty pupils were enrolled and there was a fair attendance every week, except two occasions that were inclement.

The exercises at the celebration included the calling of the roll and responses with "sentiments." After a Bible reading by the Superintendent, Thomas Baker, from the Bible class, addressed the school upon the origin of Sunday or First-day schools, that seemed to have originated with Robert Raikes of Gloucester, England, in 1783. Next followed some choice recitations and an excellent reading by Emma Z. Maule. Jesse Webster read what he considered one of the most instructive chapters in the New Testament. This was followed by Thomas Baker

reading an interesting chapter from the works of Thomas Dick on the "Philosophy of a Future State."

The school, after an appropriate moment of silence, adjourned to enjoy a social reunion in the shady meeting-house yard and to relish a well-spread lunch. T. B.

SWARTHMORE NOTES.

—The meeting on First-day morning, the 14th inst., was attended by Robert E. Evans, of Philadelphia, who appeared in supplication soon after the meeting assembled; and afterwards spoke, exhorting the young to the pursuit of a religious life.

—On Seventh-day evening, the 13th inst., the annual reception of the Freshmen by the Sophomores was given. The parlors were tastefully arranged with pictures and flowers, which the students contributed from their rooms. The entertainment was simple and inexpensive, it being the desire of the Faculty to cultivate caution in these respects and discourage any vain display. It was an occasion thoroughly enjoyed by all. The Freshmen were presented with miniature *canes*, as mementoes, signifying that "cane-rushes" between Freshmen and Sophomores were to be a thing of the past.

—The views of early Friends respecting "simplicity of dress," claimed the attention of the First-day school class on First-day afternoon, the 14th inst. This class, under care of Prof. Smith, is making good progress in the study of the principles and practices of our Society.

For Friends' Intelligencer and Journal.

A NATURALIST'S NOTES IN HOLLAND.

(*Continuation of Letter of Last Week.*)

And now Rotterdam presents itself a perfect surprise, with its massive stone docks, its beautiful modern buildings, and wide streets set out with trees and kept as clean and free from dust as the asphaltum at Swarthmore. We soon found ourselves objects of interest, from the presence of the colored maid, but as turn about is fair play, we repaid interest with interest and gazed wide-eyed at all about us. As we trudged along behind our porter with his cart-load of satchels and wraps, we enjoyed immensely the brilliantly polished brass milk cans, tin lined and holding twenty-five gallons or thereabouts. They are closed with a wooden stopper and set two or three in a small conveyance, looking like an old-fashioned hay wagon; this clumsy vehicle is propelled by man and dog power, the dog being harnessed to the hindermost axle-tree, traveling beneath his load, which is steered by the man who grasps the pole. A "gentle breakfast," as the old Scotch lady called it, put us in spirit to see something of the town, and we were soon on our way to the Zoölogical Garden, the ladies of the party being prevented from visiting more characteristic Dutch places by the perverse determination of the gentleman to combine professional duties with pleasure. No fault could be found with the naturalist here, for besides the caged specimens, this most beautiful and cleanest of European zoölogical gardens fairly swarmed with fantastically clad specimens of the genus *Homo*, representatives of various Dutch provinces, in the capacity of travelers, or nurses with their spotless winged caps, gold head ornaments, white kerchiefs, puffed sleeves, and stout bodices with skirt of red embroidered or overlaid with black, coarse white stockings and klumpens or wooden shoes. These people divided our attention with the elephants who played on the mouth organ, and the crane with the plain Friend's garb, who disgraced himself by dancing in the most grotesque and ridiculous manner. To this beautiful garden, which unites the picturesque portions of a botanical garden with the rare and interesting forms of animal life, the children of Rotterdam are taken in charge of their parents or nurses, and here all that can be done to make them happy and sound in body and spirit is done. Scattered here and there are heaps of clean sand in which the younger ones can dig, and there are fountains with basins of large extent in which they may sail their toy boats, May-poles with swinging rings, boat swings, see-saws, horizontal bars,—all the simple apparatus of a gymnasium free to all. For the edification of the older children the plants are arranged in appropriate groups, each tree and shrub being distinctly labeled. Here one of our party, a lover of the woodland, whether swamp or hill, and of the Thoreaunean or Burroughnean temperament, quickly spied out a familiar face in one of the alders, the like of which is planted upon the Swarthmore campus, but of which the specific name had hitherto escaped detection. Its secret is now out, and before many weeks it must fall into line with its identity clearly indicated as *Alnus glutinosa*. The problem of how to label small shrubs, too small to bear an iron label, was also satisfactorily settled and noted in the embryo memorandum which I expect before three years are over to see grow to the proportions of a systematically arranged card catalogue.

How many of those who have visited zoölogical gardens have felt that the gain did not repay for the injustice done the pretty birds in shutting them up in a poorly ventilated, noisome aviary. Such should have the privilege of visiting the Rotterdam birds: their house was as clean and airy as the bay windows of our homes where hang our pet canaries, and here for the first time, after having visited the great zoölogical gardens of the world, did the writer see the birds apparently as clean, healthy, and happy as if free. A long halt was made before the cage containing some two dozen or more little *Estreldas* from Java, most beautiful little seed-eating birds, songless, but giving in the various tones of the color scale what they lack in beauty of song. The quaintest, most delicate little dove-colored beauties, nestling alongside others that exhibited on breast and head many or all the glories of humming-birds without the gilding. They made as they sat snuggled together on their perch, a veritable piece of rainbow coloring, and we wondered that for those to whom the shrill trilling and whistling of a canary is annoying, these little thumb-high specimens of the genus *Estrelda* were not oftener forth coming; being rather little, moving, happy flowers than birds. Altogether the impression they make is that of pansies. Some

beautiful little green Parokeets stopped us again, and I fear comparisons were made between them and their gorgeous blue and yellow tufted relatives outside, the Cockatoos, which were not favorable to the great garrulous creatures. And last, but by no means least, we paid our tribute of praise to our own clean, prim, rich-coated Cedar bird, which held its own among all the jewels of the tropics. Without going into further details, suffice it to say, that the various little lakes were gems in their way—the water clear, fresh, running, and the swans as graceful as their long necks and sour dispositions will allow. I cannot speak too strongly in honor of the Rotterdam Zoölogical Garden.

The newer portions of the city of Rotterdam consist mostly of handsome brownish red brick buildings, the trimmings of which are made with salmon-colored bricks slightly darker in shade than those made in Milwaukee. The streets are broad and extensively paved with asphaltum, which is kept perfectly clean by a simple, dustless process that interested me very much. No noisy sweeping machine goes about at night to startle the sleeping populace or raise a cloud of dust to pour in at their open windows. Here the pavement is first sprinkled and the sprinkler followed by men with large "squeezers" made by setting a rubber into the edge of a board, which is manipulated by a long handle; with these the water and dirt are rapidly pushed off to the side of the curb and thence removed in wagons.

Our second day in Rotterdam was occupied in extensive wanderings through the older portions of the town, along the streets bordering the numerous canals, peering into shop-windows and the holds and cabins of the queer canal boats, and putting into practice our somewhat rusty stock of German in the purchase of various articles needed for the refreshment of a party during a long day's ride to Hanover. A pair of small wooden shoes was secured, to be used as match boxes in the future home, and proved a good fit for the two year old member of the party, who when dressed in his night suit, and his *klumpens* put on, furnished an excellent picture of a diminutive Hollander, and we almost expected to hear him speak *Hollands,*—as they term a jargon that is all Dutch to us.

Any description of the quaint old windmills, or of points of historical interest, has no place in this gossipy letter, but it furnished us considerable amusement to find that one of our party had taken pains to hunt up the house in which Erasmus was born, only to find it just receiving the finishing touches of a coat of paint, and decidedly the newest, freshest looking house in Rotterdam. The market places were interesting, and in each of them were statues of Dutch worthies, one of whom flourished a pole upon which was placed a broad brimmed hat; even this did not tempt us to "do" the town, or to turn our attention from the fine assortment of fruits and vegetables presented for sale by the market women.

The twelve hours' ride from Rotterdam to Hanover, proved a very pleasant one and full of interest. Leaving the city the train passes through a long tract which has been reclaimed by various syndicates. Canals have been dug through the swampy land at right angles, and the rich black soil thrown out has proved sufficient to form rectangular patches of arable land called "polders." The canals form the highways in many places, and enable the landholder to do without fences. During the wet season they are kept at a proper level by means of numerous windmill pumps, the water being poured into larger canals having a slight fall toward the North Sea. Along the edges of the polders are rows of willows and poplars, and nearer the water are many umbelliferous plants, and every few yards most delightful patches of poppies. Sagittarias, cat-tails, and tall grasses very like our wild rice, extended into the water, which furnished an abundant crop of pretty, white water-lilies smaller than those of our Middle States. In several places the farm hands were seen gathering boatloads of Duckweed (*Lemna*) which grows in great abundance. The Duckweed reminded us that we were in the land where *Hydra* was discovered, and we could not help soliloquizing on the injustice of man, who erects monuments to those of his fellows who have perpetrated all sorts of reforms and rebellions but neglects such charming old teachers as Trembly, who with his little *Hydra* has furnished to naturalists almost as prolific a source of edification as did White of Selborne. Why has no rich man perpetuated the memory of Trembly in bronze, with his jars of Lemna and a bristle in his hand turning a Hydra inside out, or of White of Selborne watching the swallows.

The farm houses consist usually of one story, thatched with a much smoother thatch than that used in England or Ireland; they have brick gable ends, and sides made with frame work, the interspaces of which are lathed and plastered. Being placed directly on the edges of the polders, wicker-work fences are used to keep the children and chickens out of the water. About the first town we passed was Gouda, where clay pipes are made,—and probably were made to supply Irving's Knickerbockers and the inhabitants of Sleepy Hollow. It was news to me to learn that the stems of clay pipes are bored by hand with iron wire and that it requires a very expert hand to accomplish the task.

As we approached Gouda, the guard, as they term the person who seems to be a sort of cross between a brakesman and a conductor, showed the good effect of a half guilder deposited slyly in the palm of his hand a short time previously; coming to the window of our compartment he suggested that we spread out, and give each of the children a seat, for we were nearing the town, and if the people saw every seat occupied they would go to some other compartment.

Utrecht the next town of importance is still in the flat district, but the canals are less numerous. Here is a celebrated university at which the professor of physiology, Th. Englemann, has made a world-wide reputation. All of the army surgeons of Holland are educated here at a special school, and here the mint is located where all the money for the home government and that of the Dutch provinces is coined. Utrecht is the headquarters of a religious sect called Jansenists, after one Bishop Jansen, whose

work "on the necessity of divine grace" met with the displeasure of his superiors at Rome, giving rise to a secession from the church. There is, I believe, another colony of Jansenists in Denmark.

Leaving Utrecht we begin to pass fields of buckwheat and of cultivated Lupines, and a little further on enter an extensive moor stretching north to the Zuyder Zee. It was a sore trial to be obliged to pass the rich purple heather. In some places the sand drifts readily in the wind, forming as a consequence extensive dunes, which the Hollanders have endeavored to stay by planting thousands of pines; these plantations are seen in all stages of development from shrubs of six inches to sturdy young trees. As Arnheim is approached the soil becomes of better quality, and elevations that can be called hills appear; the district about Arnheim is considered the most picturesque in Holland. A noticeable fact about many of these old towns, outside of their ancient belfrys and figures of saints in stained glass attitudes, is the pride with which they claim to be built on the site of a Roman camp. Thus at Utrecht the Roman invaders forded the Rhine calling the spot *Trajectum ad Rhenum*, (derived, so says the Guide book), from "Oude Trecht" "the old ford," subsequently called *Ultra Trageetum*. Again, Arnheim looks back with pride to the time when it was called *Aracanum*, and Nymwegen, to the time when Cæsar perpetuated it as *Castellum Noviomagnum*. The town of Emmerich brings us to German territory, and to a totally different series of experiences. In leaving Holland it is with a sense of great admiration for a people who have wrested from the sea by unceasing energy and perseverance almost every acre of their country.

HOME FOR DESTITUTE COLORED CHILDREN.

Our attention is called to the character and work of this excellent charity, now located at the corner of Berks St. and Old Lancaster Road, (Philad'a). From the Report for the last year we find that the number is 35; during the year 17 have been admitted, and one has died. The managers say: "They are aware of the growing feeling against institution life for children, and have given the subject their thoughtful and serious consideration. While they recognize the great work done for the white children by that noble organization, the Children's Aid Society, they are convinced, from their long experience in their work, that the time has not come when the problem of caring for the colored children can be solved in the same way. They feel that the greatest evil that threatens institution life in general is in a great measure overcome by the fact that, while the average number of children in the Home remains about the same, there is a constant change taking place in this little population—some children being placed out very soon after admission.

"Wm. P. Letchworth, in his able paper entitled 'The Children of the State,' after speaking of the objectionable features of large charitable institutions says, 'Notwithstanding the dangers referred to, in my opinion, as children become dependent, the best course is to place them immediately in benevolent societies organized for their care and protection, and at the same time bring greater activity into the placing-out branch of asylum work.'

"It is on this well-defined plan that the managers endeavor to do their work. But in placing their children out, the arduous part of their task has just commenced. It is then that the Visiting Committee commence their work of watching over the children of their adoption with the anxiety and solicitude of parents.

"Except during two or three summer months, the year has been one of almost uninterrupted good health among the children,—owing, the managers believe, to the judicious attention of their excellent Matron and Superintendent, whose conscientious administration of the affairs of the Home meets with their warmest approval.

"The school in connection with the Institution has been very satisfactorily conducted under the care of Susan R. Worley. The children find this a very attractive feature of their Home-life, being alike pleasant and profitable. It may be truly said of the teachers of the youth that they are 'born—not made;' and this seems especially to apply to the one in question here. It is but justice to say that her services in this department are most valuable.

"The school exercises consist of the regular routine work, interspersed by instruction in sewing, etc.

"Strange as it may seem, it is nevertheless true that, in placing their children out, the Board meet with no greater difficulty than that of impressing on those who indenture them the importance of giving the children the stipulated three months' schooling.

"In the last report, mention was made of the sale of the old property at Maylandville, and of the committee appointed to secure a new Home. The managers are pleased to report the purchase of a very desirable property in the vicinity of George's Hill, and that the children and their caretakers are now in possession of their new quarters, which with few alterations, it is hoped will meet all the needs of the Institution."

THE MASTER AND THE REAPERS.

The master called to his reapers:
"Make scythe and sickle keen,
And bring me the grain from the uplands,
And the grass from the meadows green;
And from off the mist-clad marshes,
Where the salt waves fret and foam,
Ye shall gather the rustling sedges
To furnish the harvest home."

Then the laborers cried: "O, master,
We will bring thee the golden grain
That waves on the windy hillside,
And the tender grass from the plain;
But that which springs on the marshes
Is dry and harsh and thin,
Unlike the sweet field grasses,
So we will not gather it in."

But the master said: "O foolish!
For many a weary day,
Through storm and drought, ye have labored
For the grain and the fragrant hay.

The generous earth is fruitful,
And breezes of summer blow
Where these, in the sun and the dews of heaven,
Have ripened soft and slow.

"But out on the wide, bleak marsh land
Hath never a plow been set,
And with rapine and rage of hungry wave
The shivering soil is wet.
There flower the pale green sedges,
And the tides that ebb and flow,
And the biting breath of the sea wind,
Are the only care they know.

"They have drunken of bitter waters,
Their food hath been sharp sea sand,
And yet they have yielded a harvest
Unto the master's hand.
So shall ye all, O reapers,
Honor them now the more,
And garner in gladness, with songs of praise,
The grass from the desolate shore."

—*Zoe Dana Underhill, in Harper's Magazine.*

OUR OWN.

If I had known in the morning
How wearily all the day
The words unkind
Would trouble my mind
I said when you went away,
I had been more careful, darling,
Nor given you needless pain;
But we vex our own
With look and tone
We may never take back again.

For though in the quiet evening
You may give us the kiss of peace,
Yet it might be
That never for me
The pain of the heart should cease.
How many go forth in the morning
That never come home at night!
And hearts have broken
For harsh words spoken
That sorrow can ne'er set right.

We have careful thoughts for the stranger,
And smiles for the sometime guest;
But oft for "our own"
The bitter tone,
Though we love "our own" the best.
Ah! lips with the curve impatient!
Ah! brow with that look of scorn!
'Twere a cruel fate
Were the night too late
To undo the work of morn.

—*Margaret E. Sangster.*

No one but he who tries to do the truth can perceive the grandeur of another who does the same. It is not the correctness of opinion that constitutes rightness, but that condition of soul which, as a matter of course, causes it to move along the lines of truth and duty—the life, going forth in motion according to the law of light: this alone places a nature in harmony with the central truth.—*George Macdonald.*

GENERAL SHERMAN AND THE COLORED PEOPLE—"OLD SHADY."

[In the *North American Review* for Tenth month, General W. T. Sherman has a very remarkable article relating to the colored people. We print the main portion below. Its reminiscences are very interesting, but its allusions to present circumstances are even more worthy of attention. —Eds. Intelligencer and Journal.]

July 4, 1863, the Union army captured the city of Vicksburg. . . . . A great many negroes, slaves, had escaped within the Union lines. Some were employed as servants by the officers, who paid them regular wages; some were employed by the quartermaster; and the larger number went north, free, in the government chartered steamboats.

Among the first class named was a fine, hearty "darkey" known as "Old Shady," who was employed by General McPherson as steward and cook at his headquarters in Mrs. Edwards's house in Vicksburg. Hundreds still living remember well "Old Shady." After supper he used to assemble his chorus of "darkies" and sing for our pleasure the songs of the period, among them one personal to himself, and, as I then understood, composed by himself. It was then entitled, "The Day of Jubilee," but is now recorded as simply, "Old Shady;" and I do believe that since the Prophet Jeremiah bade the Jews "to sing with gladness for Jacob, and shout among the chief of the nations," because of their deliverance from the house of bondage, that no truer or purer thought ever ascended from the lips of man than did at Vicksburg in the summer of 1863, when "Old Shady" sang for us in a voice of pure melody his own song of deliverance from the bonds of slavery. Here it is, not in full, for other verses have been added, but I give it entire as it then was:

OLD SHADY.

Yah! Yah! Yah! Come laugh wid me,
De white folks say Old Shady am free,
I 'spect de year of ju-be-lee
Am a coming, am a coming.
Hail mighty day!

Chorus—Den away, den away, I can't stay here no longer.
Den away, den away, for I am going home.
Repeat—Den away, den away, I can't stay here no longer.
Den away, den away, for I am going home.

Old massa got scared, and so did his lady;
Dis chile break for old Uncle Aby.
Open the door, for here's Old Shady
A coming, a coming.
Hail mighty day!

Chorus—Den away, den away, I can't stay here no longer, etc.

Good-by, Mass Jeff; good-by, Mass Stephens.
'Scuse dis niggar for taking his leavins.
I 'spect by-and-by you'll see Uncle Abraham
A coming, a coming.
Hail mighty day!

Chorus—Den away, den away, I can't stay here no longer, etc.

Good-by, hard work without any pay,
I'se going up North where de white folks say

Dat white wheat bread and a dollar a day
Am a coming, am a coming.
Hail mighty day!

CHORUS—Den away, den away, I can't stay here no longer, etc.

Oh! I'se got a wife and a nice little baby,
Way up North in the lower Canady.
Won't they shout when they see Old Shady
A coming, a coming.
Hail mighty day!

CHORUS—Den away, den away, I can't stay here no longer, etc.

After the war I met old Shady on a steamboat on the Upper Mississippi, when he sang for us on the hurricane deck that good old song, which brought tears to the eyes of the passengers; and more recently I heard of him far up in Dakota, near the "Lower Canady," toward which he seemed to lean as the coigne of safety, where his wife and "nice little baby" had sought and obtained refuge. I believe him now to be dead, but, living or dead, he has the respect of the Old Army of the Tennessee, which gave him freedom. "Good-by, Massa Jeff; good-by, Massa Stephens," was a beautiful expression of the faithful family servant, who yearned for freedom and a "dollar a day." And yet "Old Shady" was only one of the tens of thousands of slaves who escaped from bondage to freedom in the days of our national struggle. More than 2,000,000 of slaves were practically free before Mr. Lincoln's Proclamation of Freedom. That proclamation was simply the notice by the high sheriff of the nation of a concluded fact.

I saw the whole process of emancipation from beginning to end. I have attended the auction sales of slaves in the rotunda of the St. Louis hotel, New Orleans, of which Colonel Mudge, of Illinois, was the proprietor and landlord. I have seen old men, women, and children put up at auction and sold like animals; the father to one, mother to another, children to a third, and so on. I have seen young girls in new calico dresses inspected by men buyers as critically as would be a horse by a purchaser—eyes, hair, teeth, limbs, muscles, etc.—and have seen spirited bidding for a girl of handsome form and figure by men of respectable standing. Such things were then common—not so now; and say what we may, we are more the creature of habit than of original thought.

My firm belief is that domestic slavery at the South before the war was not cruel and inhuman. As a rule the family servants were treated as well as the average hired servants of to-day, but the "field-hands" were regarded and treated as animals; and it was one of the most extraordinary anomalies in political history, that the owners of these slaves, who were not one-twentieth of the whole population, should have ruled their fellow-citizens with despotic severity. They controlled the fashions of their neighbors, dictated to the counties or parishes and states and were even arrogant to the United States of America in Congress assembled. . . . .

But I must return to the negro race. They still form one-tenth of our aggregate population. They were once slaves, but are now free; not only free, but entitled by the constitution and law to all the privileges of American citizenship. They are a kindly, domestic and inoffensive race, and since the world began no higher virtue was ever exercised than by these lowly people, who toiled in the fields to raise corn and food for the rebel armies in Virginia and Georgia whom they knew to be employed to perpetuate their own bondage. Every southern gentleman who has a spark of knighthood left in his nature should take off his hat to the old bondsman who staid at home to care for his mistress and the young ladies while he was himself away fighting to destroy his own government, and to strengthen the fetters which bound his slave to the master. That bondman is now free, and by the constitution and laws of his land is entitled to a vote as though he were born a free white man; but we all knew then, as we know now, that constitutions and laws are idle winds. People are governed by usages, customs, and not by laws.

The negro is not permitted to vote if the vote disturbs the judgment of the white majority; and if it changes the verdict of their former masters, it is not counted.

What is the use of shutting our eyes to a well-known fact? We did so from 1850 to 1860, and have paid the penalty. The next war may be avoided by reason and common sense, and if I can help to avert it I will feel more honored than in past victories or triumphs. I say to the South, Let the negro vote, and count his vote honestly. It will not disturb, but, on the contrary, will hasten your prosperity and stability as a people. I begged and implored my friends in Louisiana, in 1861, not to arouse the enmity of the sleeping lion of the North. Ever since the beginning of time Southern people have been quick to anger, but not enduring. The Northern people, *per contra*, are slow to anger, but, once aroused, are not easy to allay. The Northern people will not long permit the negro vote to be suppressed, and yet be counted in the political game against them. Better meet the question honestly. Ask the abrogation of article 14 of the amendments to the Constitution of the United States, or allow the negro to vote, and count his vote. Otherwise you will have another war, more cruel than the last, when the torch and dagger will take the place of the muskets of well-ordered battalions. The negro is gaining in experience and intelligence every day, and he has read Byron: "Hereditary bondmen, know ye not, who would be free themselves, must strike the blow!" Should the negro strike that blow, in seeming justice, there would be millions to assist them. Were I to-day a citizen of Louisiana, as I was in 1861, I would far prefer "Old Shady" as a voter than any of the Bohemians who reach Castle Garden by thousands every day of the year.

I confess that I feel partial to the colored people of the United States. During the war they had a difficult part to play. They understood from beginning to end their status in our community. They were faithful to their masters and mistresses. They never betrayed the confidence of a poor Union sol-

dier who had escaped from his prison and was trying to reach "God's country." They knew the geography of the country in which we were operating, and always answered our questions honestly and truthfully. I myself have seen General Persifer F. Smith, of Louisiana, take off his cap and make a profound bow to every colored man whom he met in San Francisco in 1849, because, he said, they were the only gentlemen who kept their promises. And I here assert that Henry Sampson, of San Francisco, a slave to Colonel Chambers of Rapides Parish, La., who paid through me $1,200 for his freedom, though the law would not have enforced one cent, was as well qualified to exercise the great American right of suffrage as any single man now resident in the State of Louisiana. What more beautiful sentiment than that of my acquaintance, "Old Shady": "Good-bye, Massa Jeff; good-bye, Massa Stephens; 'scuse dis nigger for takin' his leavin's"—polite and gentle to the end. Burns never said anything better.

From the West Chester, Pa., Republican.

THE HABITS OF THE MARTINS—BY A VETERAN OBSERVER.

EDITOR REPUBLICAN:—In a recent issue of your paper I find the following:

"NOBODY EVER SEES THEM COME OR GO.

Those curious migratory birds, the martins, have already taken their departure southward in anticipation of the approach of fall. There is something peculiar and mysterious in the migratory habits of the martin that is not observed in any of the other Southern birds that visit us to spend the summer months. They make their advent among us in their Northern migratory flight early in April, during the quiet hours of the night, and as mysteriously take their departure about the beginning of August for the South. No one has ever observed these birds arrive in daylight or take their departure. When expected here in the spring they are discovered some fine morning to have already arrived and taken possession of the little boxes arranged for them on many of the houses, and so, also, when the time arrives for their departure they disappear in the same manner, never being seen to congregate in flocks like other birds preparatory to taking their flight to their accustomed winter haunts.—Hanover (Pa.) Spectator."

These birds have made their home with me for the past forty-five years continuously, during the nesting season. I have accomodations for forty pairs in the eaves of our kitchen, within fifteen feet of the ground, where the family are continually passing and repassing without any apparent annoyance to the birds. The writer seems to have had a different experience from mine. I have never known them to return from the South in a flock; they generally come one at a time, although several may appear to arrive the same night. The old males, as a rule, come first, and they have commenced to come as early as the twentieth of the Third month, and it has been as late as the fifteenth of the Fourth month before the last ones have come. They are first noticed in the morning, one, two, or three, and if closely watched, they will be seen to increase daily, until all have arrived. If the season should prove cold and stormy, or we should have snow so as to prevent their getting a supply of food, they will stay and perish rather than return to the South, where it is plenty. I have never known but once when they seemed to return, and have had many to perish. That they always return in the night, is a mistake, and arises from the habits of the bird. "At the approaching dawn the merry martin begins his lively twitter, which continues for half a minute, then subsides until the twilight is fairly broken. To this prelude succeeds an animated and incessant musical chattering, sufficient near the dwelling, to awaken the soundest sleeper." Some of them arrive in the day time. Standing at our South window one day in early spring, I saw the arrival of the first martin of that year. It was an old male that seemed tired by his long journey. He made directly for his box and I think remained silent, having no one of his own kind to exchange ideas with. He was some distance from the house when first observed, but was at once recognized by his flight. The rest gradually followed him. Every new arrival by day seems to excite them and is announced by loud cheering. Their departure is somewhat similar to their arrival. About the first of the Eighth month their young are able to leave the nest, and for a few days may be seen proving their wings and attempting to regain their nest in the evening. This they often fail to accomplish, trying to get in the wrong box. This is a cause of great commotion amongst them, as the right owner of the box will permit no stranger to enter if he can prevent it, or if one forces himself in he is quickly driven out, with the occupant of the box hanging on the tip of his wing or tail until he gets tired, and lets him go. After a few struggles they leave the nest, to return no more for the season. They may be seen for a few evenings hovering over the house, uttering a note of recognition, or alighting on the vane of a neighboring steeple and resting through the night. They also roost on the telegraph wires and other places through the rest of the month, the flock seeming to decrease as the young birds become stronger. The last of them observed this year was on the evening of the 29th of the Eighth month, when they were going to roost, and their number had been reduced to ten. It was too dark to see their colors, but I believe they were all young birds. I suppose they left early next morning for their Southern home. How long it took them to reach it, and if they stopped by the way or arrived in the night I have no means of telling.

My observations have led me to the following conclusion: The martin is not a gregarious bird. No tie existing between them but that of parent and nestling, which ceases as soon as the young is able to provide for itself, when the old ones forsake it and return to the South and the young follow as soon as they are able, the flock consisting of those only that were hatched on the premises and gradually decreasing during the month they remain. In returning North the male returns first, as has been stated. This is not an uncommon practice with many birds. They leave the South. each one by itself as the time for nesting approaches, feeding by the way. Some-

times delayed by Northern storms, or hastened by Southern winds, they reach here either in the day or night, as circumstances permit, and their presence is made known the next morning. That they do travel at night, I think admits of no doubt. Their eyesight must be much stronger than ours, and they may occasionally arrive in the night, but it has never been shown they start before daybreak. Abbott says: "The fact is there is more to be learned about birds in one hour in the early morning, than in six weeks of midday sunshine." Nuttall says: "They raise two broods in a season." I have never known them to raise but one during the long time they have been here. He also says "several pair dwell harmoniously in the same box." This is contrary to my experience. They resent any intrusion on their premises with the greatest violence and will permit no other bird to enter their box if they can help it. The roof which is within a few inches, is common to all. One year I found there was something exciting and disturbing them very much, and finally I discovered two old Norway rats had found their way up the drain into the conductor that came from the roof, and availing themselves of this road they had entered the cornice of the house and had been feasting on the young birds or eggs. I soon destroyed them. The next year only two pair returned. They have again increased and filled most of the empty boxes. The red squirrels have to be watched. Formerly there were many of them in the town. Last year four of these were killed on the premises. They are as bad as the rats. Sometimes we had a full house, but since the advent of the English sparrow there has been trouble for the martin as well as for myself. The sparrows remaining all winter, are ready to take possession of the boxes when they are opened for the martins on the arrival of the first one in the spring. The boxes are about ten inches square and about eight inches in height in the clear, entirely separate from each other, with two inch holes for entrance The perch is a small board two inches square and one half an inch in thickness, attached to the box by a brass hinge. On the departure of the martin in the fall the perch is thrown up and covers the hole, preventing the sparrow from entering it again until the return of the first martin in the spring.

Did the whole body of martins come at once, or could we tell which box to open for the new comer, much of the difficulty that occurs might be prevented, for the sparrow is no match for the martin in the air, but when the former once gets possession of of the box and sits at the entrance of the hole, with his strong bill presented, he cannot be dislodged, and after both have got to housekeeping there is but little contention between them. To attempt to dislodge the sparrows I fear would drive the martins away. I have been frequently asked how I get them to come to the house and stay so long. This I cannot tell. I only know that when they have once settled on a home they are very loath to leave it. They seem to prefer a south or east exposure, not too high from the ground, attached to something that is firm, as a house or barn, not to a pole that trembles in the wind, out of the reach of cats, to whom the young often fall a prey from a habit they have of crowding each other out of the box in their eagerness for food, when they fall to the ground. Nuttall says: "To him it is indifferent whether his mansion be carved and painted or humbled into the hospitable shell of the calabash, or gourd, associating himself equally with the master and the slave, colonist and aborignal."

P. P. S.

HOUSEKEEPING BOYS.

THERE were four boys in the family whose activity was exhausting. The mother was a wise little woman, and believed that much ill-directed force might be utilized by a judicious division of labor, which would spare her nerves and increase the family comfort.

So the oldest boy washed dishes when he was just tall enough to wear his mother's apron tied around his neck. He swept, dusted, and even cooked a little. If storms or sickness kept them in the house, they were given needles, thread and thimbles, and taught to replace buttons, and set at other slight repairing which they learned to do quite skillfully.

When the third brother (who is the hero of this story) had grown to fit the apron, the first was honorably released. His deft-handed successor, more ambitious or more teachable, became that rarest of artists—a good plain cook, who was welcome at campings-out, and other festivities of a Bohemian character. He was undaunted by biscuit and triumphant over steak. This third brother could also mend neatly, and even made his own neckties to afford himself more variety.

A time came when this training was worth a small salary. He found himself with an invalid wife, a boy of three years, and a hand so badly injured that he was obliged to change his employment. Something suited to his altered circumstances was not easily or quickly found, but the man who had washed dishes had other resources.

He did not, as well-meaning friends advised, give up his home and waste his substance on hired nurses and boarding-houses.

Through a whole discouraging year of waiting, he nursed the sick wife, cooked for the small family, and kept the house bright and tidy with an occasional day's help.

When the right position was offered at last, and the housekeeping fell again into natural channels, it was evident that a man could assist his own family without loss of dignity, and at the same time avoid the discomfort, and perhaps debt, caused by additional cares while the real care-taker was unable to meet them.

In a partnership, each member of the firm should be able to perform, or at least direct, the other's work; and there is no reason why a man should not understand some of the details of housekeeping, or a woman learn to drive a nail straight and use a saw if necessary.—*Louis Hall, in Wide Awake.*

Life is too short for mean anxieties:
Soul! thou must look through blindfold.
—*Charles Kingsley.*

PHILADELPHIA ALUMNÆ FOR WORKING WOMEN.

The *Journal of Women's Work*, the organ of the "New Century Guild" of Philadelphia, gives an interesting report of the rise and growth of the Guild's evening classes for working women. It says:

"One of the curious results of a college training for young women is that instead of disposing them to form an intellectual caste and keep themselves aloof from the uneducated, it seems rather to fire them with a desire to extend their advantages and to gain for as many as possible the thing they find so good for themselves. It was this spirit which led some of the college alumnæ living in Philadelphia to ask how the working women of their city, who had been obliged to leave school early in life, and whose day hours were occupied in earning a living, could continue their education.

"They put their wits together to supply this need—namely, the best instruction in the city at hours suited to the convenience, and prices suited to the means of women workers. In October of 1881, evening classes were advertised in the ordinary English branches, also in cooking, bookkeeping, dressmaking, drawing, and singing.

"These classes succeeding almost beyond the hopes of their projectors, the second year stenography, type-writing, English literature, and millinery were added, and all these branches, with the exception of drawing, and the addition of French and elocution, have beeu continued each winter up to the present time.

Some of the classes are taught by unpaid volunteer teachers, others by teachers who ask but a small compensation. Between two and three thousand working-women have availed themselves of the benefits of these classes.

THE WHEAT CROP.

For very many years the price of flour had not been so low in the United States as in 1887, and, with the single exception of meat—the price of which was kept well up despite the largely increased attention given to stock raising and the superior facilities adopted for dressing the meat—beef, mutton, and pork—and transporting it to the most distant markets of the country—the cost of all the necessaries of life were on the same low plane with breadstuffs.

But the price of wheat has largely increased and the bakers everywhere are declaring that in order to fairly remunerate themselves they must either increase the price of bread or reduce the weight and size of the loaf. In New York the bakers have already added one cent to the cost of each loaf, which is not much for one loaf, but a great deal to thousands of the poor of that great city when added to the aggregate loaves of a year or a month. The addition of that one cent may, and probably will, carry with it a good deal of suffering into the tenement houses of the metropolis.

The increase of the price of wheat was not the result of the "Old Hutch" wheat deal in Chicago, that being but the sequence of a comparative failure of the crop. The clearest account regarding the decreased harvest which we think, has been published, is to be found in this week's issue of the *Farmer's Review*, of Chicago, which states that the shortage in "the wheat crop of 1888 is due not only to decreased acreage but also to damage from various causes"—from winter killing, largely; from rust, from excessive rain in some instances, and, in rare ones, from drought and from chinch bugs. From this latter cause two entire counties in Iowa report a total loss of the harvest.

The following statistics, carefully collected and compiled by the *Farmers' Review*, show the condition of the crop in the principal wheat-raising States:

Kentucky—Acreage, 1,035,018. Yield in 1888, 14,490,252 bushels; in 1887, 11,113,000 bushels.

Ohio—Acreage, 2,356,487. Yield in 1888, 28,277,796 bushels; in 1887, 35,895,000.

Indiana—Acreage, 2,549,895. Yield in 1888, 34,148,635 bushels; in 1887, 33,148,635.

Illinois—Acreage, 1,988,575. Yield in 1888, 29,828,625 bushels; in 1887, 36,861,096.

Iowa—Acreage, 2,468,981. Yield in 1888, 28,396,281 bushels; in 1887, 26,887,000.

Missouri—Acreage, 1,541,342. Yield in 1888, 23,120,130 bushels; in 1887, 27,744,000.

Kansas—Acreage, 752,744. Yield in 1888, 13,549,932 bushels; in 1887, 7,607,000.

Nebraska—Acreage, 1,560,020. Yield in 1888, 20,280,260 bushels; in 1887, 16,585,000.

Michigan—Acreage, 1,466,520. Yield in 1888, 21,997,800 bushels; in 1887, 21,672,000.

Wisconsin—Acreage, 1,141,387. Yield in 1888, 12,555,257 bushels; in 1887, 13,063,000.

Minnesota—Acreage, 3,035,31. Yield in 1888, 21,247,317 bushels; in 1887, 36,299,000.

Dakota—Acreage, 3,994,563. Yield in 1888, 35,951,067 bushels; in 1887, 52,406,000.

The *Farmers' Review* estimates the total crop of the United States for 1888 to be 418,998,372 bushels as against 456,329,000 for 1887. This would show a difference in favor of last year's crop of upwards of 37,000,000 bushels, or considerably more than half a bushel for every man, woman, and child in the country.—*Phila. Ledger*, 10*th mo.* 16.

Let us serve God in the sunshine, while he makes the sun shine. We shall then serve him all the better in the dark when he sends the darkness. The darkness is sure to come. Only let our light be God's light, and our darkness God's darkness, and we shall be safe at home when the great nightfall comes.—*F. W. Faber.*

The seed seems in a wintry state, scarcely shooting above ground; yet we have thought it is under the care of Him who can nourish and bring forth; if it be but allowed to lie under His cultivating hand, and not exposed to the chilling breath that surrounds.—*Mary Dudley.*

Content not thyself that thou art good in the general, for one link being wanting, the chain is defective.—*Wm. Penn.*

THE green-clad earth lies hushed in mellowing light,
A frosty coolness thrills the morning air,
And gives the grass a silver raiment rare,
As fine as lace or soft as moonbeam white
Poured o'er the star-cheered wilderness of night.
There is a sense of glory everywhere,
A joy abounds that smiles away sharp care,
And floods the earth with hope half infinite.

Come walk with me upon this sounding shore,
Where ocean honors autumn's wide domain
With hymns that shake his foam-bespangled floor,
And thunder through the breakers' briny rain;
Come, gaze upon the sea, the hills, the sky,
And say—does summer's grace not grandly die?

—*Ernest W. Shurtleff.*

NEWS AND OTHER GLEANINGS.

—Recent government explorations in Venezuela have resulted in the discovery of fields of coal, which are believed to be of value.

—Dr. Schweinfurth, it is stated, intends shortly to visit Yemen in order to make a study of the coffee plant and of coffee culture in Arabia.

—The police at Moscow have discovered a celler used for the making of dynamite shells. In connection with the discovery, they have arrested a Nihilist who recently returned from Siberia.

—Preparations have been made for effecting the proposed connection between the Observatories of Paris and Greenwich. It is expected that this will lead in the end to the acceptance of the Greenwich meridian by French astronomers.

—An enormous aërolite, which was discovered about 100 years ago in the Brazilian province of Bahia, has been just transported to Rio de Janeiro and lodged in the National Museum. It is stated to weigh nearly six tons.

—Mrs. Sally A. Crandall, familiarly known as "Aunt Sally," for twenty years the keeper of the Watch Hill Lighthouse, has resigned her Government post there, having become tired of it. She went to the place with her husband, who has since died, and for ten years "Aunt Sally" has climbed the stairs and trimmed the lamp alone. The summer visitors have paid frequent visits to the neatly kept lighthouse, and always left her small sums of money.—*Exchange.*

—A good step has been taken by the Lancashire and Cheshire (England) Antiquarian Society in connection with the excavation of the Manchester ship canal. In order that no antiquarian treasures unearthed may be lost through ignorance of their nature or value, this society has had printed and distributed among the workmen representations of arrow-heads, stone implements, coins and pottery, with urgent requests that anything found of this nature may be transmitted to them, with full details respecting the place of finding it, the depth, soil and surroundings.

—The New York Post-office has stood where it does now for 11 years. During all that time it has never been closed. In fact, like Tennyson's brook, the post-office goes on forever doing business. It requires 15 men and 5 women to keep it clean. They are at work continually, and still the force is insufficient. A cart load of dirt is swept up in the corridors each day. The post-office gathers more than its legitimate share of dirt from the fact that pedestrians take advantage of its cool corridors in the summer to protect them from the heat, and also in the winter to avoid the cold. All kinds of articles are found on the window-ledges, including umbrellas, pocketbooks, books, shoes, clothing, etc. These articles are all taken to Room No. 1, where they can be secured by a description of the article lost. It is estimated that 15 000 more persons pass under the roof of the New York post-office every day than under any other roof on the continent.—*N. Y. Evening Sun.*

—The first woman physician, Dr. Elizabeth Blackwell, graduated in 1848. There are now 2,500 women holding first-class diplomas from duly incorporated medical colleges.

—The American Woman Suffrage Association will hold its Twentieth Annual Meeting in Cincinnati, O., on the 20th, 21st, and 22d of Eleventh month.

—A telegram from Camden, Maine, on the 13th inst., reported the death at Scarsmut, of Chesley Heal, aged 109 years. He was a pensioner of the war of 1812. During the last 12 years of his life he had never been out of the house. His longevity was partly attributed to the strength of his lungs, and it is said that his voice could be easily heard for a distance of a mile.

CURRENT EVENTS.

A FRIGHTFUL railroad accident occurred on the 10th inst., at Mud Run station, east of Wilkesbarre, on the Lehigh Valley Railroad. A very large excursion of a Catholic Temperance organization was returning to Wilkesbarre in several trains, when one ran into another which had stopped. The rear train was pulled by two locomotives which plowed through the cars of the stationary one. Those killed numbered over sixty, and many were hurt, several of whom have died. The accident was caused by the neglect either to display or regard signals.

THE Women's Christian Temperance Union of Pennsylvania held its annual convention at Pittsburg last week. There were nearly 500 delegates present. A lively contest was developed for control of the organization, between the "no party" and the "Third party" delegates. The former had a majority, and reëlected the present President, Mrs. Frances S. Swift, of Pittsburg, by a vote of 299 to 184.

AN extended and threatening street-car strike at Chicago, last week, was finally adjusted on the 14th inst. President Yerkes, of the roads involved in the trouble, (on the West and North sides), had a conference with the men, which lasted several hours, and a compromise was agreed upon. The men will receive an advance of 6 per cent. in wages and will be paid by the hour, instead of by the trip, as heretofore. They are also guaranteed ten hours' work per day.

THE total value of our exports of domestic breadstuffs during the nine months which ended with last month, was $81,259,789 against $129,892,624 during the corresponding period of 1887.

THE new cases of yellow fever at Jacksonville, on the 15th inst., numbered 20 and the deaths 3. The total number of cases to date is 3,569 and the deaths 316. It is considered very probable that some of the cases now reported are no more than malarial fever.

SEVERAL of the chiefs of the Sioux tribes interested in the proposed breaking up of the Dakota reservation have been in Washington. With their interpreters, on the 15th, they visited the Interior Department and stated to Secretary Vilas their objections to the new act. Some of them complained of the failure of the Government to fulfill former treaties, and gave this as a reason for their caution in the present matter.

NOTICES.

*** Haddonfield Quarterly Meeting's Temperance Committee has appointed a Conference to be held in Friends' meeting-house, Moorestown, on First-day, the 28th inst., at 3 o'clock in the afternoon.

A cordial invitation is extended to all.

JOHN M. LIPPINCOTT, Clerk.

*** A Temperance Conference in charge of the Committee of Abington Quarterly Meeting, will be held in the meeting-house at Quakertown, on First-day, Tenth month 21st, at 2 o'clock p. m.

SARAH C. JAMES, Clerk.

*** The Third of a series of Afternoon Meetings appointed by Samuel S. Ash, of Phila., within the limits of Radnor Monthly Meeting, will be held at Haverford on First-day, 10th month 21st, at 3 o'clock.

*** The Western First-day School Union will be held at London Grove, on the 27th of Tenth month, at 10 o'clock a. m. All interested are cordially invited to be present.

Train leaves Broad street, Philada., at 7.25 a. m. for Toughkenamon Station. If those desiring to attend will communicate in advance with Robert L. Pyle, London Grove, Pa., conveyances will be provided from station to meeting-house.

EDWARD A. PENNOCK, LYDIA B. WALTON, } Clerks.

*** Abington First-day School Union will be held at Richland meeting-house, Quakertown, on Seventh-day, Tenth month 20th, at 10 o'clock a. m. Interested Friends are invited to attend.

J. Q. ATKINSON, ANNA MOORE, } Clerks.

*** Concord First-day School Union will be held at Lionville, Pa.—Uwchlan meeting-house—on the 27th of Tenth month, 1888, commencing at 10 a. m. Conveyances will be at Whitford—Pennsylvania Railroad—on the arrival of the 7.15 train from Broad street, Philadelphia. Friends alongthe line of the West Chester and Philadelphia Railroad *via.* Media, will find it more convenient to to by way of West Chester, as a stage will there meet the grain that leaves Broad street at 7.01 a. m., and convey persons direct to the Union.

CLARA B. E. J. DURNALL, } Clerks.

*** The annual meeting of the Association for the Promotion of First-day schools within the limits of Philadelphia Yearly Meeting will be held in Race street meeting-house, Philadelphia, Eleventh month 3d, 1888, commencing at 10 o'clock a. m.

Interested Friends are cordially invited to attend.

S. RAYMOND ROBERTS, CLARA B. MILLER, } Clerks.

*** Clerks of unions composing Philadelphia First-day School Association and Superintendents of schools not connected with any union within its limits, will please send annual reports with as little delay as possible to

S. RAYMOND ROBERTS. Clerk,
26 West Johnson street,
Germantown, Philadelphia.

PUBLISHERS' NOTICES.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also to help avoid mistakes.

***As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

Absolutely Pure.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only n cans* ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

BALTIMORE YEARLY MEETING.

The undersigned will furnish, upon application, ORDERS, upon which may be purchased round trip Tickets at reduced rates upon the Pennsylvania system of Railroads, when presented at any ticket office *east* of Pittsburg, and *south* of Canandaigua, and including New York City, at any time from Tenth month 24th to 31st, inclusive. Orders will also be furnished for tickets upon the Baltimore & Ohio Railroad, or its branches. The tickets purchased upon these orders will be good until Eleventh month 7th.

Neither road will issue free return passes as heretofore.

HENRY JANNEY,
No 837 N. Eutaw St.,
EDWARD STABLER, JR.,
P. O. Box 254, Baltimore.

A FEW EARNEST WORDS TO FRIENDS.

THE serious concern which we feel at the near approach of an important Presidential election—probably the most important since the election of Lincoln—impels us to submit a few thoughts to Friends, especially to those who may think of voting the Prohibition ticket.

Four years ago, almost on the eve of the election, we counselled Friends concerning the danger of voting for the third party movement; the result justified our fears. Because of the votes then cast for the Prohibition ticket, many of them no doubt cast by persons who little apprehended so lamentable a consequence, the Democratic candidate was elected, and the party, which with all its shortcomings, represents far more nearly than the other the temperance cause, as well as other reform principles, was defeated.

Our concern is not against the person who was then elected and who now, a second time, solicits your votes (either directly for himself or indirectly by having you to vote for the third party candidate) but is against the influences which he represents, and which, in our opinion, are opposed to many of Friends' principles, and to the welfare of the nation.

First, the course of Cleveland's administration upon the Indian question, has been subversive of much of the good which Friends and others, with the countenance of the Government if with little actual aid from it, have accomplished. Honest and capable Indian agents have been displaced to make room for greedy, immoral, and dishonest men, who have done untold mischief. Obnoxious and absurd regulations have been established concerning the instruction given in Indian schools, even when entirely supported by private or society charity. New attempts have been made, and not sufficiently, if at all, resisted by the Government, to deprive the Indians of their lands. In general, the old abominations of the treatment of the Indians by white men, have

been tolerated, and even brought into practice by the existing administration which you are now invited to appprove and to renew.

Secondly: The oppression of the colored people in the Southern States, has been growing more and more fixed and systematic, until in several States there is no pretense of allowing to colored men that right of suffrage which was supposed to be one of the best fruits of the recent dreadful civil war. Wherever any apprehension has been felt by the late slaveholders that their absolute rule might be endangered by the outnumbering votes of colored men, enough of these have been killed or beaten to intimidate the blacks from voting, and when even this did not suffice, false votes, sufficient to overwhelm the votes of the blacks, have been put into the ballot boxes and counted. This is the work of the party which you are now invited to support by casting your free Northern votes for Cleveland, or for his ally, the Prohibition candidate.

Thirdly: It is notorious that the Administration party works most harmoniously with the Whiskey Trusts and the drinking saloons, deriving from them much of the money with which it seeks to perpetuate its power. The reasonable and practicable legislation by which the vice of drinking has been in many places so greatly curtailed, has been generally the work of Republicans; the outcry for impossible measures which practically operate to leave all existing evils of liquor-selling in full blast, is the work of Democrats and their allies, [often their unconscious and unwilling allies] of the Prohibition party.

Fourthly: The present Democratic administration, which now asks for your approval, and for continuance in power, has undertaken at the instance of the lately rebellious South, and of our always dangerous foreign rivals, to break down and destroy, as rapidly as possible, the defenses which enable our working people whether farmers, artisans, or manufacturers, to obtain steady work at higher wages than are paid in any other part of the world. This last named policy of tariff destruction has been so conspicuously set forth by President Cleveland as his chief aim, and has been so emphatically approved by the Democratic conventions and newspapers, that it has been made the principal issue between the parties, the Democrats evidently hoping that attention will thereby be diverted from their ultimate purpose of placing the South, with all its barbarisms, once more in full control of the national government.

We ask Friends to carefully consider. The contest will probably be a close one, and it may be decided by a few votes in New York, or in New Jersey. Those Friends before whom this appeal comes, who have thought of voting with the third party, may be sufficient in number to turn the scale. We submit to them that, in holding for the time their prohibition views in abeyance, they compromise no principle. By voting now for the Republican candidates they simply relegate to the future a question which is not now before us, while assisting by their votes in the advancement of several concerns which are held dear by Friends, and in preventing the overthrow of that beneficent system of Protection to Home Industry which is now threatened by a United South and by its allies the Northern Democrats, aided by foreign money and influence.

These things are forced upon our attention and they cannot be evaded; these are the points upon which all of us are *now* called to express our calm and serious decision. Other questions will demand similar decision at other times. Let us not fail in our present duty.

JOSEPH WHARTON.
ISAAC H. CLOTHIER.

Philadelphia, Tenth month 23, 1888.

The use of the INTELLIGENCER AND JOURNAL *as a medium for advertisements will, we think, be found very satisfactory. A careful supervision is exercised and nothing known to be unworthy is admitted. The paper now goes to about* 3300 *persons, reaching, say,* 15,000 *readers, and its size and shape, and the character of its contents give special weight to each advertisement.* ☞ *When our readers answer an advertiser, please mention that they do it upon seeing the advertisement in this paper.* ☜

A SONG OF LOVE.

THE love of the Great for the Less
Is the Sun's free way;
The love of the Like for the Like
Is the Day's glad love of the Day.
But atom and mote can tell
Of a nobler love,
In glory and beauty beyond,
In blessedness far above.

'Tis the love of the Less for the Great,
The yearning desire
Of the Poor to attain the Complete,
Of the Low to embrace the Higher;
The longing and love of the year
For the Spring unborn,
The love of the Brook for the Sea,
The love of the Night for the Morn.

—*Robertson Trowbridge, in The Independent.*

For Friends' Intelligencer and Journal.

FURTHER VISITS AMONG FRIENDS IN NEBRASKA.

WE regretted not seeing Dr. Esther Painter at Lincoln, she being interested in the establishment of a meeting there. She was visiting friends in the East. We left Lincoln, Tenth month 10th, after waiting at the depot three hours for a belated train, reaching Beatrice in the afternoon, and were met by Albert Green and taken to their cosey home pleasantly situated some distance from the station. Beatrice is a live and growing place, pleasantly situated.

Feeling weary, perhaps a lack of faith on my part prevented the appointment of a meeting for the next morning in the Methodist church—the previous evening being filled by a meeting there of the W. C. T. U. But a few of their neighbors and friends assembled in the home of Albert and S. L. Green next morning, where we gathered into silence and trust the spoken word found a place in the hearts of those present. Among the number were two Mennonites who seemed grateful with the others for the opportunity. Depending on a message that the train was two hours late, I was left behind, and the only alternative was to be taken across the country, 26 miles, by A. G. to the home of Joseph W. Starr, in Jefferson Co., telegraphing that we were coming. It seemed quite an undertaking, but was after all a pleasant journey made in about five hours. When we reached Diller, the station where we were to be met after sundown, we found J. W. S. waiting, and were very thankful for a guide, as it grew dark before reaching their commodious Nebraska home, where a warm welcome awaited us, and the neighbors were already assembling for a meeting,—Ira Bedell, wife and son having come eleven miles. This was a surprise and at first there was a shrinking from responsiblility, but while considering the weakness of the flesh there was a realizing sense of the strength which cometh from above, and there was the arising of thanksgiving for the generous thought which had provided this opportunity; and truly the Father seemed to be in our very midst. And though most of those present were strangers to Friends and their manner of worship, there was a nearness of feeling banding us together as children of the One Parent, with fervent aspiration that we might be harmoniously related to him, the Giver of All Good.

It was sweet to rest after the labor of the day under the home roof of relatives, and be refreshed for the morrow. Almost the first thought on waking was for the faithful animal that had brought us so safely on our way, but we found it was ready for the return journey. The previous day had been fine, the roads mostly good, though the depression of the "draws" made some pretty steep ascents. We saw thousands of tons of hay stacked on the prairies, the soil rich and productive, and the view so extended over the broad acres. J. W. S. has forty acres in apple trees, some of them bearing well this season. He had a good yield of peaches last year, but the winter killed many of the trees. We walked around to see the variety of fruit and other trees, also to the fish pond, but hearing of the rattle-snakes they had killed and one they were in search of detracted somewhat from the enjoyment. Everything was of their own planting, as they came only a few years ago to an unbroken prairie. The old California Trail, over which the gold seekers had traveled, is in sight of their home. Our ride the day previous suggested to A. G. the rides he had taken with the Indians in their buffalo hunts over this country, and also recalled the wrongs inflicted upon this greatly injured race.

Sixth-day afternoon I parted with my cousins at Diller where they brought me to take the train West. I came in sight of the Republican River at sunset, and the bright tints reflected on its surface added beauty to the scene. Reached Red Cloud in the twilight, and had a glimpse of other towns by moonlight. Prepared to alight at McCook, where we arrived at 11.15, if any familiar face appeared; and was reassured, looking from the window, to recognize my cousin Henry G. Dixon, who conveyed me to their home overlooking the town and country around. It was a beautiful night, and a sense of gratitude arose for

preservation and continued favors. Took a ride the next day, seeing several sod houses and "dug outs," these being the first homes of the pioneer settlers. They are said to be warm in winter and cool in summer. We could but think of the hardships through which some of our forefathers lived and raised their families, and contrast their conditions with the costly homes so prevalent in many parts of our country. The one-story cottages prevail here, many of them very neat and attractive, some quite roomy, with large yards nicely kept, and flowers still blooming. I found very unexpectedly members of our Religious Society in McCook,—Henry and E. Troth; also the INTELLIGENCER AND JOURNAL, and the desire seemed so great for a meeting as to delay the continued journey to Denver for a day or two. The Methodist minister being indisposed, very freely proffered their meeting-house. First-day morning was very windy, as it often is here, but the distance was very short to the place of meeting, where we gathered at 11 a. m., and after the preliminary services had a season of silence, wherein was realized the common need of every soul, covering all space, embracing the east and the west, the north and the south. The language of the prophet Micah revived, after querying what offerings would be acceptable to the Lord, according to the customs of that day: "He hath shewed thee, O man, what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God? " leading to a comparison with the present need, and the fruits of obedience thereto.

We spent the afternoon and evening at H. and E. Troth's, greatly enjoying the visit, and wishing so much that these few Friends in McCook could gather around them a few of our members and have the privilege of religious fellowship. Yet we know the Good Spirit is as near these isolated ones as in our more favored centres. We were sorry to miss seeing Caleb Clothier, son of William, who is associated with Henry in their ranch 50 miles distant on Red Willow Creek. He had gone east a few days before. They have 560 head of cattle, and speaking of these reminded of the "cow boys" and led to a query regarding the class we have heard so much of. Henry replied he was "one of them," which was quite reassuring. McCook is about five years old and has 3,000 inhabitants.

We left for Denver on Second-day morning, a lovely day, and kept near the Republican River for many miles. Timber does not follow the streams here as in eastern Nebraska and Iowa. The bluffs were high, rough, and rocky in some places, with deep crevices more like cañons than "draws." A rougher country was encountered after leaving McCook, and we did not see any place so attractive or pleasantly situated, though there were numerous railroad towns, with a prominent building supposed to be for educational purposes. We saw quite a number of "dug outs" and sod houses, some falling into ruin, the homesteaders finding more permanent abodes. The land looked very parched and sterile, with no sign of vegetation around the homes other than the dry short grass, and an occasional patch of corn, leading to the question how these people lived. The country became quite level before coming into Colorado, houses being still far between, but growing somewhat more frequent. We saw large herds of cattle, but little for them to feed on, large tracts being covered with sedge grass which did not look disturbed. We came in sight of the mountains more than 60 miles before reaching Denver, Long's Peak looming into view, and we watched eagerly for a sight of Pike's Peak, but the fog prevented it. We could see the snow plainly on the tops, though so far away. We felt refreshed by the growth of trees along the Platte River, as we neared Denver. We reached this great city of such wonderful and speedy growth after 5 p. m., and were met by sister Ellen M. Price, and conveyed to their home to meet the glad welcome of our brother Philip, and rejoice in the privilege thus afforded of mingling with them, grateful for the many blessings vouchsafed. L. H. P.

Denver, Col., Tenth month 16.

From the British Friend (Glasgow) Tenth month.

LANCASTER MEETING-HOUSE. 1677–1888.

ALMOST under the walls of the grim old castle where George Fox was confined by order of Justice Porter and Judges Twisden and Turner, and where Margaret Fell received so resignedly her sentence of premunire from Judge Turner (yes, and replied with such grace and dignity), stands the Friends' meeting-house, not only contemporary with George Fox, but for the most part pretty much the same as when built, as the date over an inner doorway tells us, in 1677.

A porch in harmony with the building has since been erected, and in the Autobiography of William Stout, a Lancaster Friend, who tells his experiences of commercial life in his own quaint and interesting way, we find the following allusion to the meeting-house:

"In the spring 1708, our meeting-house not being capable to entertain the general meeting for the four northern counties, it was resolved to pull it down, and build it nigh double to what it was, which was committed to Robert Lawson's and my care. We got it finished in about six months, with floor, seats, galleries, and ceiling, to the general satisfaction of our Friends in the county and others. The whole charge whereof was £180, which was thought moderate."

A Lancaster Friend, who has kindly forwarded the above extract, writes:

"Some years ago, when the roughcast was removed, we saw the extent of the original building in 1677 with string courses and mullioned windows. The stone floor of that date still exists under our present boarded one. A homely picture of that meeting-house shows a small porch and much shorter building than the present one, though it scarcely confirms the boast of William Stout that they made it 'nigh double.' In fact, the amount expended, even considering the difference in values, would not have erected the present house. Of course, it is no real consequence how old are the walls in which we worship; but it is interesting to think of all the generations from the days of persecution who have gathered in the Lancaster meeting-house."

It is most interesting to reflect that those walls have again and again resounded with the clear, strong tones of George Fox's voice as he set forth in his peculiarly lucid and earnest manner the everlasting gospel of grace to mankind. That he had a bold and earnest delivery, we gather from his journal that, on the 14th day of Third month, 1663, Judge Twisden found he had met with an unusual prisoner, for, after he had been rebuked by George Fox for calling him Sirrah, he roused himself up and said, "I will not be afraid of thee, George Fox; thou speakest so loud—thy voice drowns mine and the courts. I must call for three or four criers to drown thy voice; thou hast good lungs." To which George Fox replied, "I am a prisoner here for the Lord Jesus Christ's sake; for his sake do I suffer; for him do I stand this day; and if my voice were five times louder I should lift it up and sound it out for Christ's sake."

Walled round, and standing back from the road about 20 to 30 yards, in the midst of grass-grown graves and green sward which covers the remains of whole families of former generations of those who worshipped there, covered with creepers, roses, and jessamine, it is truly a place well suited to the spiritual worshipper. The plan of the building is like most meeting-houses of the period, extremely plain, but the window at the east end is rather more modern, and has a pretty effect, letting in the light softened by the delicate green of the Virginia creeper. There is a gallery round the north and west walls which points to large gatherings of Friends, and may be useful now on occasions of public or quarterly meetings. The attendance when the writer of this little sketch was there was considerable, but largely composed of young men of the adult First-day School. Two elderly Friends were sitting in the minister's gallery where but a few years ago eight might have been seen, whose remains now lie in the adjoining yard. Long lines of graves with the little rounded-headstones record the names of well-known families whose descendants have mostly joined the Established Church or left the locality. Among others may be seen the names of Hall, Ford, Hadwen, Satterthwaite, Albright, Brunton, Binns, Dockray, Walley, and Bradshaw—all of whom, it may be said without flattery, are remembered with respect in the locality.

The old caretaker of the premises, David Cragg, is a descendant of Jeannet Cragg, of whom we read that, during the plague of London, she set off on horseback from the neighborhood of Lancaster, reached London, sought out two nephews, whose parents had died of the plague, and through many perilous adventures conveyed them safe to her home and brought them up as her sons. This was no light thing at a time when the King and Parliament were fighting, and bands of troopers were ranging the country seizing on all the horses they could find.

It is not within the province of this paper to touch on the causes of the decline of Quakerism, which perhaps is not more marked in Lancaster meeting than in many other parts of the country. Other writers have dealt very ably with that subject. Meanwhile, it does seem as though the duty of Friends in this day is to carry the healing power of the gospel to the homes of the sons of toil; and it is pleasant to learn that Lancaster meeting is doing its share in this direction. A WORTHY EXAMPLE.

Since reading the beautiful and appropriate tribute to the memory of our late Friend, Benjamin G. Foulke, I have felt more and more impressed with a sense of the benefit to be derived from the example of such a life.

It seemed comparable to a pyramid, the base of which rested on a firm foundation, and the four sides were so duly proportioned that one did not encroach upon another, but each contributed to the symmetry and the majesty of the whole. The foundation was comparable to the "rock" described in the "Sermon on the Mount," the depth and solidity of which could be inferred from the stability of the superstructure. The *four sides* (so faithfully, though modestly, drawn in the tribute referred to), represent the subject as a domestic man, a social man, a business man and a meeting man: all sprang from the same foundation, all inclined upward, and all tended to the same point.

The domestic man. So vigilant in his oversight, so reasonable in his requirements, so solicitous for the welfare of his family; and withal so gentle and affectionate;—where should we look for a better husband and father?

A social man. Those who knew him either as their host or their guest, can testify to the interest which they felt in listening to his entertaining conversation, on varied topics, and to the kindness indicated by the expression of his countenance and the tone of his voice. It was not his wont to speak lightly of serious matters, or to introduce the grave subject of religion at unseasonable times or in mixed companies; for with his keen discernment and deep religious experience, he probably felt that such a topic should be approached with reverence and treated with solemnity; while all conversation in the social circle should be adapted to the capacity of the participants and the listeners. A hospitable host, a welcome visitor, and an entertaining conversationalist, he made impressions that will long remain, and be cherished as pleasant memories of our departed friend.

A business man. "He was never engaged in any kind of litigation, or business controversy." What a testimony concerning a man who for more than half a century was accustomed to transact business in which important interests were involved, and much of which was directly or indirectly connected with court proceedings! Surely there must have been a *something* deeper than cautiousness and better than shrewdness that enabled him to keep himself and others out of the turmoils of contention and the whirlpool of litigation.

The Friend who occupied so many stations in the Society and who served it so faithfully and so well in each capacity, may certainly be designated "a meeting man." The other occupations, or duties of

life—engrossing as they were—were not permitted to interfere with his allegiance to his beloved Society, and the performance of such service as it placed upon him. As an elder in the gallery his solid countenance and grave demeanor seemed calculated to keep down any frothy spirit, and to check whatever might tend to triviality in a religious meeting. He was well acquainted with our Discipline, conversant with the phraseology and usages of the Society, dignified and deliberate in his manner and expression, keen in discernment and sound in judgment, and above all, he was more weighty than wordy. It is no light matter to be clerk of Philadelphia Yearly Meeting and those of us who remember our departed friend as he served in that capacity, cherish for him a feeling akin to reverence. The dignity of the assembly, the welfare of the Society, and the honor of truth seemed to him as coëxistent conditions to be maintained under all circumstances, and the greater the emergency the higher he seemed to rise in order to meet it; but with all his deliberation, his dignity, and his firmness, there would be no manifestation of fear, impatience, or egotism. When the time came for him to be released from this arduous service on account of his declining health, it was found how strong was the hold he had upon the confidence of the meeting.

Such were the four sides of a life built upon sound principle, under direction of the inward monitor, and kept in firm stability against "all the winds that blew." May we try to profit by the example while we cherish the memory of a consistent, conservative Friend. H.*

Tenth month 20, 1888.

From Young Friends' Review, Tenth month.

THE AWAKENING.

He that is engaged in life's work cannot justly estimate his true bearing and influence on the world; yet there comes at times a vision let down, as it were, from the upper world, revealing it truthfully to him. Neither does a society, if it is active at all, see the full extent of its influence upon the world, save as God grants it the seer vision. And how does such a vision reveal the state of the Society of Friends to-day, and its hope for the future. There are many minds among us that are indifferent; many that are despondent; some that even say that the mission of Quakerism is accomplished, that the light and the life is passed from us, and that the dying body is even now wrapping around it the grave clothes of conventional custom to be laid away in the gloom of oblivion. I invite all who entertain any such judgment of the Society to discard it as untrue. The Society has had a wonderful influence towards liberalizing and spiritualizing the religion of the world in the past. This influence is not unfelt to-day; and if we are faithful to the requirements of God our influence will be felt in this line more and more until the whole world shall come to worship Him in "spirit and in truth." All Christianity is becoming less tenacious in its belief in an *angry, wrathful,* and *revengeful* God, as has been so often pictured, and is coming to see Him as Jesus Christ represents him, as a God of love—eternal love.

Christian nations, no doubt influenced greatly by the belief and example of Friends, who ever bore testimony against war, and who could not be made to fight when put to the test, are becoming awakened to the wrongfulness of all wars, that they originate in the lusts of mankind, and are contrary to God's nature and wish, who commands through his anointed Son that we should "*love* our enemies, and do good to those that hate us." A high standard indeed, but unless we practice it we cannot be the "children of our Father which is in Heaven." Our Society has always recognized this fact, and is foremost to-day in urging the nations to settle all their disputes by the peaceful means of arbitration. They early caught the strains of Isaiah's prophecy and sing it over again: "They shall beat their swords into plowshares, and their spears into pruning-hooks; nation shall not lift up sword against nation, neither shall they learn war any more."

The Society has its testimonies to bear and its duties to perform in these lines yet, and in others more numerous than our predecessors had. But all of these may be summed up in the doctrine of the "Inner Light" of "immediate revelation," which ever has been, and still remains to be the distinctively Quaker doctrine. The time is coming and now is, when the Lord shall have made a new covenant: "I will put my laws into their minds, and write them in their hearts, and I will be to them a God, and they shall be to me a people; and all shall know me, from the least to the greatest." And this is the consummation of religion in the world—when God teaches and man obeys. Surely there can be nothing higher. It will be the perfect day. The dawn of the new era is even upon us. We can see already the divine light tinging the mountain peaks of humanity. We can see it with our spiritual eyes. We feel it in our own souls, and, founded upon this evidence within us, we have faith. We know that God is fulfilling his promise and his purpose. Oh, Friends, let us waken up to this higher life, this purer light, and be ourselves jets in the divine arrangement in ushering in this brighter day!

The world, even the Christian world, God's people, through disobedience to their leader, Jesus Christ, and their want of faith in the ever-present and sustaining power of their God, were turned back into the wilderness in which they have been wandering through these "dark ages," whose midnight was in the twelfth century. But the dawn of the true light is even now banishing the darkness. All hail to the brighter day! Let us hasten its opening, one and all.

Has our Society no work? Have we as religious individuals nothing to do with this glorious commission of ushering in the perfect day, given to those who will accept it? Surely we can be no longer indifferent; surely we can be no longer inactive when God calls us to be his instruments in shedding his light more abundantly in the world. This conviction, when it has really taken hold of the heart, brings us work, and it brings us a sense of responsibility in the work. Love to God and our neighbor will become the ruling passion of our lives. And love to

God necessitates an unswerving obedience to his commands and laws that are made clear to our understanding through immediate revelation. And what does this new life and light require of thee but "to do justly, and to love mercy, and to walk humbly with thy God ?"

For Friends' Intelligencer and Journal.

WORDS OF ENCOURAGEMENT.

"When Israel went out of Egypt, the house of Jacob from a people of strange language, Judah was his sanctuary, Israel his dominion. The sea saw it, and fled, Jordan was driven back. The mountains skipped like rams, and the little hills like lambs.

"What ailed thee, O thou sea, that thou fleddest; thou Jordan that thou turnedst back ?

"Ye mountains that ye skipped like rams, and ye little hills, like lambs ?

"Tremble, thou earth, at the presence of the Lord, at the presence of the God of Jacob, which turned the rock into a pool of water, the flint into a fountain of waters." (114 Ps.)

Herein is a representation of the power of the Infinite Jehovah who did marvelous things in the land of Egypt, in the field of Zoan, and still manifests the same to those whose whole trust is placed upon him, making a way where to human conception is seen no way, removing difficulties compared to the sea, the mountains, and the little hills, out of the way; making that which is hard to human nature become easy, and even bitter things sweeten his boundless love to the children of men.

O ye, who may be passing through the waters of affliction, remember the promise: "When thou passest through the waters I will be with thee, and through the river it shall not overflow thee. When thou walkest through the fire thou shalt not be burnt, neither shall the flames kindle upon thee."

There is encouragement to every tried, tribulated soul, to cleave to that Power which has sustained the righteous in all ages, whose arm is not shortened that it cannot save, who even hears the cries of the poor and needy ones, and will bless his humble, depending children with an everlasting blessing in his kingdom of righteousness, peace, and joy; when done with the conflicts of time, to dwell with purified spirits, whose names are written in Heaven giving glory, and honor, and praise to his name forevermore.

Fallston, Md. Rebecca Price.

The world we inherit must have had an origin; that origin must have consisted in a cause; that cause must have been intelligent; that intelligence must have been supreme; and that supreme, which always was and is supreme, we know by the name of God.—*Scotch Divine.*

Sleep is to be regarded as a divine thing. It is akin to creation. One should never pass into it without adoration. It is a return into the hands of God to be new-made, the tire and age of the day to be taken out, and the freshness and youth wrought in.—*T. T. Munger.*

LETTERS FROM EUROPE.—XXIX. SOME CONCLUSIONS CONCERNING ENGLAND.

Liverpool, Sept. 13th, 1888.

Our two years' term of travel is drawing to a close. The *Etruria* is in port, and day after to-morrow we commence our homeward journey. We hope our time has been profitably, as it certainly has been pleasantly, spent. Beyond the mere knowledge gained I trust there has been some education of the heart and the feelings. On our voyage out we had the company of a Presbyterian minister of grave, indeed austere aspect, but, as we found, of kindly disposition. We parted with him at Antwerp; but six months later, walking one day in St. Peter's at Rome, I found him standing under the vast dome contemplating the grandeur around. I advanced to his side and saluted him with the question, "What are *you* doing in this pagan temple?" He turned and said pleasantly but seriously, "I am broadening my views." It was a modest and I think a wise answer. It is a selfish spirit that is content to seek only its own profit even if that profit consists in its elevation and purification; but even that object is aided by extending our sympathy and interest beyond ourselves and even beyond our friends and our country. Whatever takes us away from self and selfish objects removes an obstacle to spiritual advancement. Most of your readers will remember the fine apologue of Abou ben Adhem "who loved his fellow men," and whose name on the heavenly roll stood higher than all the rest. I would be happy to think I had communicated to your readers some portion of the interest that the condition of the people of Europe has awakened in me.

I revert now to a subject on which I fear it will be thought I have already said enough—the condition of the English people; but there is a lesson in it which I wish to present.

I have heretofore said that the lower class of English struck us at once as the most wretched we had seen in Europe. This impression we received before we had heard or read anything on the subject, but we had it subsequently confirmed in ways which I think I have stated. I wish to add that I have recently read some letters of an Englishman traveling in Germany who tells us what he did *not* see in that country but had seen at home. Abroad he saw no "preventable brutalities," "no sordid poverty," "no wasted and pinched bundles of rags, dirt and vice," "no tumble-down cottages reeking with typhoid and scrofula." And, finally, there has just been held at Bath a meeting of the British Association for the Advancement of Science, attended by 2,000 scientists including many guests from the Continent and America. At one meeting was read a paper on Social Legislation, which, as customary, was commented upon by members, and a visitor from Russia, a Mr. Kieler, remarked that nowhere in Europe were there such extremes of wealth and poverty as were to be seen in England. This no one disputed.

Now England prides itself on being the freest country in the world. Its policy is to leave to its people the most absolute freedom of choice in the

selection of employment and in its conduct, and to interfere as little as possible in what people consider their private affairs. This is the policy of "laissez faire" as distinguished from its other extreme, the socialistic policy, which prevails to some extent on the Continent and especially in Germany, where it is spoken of as Bismarck's state socialism. I have heretofore mentioned the provision which laborers are compelled to make for old age and sickness, and will only add that conscripts during their three years' term in the army are so taught to work that when discharged they can command 30 per cent. more wages than when they went in. Thus it is claimed that the German army costs nothing; the increased value given to the men as workers being equal to the expense,—probably an absurd calculation, but having some foundation of fact.

Then in England the people are left free to buy and sell where they will. The consequence is they buy, as I have before said, $120,000,000 worth of dairy and garden stuff from Belgium and Holland, while tens of thousands of acres of land just fitted for such produce are out of use, and hundreds of thousands of agricultural laborers are idle. Some manufacturers have their goods made by the cheaper labor of the Continent and brought over and sold as English made fabrics. Railroad companies, like all others, are free to charge what they please for their services, and put such rates on the carriage of fish, (for example), that more fish than would feed all the starving population of London, are, after being caught on the coast, thrown overboard again, because railroad rates are prohibitory. And it was stated at an agricultural meeting at Bath last week that it cost 25 per cent. more to send cheese from that city to London than to send it thither from New York or Canada, although, besides the ocean voyage, the railroad distance from Liverpool to London is twice as great as from Bath to London.

Then people are free to go and come. Immigration is unrestricted, and the Pole fleeing from Russian tyranny, and the Jew driven out of Germany by the anti-Semitic feeling which the Government vainly tries to suppress, drift over to England and find refuge in the slums of East London. Strange to say, the greater number prosper under circumstances which ruin the English. The Jews, says a writer who dwelt among these people to learn their wants, always rise out of the mire in which all first land, because, as she says, "they are sober and their women chaste"; while with the English of the slums the reverse is the case. Of course the immigrants are as much hated as the Chinese are with us.[1]

Such is the condition of the working class, in the freest country in Europe and the richest in the world. And I think we may read in it a most important lesson, which is this: That where all the people are left free to struggle for the good things of the world and the necessaries of life by all peaceful means, differences of mental qualifications produce even greater extremes of wealth and poverty than did the differences of physical force in the past ages of force and violence. As has been truly said, divide equally all worldly goods on Monday morning, and on Saturday night some will have nothing and others have all. It is more true of wealth than as Jefferson said, it was of power,—that it is always stealing from the many to the few. This process has gone on at an unexampled rate in our own country, and it is accelerated by modern business methods. It would take a long time for a man to lay by money enough to purchase a railroad, and some time then to find one for sale. But our methods render the acquisition easy. Railroads are divided into small shares which are always for sale and can be bought one at a time; and moreover when one has acquired a bare majority of the shares, he virtually owns the whole. And the prevailing tendency is thus to convert all productive properties into stock, and so to make them the prey of the shrewd and avaricious. I see nothing to prevent in America the condition of things that prevails in England. We are of the same race. The spirit of our laws and most of their provisions are the same, as are our religion and the fundamental ideas which regulate our conduct. We have already an enormously rich class, and if it be true that in the streets of New York every day there are a hundred thousand people who do not know where they shall find a lodging for the coming night or a breakfast next morning, we have the beginning of a Pariah class. The incidental glimpses of the wretchedness of that class given in the police reports in London must have drawn tears from many eyes.

But of all the wretched classes in England, the lot of the little children is the worst. Hundreds of thousands of them,—millions perhaps,—are the property of brutal fathers and lewd mothers. At the earliest possible age they are sent into the streets to get money,—any how. They are often forbidden to come back to the home without bringing so many pence. The police find them at midnight cowering in doorways or in obscure corners, having failed to make up the required amount and afraid to return to the savage punishment that awaits their involuntary disobedience. The stories of wife-beating and child-beating that appear in the police reports are simply amazing. The police, it seems, may interfere if a parent strikes and bruises the child or inflicts other visible injury. Short of this it is within the right of "reasonable correction." But for starvation, neglect, or other such maltreatment there is no remedy. "If it were a dog," a police magistrate is reported to have said, when a case of cruelty was reported, "I could interfere, but for a child I can do nothing under the circumstances."[2] The magazine writer who reports

[1] A remarkable expression of this hate occurred a few days ago in a Magistrate's Court in London. A Pole applied for a summons against an employer who withheld his wages The magistrate at first refused it, telling the Pole he had no business to come to take the bread out of Englishmen's mouths. Being remonstrated with, he said he would grant the summons, but hoped the man would not succeed in getting his money. Considering the respectable character of the London magistracy, this was an extraordinary exhibition of hostility in one who was to try a cause judicially.

[2] Upon a similar application to a magistrate, the child was brought into court. It was an emaciated elf, said to be eighteen months old. The physician said at that age it ought to weigh twenty-eight pounds. It weighed *seven!* The little creature regarded every one with terror, and when any one offered to touch it cried out, "no beat! no beat!" Fortunately, the poor little body contained enough bruises to entitle it to the protection of the law. Can it be true that "of *such* is the Kingdom?"

this says the case is otherwise in America. I trust it is so.

Now what is the cause of all this? It is not simply low wages, because the wages of the lowest class is in England,on the whole, higher than on the Continent. The Catholics say it is due to the failure of Protestant Christianity, and I am not sure there is not something in this. The clergy of the Roman Catholic Church in Catholic countries do not neglect even the very lowest of the people. They really go out into the highways and by-ways to seek,—victims, if you please. They never expel a man from their communion for bad conduct or because he brings discredit on the church. They forgive him seventy times seven times. They make him a member of a Sodality in honor of some saint; make him brush his clothes, put on a clean shirt, or at least wash his face; they put him into a procession and perhaps give him a banner to carry, or a cord to hold that steadies it. And when the parade is over, they take him to the church to hear a discourse on the special merits of the saint in whose honor all this is done. It is I think a weakness of the Protestant denominations that they are comparatively small, and in some sort rivals, and therefore jealous of their respectability. They cannot afford to tolerate black sheep in the fold, and the temptation is strong to cast out any disreputable member. Their good work is therefore outside of their congregations mostly. A church that numbers a hundred and sixty millions is moved by no such motive. Whether the Catholic church could rescue the English lowest class may be doubted, even if it were given a free hand. Certainly Protestantism can not. The clergy of the Church of England have come to a general resolution to keep their churches, like the Catholic churches, open all day, but this certainly will not have much effect. Money has been poured out like water doing much evil with much good. Some think more evil than good. Judicial punishments, from the gallows and whipping post down to transportation, have been tried and have failed to make good citizens and honest men of creatures who have been trained to vice and crime from their birth up to the age at which the law holds them responsible for their acts. There are signs of a recognition that the plan of letting the tree grow wild until it is gnarled and contorted and then undertaking to force it into shape and symmetry is not as apt to succeed as the plan of watching and guiding its growth, and that it is better to pinch off buds that appear in the wrong places, than to wait and have to lop off limbs. In other words, there is a growing suspicion that the best way to make the people honest and orderly is to train up the children in the way they should go. At present the suggestion that the sacred rights of parents to bring up their children as ruffians, thieves, and harlots are to be interfered with, rather shocks the sense of the community; but a daring magazine writer has ventured to print an article asserting "the rights of children," a phrase, so far as I know, never heard before. It will take time to familiarize the people with the idea, but in time it will prevail, and the next generation may possibly see public officers inquiring into the moral condition of one's children as they now do into the sanitary condition of one's house. But this is an astounding proposition to put on paper, and the daring writer above referred to has not ventured to suggest it, though it inevitably follows from her contention, (for of course it is a women), that children have rights which the parents are bound to respect.

In the meantime the country which of all Europe has the most wealth and the most freedom in civil and religious matters, has at the same time an immense number of brutalized and degraded people, yet all of the same race and all akin, such as are not found elsewhere on the face of the globe. Of that country our own is an off-shoot, and has derived from it our language, laws, institutions, religion, and modes of thought. We are engaged with equal if not greater vigor in the pursuit of wealth, and what is to prevent the production of a similar state of affairs?

With this query I take my leave of your readers and close a series of letters begun more than a year ago, in a tone much less serious than that they have since taken on.

JOHN D. MCPHERSON.

THE DIVINE SPARK WITHIN.

LOOK not up for God; look not out for him, he is inmost; inmost to the universe, inmost to the individual soul. That child was divinely taught, who answered to the question, "How great is God?" "He is so great he is everywhere, and so small he is in this little heart." No doubt the Divine fills the universe; but that little incarnation of divine life within ourselves concerns us most intimately. If we keep open house to that, the universe may come in with it, as much at least as our pitcher will hold. The only way to find God present everywhere, is first to find him within; and when the spark of divine love, the hidden impulse to good, is found, to give it air, fan it to a flame, and deliver ourselves to its authority, placing all that we have and are at its disposal. Let us make this gracious guest the master of the house; so may it abide with us. Let selfish will become so absorbed in love divine, that we cannot distinguish between our own desire and the promptings of the Heavenly Spirit. So shall the Spirit bear witness with our spirits; so shall we become at one with God; so shall we be daily nourished with hidden manna, watered from the fountain head, and vitalized by the sacred flame of life and love that is inmost in all things.

To some persons this is all incomprehensible. That they have the power of conscious union with God, it is not possible to doubt, or they would not be human. But the power has been too weak to exert itself, and the external life has overlaid it,—smothered it, buried it more or less deeply, according to the strength it had to struggle against the force of outside pressure.—*I. E. Crosby.*

THERE is no readier way for a man to bring his own worth into question than by endeavoring to detract from the worth of other men.—*Selected.*

PHILADELPHIA, TENTH MONTH 27, 1888.

EXTRAVAGANT SPEECH.

THERE is scarcely to be found in the whole flock of "little foxes that spoil the vines" a more mischievous one than extravagant speech. It so permeates all grades of society and all periods of human life, that we are sometimes almost ready to exclaim "who will show us any good?" or who will tell us the sober truth, or present the colorless statement, that we can ourselves determine the right or wrong of the whole matter? It affects very often the earnest, hard-working reformer who is so zealous in the cause that he has espoused that it is difficult for him not to exaggerate, when the wrong he so desires to set right appears and really is so very monstrous. Yet the ready defense even of vice is often provoked by the manner of the attack upon it and the wisdom that has its foundation on the rock of truth is needful to make permanent and effectual headway against it. So many good causes are hindered by this unfortunate handling that one longs for the tenderness and sweetness of spirit that characterized the Blessed One of Nazareth, ever fearless and plain-spoken regarding the evils of his time, yet never departing from the truth in order that the good might thereby triumph.

Quite recently we have been pained to observe in certain temperance publications, especially in some issued for the benefit of the young, many extravagant representations calculated to lower the standard of purity, and make too familiar the hideousness of vice. Many persons whose lives are good examples of pure living would willingly engage in more active temperance work, but for discouragements of this nature, so averse are they to be participants in presenting to innocent minds pictures of evil that might otherwise never be impressed. An exchange paper in giving utterance to a similar concern thus forcibly expresses itself: "The blighting effect of alcohol upon the physical and spiritual natures of man is startling enough without any attempt at exaggeration, while extravagant speech always weakens the cause. We trust that the era of the gutter man in temperance work is nearly at an end,—the man who has 'reformed,' and goes about exposing his spiritual ulcers and scattering broadcast in the minds of untainted youths the slang, profanity, and swagger which he acquired in the days of his sinful indulgence. We trust that the era of the statistician, physician, and student is well begun in the temperance field. Not *agitation*, but *education*, is what we need concerning temperance. The temperance press, as well as temperance organizations, must learn that there is an inseparable connection between pure speech and clean lives. The kingdom of heaven cannot be served by the methods or the language of the kingdom of darkness, which is also the kingdom of coarseness. Temperate speech best serves sober living. Above all, let temperance people have a conscience for the truth."

We have no desire to be over fastidious in these matters or place anything in the way of those who so patiently and prayerfully labor in this great cause —indeed we are workers with them—but we do plead for a more careful use of words, and a more thoughtful examination of the literature circulated that it be pure, clean, and free from exaggerated statements and illustrations of crime. Especially in the matter selected for school readings and recitations designed for committing to memory, and perhaps to be retained through life, let these present the beauty of purity and not burden the mind with dark pictures of erring lives. There is still danger of too great familiarity with wrong, and Pope's lines:

> "Vice is a monster of so frightful mien,
> As to be hated needs but to be seen;
> Yet seen too oft, familiar with her face,
> We first endure, then pity, then embrace,"

remain a truth even in our advanced age, with all of our boasted progress in civilization. Cultivate truthful expression, "for there is no virtue that derives not its original from truth, as, on the contrary, there is no vice that has not its beginning in a lie. Truth is the foundation of all knowledge and the cement of all society."

MARRIAGES.

FURNAS—UNDERWOOD.—On the 27th of Ninth month, 1888, at the residence of the bride's parents, in Clinton county, Ohio, under the care of Miami Monthly Meeting, Edwin S. Furnas and Harriet E. Underwood.

PRICE—WEBB.—Tenth month 18th, 1888, at the residence of the bride's parents, under the care of the Monthly Meeting of Friends of Philadelphia, William L. Price, son of James M. and Sarah L. Price, and Emma, daughter of William B. and Rebecca T. Webb.

ROGERS—EAVENSON.—At Race street meeting-house, Tenth month 18th, 1888, under the care of the Monthly Meeting of Friends of Philadelphia, Howard Taylor Rogers, son of Dr. Sarah T. and the late Clayton B. Rogers, and Mary A., daughter of Alban T. and the late Susan B. Eavenson.

SELLERS—WORRELL.—At the residence of the bride's father, Tenth month 18th, 1888, under the care of Wilmington Monthly Meeting, Howard Sellers, son of John, (Jr.) and Ann Caroline Sellers, of West Philadelpia, and

Sarah Mendinhall, daughter of Granville and the late Mary S. Worrell, of Wilmington, Del.

SMITH—ROBERTS.—At the residence of the bride's mother, Norristown, Pa., under the care of Gwynedd Monthly Meeting, Tenth month 16th, 1888, Robert D. Smith, of Philadelphia, son of Dr. Jervis and Sarah P. Smith, of Horsham, Pa., and Lucretia M., daughter of Ruth and the late Isaac Roberts.

WILLIAMS—CONROW.—At the residence of the bride's parents, Cinnaminson, Burlington county, N. J., Tenth month 17th, 1888, under the care of Chester Monthly Meeting, held at Moorestown, N. J., James W. Williams, of Waterford, Loudoun county, Va., son of William and the late Mary E. Williams, and Hannah, daughter of Clayton and Mary S. Conrow.

DEATHS.

APPLETON.—Tenth month 16th, 1888, at Langhorne, Pa., Hannah Gillam, widow of Lewis Appleton, in her 64th year; a member of Middletown Monthly Meeting.

ATKINSON.—At his residence, Cerro del Ojito ranche, near La Jara, Conejos county, Colorado, Tenth month 13th, 1888, John Spencer Atkinson, son of John and the late Annie O. Atkinson, in the 31st year of his age.

BOLTON.—Ninth month 27th, 1888, Jason Bolton, in the 75th year of his age; an esteemed Elder of Little Britain Monthly Meeting.

The circumstances attending the death of this valued Friend are particularly sad. In company with his wife he left his home on First-day morning to attend the funeral of his brother-in-law, John Barnard, of London Grove, Chester county. Shortly after their arrival at the residence of the late J. B., he was taken ill and the day following was unable to leave the house, although his illness was not thought serious. It proved otherwise, however; he continued to grow worse, and although he had the benefit of the best medical skill, he departed this life on Fifth-day following.

His remains were removed to his late residence, Drumore, Lancaster county, and interred from there on the 2d of Tenth month, accompanied by a large concourse of relatives and friends who mourn the loss of a just man, a true Christian. B.

HALL.—At Radnor, Pa., Tenth month 18th, 1888, Barclay Hall, in his 56th year; a member of Radnor Monthly Meeting, Pa.

LEVY.—At Pensacola, Fla., Tenth month 17th, 1888, Mary L. Kennedy, wife of Charles P. Levy, Jr., and daughter of Catharine A. and the late Samuel W. Kennedy, of Philadelphia.

REES.—Elizabeth J. Rees, daughter of Henry and Mary G. Atherton, Ninth month 22d, 1888, near Wessona, Marshall county, Ill., aged 29 years, 4 months, and 12 days.

A solemn meeting was held in Friends' meeting-house on the 24th, after which her remains were interred in the burying ground at Clear Creek. For several years a consistent member of Clear Creek Monthly Meeting, this Christian friend endeared herself to all who knew her. We mourn not as those without hope. A. M.

ROOT.—At Brooklyn, N. Y., Louis A., aged 2 years, son of Howard C. and Jane J. Root, formerly of Philadelphia, and grandchild of Elizabeth N. and the late Stephen Cox.

WOODNUTT.—At Colorado Springs, Col., Tenth month 17th, 1888, Clement Acton Woodnutt, M. D., in his 25th year, son of Thomas and Hannah H. Woodnutt, of Philadelphia; a member of the Monthly Meeting of Friends of Philadelphia.

SCRIPTURE LESSON, No. 42.

ELEVENTH MONTH 4, 1888.

TOPIC: DISOBEDIENCE BRINGS SUFFERING.

GOLDEN TEXT.—"Incline my heart unto thy testimonies, and not to covetousness."—Psalm 119 : 36.

READ Joshua 7 : 1–12.

THE warriors of Israel had utterly destroyed the city of Jericho with all its inhabitants, save only Rahab and her family, whose lives were spared because of the kindness she showed to the spies sent out by Joshua, before he encompassed the city. Now they were prepared to make an attack upon Ai, a city to the northwest of Jericho; but before starting out, Joshua sent men as he had done at Jericho, to see the condition of the city and bring back a report. Our lesson gives the result of that effort, and the disastrous consequences that followed the attack. It was not so large a city as Jericho, but must have been surrounded by walls, as were all the large cities of ancient times, though we read of the Israelites building fenced cities. It was necessary then to have the cities enclosed as a protection against lawless tribes that lived by plunder, and had no settled homes, and from the savage beasts that were far more numerous than they are now. The Israelites had found the capture of Jericho so easy, that probably they had not thought it a very hazardous undertaking to attack Ai.

Now that they were defeated, an inquiry as to the cause was instituted, and it was soon discovered that a portion of the spoil found in Jericho and devoted to the Lord, had been stolen by one of the warriors and secreted, and it was this act that had brought defeat to the army of Israel.

And Joshua rent his clothes, etc. This was the usual way by which grief or disappointment in an undertaking was manifested.

Israel hath sinned. It was Joshua's duty to search our the transgressor, for as long as he remained unknown, the people could not prosper. This opens to our view the strict discipline maintained among them, yet their leader must not lie down before the ark and spend the hours in mourning over the disaster that had befallen his army. The voice came to him, "Get thee up," search out the offender and bring him to see the wrong he hath committed in taking that which was devoted to God for his own use, and let him suffer the punishment that his sin has brought upon him. It was for withholding a part of that which had been given to the church that Ananias and Sapphira were accused by Peter. Acts 5: 1, 2. It was considered a deadly sin to appropriate what belonged to the Lord to individual use. Disobedience brings its own reward, whether it is shown to parents, to teachers, or to the divine word in our own souls. It is the beginning of a course that is downward and destructive of all true happiness. How often does the wayward child in the penitence that a sense of wrong-doing and the necessity for reform bring, confess that the first wrong step was disobedience to the will of a loving parent.

Our own lives and all history are so full of examples of suffering wrought upon man by disobedience of God's laws, that they readily occur to each mind in considering this subject. But to few of us do they come with sufficient force to prove a determent when

we are tempted. Few of us will go so far into sin as to be dishonest, to tell a deliberate falsehood, or to keep what belongs to another; but the sin of covetousness is very common. We allow ourselves to wish we had something *like* that which some one else has,—so we put our thought, and we say it is not coveting their property. But the unhappiness comes, we are discontented and miserable; the good things we have seem worthless, and the whole world is dark because we want what we have not, and it is not in our power to obtain, without wronging some one else.

In the United States Treasury there is quite a sum of money, called "conscience money," returned by people who have purloined funds belonging to the government without being discovered. The suffering their conscience has given them has caused them to return the money, sometimes after many years,—in which case the interest is generally added.

It is not always material things that are coveted, but praise, love, the reputation of another. In this case the "unruly member" often drops a disparaging remark, which robs as genuinely as does the burglar. What suffering follows this evil attempt to raise our own value by depreciating some one else! In the middle of the night one will be wakened with a guilty blush of shame at the thought of the unkind word. Money stolen may be returned, but false words can never be recalled. Truly says the poet:

> "He that filches from me my good name,
> Robs me of that which not enriches him
> And makes me poor indeed."

After we have felt the suffering which results from disobedience, there is but one way to relieve ourselves. We must repent and reform. God is not afar off. He is ever ready to receive the penitent prodigal. The Psalmist says, "The Lord hath heard my supplication; the Lord will receive my prayer." But the soul that has sinned can never be as it was before. As in the well-known story of the boy whose father drove a nail in a post for every one of his bad deeds, and drew one out for every good one, when the last nail was drawn, "The nails were gone, but the scars were still there."

For Friends' Intelligencer and Journal.

A TOUR IN THE BRITISH PROVINCES.

Leaving Philadelphia the 10th of 7th mo. to attend the Prison Congress at Boston, we stopped two days at Newport to enjoy its attractions, and arrived in Boston the 13th where we were completely engrossed for one week attending the sessions of the Congress. The local Committee having charge were fully alive to the work and entered into it vigorously. The mornings and evenings were devoted to reading papers, and these were followed by discussions and general business. Many of the papers were of vital importance to the community at large. The afternoons were reserved for visiting the various penal institutions around the city. One that interested us most was the Reformatory for women at Sherborn, Mass., of which Mrs. Ellen Johnson, as superintendent, has absolute control; receives and disburses all the funds, makes all the purchases from a piece of muslin to a horse, has the oversight of an extensive farm, dairy, aviary, and has introduced silk culture, interesing the inmates in all these matters. She has made it so productive that it pays the expenses of the prison. There are more than 200 inmates who are taught to operate the sewing-machine, make vests, coats, and do general housework; many of them are indentured to farmers during part of their sentence. She said she never inquired into their past lives, that door being closed when they entered Sherborn, trusting to a better future. All her employes are women except some farm laborers. She has a female minister and a physician on the premises to minister to their spiritual and physical necessities. Mrs. Johnson, who is a power in herself, took the lead and conducted the delegates over the premises; the only regret was that time would not admit of our inspecting it as thoroughly as it richly deserved. From thence we went to Portland, Maine, intending to go to Poland Springs, but ascertaining that there was no place for us we turned our attention to the British provinces; so after remaining a few days we took steamer for St. John, New Brunswick, and across the Bay of Fundy to Annapolis Royal, Nova Scotia. This is the site of the first town settled in Acadia; here are the remains of an old fort that shows signs of the sieges it has been subjected to. This is a great country for fruit of all kind except peaches, the raspberries were the largest we ever saw, being ¾ of an inch in diameter.

Annapolis has 600 inhabitants and is the seat of government of a county of 6,000 persons, yet there was not one criminal within the walls of its prison. After tarrying eight days in this beautiful spot we journeyed by rail through Middleton, where the tourist may branch off to the celebrated Wilmot Mineral Springs whose waters are said to cure the thousand ills flesh is heir to. Passing through the valley of Annapolis, the great apple-growing country, our eyes beheld a richly cultivated landscape with ranges of uncleared mountains for a background. The next point, Kentville, is beautifully situated in a valley of the Cornwallis river and near the famed "Garden of Nova Scotia." Nearly all of this part of the country is protected from the high tides (sometimes 70 feet) of the Bay of Fundy by large dykes, built mostly by the old Acadian French. A little farther on we stopped at a small station and realized that we were in the land of Longfellow's Evangeline.

> "In the Acadian land, on the shores of the Basin of Minas,
> Distant, secluded, still, the little village of Grand Pre
> Lay in the fruitful valley."

Traveling on we reached Windsor, situated on an elevation commanding a view of the Basin of Minas, and the country around. Here is Kings College, the oldest university in the Provinces, also "Clifton," the late residence of the great humorist, Judge Haliburton—Sam Slick. The railroad runs for nine miles around a lovely sheet of water called the "Bedford Basin" surrounded by hills; it is said to resemble the scenery of the Scottish lakes. At this point we enter Halifax, the close of our afternoon journey. This city seems to have been finished years ago, yet there are many points of interest to visit, the Park, and the Bay front, with their beautiful drives, the various

forts, that were erected while the French held possession of the city. The principal one was on elevated ground overlooking the country around and garrisoned by soldiers in the gay British uniforms of red. These are met at all times on the street, a novel sight for an American. In its prison we found sixteen men, two women, and one debtor. After passing a few days here we returned to Annapolis and across the basin of Annapolis to Digby, the famed watering place of the Provinces, celebrated for its codfish and herring. Here we had a beautiful drive of nine miles to the village of Bear River, which is situated on a river of the same name, in a valley, the descent to which being so steep one would wonder what was the inducement to build there. The river is only navigable here at high tide. In Digby prison there was only one inmate, sentenced for 30 days for an assault. Recrossing the Bay of Fundy to St. John we concluded to take a trip up the St. John River, "the Rhine of America." The scenery is charming and diversified. It is the largest body of fresh water on the Atlantic seaboard between the St. Lawrence and the Mississippi, its length being 450 miles. The Indian name was "Looshtook" meaning "Long River." It is navigable for vessels of 150 tons to Frederickton—the capital of New Brunswick—a distance of 84 miles from the Bay of Fundy. Smaller steamers can ply to Woodstock, 65 miles farther, and occasionally to "Grand Falls," 225 miles from the sea. Here the river descends precipitously 180 feet. The scenery at this point is said to be grand and picturesque. The St. John and its tributaries are navigable for 1,300 miles. Very few landings were made, the passengers being received and taken off in row boats. It is a great timber country, principally spruce. We saw immense rafts of these logs being towed down to the saw mills.

The next day after our arrival in Frederickton we inspected that city. The House of Parliament is a substantial granite building situated in a park and surrounded by forest trees of large growth. There are some manufactories, fine stores and residences, and two draw-bridges, about a mile long, one for ordinary travel, the other a railroad bridge. On the bank of the river were two Indian canoes made of birch bark, eighteen feet long, one of them a solid piece of bark and so light that it could readily be carried in one hand. The door to the ladies' entrance at the "Queen Hotel," was standing open all day and no one to guard it and yet with all the beautiful articles that decorated the hall nothing was disturbed. Does not this speak well for their honesty? In their prison there were four men, one woman, and one debtor. I was surprised to learn from the lady who was acting warden in the absence of her husband, that the young woman who admitted us, was a prisoner. She was not twenty years old, pretty and ladylike; she had been committed for drunkenness, it having occurred frequently since she was eight years old. She had full liberty of the prison yet never transgressed, was very happy and much esteemed, yet could not withstand temptation when with her old associates. On our return to St. John by boat, our genial Captain pointed out many beautiful summer resorts that looked very enticing and restful. In this city of 30,000 inhabitants we found in its prison twenty-seven men, fifteen women and one debtor. In all the places named the rooms were large and airy, their diet was mostly bread and water, varied occasionally by a quart of soup for dinner and some tea for breakfast or supper; no meat was allowed them, but their friends were at liberty to furnish them anything they might wish. The warden introduced us to John R. Marshall, who had been Chief of Police for twenty-five years; he kindly escorted us over a portion of the city, pointing out many places of interest. In his official capacity he has the authority to grant licenses. In 1870 there were 283 licensed taverns and fifteen wholesale places, but in 1887, under the new law that requires a fee of $500, and the signers to the application to be real estate holders, and residents of the ward, the number decreased to forty-five licensed taverns and twelve wholesale. In 1870 there were 2,700 arrested, 1,900 being for drunkenness; in 1887 there were only 889 arrests, of which 493 were for drunkenness. We traveled for weeks in the Provinces without hearing an oath, for profanity there is believed to be not only wicked but vulgar and debasing, and we only saw one person intoxicated, for it is a disgrace to be seen drunk on the street. While liquor can be had in abundance and no attempt is made at concealment, it was a surprise that no cases of intoxication were noticed. The pulpit and the press exert their influence against drunkenness and the sale of liquor, thereby creating a more healthy moral sentiment. It is said a marked change has taken place in the last twenty years in regard to profanity, and that the young are growing up with purer speech than formerly. The absence of these terrible habits was a pleasant feature for which they are to be congratulated.

In St. John, as in Annapolis Royal, we found several persons whose family had been connected with Friends. They referred to their ancestry with a great deal of pride, and said a visit from ministering Friends would be very satisfactory and highly appreciated. Also at Granitville on the other side of Annapolis River there were still some families of Friends.

After having such a delightful experience in the Provinces, we bade adieu to St. John the 17th of Eighth month, taking the steamer for Portland. Soon after leaving the wharf the fog settled down so heavily we could not see the length of the vessel; the fog horn was sounded all day and night, making us feel very doleful, but we arrived in Portland only two hours late, being thankful for our safety. From thence to White Mountains, spending a day on Mount Washington where the thermometer was thirty degrees and the wind blew fifty miles an hour, making it difficult to maintain our standing. Thence to Montpelier and Burlington, Vermont, across Lake Champlain, to Port Kent, where stages were in waiting to take us to the Lake View House, which has an elevation of 500 feet above the lake, and a view of the Green Mountains on one side and the Adirondacks on the other. A short walk brings the traveler to the Ausable Chasm. This wonderful work of nature is the channel of the Ausable river; it forms a

cañon with sides of rocks sometimes nearly two hundred feet high almost perpendicular, the tops and sides being covered with cedars, giving a dark hue to the water. There are some fissures or gorges where the rays of the sun never penetrate; others are bright and beautiful and covered with moss, ferns, and flowers. The chasm is two miles long. In places the river is fifty feet wide, in others it narrows to ten feet, is of great depth and still; sometimes it dashes with great fury against its rocky confines, producing many beautiful cascades and rapids. The path, bridges, and stairways are kept in good repair, and the tourist may go the entire distance without much fatigue. The last half mile is traveled by a boat which is controlled by two trusty men who paddle you through and over two rapids with perfect safety, —this is one of its enchanting features. From here we went by Lakes Champlain and George to Saratoga, the renowned watering resort. From thence to Sheldrake on Cayuga Lake, where we tarried eight days and found it to be a delightful and restful spot. From here we returned to our home.

HARRIET W. PAIST.

For Friends' Intelligencer and Journal.

THE CRICKET FAMILY.

"To have a cricket on the hearth is the luckiest thing in the world," says Dot Peerybingle in that cheery and yet pathetic picture of home life, Dickens's "Cricket on the Hearth." No one who has read the Christmas Books, "written," says the author, "to awaken some loving and forbearing thoughts never out of season in a Christian land," can help associating the chirp of this "genius of the hearth and home" with the "fireside song of comfort" which the tea-kettle sends forth; with pleasant pictures of unselfish devotion; with visions of cheerful comfort and welcome home.

The house cricket, whose presence used to be hailed in England as a sign of good luck, and whose music gave hope and comfort to simple, honest John Peerybingle and his wife, is not a native of the United States, but crossed the Atlantic long ago and is now to be found in many parts of our country. It is fond of warmth, and the old-fashioned brick fireplace used to be one of its favorite retreats.

With the common black cricket (*Gryllus abbreviatus*) we are perhaps more familiar. Hundreds of them may be seen on any bright autumn day hopping along the country roads in company with their more agile cousins, the grasshoppers. They are easily caught and are well worth careful observation, for if you know a cricket thoroughly you know a great deal about all insects. Queer, grotesque little creatures they are! Some naturalists regard the slender antennæ, which protrude from the front of the head and wave constantly to and fro, as organs of hearing while others regard them simply as organs of touch. That they are very sensitive can be easily proven, for at the slightest touch they are instantly withdrawn. The jaws do not move up and down but close over each other from side to side. Just back of the mouth are the maxillæ which aid in holding and biting the food. Rather complicated visual organs complete the head or first body region.

To the thorax or second body region are fastened six legs, the hinder pair larger and developed for jumping; also two pairs of wings, the under ones thin and folded like a fan, and the outer pair thicker and darker.

Two stylets are at the extremity of the abdomen, or third body region, and the female is also provided with a long ovipositor by which her eggs are introduced into the earth.

So much for external appearance. Colorless blood, penetrating all space not occupied by the internal organs, a breathing apparatus composed of small holes on the lower side of the abdomen and a network of tubes through which the air circulates, a rudimentary nervous system, and a well developed digestive system complete this very typical member of the *Orthoptera*.

Crickets are violinists, not vocalists. The sound they produce is made by rubbing the horny base of the outer wing upon that of the inner one. A similar sound is made by grasshoppers, locusts, and katydids. It is the call of the male to his mate and O. W. Holmes must have been indulging in considerable poetic license when he said in his lines "To an Insect":

> "Thou art a female katydid!
> I know it by the trill
> That quivers through thy piercing notes,
> So petulant and shrill."

These crickets do not object to captivity. I have had a pair imprisoned in a glass for several weeks and they seem quite cheerful and healthy. They are very fond of water and, judging from the apple leaves and other things they devour, the amount of vegetation consumed by a small army of them during the summer must be considerable. I must confess that they have not advanced beyond the stage of cannibalism, for they killed and ate a small cricket of another kind which I confined with them.

Several other interesting crickets are found in Iowa. The large, brownish-yellow mole cricket (*Gryllotalpa borealis*) inhabits wet places and burrows in the ground with its broad, spade-like fore feet. The small brownish *Nemobius* is quite common and seems more social than some others. The *Oecanthus* does not look much like a cricket, having large membraneous wings, a light colored body, and a short strong ovipositor with which it bores into the stems of grapes and raspberries, causing them to wither after the eggs are deposited.

Far back in the Paleozoic Age when the abundant vegetation of the coal period began to cover the slowly rising continent, in the dense, damp forests of tree-ferns, club mosses, and *Sigallaria* the earliest representative of the cricket began to chirp; and though the forests which first resounded with its music have given place to widely different forms of vegetation, the cricket, though perhaps modified to suit his environment, still chirps on—the emblem of cheerfulness and patient hope.

LIFE is too short to dwell on failures—push on to new success.—*The Standard.*

THE SOUTHERN COLORED SCHOOLS.

The annual meeting of the Trustees of the Schofield School at Aikin was held in New York City on the 17th instant, and the same officers were continued for another year: President, William Lloyd Garrison; Vice President, Mary T. Stone; Secretary and Treasurer, Martha Schofield; Finance Committee, John T. Willets, Henry Haines, William M. Jackson; Educational Committee, Martha Schofield, John. G. Phillips, William T. Rodenbach. The beginning of an endowment fund has been made; it now amounts to $7,500. John P. Lapham, of New York City, was elected a Trustee to fill the vacancy caused by the death of his father, Henry G. Lapham.

The session of the Aikin School was expected to begin this week, with the same principal teachers as last year. The opening was deferred a week or two, on account of the cotton picking, as that is the main source of income for some of the children in the country.

The erection of a new school-house at Mount Pleasant was begun some weeks ago, on a lot which was given for the purpose by the town authorities. The cost of the new building will be about $2,500, and this sum has been raised by Henry M. Laing and other devoted friends of the school. The session will be opened a little later, in charge of Abby D. Munro, as usual.

THE FIRST-DAY SCHOOLS.

MEETING OF ABINGTON UNION.

The half-yearly meeting of Abington First-day School Union was held in the meeting-house at Quakertown, on Seventh-day, the 20th instant. There was a good attendance, including delegates from all the schools in the Union except Stroudsburg. Reports were also received from the different schools, all of them indicating a maintenance of active interest, and an encouraging attendance of young people and children. (There are schools at all the meetings except Byberry and Warminster.) Horsham school proposed, and the Union approved, that the Yearly Meeting Association, (to meet in Philadelphia on the 3d prox.), be asked to prepare a blank form for all the schools in the Yearly Meeting, to report their number of officers, teachers, attendance, etc., to the monthly meetings, in order that these statistics may go regularly up to the Yearly Meeting, in a systematic and uniform way, and be conveniently talulated by the clerks in a general report.

There were a number of interesting essays by different members of the Union, with readings, recitations, etc. Among those who took part were Dr. Franklin T. Haines, of Rancocas, N. J., Samuel Swain, of Bristol, and others. The Quakertown Friends kindly provided refreshment at the noon hour, and made the visitors welcome, and there was a general feeling of satisfaction that the meeting had been held there. It was agreed to hold the next at Upper Dublin, at the usual time,—the third Seventh-day of Fourth month.

A passionate reproof is like a medicine given scalding hot; the patient cannot take it.

TRUST.

We know that into outmost space
Snatched sheer of earth, the spirit goes
Alone—stark—silent; but who knows
The awful whitherward?—the place
Which never deepest piercing eye
Had glimpse of, into which we die?

Who knows?—God only; on His word
I wholly rest, I solely lean—
The single voice that sounds between
The Eternities! No soul hath heard
One whisper else, one mystic breath
That can reveal the why of death.

I think of all who've passed the strife;
Pale women who have failed to face
With bravery of common grace
Their daily apprehensive life,
Who yet with straining arms stretched high
Through ecstasy, could smile and die.

Of little children, who would scare
To walk beneath the dark alone,
Unless some hand should hold their own,
Who've met the terror unaware,
Nor knew while breathing out their breath
The angel whom they saw was death.

And I am comforted, because
The love that bore these tremblers through
Can fold its strength about me, too;
And I may find my quailing was
As theirs, a phantom that will fly
Dawn smitten, when I come to die.

Therefore, I cleave with simple trust,
Amid my hopes, amid my fears,
Through the procession of my years,
The years that bear me back to dust—
And cry, "Ah, Christ, if Thou be nigh,
Strong in Thy strength I dare to die!"

—*Margaret J. Preston.*

VALIANT FOR THE TRUTH.

"Ye should earnestly contend for the faith which was once delivered unto the saints."—Jude 3.

Unfurl the Christian standard! lift it manfully on high
And rally where its shining folds wave out against the sky!
Away with weak half-heartedness, with faithlessness and fear!
Unfurl the Christian standard, and follow with a cheer!

In God's own name we set it up, this banner brave and bright,
Uplifted for the cause of Christ, the cause of Truth and Right;
The cause that none can overthrow, the cause that must prevail,
Because the promise of the Lord can never, never fail.

—Frances R. Havergal.

It speaks much, therefore, for Sheridan's personal character, and much for the American popular ideas which produce such sentiments in our soldiers, that at heart, like Grant, he had an utter abhorrence of war, having been known even to say that "the time is coming when the killing of a thousand men in battle will be looked upon as a thousand murders.—*Century.*

SIX LITTLE WORDS.

Six little words arrest me every day;
I ought, must, can—I will, I dare, I may.
I ought—'tis conscience' law, divinely writ
Within my heart, the goal I strive to hit.
I must—this warns me that my way is barred,
Either by nature's law or custom hard.
I can—in this is summed up all my might,
Whether to do or know or judge aright.
I will—my diadem, by the soul imprest
With freedom's seal—the rule within my breast.
I dare—at once a motto for the seal,
And dare I? barrier 'gainst unlicensed zeal.
I may— is final, and at once makes clear
The way which else might vague and dim appear.
I ought, must, can—I will, I dare, I may;
These six words claim attention every day.
Only through Thee know I what, every day,
I ought, I must, I can, I will, I dare, I may.

—*Chambers's Journal.*

THE GREAT FLOURING MILLS OF MINNEAPOLIS.[1]

The boys and girls who studied geography when the "Great American Desert" stretched blankly across their map of the "far West," and the Falls of St. Anthony were only marked as the head of navigation on the almost unnavigated waters of the upper Mississippi, have lived to see much of that desert blossom as the rose, or what is better, wave as the world's harvest field; while the beautiful, lonely waterfall has donned a working "apron" and gone to grinding up the harvests at the rate of forty million bushels a year.

Even after the possibility of raising wheat in Minnesota and Dakota was proved, it was long before the fact had more than a local interest to these settlers exiled by fate to these Siberian wastes, as eastern people imagine them. The deep frosts and scanty snowfall made it impossible to raise winter wheat successfully, and, with the old system of milling, spring wheat flour was dark and of poor quality, not worth the expense of transportation to a distant market. Not till 1871 was the "New Process" introduced by which the dark bran of the spring wheat can be thoroughly removed, and the most nutritious part of the berry lying next its closely adhering inner coat can be saved and made into the best flour in the world. The western spring wheat is richest in just this part of the berry, formerly wasted as the bran, and the Minneapolis mills grind nothing else. Its hardness is now the standard of excellence, the best being known as the Number One Hard.

The New Process machine was the invention of a French scientist, M. Joseph Perrigault, perfected by two Americans, Nathan La Croix and George T. Smith. To the late Cadwaller C. Washburn, ex-Governor of Wisconsin, belongs the honor of having brought to our country this new source of boundless wealth. Next to the Washburn Mill, the new process was adopted by the Pillsbury Mill, owned by ex-Gov. John S. Pillsbury, of Minnesota, and his brother, and their sons, formerly of New Hampshire.

[1]Arranged from Helen G. Ludlow's "Mill Powers on the Mississippi," in the *Southern Workman* for Tenth month.

Though the Washburn and Pillsbury Mills still stand at the head, other firms have found room for successful business, till twenty or more mills now use the water power of the St. Anthony Falls, supplementing it with steam power only in the dryest seasons. The statistics published in the Minneapolis *Evening Star*—of the grain and flour trade of the milling year just closed, Aug. 31st—give the wonderful record of wheat receipts, 47,735,400 bushels, which is an increase of 8,457,050 over last year; and of flour made, 7,275,440 barrels, over one million more than in 1887. The growth of the export trade has been proportionately great, the flour shipments having been over 6,000 barrels. The untimely frosts in August have seriously damaged the crops in Dakota and Minnesota, and very little "No. 1 Hard" has appeared in the samples thus far sent in, as I learn from Mr. J. Q. Adams, president of the Northern Pacific Elevator Company.

The "Pillsbury A" mill is the largest flour mill in the world, turning out in fact more flour than any other two in the world,—from 6,000 to over 7,000 barrels daily and grinding 9,500,000 bushels of wheat a year. The three Pillsbury mills together have a daily capacity of 10,500 barrels; in other words, could feed two cities the size of New York.

The "Pillsbury A" which I have just had the pleasure of inspecting, has a branch railroad of its own, connecting it with the various lines that pass through the city. Two hundred cars laden with wheat, flour, or refuse, ply in and out daily. Running alongside the building, the cars empty their wheat upon scales within. Each load is weighed and then lifted by buckets on an endless belt to the bins. The elevator holds 80,000 bushels of wheat, which is a supply for a little over two days. Stepping on to a "lift," we intercept it at this point of its transforming journey. Long wooden box tubes in which an endless screw revolves, extend from the bins. Looking in through the opening, our guide uncovers one of these "conveyers;" it is impossible to resist the optical illusion which makes the broad flanges of the revolving screw seem to be gliding along with the grain that is sliding through their serpentine folds. So conveyed it reaches "cleaners" and "separators" which deftly winnow and sift away the chaff, cockle seeds, and any other extraneous matter.

Thus, finally rid of its "tares," the good wheat passes on to new ordeals. Dropping now back to the first floor, it is caught and crushed and ground between successive pairs of chilled iron rollers, grooved with varying fineness and at varying angles. There are three hundred pairs of these in the "Pillsbury A," and they can break 2,000 bushels of wheat an hour. They are arranged in seven grades, with seven pairs in each set, so that the grain is broken forty-nine times. After each grinding, or "reduction," it is raised again to the top of the mill, to pass through "the diamond reels." These are long cylindrical frames, covered with bolting cloth of canvas or silk, of all grades of fineness, of from eighteen to one hundred and fifty-seven meshes to the square inch. The best quality lasts in use five years. Creamy, lustrous, and gauze-like but firm in texture, some of the fine

grades of the bolting silk are in demand among ladies for embroidery or painting, or for dainty neckties. Quite as dainty is their use in the mill, sifting out the velvety flour and pearly "middlings," and sending the more obstinate grains back to be further reduced.

The central part of the grain of wheat is softest and most easily ground. This is all that used to be saved in the old process, except in the Graham flour, which ground up bran and all. The harder layer which adheres so obstinately to the inner coat of the bran is, however, the best and most nutritious part of the wheat, as Graham knew. To save this "middlings," separate it from the poorer flour and purify it from the bran is the triumph of the "new process," the salvation of spring wheat and Western wheat fields. The softer, central part, yielding its flour first is easily separated. It is particularly poor in spring wheat, but we should never have guessed its present use. Most of it is shipped to England, our guide informs us, to be mixed with moulding sand, or *fed to oysters*.

After all its forty-nine crushings, the "middlings," now reduced to a coarse flour or meal, is still dark with obstinate specks of bran. The "middlings purifier," is the crowning glory of the New Process—its essential feature. The "Pillsbury A" has forty of these machines on each of four floors. In a frame of fine bolting cloth through which the middlings flour can pass, but gradually, it is shaken and shaken. The persistent bran particles have one weak point which proves fatal to them. They are lighter weight than the particles of flour—"like the chaff which the wind driveth away." A delicately adjusted fan creates a suction above the frame, and as its shaking tosses the brown and white atoms into the air, the light weights are caught up by the whirlwind, and whisked off on a horizontal current into a chamber where blanketed shelves await them, on which they can finally settle as must "dust to dust."

Is it not a pretty fairy story of science? Newton saw an apple fall to the ground, and beheld the law of gravitation. Perrigault saw the motes floating downward through a sunbeam in his room, and beheld—the "middlings purifier."

One more most "intimate enemy" remains to be disposed of. This is the wheat germ, which, indispensable as it is from the vegetable's point of view, is quite otherwise from the baker's, making the bread "sticky." It has passed with the middlings through all the ordeals of the reels and rollers. But, like the bran, it has one weakness at last decisive—not lightness, but softness, a set of smooth, white, innocent looking porcelain rollers rightly set, have no effect on the gritty little middling bits,—which indeed roughen them in time—but gently press the tenderer germ out of shape so that it is rejected by the silken meshes.

One might sift out some parables perhaps from all these siftings and sortings. It must be said for the wheat germ, however, that it is by no means useless being manufactured into an excellent food for infants and invalids, and added in proper proportions to certain brands of flour, making it yellower but somewhat more sweet and nutritious.

And now having stood all tests, the "middlings" hastens to its last "reduction." This is effected by no "new process," but between such primitive "burr-stones" (barring some improvements in size and perhaps otherwise) as burred away over the falls of St. Anthony half a century ago, in the old mill of Fort Snelling. We were shown one handsome pair of "violet flint" stones imported from France at a cost of $800. The seventeen other pairs used in the mill are of the American white flint.

After the burr-stones, the very best grade of flour gets one more going over in a cylinder set with whirring knife-blades supposed to make it lie more lightly, without lumping. Then, nothing can excel this finest of the wheat. To keep it always up to the standard, a bakery is constantly running in connection with the mill, putting the flour every hour to the "proof of the pudding." which, as is well known, is "in the eating," If any loaf falls below the mark in the opinion of the expert taster, the fault is not laid to the baker, but sought for in the machinery, which may somewhere need repair or reäd-justment.

Our flour is made, and now we go to see it packed on the first floor. This is a lively operation, employing many men—a relief to the eyes after the great lonely spaces where the magical machines are working away so solemnly, almost by themselves. Barrels and sacks, full and empty, are grouped and heaped around. The "feeders" protrude their great black trunks through the ceiling, apparently open at the lower end, but really closed by a revolving damper which lets down as wanted a barrel full of flour or 196 lbs. as nearly as may be, pressing it down as it goes. Under each cylinder's mouth is a small platform lift. An attendant whirls upon it an empty barrel. Up it flies till the great trunk is plunged nearly to the bottom, then descends as the damper turns and the barrel fills, till, as you look to see the snowy torrent foam over the edge in a generous *staubbach*, or "dust fall," the supply is arrested and the full barrel is whirled off on to a platform scale. The weigher looks at the index, tosses in a scoop-full of flour to perfect the measure, thrusts in the Pillsbury Company's handsome circular which every buyer finds, like Joseph's cup in his sack's mouth; one more whirl sends the barrel into the hands of the headsman; a deft stroke or two, and the packing process is over, all in less time than I have taken to tell it.

It takes twenty-eight hundred horse power to run the Mill, and the large Corliss engine used when the water fails was a fine sight, though standing idle, as the river has been full this season. We descend below the surface of the ground to see the great fly wheel, twenty-four feet in diameter, the cog wheels weighing four tons each, and the great belt five feet wide; all revolving so swiftly and noiselessly that they seem at rest, yet transmitting power to all the whirling, clattering machinery above. Still forty feet below us, in darkness and solitude, turns the great turbine at the source of power in the ceaseless rush of the falling waters.

Four years ago the large Washburn Mill on the other side of the river, with three mills near it, was

thrown into heaps in an instant by the explosion of the dust floating in the air in particles so fine that a spark was enough to send them into elemental atoms. Science and invention at once set to work to devise some safe-guard against this constant source of danger. The result was the ingenious "dust collectors" now employed in all the mills. By a system of fans on every floor, the dust is drawn out of the air and up to the roof where it is carried away by the winds.

SOMETHING FOR NOTHING.

It is always impossible to get something for nothing honestly. It is always impossible to give something for nothing beneficently. This is as true in other realms as in the commercial. It is violated by other methods than those of the gambler.

The man who gives a dime or a dollar to a beggar for nothing does nothing to alleviate poverty. He increases it. This is the lesson which the laggard-brained world has been so long in learning. But we have learned it at last. This lazy kind of charity is not charity at all. This careless benevolence is not benevolence at all. He who makes the beggar earn the dime or the dollar, before or after, by service first rendered or by industry to be awakened and set in motion, does a charity. But he who gives and neither demands a compensating energy before nor arouses a compensating energy after, gives nothing. He has only helped a man to violate the universal and inexorable moral law against all effort, however disguised, to get something for nothing. A young girl is thrown upon her own resources by her father's death. She has had an average education; no better and no worse than that of a hundred thousand other girls. She straightway sits down to write an article—most probably a poem—for the press, and hopes to earn a livelihood by her pen. Why? Has she any special knowledge to impart? any special experience of life to bestow? any fire of genius wherewith to enkindle other hearts? Does she possess any equipment that fits her to be a teacher of humanity? Not at all. It may seem to be cruel to say so, but this is the exact fact. She has nothing to give, and yet she expects to get something, and is bitterly disappointed when her poem or her schoolgirl composition comes back "declined with thanks." She would be indignant if any one were to suggest that she is trying to get something for nothing. But what else can one say of the transaction if he tells the truth? To be a teacher of men, by prose or verse, requires preparation of some sort—knowledge of facts, knowledge of literary art, power of expression, power of feeling, something that makes the would-be teacher richer than her desired pupils. But she has nothing of the sort, and yet expects an audience to pay her for ideas no better or other than those they already possess. A man in middle life has failed in his chosen calling. He has contrived to save a little money, and wants to borrow a little more from his friends. For what? To go into business. He is going to set up a store—grocery, dry goods, millinery, what not. But what is a storekeeper? A man who aids in the work of bringing demand and supply together. I pay him his profit because he knows better than I know what I want, or where to get it, or how to buy it, or how to bring it to me. But does this man know any of these things? Not at all. He knows no more of price and qualities of sugars, or broadcloths, or calicoes, or bonnets, than I know. How then can he expect to succeed? For what does he expect me to pay him a profit? This is our old friend, or rather our old enemy, and the enemy of all mankind. Something for nothing, in a new guise. This man would not expect to make broadcloth without knowing how; but he expects to sell it without knowing how. But to buy and sell goods requires as much and as special knowledge as to make them. He wants the community to give him a livelihood, and he has nothing to give the community in return. No wonder that he fails. Something for nothing ought to fail. . . . .

Look around you and you will find that all the men of great success are men who have given something for something, and generally good measure, heaped up, pressed down, and running over. But you see only what they have received, not what they have given. And the men who have failed deserved to fail, because they have been trying, consciously or unconsciously, to get something for nothing. And that is never a road to an enduring success.—*The Christian Union.*

THE ARAB LEGEND.

There is a quaint Arabian legend which tells of the pilgrimage to Mecca of two devout followers of the Prophet. Abouk journeyed on foot; Selim was mounted on a camel. At nightfall both the pilgrims had reached a spring of water in the desert, where grew a few palm trees. They prepared to spend the night together. "It is a long and tedious journey," said Abouk. "On the contrary, it is short and pleasant," answered Selim; "I was cheered by a mirage on the horizon, wherein I saw the spires of the temples of the Holy City." "There was no mirage, no Holy City to be seen!" angrily declared Abouk; "there were, instead, legions of venomous ants in the sand, that bit and poisoned my flesh." "Not a single ant was on the desert," rejoined Selim. The two pilgrims were quarrelling fiercely, when a good priest, also journeying toward Mecca, came up. He listened to them patiently. "Peace, my brethren," he said at last; let us leave these questions until to-morrow night to decide. In the meantime let Selim go on foot, and Abouk ride the camel." They consented to this exchange of places. On the next night it was Abouk who had seen the glorious visions and found the journey pleasant, and it was Selim who had been bitten by the ants. "My brothers," said the priest, "we are all going to Mecca, whether we walk or ride; but Selim cannot see what Abouk sees unless he stands where Abouk stands. It is well to change places occasionally."—*Argonaut.*

Be careful in your promises, and just in your performances; it is better to do and not promise, than promise and not perform.

A LIFE-BOAT HERO.

Last month there was buried, in Whitby Cemetery, John Storr, one of Whitby's brave life-boat men. On the day of the funeral all the shipping and fishing craft of the port lowered their colors half-mast, and many thousands of persons witnessed the passing to the cemetery of the funeral procession, which was a remarkably long one. The coffin bearing the deceased was carried shoulder high through the streets by life-boat men and fishermen. The funeral rites at the grave-side were performed, and the scene was deeply affecting, for deceased was not only respected for his bravery, but also beloved for his many personal qualities.

John Storr was a member of a numerous family of that name, all of whom spent the best years of their lives in the precarious occupation of fishing in the deep sea; all of whom had a deserved reputation for unselfish heroism; and many of whom sacrificed their own lives in their attempts to save those of others, who had been cast upon the rocky coast of Whitby, by the angry waves. Storr's own father perished in one of the most brilliant enterprises ever recorded in the national life-boat annals; while a brother and two uncles lost their lives in similar deeds of heroism. The deceased, John Storr, was ever to the fore, in times of peril to those at sea; and for many years none of the Whitby life-boats have gone out to shipwrecks without having him as one of the crew. He was one of the coxswains of a crew of brave fellows that have saved many scores of lives from vessels which have been beaten on Whitby's shore by the fury of the sea, and there dashed to pieces. He has had many miraculous escapes, one about eight or nine years ago, when the life-boat, while on one of her adventurous expeditions, was upset by a huge sea. She, however, soon righted herself again, but four of the crew were missing, among them Storr. He, however, was cast up on the beach, though unconscious. By long and patient nursing, he recovered. The other three poor fellows were drowned.

The most memorable feat accomplished by a life-boat crew, was that in January, 1881, when the national life-boat, "Robert Whitworth," was dragged all the way from Whitby to Robin Hood's Bay, a journey of six miles, through banks of snow standing in some places several yards high. A boat containing the crew of a sunk ship, was off Robin Hood's Bay, in momentary peril of being swamped. The Whitby life-boat reached the Bay after encountering difficulties and obstacles hitherto unheard of, and was launched into the terrible waves. Once she was driven back, twice she was driven back more or less disabled, but still the plucky fellows, urged by Storr, stuck to their work, and again launched into the sea. At last the frail craft was reached, and a crew of five or six men, half frozen to death, were brought to the shore amid a tumult of joy that was almost delirious. In other brave deeds of a similar character, Storr was a prominent actor, and his name will ever be revered, at least in the local annals of the doings of brave men.—*Herald of Peace* (*London.*)

"UNITED WE STAND."

Bees and ants may be called civilized animals. They live in cities, and understand the value of coöperation. Indeed, they could give men some valuable lessons upon one of the oldest, the best known, and the truest of human proverbs—"In union there is strength."

Ants show wonderful intelligence, and the "driver ants" not only build boats, but launch them, too; only these boats are formed of their own bodies. They are called "drivers" because of their ferocity. Nothing can stand before the attacks of these little creatures. Large pythons have been killed by them in a single night, while chickens, lizards, and other small animals in Western Africa flee from them in terror.

To protect themselves from the heat, they erect arches, under which numerous armies of them pass in safety. Sometimes the arch is made of grass and earth, and gummed together by some secretion, and again it is formed by the bodies of the larger ants, who hold themselves together by their strong nippers, while the workers pass under them.

At certain times of the year, freshets overflow the country inhabited by the "drivers," and it is then that these ants go to sea. The rain comes suddenly and the walls of their houses are broken in by the flood, but instead of coming to the surface in scattered hundreds and being swept off to destruction, out of the ruin rises a black ball that rides safely on the water and drifts away.

At the first warning of danger, the little creatures rush together and form a solid body of ants, the weaker in the centre; often this ball is larger than a common base-ball, and in this way they float about until they lodge against some tree, upon the branches of which they are soon safe and sound.—*St. Nicholas.*

NEWS AND OTHER GLEANINGS.

—The sanitary press is discussing the comparative advantage and disadvantage of having trees near a house. The general conclusion is that no tree should be planted nearer to a house than its own length when full grown. Trees not only moisten the air about them, but the earth also. Sunshine should have access to a house at all times.

—A specimen of volcanic ash, collected recently on the coast of Ecuador, one hundred and twenty miles from Cotopaxi, has been analyzed by Prof Mallet. The ash fell in July, 1885, and formed a deposit to the depth of several inches. The interesting feature in the composition of the material was the presence of a small amount of silver, probably as silver chloride. The result of several experiments showed that silver was present to the extent of one part in eighty-three thousand of ash. This is believed to be the first instance in which silver has been identified in material ejected from a volcano.—*Panama Star.*

—An extended article in *Science* conveys the information that the final survey for the location of the Nicaragua ship canal has just been completed, the results only slightly differing from those of the survey of 1885. The route as now mapped out extends from Greytown on the Atlantic coast to Brito on the Pacific, a distance of 169.67 miles. By means of the large Lake Nicaragua, the smaller basins of Deseado, San Francisco, Machado, and Tola, and the river San Juan, a distance of 140.78 miles of free navi-

gation is obtained, leaving only 28.89 miles of actual excavation to be made. The Descado and Tola basins were not included in the former surveys. Estimates of the cost of the canal have not as yet been completed, but the estimates of the survey of 1885—$64,036,197—are thought to be too liberal for the new route. In the foregoing estimate, 25 per cent. for contingencies is included.—*The American.*

—A new sponge industry is being developed on the coast of Dalmatia, as an outcome of experiments by Prof. Oscar Schmidt of Styria. Prof. Schmidt planted in favorable spots very small cuttings of live sponge, and in three years was rewarded with a fine crop of large sponges. The expense was small, the total cost of 4,000 sponges being not more than 225 francs.

—A very important and interesting geographical exploring expedition started from the vessel *Jason*, on July 17, on the east coast of Greenland. The party consists of Dr. Fridtjof Nansen and five others. Their intention is to cross Greenland from east to west in latitude 65° 2′ W., heading for Disco Bay on the west coast. The expedition has every prospect of success. Mountains 6,000 feet high characterize the east coast, and from there westward the land is inclined, rendering travel on sledges and *ski* much more rapid. The prevailing winds, also, are from west to east, and if the snow is in a dry condition rapid progress is almost assured. The expedition, it is hoped, will clear up the question of the existence of an interior fertile "oasis," firmly believed in by the natives, and by some thought to be indicated by the disappearance of reindeer and birds inland at certain periods of the year. For financial support the undertaking is indebted to Mr. Augustus Gamel of Copenhagen.

—One of the oldest industries in Egypt is artificial egg-hatching, principally engaged in by Copts. There are said to be seven hundred establishments of this nature in the country, and the production of chickens from the ovens is estimated at from ten to twelve millions annually. The season for incubation lasts through three months of the early summer. The country people bring eggs to the proprietors of the "farroogs," and give two good eggs for every newly hatched chick.

CURRENT EVENTS.

YELLOW FEVER still lingers at Jacksonville. The report on the 22d instant showed 43 new cases and 1 death, making the total number of cases to that date 3,839 and deaths 332.

THE Coroner's jury inquiring into the cause of the terrible railroad accident at Mud Run, Pa., (mentioned last week), have returned a verdict censuring for "gross negligence" the engineers and lookout men of the two locomotives that ran into the standing train, also the brakesman of the latter, and the conductors of both trains. This verdict is based upon the view that if due care had been taken by the standing train to display danger signals and by those in motion to see them, the accident could not have occurred.

THE session of Congress adjourned finally, on the 20th, it being the longest ever held. The whole number of bills and joint resolutions passed during the session was 1,443 of which 1,197 were approved by the President, 95 became laws without his signature, 128 were vetoed, and 23 failed for want of signature at the time of adjournment.

THE negotiations at Washington in reference to the opening of the Sioux reservation in Dakota have come to an end. The chiefs, on the 20th inst., formally notified Secretary Vilas that they had rejected, by a large majority, the propositions made by the President. They submitted a counter proposition agreeing to accept $1.25 per acre, the money to be paid at once. This proposition, the Secretary declared, could not for a moment be entertained by the Government. A small minority signified their willingness to accept the propositions.

A TELEGRAM from Muskogee, Indian Territory, says the Creek Council has passed a bill providing for the disposition and settlement of so much of the land known as "Oklahoma" as the Muskogees have an interest in.

A RAIN storm accompanied by heavy thunder and lightning, prevailed on the morning of the 17th inst., in and near this city and New York and to the Eastward. The St. John, (New Brunswick, Canada), *Globe* says that on the following day "there was heavy thunder all over Nova Scotia." At Hopewell a barn was struck, and a boy and two horses killed.

THE executive committee of the Mississippi State Board of Health have withdrawn all quarantine officers. Travel to and from that State will no longer be interfered with unless by local quarantines, which are now very few.

WILLIAM CONNELL, a prominent business man of Scranton, has been appointed by the Lehigh Valley railroad company to make all arrangements towards an amicable settlement with persons representing relatives and friends of those killed or injured in the Mud Run disaster. It is expected that the damages may reach half a million of dollars.

NOTICES.

*** Haddonfield Quarterly Meeting's Temperance Committee has appointed a Conference to be held in Friends' meeting-house, Moorestown, on First-day, the 28th inst., at 3 o'clock in the afternoon.

A cordial invitation is extended to all.

JOHN M. LIPPINCOTT, Clerk.

*** The Western First-day School Union will be held at London Grove, on the 27th of Tenth month, at 10 o'clock a. m. All interested are cordially invited to be present.

Train leaves Broad street, Philada., at 7.25 a. m. for Toughkenamon Station. If those desiring to attend will communicate in advance with Robert L. Pyle, London Grove, Pa., conveyances will be provided from station to meeting-house.

EDWARD A. PENNOCK,
LYDIA B. WALTON, } Clerks.

*** Concord First-day School Union will be held at Lionville, Pa.—Uwchlan meeting-house—on the 27th of Tenth month, 1888, commencing at 10 a. m. Conveyances will be at Whitford—Pennsylvania Railroad—on the arrival of the 7.15 train from Broad street, Philadelphia. Friends alongthe line of the West Chester and Philadelphia Railroad *via.* Media, will find it more convenient to to by way of West Chester, as a stage will there meet the grain that leaves Broad street at 7.01 a. m., and convey persons direct to the Union.

CLARA B. MILLER,
E. J. DURNALL, } Clerks.

*** The annual meeting of the Association for the Promotion of First-day schools within the limits of Philadelphia Yearly Meeting will be held in Race street meeting-house, Philadelphia, Eleventh month 3d, 1888, commencing at 10 o'clock a. m.

Interested Friends are cordially invited to attend.

S. RAYMOND ROBERTS,
CLARA B. MILLER, } Clerks.

*** Clerks of unions composing Philadelphia First-day School Association and Superintendents of schools not connected with any union within its limits, will please send annual reports with as little delay as possible to

S. RAYMOND ROBERTS, Clerk,
26 West Johnson street,
Germantown, Philadelphia.

ROYAL

BAKING POWDER

Absolutely Pure.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, hort weight, alum, or phosphate powders. *Sold only n cans* ROYAL BAKING POWDER Co., 106 Wall-st., N. Y.

PUBLISHERS' NOTICES.

*** Political matter not being accepted for the reading columns of the INTELLIGENCER AND JOURNAL, the publishers further state that they prefer to decline also the insertion of it as an advertisement. The advertisement below, in this issue, being a response to one last week, it is expected that this will relieve the minds of both classes represented, and close the discussion.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also to help avoid mistakes.

***As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

***Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

COUNTRY BOARD.—WANTED IN A Friend's family, a few boarders—children or adults; farm situated about two miles from depot and meeting-house at Quakertown. Reasonable rates; very beautiful country and healthy climate. Address A. S. H., Friends' Book Store, 15th and Race Sts., Philadelphia.

COMPANION.—A LADY WOULD MAKE herself generally useful in a refined family. Compensation moderate. References exchanged. Address H., Office INTELLIGENCER AND JOURNAL.

MORE EARNEST WORDS TO CONSCIENTIOUS FRIENDS.

THE article that appeared in last week's INTELLIGENCER has made us feel that we, too, must address, "A few earnest words to Friends." We do not appeal to you as partisans, but as members of a religious body which professes to embody its principles in its practices; and we ask you to carefully consider the responsibility which rests upon you as voters, and to see to it that your actions in this capacity are consistent with your principles as Friends.

The article alluded to tells us that the "Course of Cleveland's administration upon the Indian question has been subversive of much of the good which Friends and others have accomplished." If that be true, then we Friends can find no better man to vote for than Clinton B. Fisk, who was appointed by President Grant Chairman of the Indian Commission, and who still holds that office, having spent out of his own pocket thousands of dollars

for that people whom the Friends are interested to protect.

If we would prevent oppression in the South, we must vote the same ticket, for that is the ticket of the only party that would or can break up the "Solid South" and put an end to sectionalism, out of which all such political oppression grows.

The platforms of both the Republican and the Prohibition parties are silent on these two subjects, and we must, therefore, look to that party which is the greatest friend of humanity. And can any party be a greater friend of humanity than that party which is organized for the protection of the home? And what evil rests so heavily to-day upon the Negro of the South as the evil of intemperance? The candidate of the one party has been for years a laborer for the good of the Indian, and Fisk University is but one of the monuments of his world-wide reputation as a friend of the Negro. Has Harrison such a record?

The Prohibition party advocates arbitration for the settlement of national difficulties, it advocates woman's equality with man before the law. Can Friends find these anywhere else? Is it consistent with Friends' principles to support them?

But we are told that "Protection must be protected." It must, and nowhere can we find a clearer or more emphatic declaration of that than in the Prohibition Platform.

Why, then, are we urged to turn from this party to the Republican, if the policy of Protection is as earnestly advocated in the former as in the latter.

Because the Republican Party has given us "the reasonable and practical legislation by which the vice of drinking has been in many places greatly curtailed." This we could prove by reliable statistics to be in most cases incorrect, did the space permitted to us allow us to introduce them; but even if we admit that it has been "curtailed," it has not been *prevented*. The *vice of selling* still goes on and we have no promise or indication of any intention on the part of the Republican Party to *stop* it. That party grants it permission to go on, and shares the money wrung by its *licensed agents*, the rumsellers, from the poor and degraded of this land; and we, the members of the Society of Friends are urged to be partners in this iniquity, to approve it and to perpetuate it. We are told that the time to act on this question is not *now*, but that we should wait four years longer; and it appears that we were told the same thing four years ago; and yet they who tell us this are grieving over the wrongs of the Indian and the Negro and feel that *they* must be righted to-day.

But what is the real argument in last week's INTELLIGENCER, had it been fully expressed? Simply this: "The Prohibition Party is right, we have no word to say against it, its candidate, or its principles; but it cannot elect its nominees; therefore, don't vote for them for fear that by so doing the Democrats may retain power." What an argument to address to members of the Society of Friends!

Don't act according to your convictions, but do what you know to be *wrong* that some fancied right may be gained. Oppose the manufacture and sale of liquor in your own Society, turn out those who violate the discipline in that respect, and then go to the polls and vote the same ticket with the rumseller, to perpetuate the power of the party that sells him a license, in order that you may lighten your taxes or be true to your party.

But we have not yet been able to entirely clear our Society of liquor dealers; shall we, then, give up Prohibition and sell to those who have the means to buy a high license to continue their business, and then take the proceeds to partly pay the expenses of the meeting?

Friends, shall we take the principles of our Society into our politics, or shall we take the policy of the Republican party into our meeting? Let us be consistent: no vote is ever lost that uplifts a great moral principle and pushes it forward toward ultimate triumph.

ARROW WORDS.

NEVER shall thy spoken word
Be again unsaid, unheard.
Well its work the utterance wrought—
Woe or weal, whate'er it brought;
Once for all the rune is read,
Once for all the judgment said.
Though it pierced, a poisoned spear,
Through the soul though holdest dear,
Though it quiver fierce and deep,
Through some stainless spirit's sleep,
Idle, vain, the flying sting
That a passing rage might bring.
Speech shall give it fangs of steel,
Utterance all its barb reveal.

—*Rose Terry Cooke.*

SILENT MEETINGS.

THIS is a great mystery, hid from the eye of that man who is run from the inward life into outward observations. He cannot see either that this is required by the Lord of his people, or any edification therein, or benefit thereby; but to the mind that is drawn inward, the thing is plain; and the building up thereby in the life of God, and fellowship one with another therein, is sweetly felt; and precious refreshment from the presence of the Lord, received by *them* who singly herein wait upon him, according to the leadings and requirings of his holy spirit.

After the mind is in some measure turned to the Lord, his quickenings felt, his seed beginning to arise and spring up in the heart, then the flesh is to be silent before him, and the soul to wait upon him, and for his further appearings in that measure of life which is already revealed.

Now, in this measure of life which is of Christ, and in which Christ is and appears to the soul, there is the power of life and death;—power to kill the flesh, and power to quicken to God;—power to cause the soul to cease from its own workings, and power to work in and for the soul what God requires and what is acceptable in his sight. And in this, God is to be waited upon and worshipped continually, both in private and in public, according as his spirit draws and teaches.

For the Lord requireth of his people not only to worship him apart, but to meet together to worship; and they that are taught of Him dare not forsake the assembling of themselves together, as the manner of some is, but watch against the temptations and snares which the enemy lays to deceive them therefrom, and to disturb their sense by, that they might not feel the drawings of the Father thereunto.

And this is the manner of their worship: They are to wait upon the Lord,—they are to meet in the silence of flesh, and to watch for the stirrings of His life, and the breaking forth of His power amongst them. And in the breakings forth of that power they may pray, speak, exhort, rebuke, etc., according as the spirit teaches, requires, and gives utterance. But if the spirit do not require to speak and give to utter, then every one is to sit still in his place—in his heavenly place, I mean—feeling his own measure, feeding thereupon, receiving therefrom into his spirit what the Lord giveth. Now, *in this*, is edifying—pure edifying—precious edifying; *his* soul, who thus waits, is hereby particularly edified by the spirit of the Lord at every meeting. And then, also, there is the life of the whole felt in every vessel that is turned to its measure; insomuch as the warmth of life in each vessel does not only warm the particular, but they are like a heap of fresh and living coals, warming one another, insomuch as a great strength, freshness, and vigor of life flows into all. And if any be burdened, tempted, buffeted by Satan, bowed down, overborn, languishing, afflicted, distressed, etc., the estate of such is felt in spirit, and secret cries, or open, as the Lord pleaseth, ascend up to the Lord for them; and they many times find ease and relief in a few words spoken, or without words, if it be the season of their help and relief with the Lord.

For absolutely silent meetings, wherein there is a resolution not to speak, we know not; but we wait on the Lord, either to feel Him in words, or in silence of spirit without words, as He pleaseth. And that which we aim at, and are instructed to by the spirit of the Lord as to silent meetings, is, that the flesh in every one be kept silent, and that there be no building up, but in the spirit and power of the Lord.

Now, there are several states of people; some feel little of the Lord's presence, but feel temptations and thoughts with many wanderings and rovings of mind. These are not yet acquainted with the power, or, at least, know not *its dominion*, but rather feel dominion of the evil over the good in them; and this is a sore, travailing, and mournful state; and meetings to such as these, many times may seem to themselves rather for the worse than for the better. Yet even these, turning as much as may be from such things, and cleaving, or at least, in truth of heart, desiring to cleave to that which disliketh or witnesses against them, have acceptance with the Lord herein; and continuing to wait in this trouble and distress, keeping close to meetings in fear and subjection to the

Lord who requireth it, though with little appearing benefit, do reap a *hidden* benefit at present, and shall reap a more clear and manifest benefit afterwards, as the Lord wasteth and weareth out that in them, wherein the darkness hath its strength.

God is to be worshipped in Spirit, in His own power and life, and this is at His own disposal. *His church is a gathering* in the Spirit. If any man speak there he must speak as the oracle of God, as the vessel out of which God speaks; as the trumpet out of which he gives the sound. Therefore, there is to be a waiting in silence till the spirit of the Lord move to speak, and also gives words to speak. For a man is not to speak his own words, or in his own wisdom and time; but the spirit's words, in the spirit's wisdom and time, which is, when it moves and gives to speak. Yea, the ministry of the spirit and life is more close and immediate when without words than with words, as has been often felt, and is faithfully testified by many witnesses. Eye hath not seen, nor ear heard, neither hath it entered into the heart of man how and what things God reveals to his children by his spirit, when they wait upon him in his pure fear, and worship and converse with him in spirit; for then the fountain of the great deep is unsealed, and the everlasting springs surely give up the pnre and living water.—*Isaac Pennington.*

THE PRISONER.[1]

What is the prisoner in his cell? A man just the same as you or I, held in the same great hand, but held differently,—held tightly, violently, if you will, roughly, indignantly, because he is out of sympathy with the hand which holds him. Sometimes the fault is in the hand. Sometimes the law is unrighteous; and then it holds the prisoner harshly, just in proportion to his righteousness. Then come the cells full of spiritual honor of him in history. Then come the scaffolds, which are glorious. Then the prisoner rests in the grasp of the higher law. But when the law is righteous and the man unrighteous, then his penal imprisonment is simply the tightening grasp of the same great hand of corporate humanity which has been about him from his birth. He has insisted on swimming up the stream, and so the stream beats him in the face; but the great, gracious movement of the stream itself is still the same. It is of all importance. I believe that we should clearly see how imprisonment and every kind of punishment is not a new activity, but it is the special form which the perpetual activity of the State, which represents humanity, assumes when it is resisted by harmful crime. If we do not understand that, our prisons become unaccountable. They are anomalies and monsters. And this is testified by the consideration of the only purposes for which, when he thinks carefully, man can believe that he has the right to administer punishment to his fellow man. What are these purposes? Where does society get its right to punish? What are the limits of its power? Sometimes it seems as if the State's punishment were vengeance, or the absolute meting out by man to fellow-man of the essential correspondent of his crime in suffering,—the giving to the criminal his deserts. But that cannot be. Man has no wisdom or character to fit him for that awful function. Only the Eternal and Absolute can judge absolutely. Vengeance belongs to God.

Again, it seems as if society dealt only with its inconveniences, and swept into the waste heap of its prison, or swept over the precipice of its scaffold, all that made it uncomfortable or hindered the execution of its plans. Once that may have been, probably was. But modern society, modern law, demands a moral element. There must be wickedness in the criminal, as well as inconvenience to the State, before punishment becomes a right. For the inconvenient man who is not a wrong-doer, modern life has no prison. What then? Three purposes of punishment remain. They all presuppose wrong-doing. The first two are deterrent, and the third is educational. The first two are repressive, and the third constructive. The first two are negative, and the third is positive. The first is easy, the second is harder, and the third is very hard. It is easy to deal with the prisoner so that he shall not repeat his crime. You have only to kill him or keep him unpardoned behind his prison's bars. It is harder so to deal with the prisoner that others shall be less inclined to crime on his account. That demands deep study of human nature, and of its wayward impulses. It is very hard to deal with the prisoner so that he himself shall be reformed. That is not done without sympathy, tireless devotion, and quenchless faith. And yet this third is the only real purpose. It is the best; and, if you leave it out, there will be little need of prison reform. The scaffold will answer all purposes, as it used to do. Prisons will only be needed while the guillotine is set up or the fire is kindled. But make the third supreme, with the other two waiting in the background as its ministers. Let the great purpose of imprisonment be reformation, with immediate prevention of crime only as the subordinate necessity, and is not the figure of the tightening hand absolutely true and clear? The grasp, the same grasp which has held him in the sunshine, now shuts the culprit in the dark. And why? First, certainly that he may not do mischief; second, certainly that others still in the sunlight may be taught and warned and frightened by his disappearance. But, most of all, certainly that in that tightened grasp and in that undisturbed darkness the healthy pressure of the healthy whole may round this diseased, distorted portion into symmetry and health. Such a description is absurd and fantastic, if we judge it by the prison standard of the past. Does it not truly represent the true and growing prison standard of to-day?

I ask you to think with me whether it does not immediately tend to secure those conditions and feelings with regard to imprisonment which are really fundamental to its best work, which must be cordially recognized before imprisonment can satisfy our consciences and do its work? I mention five of such conditions, which we may call the normal or healthy aspects of the prisoner's life. The first is the combination of

[1]Part of a sermon by Phillips Brooks, of Boston, before the National Prison Association, Seventh month 15, 1888.

the natural and the unnatural, of that whose causes I can clearly trace, and that which seems most incredible and monstrous. No man thinks rightly of the prison unless he feel both of these elements in it. The prisoner is man; and yet he is man who has broken loose from the true life of manhood, and so forfeited the first right of manhood, which is liberty. This latter fact is horrible. Every best instinct rebels against it. No true soul can pass a prison on the street without a shudder. But the first fact, the undestroyed manhood of the man, is full of hope. What man has been, what man intrinsically is, he may be. Honor and hope, these two together, must fill the prison atmosphere. Before the last hundred years, before Howard began his journey of inspection in 1773, there was no sense of honor and no light of hope in the prison world of England. The two came in together. When it came to seem not a matter-of-course affair, but something very dreadful, that a man should lose his liberty and energy and character,—then, not till then, began the struggle for recovery. When it seemed possible that he should be redeemed, then it seemed horrible for him to be as he was. When the misery of a man's being lost in the desert came to be intensely felt, then it was also felt that it was indeed a man that was lost; and so, that he might fight his way out of the wilderness, with the power of the prison came its hope, and with its hope came its honor.

Closely allied to this is the education which a true prison ought to give to the prisoner's sense of the quality of pain. That which makes the prisoner's sufferings must change as the manhood of the prisoner is more and more developed. At first, it is the mere discomfort of his lot, the most ignoble sort of pain,—the meagre food, the hard bed, the disagreeable toil. Then afterward, if the man becomes more noble, it is the nobler suffering of the loss of liberty. That he should sit between these walls while beasts are roving in the mountains and ships are sailing on the sea and merchants are trading in the market and caravans are journeying across the plains,—all this is terrible. And, then, it is the misery of base companionship, the brutal life, the low and cruel faces which look in through the window every day. And yet it has not sounded the man's capacity of pain. Not till there comes the sense of shame, the self-contempt, the vision of lost opportunity, is the man's true suffering attained. A beast might feel the others,—this is the man's alone. Men are judged by their capacity of suffering. Poor is the prison influence which does not bring forth the capacity for ever nobler, deeper pain, which also is the ministry of this prison life in which we live.

Again, the prison has its value in the way in which it bears constant witness to that fact which lies at the bottom of our consciousness and our experience, but which both our highest and our lowest thoughts and standards are always tending to obscure,—the fact that principle and interest are identical, that goodness and happiness, wickedness and unhappiness, go together. How man's first instincts prophesy that truth! How, as his life goes on, it grows obscure! The bad man says: "It is not true. Behold, I can be very bad, and yet be very happy." The good man says: "I will not care whether it be true or not. I must be good regardless of my happiness." And yet how men are held, in spite of every contradiction, to the assurance that it must be true! The prison is the hard, crude, violent assertion set into the heart of the complicated and bewildered life of the city that the truth is true. The prison is the stony conscience of the town. It stands there with its blank unqualified assertion that sin brings misery. It strikes that assurance inward on the prisoner, giving him the rebuke and inspiration which conscience always has to give to those who will listen to her voice. It radiates that assurance outward on all who walk beneath its walls. It would not be good that it should be the only institution of the city, as it would not be good that a man should be only conscience. But the conscience cannot be spared out of the man; and the prison's sharp, clear voice has its perpetual testimony to bear amid the confused, sophistical standards of human life.

EAST NOTTINGHAM, MD., MEETING-HOUSE.

In 1701, twenty years after William Penn received the grant of land forming the great State which bears his name, a colony of Friends clustered themselves more or less remotely about the spot now occupied by East Nottingham meeting-house, (now in Cecil county, Maryland). Attracted to this locality, as history records, by the excellent quality and great quantity of timber, they had grants of land from the Commissioners who were in charge of Penn's possessions, (as it was then supposed to be a part of them), some of one thousand, others five hundred acres, at eight pounds sterling per hundred acres, or at an annual rental of one-and-a-half bushels of wheat, the first year being rent free, and a like time allowed for the payment of purchase money.

In the same year Penn visited the infant settlement, marking with his own hand, as tradition says, the site for a meeting-house, and giving by deed to his beloved society as a perpetual possession a tract of forty acres. In 1705, a meeting was organized at the home of James Brown, one of the pioneers; five years later upon the site before mentioned the first house of worship, a log structure, was erected. Whether the spot was of Penn's selecting or not it is certainly an eligible one, being a point from which the ground descends on all sides, and where now five roads meet, each running through the donated tract, and thus dividing it into five parts.

In 1730, a monthly meeting was established here, and about this time the log building gave place to a more commodious one of brick,—imported from England as many think, but there are better reasons for believing they were burned near where they were used. As such buildings were rare in the new country, this gave the name of "Brick Meeting House," (which was retained until recently), to the little village which grew up about it. Its erection was also presumably indicative of the prosperity which attended the settlers. Perhaps even in those days they were earning the reputation for thrift for which they of the Society

have become almost proverbial. In 1748 the woodwork was destroyed by fire; the walls remaining, it was shortly refitted, when a stone addition made of it quite a large house; but it must be remembered that it served the country for many miles around as the settlers in this locality and to the North were in great part Friends.

In 1810 the woodwork of the building was again destroyed, the fire originating, says our informant who well remembers the occurrence, in this manner: "It was in the winter season, when during a business session of meeting some children were playing about when one found his way into a closet where kindlings were kept and where was a pan of ashes containing live coals. The child not understanding 'how great a matter a little fire kindleth' amused himself by placing light fuel on the coals. His prank was not known, yet he afterward related the circumstances unaware of the harm resulting. The fire was not discovered until seen from without at night fall." Although the combustible portion was destroyed the walls again remained, and upon replacing the wood work a gallery extending around three sides of the building was added and the chimneys with wide fire places were replaced by flues.

Thus for more than a century and a half have a part of the walls withstood the ravages of time and their present appearance gives promise of their remaining for years to come. A landmark to all the country round the old house stands a mute witness to manifold changes and the occurrence of numberless scenes long forgotten. These walls have resounded with the voices of many of the loved and honored leaders of the Society. Here, often amid the silent worshippers the weary and burdened have gained fresh strength for life's conflicts while from its doors has issued a continuous stream of influence whose extent we may not measure. Near by is the ground where are sleeping those hardy pioneers, with generations of their descendants. All of the earlier graves are unmarked, there being but two stones bearing dates in the last century; but as death was in the land then as now, the ground was doubtless put to its intended use at an early date. Near to the small entrance gate is a distinct depression where it is said, and doubtless truly, were buried Revolutionary soldiers who died in the meeting-house while it served as a hospital for a division of Gen. Smallwood's army. Not even a mound marks much of the ground first in use, yet this portion with that now in use is well kept and neatly enclosed.

Lombard, Md. M. Alice Brown.

There is an immense difference between knowing a man and knowing about a man, and there is the same difference between knowing a thing and knowing about a thing. It is this latter kind of knowledge with which the young and the old of this generation are to a large extent supplied.—*Principal Donaldson in the Forum.*

Personalities are cheap; they are the poverty of our intellectual resources, and they rarely end in honor or charity.—*Selected.*

DENVER AND THE MOUNTAINS.

I spent the First-day quietly in brother Philip Price's Denver home. The next day, in company with sister E. M. P., made a visit to Silver Plume, over 50 miles northwest of Denver. We passed Argo, where there are large smelting works, saw snow-capped mountains in the distance (the Snowy Range) illumined by the sun, although hidden from us by intervening clouds. It was an inspiring sight, for while there are multitudes of travelers and pleasure seekers to whom these are common things, the privilege of seeing the Rocky Mountains in all their grandeur had not been among my anticipations. We saw Long's Peak towering high, also Gray's Peak, altitude 14,341 feet. They looked so near yet were miles away. The mountain scenery was so attractive that for miles the nearer view was neglected. We saw them gathering the alfalfa crop, which though ripe was bright and green. Soon we came to the foot-hills which seemed grand before seeing the greater heights. Some of them were perfectly flat, called *mesa*. Part of Pueblo is built upon such a mountain. We passed Castle Rock,—and it does have a castle-like appearance,—came to Golden, where they have a Reform School doing good work, and also a "Mine School," which is in demand in these mining districts. Descended to Clear Creek Cañon, with the high mountains closing in around us, their sides almost in places touching the cars, while the overhanging rocks, apparently loose, seemed as though they would plunge upon us. But O, so majestic! giving one some conception of the mighty throes of nature, and the internal workings essential to render this globe inhabitable. Deep clefts in the rocks were often seen; sometimes they looked like loose stones piled high, then again more solid and concrete. We queried, awed in spirit by the grandeur: Can there be scenes more sublime than these? Clear Creek, (not yet rightly named, for the mines color it), keeps close to our track, sometimes with scarcely room for its course and our train in the deep defile. We had not advanced far into the mountains until we were induced to take the observation car which we at first had avoided on account of the exposure. Utilizing all our wraps we enjoyed greatly the unobstructed view. Loose stones and rocks lie along the way, hinting from whence they may have fallen, but having no power to detract from the intense interest of the scene. Some evergreens and other growth deck the sides and summits at intervals, while still higher and more rugged the peaks tower in their majesty. Even here beneath the deep blue heavens, and the grandeur all around us, there were drawbacks to our enjoyment. A party of young men and women were in the open car; one of the latter quaffed the intoxicating cup, the other was smoking a cigar. Each fainted at different times, not seeming to reason from cause to effect. It was indeed a heart-rending sight, yet while disturbed by their boisterous mirth, we could not dwell in the valley of depression in such an uplifting and inspiring atmosphere. It seems impossible that such could truly enjoy the works of the Great Architect. But we could only leave them in His hands and judge mercifully.

Part of our train branched off at Fork's Creek for Black Hawk. In some places the creek is almost obstructed by rocks which have fallen. The road was walled occasionally with round stones or pebbles of almost every size—looking as though washed by the sea. Some of the rocks or mountains look like solid mason-work, and in a sense they are. We came to Idaho Springs (hot mineral), quite a health resort where were a number of attractive vine-clad houses. Passed smelting works and cabins on the mountain sides, the shelter of prospectors for the precious ore. Some of these were on the top of the mountains, and the frequent openings with white sand piled in front indicated how many have come to these mountains seeking their fortunes, often to turn away disappointed, though a few have thus amassed wealth. The cañon widens in many mining districts or where the towns are situated. Saw some ranches in these spaces—but scarcely sufficient results we though to compensate for the toil. Saw two little girls by the mountain side accompanied by a dog, and wondered what facilities there were for the rearing of these. But the towns were not many miles apart, and doubtless a school of some description is provided. At the foot of one of the mountains there was a cemetery; the white stones which marked it came to view quite unexpectedly. We thought of travelers who might have perished in these deep defiles, amid the wintry storms. Georgetown is quite a large town in a flat between the snow-capped peaks; we found that here the snow had fallen within the last two weeks,—though some of the peaks we saw had been whitened all through the heat of summer. There was a large school building, some fine residences, and hotels here, looking as though comfort and prosperity might abound. We now came to "The Loop," which is truly wonderful,—making three circles by rail,—passed under a slight bridge suspended high in air above us, over which we were soon to pass as we made the loop, a perfect circle—followed by two others which did not quite tie. There was a fine view of Georgetown lying below us as we crossed the high bridge. The scenery is grand beyond description; we see mining huts high up the mountains, and wonder how they climb the steep ascent. A young woman on the train was taking instantaneous views,—a grand opportunity. Four miles beyond Georgetown we reach Silver Plume and alight, the train going four miles farther to Graymont. We have two hours to eat our lunch and look around the town. Here Clear Creek, truly named, every stone and pebble clearly defined in its limpid water, runs close to the houses. Saw the children going to school, who stopped and gave us a drink from a pure mountain spring. Delicious it was indeed, and we rejoiced in the many who would find refreshment therefrom. At 2 p. m. we took train for return trip, and enjoyed it all over again. Flowers blooming in the cottage windows cheered us, bespeaking a love of the beautiful. We often saw roads high up the mountain sides, looking more dangerous than our railroad travel, and could but wonder to what point they led. Much of the way we could see the engine and train ahead making the curves, we being in the rear. Saw a log house at Idaho Springs, the seams covered with tin cans, (opened of course), painted blue, also a stone edifice built to resemble one of the old castles. Some of the mountain sides looked tillable, smooth, and seemingly devoid of rock—but too steep for man or beast to climb; others jutting rocks piled high. The mountains seemed even higher than in the morning; so wild, so grand, and awe-inspiring. We parted with them and Clear Creek as the daylight was fading, after a day of intense enjoyment, wishing so much many of the dear friends at home could have shared it with us. Reached Denver after 6 p. m., and were soon in our brother's house, who had been alone through most of the day, but had fared comfortably, and there was a sense of deep thankfulness for all the day had yielded.

We were surprised the next day to receive a call from William and Mary Ferris, of Wilmington, Del., accompanied by their daughter Fannie Hallowell residing here, and have since visited them very pleasantly in her home. We also had a call from William and Ellen V. Smedley formerly of West Chester, and go this afternoon to visit them in North Denver. It is very pleasant to meet with familiar faces so far from home, and this and the kindnesses continually received from those never met before tend to diminish distance and unite us in the bonds of a common humanity, and Christian fellowship. We have also been visited by Edward Marshall and wife from West Chester, and since called on them here, he feeling the climate a great benefit to health as so many affirm. The atmosphere does seem very pure, and the sky so deep a blue; we are almost able to catch a view of the distant mountains. Yesterday we saw Pike's Peak while taking a ride with some friends.

Mary A. Edmunds, a teacher formerly in Chester Co., and a pupil in the Normal School at West Chester, who came here for health, and is still teaching, having her heart in the work, kindly took me to visit some of the public schools. The system is excellent here; they have about twenty schools. I felt attracted to the "Whittier," erected 5 years ago, 12 rooms; a very handsome building, as indeed they all are that I saw. The Principal took us through the different rooms, which were well ventilated, having the best conveniences therefor. We also went on top of the building and had a grand view of the whole city, also of the mountains, having most of the schools pointed out,—the Emerson, Longfellow, the Hyde Park, just being completed, where M. A. E. is to teach, and many others. Then we visited the High School which is a very large and imposing building; the halls and stairways immense. We called in most of the rooms, seeing the pupils engaged in their various exercises. Met with the principal, Jas. H. Baker, long a teacher, and greatly interested in the work. They have no political or other selfish interests to interfere with the best school government.

All the means necessary are freely furnished; there is no complaint of taxes, and the stranger coming to apply for a position stands an equal chance with the Mayor's daughter, only merit prevailing. The salary is $80 per month, except in the primary

department. In this the number of children is in excess of room and they divide the day, having another class to come in the afternoon. These teachers receive $100 per month. There is another pleasant feature in these schools,—no distinction of color is made, there are no separate schools or seats, and there appears to be no feeling on the subject.

Last evening, (2nd day, 22nd), had an appointed meeting in Unity church, where from one to two hundred assembled. There was the arising of prayerful desire, to realize in the depths of the soul "that perfect love casts out all fear," and to rely alone on the Divine Source of strength. The call was extended, seeing we were of different religious persuasions and many entirely unacquainted with the manner of Friends, that all might endeavor to gather into the true silence of the soul, that we might be blessed and refreshed together. And all dividing lines were, I believe, laid low and a fellowship of spirit experienced. There were several members of our Society present, and many who had come from among Friends, or had some connection or acquaintance with them. Louisa Painter, widow of Edward, and her daughter were there, also a neice of John Worth, all of whom it was very pleasant to meet and many queries were extended regarding Friends in the East, and the desire was expressed for similar meetings. We came home and had a precious opportunity in brother Philip's family, he not being able to go out with us—and retired with a heart overflowing with thanksgiving to the Father whence all blessings flow.

SCRIPTURE LESSON, No. 43.

ELEVENTH MONTH 11, 1888.

TOPIC: FAITHFULNESS REWARDED.

GOLDEN TEXT.—"Trust in the Lord, and do good; dwell in the land, and follow after faithfulness."—Psalm 37 : 3.

READ Joshua 14 : 5-15.

FIVE years of conflict intervene between the defeat at Ai and the present lesson. In that time Ai had been again attacked and utterly destroyed. The great cities of the land with their kings had, one after another, yielded to the victorious army of Israel, until the whole country from its southern border to "the valley of Lebanon under Mount Hermon," was in the possession of the Israelites. It is a sad story of war in its most cruel and unrelenting features, and it is hard to reconcile our thought of God as the kind and loving Father of the whole human family, with the barbarous conceptions of the Israelites, who believed themselves acting under his leadership, as the appointed instruments for the destruction of the Canaanitish idolators. War is always to be deplored and we may well work and pray that the time may soon come when the nations of the earth shall learn war no more. Joshua and Caleb are both old men, and the work of dividing up the land among the tribes and the half-tribe is begun, the distribution being made by Eleazar, the priest, and Joshua and the heads of the tribes of Israel. Joshua belonged to the tribe of Ephraim, one of the sons of Joseph, and Caleb was of the house of Judah. The headquarters of Joshua were at Gilgal, the place where the people made their first encampment after crossing the Jordan. It is here that Caleb came to ask that his portion be the same as was promised him by Moses forty years before. (Num. 14 : 24.)

Hebron became the inheritance of Caleb. This beautiful city, situated in the mountains, twenty miles south of Jerusalem, is still in existence, and is one of the most ancient cities in the world. It was well known when Abraham entered Canaan, and was his home for a time. There Sarah died, and was buried in the cave of Machpelah. It is profitable for us to trace, amid all the strife and conflict that gave Israel again the land that had been taken possession of by Abraham, their progenitor, the history of those who were not easily dismayed or discouraged; but were willing to undertake any service that their convictions of duty laid upon them, feeling assured that they would be helped in every time of need.

The late A. Bronson Alcott, in one of his addresses on the revealed will of God, says: "There is no appeal from the decision of the High Court of Duty in the breast. One may misinterpret the voice, may deliberately, disobey the command, but cannot escape the consequences of his election. The deed decides." The truth of this declaration has been substantiated in the experience of every person of high, moral character, and that, too, so fully and convincingly as to leave no room for doubt, that a Power beyond our own will, superior to our own intelligence, acts upon the soul. It is strange that, having had the experience of this unswerving monitor warning them of their faults, men should underrate the importance of the instruction, and seek in books, in the advice of men, or in the traditions of their ancestors for a guide in the way of life. One of our recent writers has referred to this sense of duty that oversweeps the mind as "the great moral inquisitor, whose sessions are held in secret, whose absolute justice is untempered by mercy, whose processes are unrelated and superior to the laws of the land." Indeed, it is this quickening spirit in the souls of men that leads to all improvement in morals, all increase of public virtue, all advancement in national civilization. Everywhere we behold its leaven acting in the consciences of men.

But there is another manifestation of this supernal Power, not less positive, not less certain, not less convincing than the condemning Spirit. It is the rewarding Spirit,—the glad tidings of "Well done, thou good and faithful servant," that enter into the heart of every person who faithfully performs the duty that is laid upon him. "Trust in the Lord, and do good; and thou shalt dwell in the land, and verily thou shalt be fed." This was the experience of the "Sweet Singer of Israel," and ever has it been verified in the experiences of good men and women. He who trusts in the Lord and *does good*, as such trust certainly leads him to do, never fails to be fed,—fed with that which fills his life with peace and joy, and which expands his soul for the reception of sublime intuitions, not otherwise to be attained. The world cannot be sustained by the thoughts of yesterday; the present, instant inspiration of Divine intelligence

and instruction is needed for its growth in righteousness; and every faithful soul, true to its intuitive impulses to do the right, assists God in his work of raising humanity from its low estate into the condition of spirit in which heaven seems more real than earth.

WALLED CITIES IN THE ANCIENT EAST.

Walled cities were very numerous in Palestine and Syria at the time of the invasion of Canaan by the Israelites, and had indeed come down to the Canaanites of that period from a somewhat remote antiquity. When Thothmes the Third, of the eighteenth Egyptian dynasty, invaded Palestine about the middle of the fifteenth century before Christ, he found himself resisted by fortresses at almost every step. Gaza, Jaham or Jamaia, Megiddo, Taanach, Aaruna are especially mentioned as strongholds in the land of Kham, while further northward in the country of the Ruten, were Nunaa, Anaukasa, Hurankar. Perhaps the most important walled city of these early times was Kadesh on the Orontes. This city is represented more than once in the Egyptian bas-reliefs. It is of an oval shape, and is surrounded in one instance by a single and in another by a double moat, while within the circuit of the moat are a set of battlemented towers, more or fewer in number, apparently according to the taste of the engraver. Not much can be gathered from these representations, which, however, show: That the Syrian fortresses were, at any rate, sometimes oval in shape; that they were guarded both by walls and moats; that within the circuit of the walls was a keep or citadel, having numerous towers, which were crowned by battlements.

The material used for the walls of cities was either brick or stone; and of bricks there were two kinds, the sun-dried and the baked. Generally, though not always, where stone was plentiful, it was the material exclusively employed, brick taking its place only where the neighborhood did not supply stone in sufficient quantity. Thus, in Upper Egypt and in Palestine, Phœnicia, and Syria, stone was the material used, but in the Delta of Egypt and in Babylonia the walls of cities had to be of brick, since there was no stone in the country. In Assyria, stone is plentiful, and we might have expected that it would have been in universal and exclusive use; but this is not found to have been the actual fact. Assyria took her arts from Babylon, and employed brick principally for the walls of her towns; though sometimes she revetted her brick with stone, or used stone in the lower part of the walls, which was the part most open to attack.

Where stone was the material employed, the early builders of cities thought it desirable, almost universally, to make use of the largest blocks that they could anyhow arrange to move. The stone substructions of the Temple at Jerusalem formed a part of the outer wall of the town; and these, which have been recently laid bare in several places, are found to be generally from three to six feet in height, and are frequently from eighteen to twenty-five feet long. The longest of all measures thirty-eight feet nine inches, and is estimated to weigh above a hundred tons. Walls of a similar kind are found at Hebron, at Balbek, and in several places in Phœnicia. The wall of Aradus, a portion of which still stands, "is composed of quadrangular prisms, nine feet three inches in height, and from thirteen to sixteen feet long." That of Sidon is almost equally massive. Where blocks of this immense size were employed, it was quite unnecessary to introduce any cement; and so we find that both at Jerusalem and at Aradus cement has been discarded, and the stones are merely laid one upon another, but with such perfection that it is often impossible to insert a knife into the joints. Masonry of this solid kind seems to be represented in one Assyrian bas-relief, where four or five courses complete the wall up to the battlements. Wherever masses of this size were used, the difficulty of emplacing them increased with each of the courses; and it was, no doubt, mainly on this account that the builders, in most cases, placed their most massive blocks only in the lower courses of the walls, and proceeded as they advanced to employ stones of less size, until they finished at the top with masonry of the ordinary character.

When the walls of cities were built of brick, the sun-dried material was ordinarily considered sufficient,—at any rate, for the great mass of the wall. Bricks of a good clay, dried in the hot sun of Babylonia or Upper Egypt, are a solid and fairly enduring substance, and make a wall of no little strength. It was recognized, however, that such walls fell short of what was to be desired; and they were therefore either revetted with burnt brick, or else made of a very great thickness. The thickness of the walls of Babylon, according to Herodotus, exceeded seventy-five feet; and though this is, no doubt, a great exaggeration, yet Egyptian town walls in this material have been found to measure as much as twenty-two feet. Moreover, the accurate Xenophon states that the wall of Larissa (Nimrud), when he passed it, had a width of twenty-five feet, and that of Mespila (Nineveh) one of fifty feet."

Ancient walled cities in the East had very elaborate gates. The gates were reckoned the weakest points, because they were commonly of wood and could thus be attacked by fire. To meet this attack, a bronze covering was sometimes spread over the whole gate, sometimes over parts of it, as at Ballawat. But the main defense was in the construction of the gateways, which was elaborate. A gate in the enceinte of Nineveh could only be gained after three successive entrances had been forced, each defended by its own picked troops.

We have said nothing of the height of walls, because this is a disputed point. Ancient authors speak of walls more than three hundred feet high; but the best modern critics doubt whether the height in reality ever exceeded sixty or seventy feet.—*Geo. Rawlinson, M. A., in S. S. Times.*

It is what a man neglects to do in the line of his duty that marks his true character, rather than what he omits to do of sinning beyond the sphere of his personal self-seeking. His non-doing of good condemns him beyond the power of his non-doing of evil to justify him.—*Selected.*

For Friends' Intelligencer and Journal.

THE MACEDONIAN CALL.

"COME over to Macedonia and Help Us."

This call went out in earnest, pathetic pleading that the work before them might go on and prosper and bless the world, and that truth, pure and untrammelled by long established usages, might prevail. Ever since that day the same feeling prevails, and the desire is earnest for more fellowship in the work of spreading the undying truths of Christianity in their own sweet simplicity. "Come over to Macedonia and help us:" may the prayer go up to the great I Am! O Lord, in thy great mercy renew the call once more to such as stand idle in the marketplace, to enter into the work assigned them ere it be said as of old, "I would have gathered you, . . . but ye would not," and the same mournful destiny follow. The call to-day is as of old, "Take up the stumbling stones out of the way of my people," that the weary and heavy-laden journeying toward the land of rest may pass on to the close when and where the crown is won. Not a few feel as did Jonah when he said: "I went down to the bottoms of the mountains; the earth with her bars was about me forever: . . . the weeds were wrapped about my head. Then I said, . . . I will look again toward thy holy temple." Then relief came through obedience to the call to warn Nineveh against impending calamity which repentance only would avert. Let us take warning by what has been, and give our strength on the side of right; for "right is might."

SARAH HUNT.

THE CONSCIENCE OF THE XIXTH CENTURY.

FROM Dr. Lyman Abbott's article on "The New Reformation," in the *Century*, we quote the following: "Certainly the conscience of the American people, I should rather say of the Anglo-Saxon people, never has been so sensitive and never so resolute in dealing with practical life. If the most trustworthy expressions of religious feeling are those uttered in devotional meetings, private journals, and religious biography, it is quite possible that what the theologians call "conviction of sin" was more poignant in the last century than in this; but if the most trustworthy expressions of religious feeling are those embodied in life, the sense of sin and the purpose of reformation have been far more effectively expressed in this century than in the last. Then millions of slaves were held in bondage in America, and other millions under the British flag in its colonies, with only a feeble and wholly ineffective protest. Drunkenness did not lead to social disrepute either in Old or New England. Churches paid for drinks on occasions of dedications and ordinations, and the minister's sideboard took on the aspect of a public bar. The conscience of England abolished slavery in all English dominions in 1833; that of the United States, moving more slowly and having a more onerous task, accomplished its work thirty years later and at an awful cost. But the task was accomplished. Almost on the very spot where in the first half of this century a Northern missionary was publicly whipped on the bare back, not for circulating anti-slavery tracts, but for having one in his possession, now stand the buildings of the Fisk University, dedicated to the education of the emancipated negro. If drinking has not been diminished,—upon that question social statisticians are not agreed,—drunkenness certainly has decreased, both in England and in the United States; and the conscience of the people is seeking to find a way to bring the destruction of this enemy to a perpetual end. It has not yet found the way; but it has found, or is fast finding, the will. And where there is a will there is a way."

OUR FIRST QUERY.

THREE times in every year we are called upon to make answer to this query in all our preparative, monthly, and quarterly meetings, and the final answer for the whole year comes before us at our annual or yearly meeting. This constant reminder of our duty in respect thereto is not without its significance, and the fact that it stands first in the list of queries formulated for the government of our lives and the regulation of our conduct as members of the Religious Society of Friends, indicates the importance of its observance by those who hold a right of membership in the Society; yet in its observance how very remiss we are, and how few of us realize the loss to ourselves and to the meeting that this delinquency entails. They who absent themselves for trivial causes open the way for habitual neglect, though it may be farthest from their intention to become delinquents at the beginning. Especially is this true of our mid-week gatherings from the attendance of which there are many amongst us who feel themselves entirely excused. True, our business relations interfere greatly with the holding of religious meetings regularly in the middle of the week during business hours, and the larger part of the members of all our meetings are actively engaged in one or another of the various pursuits by which a livelihood is gained. But such of these as have control of their own time can hardly consider themselves released from this duty. Our religion fails to bring the full measure of blessing to the life if in the performance of any duty it enjoins there is wanting a true appreciation of its necessity.

This is especially the case with regard to the attendance of our meetings, for it is in mingling together for spiritual helpfulness that our interest in one another increases and our faith in the principles and testimonies we profess becomes stronger and takes a firmer hold upon our feelings and affections.

The tenderest sympathy should be given to those whose family duties or ill health or business engagements make it a necessity for them to be absent from mid-week meeting, but it is a very small percentage of our membership that are so situated. By far the larger portion have to *make* excuses, if any

are offered, and it is for this class that our concern is awakened. Many of these are yet in the formative period of life, and are not fully aware of the importance of observing this requirement of our discipline, as a duty they owe to the church, and of the advantage it will be to them in all the years to come, to have acquired the habit of regular attendance of meeting in early life.

It was said by one formerly "I was in the way, and the Lord met me." He is always meeting us in most unexpected ways, and there is no place in which we can more surely expect to find him than when we are met together for his worship. Then is the promise of his presence fulfilled, if indeed we have met in "the unity of the spirit." Those among us who have striven to be faithful can bear testimony to the help it has been to them and offer words of encouragement to all others to do likewise. The exhortation of Paul to his Hebrew brethren is in place here, "Let us consider one another to provoke unto love and good works; not forsaking the assembling of ourselves together, as the custom of some is, but exhorting one another, and so much the more as we see the day drawing nigh,"—the day in which we can no longer gather with Friends in this "reasonable Service"—the day that sooner or later comes to every one when we must receive our discharge as stewards. Shall it be as "good stewards of the manifold grace of God?"

MARRIAGES.

GODSHALK—JOBSON.—At the residence of the bride's parents. Tenth month 24th, 1888, by Friends' ceremony, Winfield H. Godshalk, of Philadelphia, son of the late Jesse S. and Sarah C. Godshalk, of Towamencin township, Montgomery county, Pa., and Mary B., daughter of Joseph and Mary E. Jobson, of Philadelphia.

PUSEY—GOOD.—Tenth month 25th, 1888, at the residence of the bride's father, West Grove, Pa., Solomon J. Pusey, of Londongrove, son of Jesse D., and Hannah D. Pusey, and Ella T., daughter of Francis and Sarah T. Good.

ROBERTS—PEIRCE.—In the presence of Mayor Fitler of Philadelphia, by Friends' ceremony, Tenth month 30th, 1888, Samuel M. Roberts, of Fellowship, N. J., and E. Lillian Peirce, daughter of Maurice K. and Elizabeth L. Peirce, of Philadelphia.

DEATHS.

BARNARD.—In West Chester, Pa., on Third-day, Tenth month 23d, 1888, Joseph W. Barnard, in his 54th year; a member of Birmingham Monthly Meeting.

BUZBY.—Tenth month 23d, 1888, at the residence of his son, Bustleton, Phila., Mordecai Buzby, in his 84th year; a member of the Monthly Meeting of Friends of Philadelphia.

DAVIS.—At her residence, Camden, N. J., Tenth month 28th, 1888, Sarah Davis, in her 98th year.

GILPIN.—Tenth month 22d, 1888, John F. Gilpin, a native of Wilmington, Delaware, but for a long series of years a citizen of Philadelphia, in his 92d year. Until age prevented he was a frequent attender of the meeting held at Race street, and formerly at Cherry street in that city.

GRIFFEN.—On Tenth month 5th, 1888, at the residence of his son-in-law, Purchase, N. Y., Henry Griffen; a member of New York Monthly Meeting.

Having lived an active upright life for sixty-two years, he endured many weeks of trying debility with calm submission to a higher Power. At last quietly passing away in his chair, that beautiful light shone over his countenance, giving assurance of his Heavenly Father being near to welcome home the spirit.

HARPER.—At Plainfield, N. J., Tenth month 27th, 1888, after a lingering illness, Sarah P., wife of Nathan Harper, and daughter of the late Joseph and Elizabeth Williams Mather, of Whitemarsh, Montgomery county, Pennsylvania.

McCANN.—At his late residence, near Blue Bell, Montgomery county, Thomas McCann, in his 80th year. Interment at Plymouth meeting ground.

RICHARDS.—At their residence, West Philadelphia, Martha, daughter of Joseph T. and Martha E. Richards, aged 8 months.

SNYDER.—At her residence, Sandiford, Philadelphia county, Tenth month 23d, 1888, Susanna, widow of John Snyder, in her 87th year; a member of Frankford particular and the monthly meeting of Friends held at Green street, Philadelphia.

WAY.—At the residence of Thomas W. Richards, West Philadelphia, Tenth month 19th, 1888, Joseph Way, aged 80 years. Interment at Fair Hill.

WILLS.—Tenth month 24th, 1888, Charles Wills, in his 63d year. Funeral from Rancocas, N. J., meeting-house.

YERKES.—Tenth month 25th, 1888, at the residence of Howard Mather, Huntingdon Valley, Pa., Maria, widow of William Yerkes, aged 80 years. Interment at Horsham.

THE FIRST-DAY SCHOOLS.

WESTERN FIRST-DAY SCHOOL UNION.

The semi-annual session of the Western First-day School Union, was held at London Grove, on the 27th ultimo. At the hour for opening, the rain was steadily descending, nor did the storm abate in any degree as the day advanced. Owing to this fact the attendance was much smaller than usual but those assembled felt gratified that so many felt interest enough to brave the inclemency of the weather. Reports were received and read from all of the nine schools belonging to the Union. The highest enrollment reported by any single school was 113, the lowest 44. All reports indicated a well maintained interest in the work.

During the morning session the question was asked whether it was advisable to begin the exercises of the school promptly at the close of meeting, or to allow a brief recess to intervene. The practice of the various schools was found to differ upon this point, but the prevailing expression was in favor of allowing as little pause as possible between the close of meeting and the opening of the school exercises.

The Visiting Committee presented an interesting report of work accomplished, and members of the schools visited, expressed satisfaction with this m ethod of mutual encouragement.

At the opening of the afternoon session, in pursuance of the programme submitted by the business committee, an exercise showing the manner of using Primary Lessons Leaves was offered by London Grove school. "The object of First-day School

Teaching," next claimed the attention of the meeting. Two papers, one from West Grove and one from Centre, were submitted upon this subject, and considerable expression was given by the meeting. All seemed agreed that spiritual training was the ultimate end and object of all rightly directed First-day School teaching, and the point was urged upon our attention, that if we would teach others to be Christ-like, we must first be learners at the Master's feet. The stirring times of Fox and his contemporaries were alluded to, and we were asked to make the same zeal for truth *our* object, that *they* evinced through the dark days of persecution. The study of the Scriptures was advised as a means to lead us higher, and into a closer knowledge of Him of whom they testify. The development of character must claim much attention from the teacher; the pupils should be inspired to cultivate the good that is within them, and to be strong to resist evil. The factor of personal influence and example was spoken of as an invaluable means to help in the attainment of these objects. Satisfaction was expressed that the Lesson Leaves were to continue to follow the International Series.

After a most harmonious, and seemingly profitable session the Union adjourned to meet at Centre in Fourth month next. R.

MEETING OF CONCORD UNION.

This body held its autumn meeting at Uwchlan Friends' meeting-house on the 27th ultimo. The First-day school at this place (Lionville, Chester Co., Pa.) is not located within the limits of Concord Quarter, but having received encouragement to begin its labors from that source, and there being no union in Caln Quarter, it has attached itself and been warmly welcomed thereto.

The day was rainy and the place remote from the majority of the schools, so the attendance was small. But what it lacked in numbers it made up in earnest interest, notwithstanding the depressing effect caused by lack of responses to the roll call of delegates. Reports were read from schools as follows: Middletown, Willistown, Concord, Uwchlan, Darby, Newtown, Chester, Providence, Wilmington, Goshen, and West Chester, all of which were of an encouraging character. The question, "What is the best method of teaching the little ones?" was ably presented in a suggestive paper by Elizabeth W. Smith, of Wilmington, Del. From the Willistown report there arose profitable discussion on "How far shall we go in proselyting the children?" the general feeling as expressed being in favor of teaching the principles we believe, as it was said the Society had lost ground by the loss of the proselyting spirit, though there was felt to be an objection to the use of the word "proselyte." The statement made in the report from Uwchlan that not one child in the school was a member of the Society awakened expression and concern for their future as a meeting.

Accompanying the report from West Chester were tributes to two valuable and well known workers in their school, Sarah Hoopes and Sallie A. Sharpless, the reading of which produced great tenderness of feeling, under which covering and the solemnizing influence of prayer, the Union adjourned to meet in Chester in Fourth month next.

THE ST. THOMAS MISSION SCHOOL.

A Friend from St. Thomas writes as follows: "Our Friends' Mission School is growing so, that we are already coming to feel crowded in the room we now occupy. From a beginning of eighteen, only seven weeks ago, we yesterday (Tenth month 21st, 1888), had thirty-three at roll-call with visitors besides, and several more could not attend because it was a wet, snowy day, and they had not shoes suitable. On the roll-book there are fifty-four that we count as members. Yesterday, both teachers and scholars manifested an interest that had scarcely been felt before. If this spirit continues, we must continue to grow and do good. Thus far we have been favored in having free rent and ample school supplies, having only to purchase fuel, stationery, and incidentals.

There being opposition to the receiving of colored children in the school, we felt it our *present* duty not to contend for it, and T. is now offering them the same facilities in our own home, which are gladly accepted."

[These Friends are earnestly at work doing what they can, the school being the direct result of the recent F. D. S. General Conference at Yarmouth, and they deserve the sympathy, and may need the material assistance of Friends elsewhere, as only two families of Friends reside there. Too long have we as a Society stood aloof from active work among the poor and needy, and have been the losers thereby.—Editors.]

TEMPERANCE.

SHOULD FRIENDS ENGAGE IN ACTIVE WORK OUTSIDE THEIR OWN SOCIETY?[1]

In approaching this subject it appears to me that the first thing to be considered is the mission of Friends as a Society, and their connection and influence on the community in which they live as well as on the world at large; for we as a Society as well as individuals have an influence for good or for evil in the world. Now what has been and what should be the mission of the Society? Is it not the advancement of the Redeemer's kingdom on earth? I think in this we will all agree, although we may differ in the means to be employed in carrying out our object. And where are we to look for strength to carry on the work, and also the example for the same, other than to him that spent his life in going about doing good to the bodies and souls of men, without partiality to state, nation, or condition, who cried aloud against every evil in the land and spared not, regarding not the consequence so that he felt the approving consciousness of his Father in Heaven.

And is it not our duty, claiming as we do to be followers of the meek and lowly Jesus to endeavor to walk by the same Light and be guided by the same Power that enabled him to perform the many

[1] An essay read at Abington First-day School Union, at Quakertown, Pa., Tenth month 20th, 1888, by Charles Bond.

miracles that he did, of healing the sick, in casting out the evil spirits, and of raising the dead?

Now are not all of those conditions to be found among the victims of intemperance more than almost anywhere else, and have we as enlightened and Christian people nothing to do for the amelioration of this large class of the community outside the limits of our own Society, where I am glad to think according to our numbers we are as clear of the evil as any other society in this country. But let us remember that Jesus declared it was not those that were whole that needed a physician, but they that were sick. Is it not therefore our duty to go out into the world and into the byways and hedges and endeavor to gather up those that have fallen into the hands of this mighty Goliah who is continually going up and down on the earth seeking whom he may devour, and bring them into a condition where they may sit at the Master's feet clothed and in their right minds?

I fear sometimes that we are so accustomed to seeing and hearing of the evils of intemperance that we get careless and suffer our minds to become in a measure callous to the importance of the subject. I therefore feel it right to call our attention to a few of the many evils arising therefrom.

It not only destroys the health, but inflicts ruin upon the innocent and helpless, for it invades the family and social circle, and spreads woe and sorrow all around; it cuts down youth in all its vigor, manhood in all its strength, and age in its weakness; it breaks the father's heart, bereaves the doting mother, extinguishes natural affection, erases conjugal love, blots out filial attachment, blights parental hope, and brings down mourning age in sorrow to the grave. It produces weakness not strength, sickness not health, death not life. It makes wives widows, children orphans, fathers friendless, and all of them at last beggars.

It bribes our voters, corrupts elections, poisons our institutions, and endangers our government. If we wish to know who is the most degraded and the most wretched of human beings, look for a man that has practised this vice so long that he curses it and clings to it; that he pursues because he feels an evil spirit driving him on towards it; but reaching it, knows that it will gnaw his heart and make him roll himself in the dust with anguish and despair; and yet he says "One glass more and I have done."

Now, my friends, these are but a few of the evils of intemperance, but are they not enough to create in every heart a firm resolve to go forth in the crusade against this mighty evil wherever it may be found, in our beloved Society or out of it, wherever we find it existing? And may He who hears the prayers of the widows and the crying of the orphans made by this portentious evil bless our endeavors, and hasten the day when Temperance shall cover the earth as the waters cover the sea.

Mrs. Ormiston Chant, who was recently in this country, in speaking to the British Women's Temperance Association, said that American women organize better than English women, but English women work better than American women.

NEWS OF FRIENDS.

RELIGIOUS LABOR IN WESTERN QUARTER.

Daniel H. Griffin, a minister from Amawalk, N. Y., with his wife, are visiting all the meetings that constitute Western Quarter of Philadelphia Yearly Meeting, under a minute granted them by Amawalk Monthly Meeting, Robert and Esther Barnes, with a minute from Purchase Monthly Meeting, accompanying them.

They were in attendance at New Garden Meeting on the 21st ult., on which occasion Daniel ministered with great acceptance. In the First-day school, which is held at the close of meeting, they all participated. The school is large and in a flourishing condition, nearly all the attenders both old and young remaining. At the select quarterly meeting Daniel was greatly favored in expressing his views of the value and benefit to the ministry of these meetings, and at the general meeting held on Third-day, (23d), his words of counsel and encouragement claimed close attention from the large audience which had come from far and near through a drizzling rain, to be present. Louisa J. Roberts and Matilda E. Janney, members of the Yearly Meeting's Visiting Committee, on appointment, also Joseph B. Livizey and others of that committee were present.

The meeting for worship was long; many testimonies were handed forth each having a place and finding acceptance with those who heard. In the business meeting the three queries usually replied to at this time were considered, the first one being dwelt upon, and its importance as the means of perpetuating the Society as a religious organization was earnestly presented. Tender counsel to the young women was heard with close attention, and the meeting closed under a feeling that the occasion had been a profitable one.

Daniel H. Griffin is well advanced in years, and the service he is engaged in is arduous, as meetings are held morning and afternoon where the meeting-houses are not too far apart. Some parlor meetings were held, calling in neighbors and friends of other denominations; they have been seasons of profit, and are greatly appreciated by those who attend that are not of our fold, as well as by our own members.

R.

THE LIBRARY.

Friends' Almanac has been issued for the year 1889, in the usual forms,—the larger size, and the "pocket" edition. This almanac is almost indispensable to Friends interested in the organization of the Society, as it, (the larger one), contains the official titles of the meetings of business, and the times and places of their holding, throughout the seven yearly meetings, with the names of their clerks, correspondents, etc., etc. Astronomical calculations are made for the 40th degree of north latitude, and adapted to the meridians of New York, Philadelphia, Baltimore, and Cincinnati. Copies may be had of Friends' Book Association, 15th and Race streets, Philadelphia.

The almanac states that five eclipses will occur during 1889. Three of these,—an annular eclipse of the sun, on the 28th of Sixth month, a partial eclipse

of the moon, on the 12th of Seventh month, and a total eclipse of the sun, on the 22d of Twelfth month, will be invisible in the United States. A total eclipse of the sun, on the 1st of First month, will be visible as a partial eclipse in that part of the United States west of the meridian of New York City, and east of Denver,—beyond the latter it will be visible totally. A partial eclipse of the moon will occur on the evening of the 16th and morning of the 17th of First month.

The Proceedings of the First-day School General Conference held at Yarmouth, Ontario, Canada, in Eighth month, have been printed in pamphlet form. The reports from the different committees and Unions and Associations, and the essays and special papers which were read, are all given in full, with brief notes of the discussions and exercises accompanying the business. Copies may be had, we presume, of the clerks of the General Conference, Joseph A. Bogardus, 177 West Street, New York, and Rebecca Schooley, Sparta, Ontario.

THE WAY OF SALVATION.

[From *The Friend*, (Orthodox), Philadelphia.]

Those who are accustomed to weigh the meaning of words, and to select such as will accurately convey the ideas they wish to express, are aware of the danger there is of false impressions being made by the use of terms which, although in one sense true, yet may foster erroneous views in themselves and in others. An illustration of this danger we think may be found in expressions frequently used by writers or speakers on religious subjects, which speak of salvation being secured by our *accepting* Christ, or *accepting* the salvation which he offers.

One of the meanings of the word *accept*, is to take an offered gift; and with this meaning in his mind, a person listening to such teaching may gradually come to believe that the religion of Christ requires nothing more than simply to receive salvation; unless the teacher is careful to point out the accompanying conditions which Christ and his Apostles have clearly laid down as necessary to be observed. If we turn to the "Sermon on the Mount," which is the most important compendium of Christian doctrine of which we have any record, we find it full of practical directions to be observed by the disciples of Christ; showing that there is a work and service for man to perform; and that the kingdom of heaven is not promised to every one that acknowledges Christ as Lord, but to him "that *doeth the will* of my Father which is in heaven."

Many passages of similar import might be quoted from the New Testament—such as "*strive* to enter in at the strait gate;" "*Work out* your own salvation;" "Be ye *doers* of the word, and not hearers only," etc. All of which show that it is a part of the plan of salvation, that man should coöperate with the Divine Power and Spirit of God "which worketh in us both to will and to do of his good pleasure." Without submission to the operations of this Power, there can be no well-founded hope of salvation; for it is through it we are redeemed from the defilements of sin, and prepared for admission into that celestial city where nothing that is impure or unholy can ever enter.

Nor is there anything in this view inconsistent with the declaration of the Apostle, that it is "the Grace of God which bringeth salvation"—for man cannot of himself work the work of God, but is dependent on this "free gift," this Light, Grace, and Spirit, of which our blessed Redeemer said, "I am come that they might have life, and that they might have it more abundantly."

EXTRACT FROM THE JOURNAL OF STEPHEN GRELLET.

We had a refreshing meeting at Spring; it was a large one. The following interesting circumstance was there related to me by John Carter, a near relative of the Friend who had been an instrument in raising up that meeting from a decayed state and on that account had called it Spring Meeting.

A number of years ago, it had become much reduced through the unfaithfulness of some of its members, and the death of others.

A young man by the name of Carter became religiously inclined, so as to feel disposed to open the meeting-house, and to repair there, though alone, on meeting days. He had continued to do so for some time, when one day a great exercise came upon him to stand up and audibly to proclaim what he then felt to be on his mind of the love of God, through Jesus Christ, towards poor, sinful man.

It was a great trial of his faith, for nothing but empty benches were before him. He yielded, however, to the apprehended duty, when shortly after having again taken his seat, several young men came into the house, in a serious manner, and sat down in silence by him, some of them evincing brokenness of heart.

After the meeting closed, he found that these young men, his former associates, wondering what could induce him to thus come alone to that house, had come softly to look through the cracks of the door at what he was doing when they were so reached by what he loudly declared, that they came in. Some of them continued to meet with him, and became valuable Friends. The meeting increased by degrees to the size it now is. Thus is the Lord pleased to make the faithfulness of one a blessing to many.

Wisdom does not show itself so much in precept as in life,—in a firmness of mind and mastery of appetite. It teaches us to do as well as to talk; and to make our actions and words all of a color.—*Seneca.*

It is the individual power to grapple with the complicated problems and mysteries of life that is measure of the man, and not the amount of information which he has gathered from books.—*Principal Donaldson in the Forum.*

I wonder at men always ringing a dish or a jar before buying it, but being content to judge of man by his look alone.—*Diogenes.*

Live to explain thy doctrine by thy life.—*Prior.*

AT THE DOOR.

A HAND tapped at my door, low down, low down,
I opened it and saw two eyes of brown,
Two lips of cherry red,
A little curly head,
A bonny, fairy sprite, in dress of white,
Who said, with lifted face, "Papa, good night."

She climbed upon my knee, and kneeling there,
Lisped softly, solemnly, her little prayer;
Her meeting finger tips,
Her pure, sweet baby lips,
Carried my soul with hers, half unaware,
Into some clearer and diviner air.

I tried to lift again, but all in vain,
Of scientific thought the subtle chain;
So small, so small,
My learning all;
Though I could call each star and tell its place,
My child's "Our Father" bridged the gulf of space.

I sat with folded hands at rest, at rest,
Turning this solemn thought within my breast:
How faith would fade
If God had made
No children in this world—no baby age—
Only the prudent man or thoughtful sage.

Only the woman wise, no little arms
To clasp around our neck; no baby charms,
No loving care,
No sinless prayer,
No thrill of lisping song, no pattering feet,
No infant heart against our heart to beat.

Then if a tiny hand, low down,
Tap at the heart or door, ah! do not frown:
Bend low to meet
The little feet,
To clasp the clinging hand; the child will be
Nearer heaven than thee—nearer than thee.
—*Lillie E. Barr, in "Our Dumb Animals."*

THE BLUEBIRD.

"On his breast the earth: on his wings and back the sky."—THOREAU.

To the window of my garret
Came a bluebird yestermorn,
And I fancied for a moment
'Twas the soul of Spring, new born;
But I heard thy wind, October,
Sighing like a ghost forlorn;
And the gray clouds, full of menace,
Frowned the dancing leaves to scorn;
And the bluebird flew away:

Flew away ere I could open
Unto such a heavenly guest
That old window of my garret,
Near to which, perhaps, a nest
Full of bluebirds once was hidden,—
So, before his Southern quest,
He had paused for one more visit
Near the place he loved the best—
The old nest where he was born:

Yes, was born. There is a hollow
In the apple-tree close by;
And the bluebird (who doth carry
On his back and wings the sky,
And upon his breast the brown earth
Of the springtime soft and shy),
Trusteth often to things hollow—
Precious hopes,—as you and I
Oft have done and may again.

May again? Nay, will do always,
Let us pray—since far more wise
Is the habit of believing
Than the wisdom cynics prize:
Rather let us be like bluebirds,
Who, although the brown earth tries
Upon their breasts to spread its color,
Carry on their wings the skies—
But my bluebird flew away:

Flew away; and then this other
Fancy came: how oft, indeed,
Heavenly guests unsought might seek us
In our grayest days of need,
If we only to the music
Of their coming wings gave heed!
But they find our garret windows
Closed too oft,—and so they speed,
Like my bluebird, far away!
—*Henry W. Austin, in Sunday School Times.*

THE INDIAN SCHOOL AT CARLISLE.

THE annual report of the Carlisle Indian School, for the year ending with the Sixth month, is printed in *The Red Man*, the monthly newspaper issued there, for the Tenth month. There were at that time, (Sixth month 30), 589 in charge of the school, (373 males, 216 females), the large majority, (301 males, 135 females, total 436), being out on farms and engaged in families. There were no less than 42 tribes represented at the school, the most numerous being the Apaches, 133; Pueblos, 114; Sioux, 86; Oneidas, 72; Cheyennes, 29; Arapahoes, 22; Winnebagoes, 16; Pawnees, 14, and Omahas, 12. All the other tribes had less than ten representatives each, several having but one.

In the mechanical training departments the following trades were taught the boys: carpentering, blacksmithing and wagon-making, harness-making, tailoring, shoemaking, turning, painting, printing, baking, and steam-fitting. The number of boys learning some one of these trades was 191, representing 28 of the tribes. In relation to this feature, Captain Pratt says:

"I urge more than ever the value of work shops and manual training in schools for Indian youth; but to all industrial and literary training should be added association and competition with the whites during the time of their school life; this alone will assure to them confidence in their own ability to meet the issues of the common struggle for existence.

"The industries taught the girls embrace all that is essential to house-keeping, so far as can be taught in a large institution, and this instruction is largely supplemented by practical experience in suitable white families."

We make the following further extracts from the report:

"It is fortunate that this School is so situated that its capacity for agricultural instruction is not limited

to the three hundred acres of School land. Its facilities in this direction might at once be extended to cover the best of training for a thousand boys. The system of placing pupils in families and on farms during vacation, and leaving a limited number of these remain through the winter to attend the public schools has widened, and its results have been more satisfactory. Three hundred and one boys and one hundred and thirty-five girls have had these privileges for longer or shorter periods during the year.

"Out-pupils are visited and careful inquiry made covering the homes in which they live and their treatment while there, also their own personal conduct and habits, and the schools they attend are examined, and reports covering all these points become a part of our permanent record. Teachers having the care of our Indian pupils in the district schools universally speak well of them. It is a gratifying feature of this out experience that those patrons who were the first to take hold of the system have been so well suited, that they still continue to employ our students and prefer them to any other help. Their general testimony is; 'They are plesaant to have about the house;' 'Are good to my children;' 'So respectful to the ladies;' etc., etc. Of the whole number out during the year, only four failed to give satisfaction, and no case of criminal viciousness occurred.

"In regard to the conduct of students returned to agencies reports are conflicting; in many cases they are creditable, but in others quite the reverse. In order to measure success by these apparent results, a very thorough knowledge of the adverse circumstances to which they return and in which they are compelled to live is needed. Enough comes to us to satisfy us that the work of Carlisle is an ever increasing factor for good in Indian matters, and that by means of this and other schools of like character, the great body of Indians may yet be brought into thought and touch with the outer world more rapidly than by any other means so far inaugurated. The government can only hope to do away with our distinct Indian population and assimilate it through some organized plan having that purpose in view. The massing and herding on reservations separated from the intelligence and industry of the country, is the reverse of every such purpose.

"The mortality of the year was abnormally large; being twenty-one out of a total population of six hundred and thirty-seven. Sixteen of these—nine males and seven females—were Apaches; one boy, Cheyenne; one boy, Lipan; two boys, Nez Perces; one boy, Pawnee. This great mortality among the one hundred and fifty-two Apaches is more than three times that of all the rest of the school combined, though they number less than one-fourth of the whole. An explanation is found in the fact, that when they arrived at Carlisle they were at a very low ebb physically, many of them suffering from chronic and incurable disease. All the deaths were from tubercular consumption or kindred affection. Aside from the Apaches, the health of the school has never been better. I repeat what I said last year, that the most potent element in rebuilding their naturally weak constitution is the country life and diet of the out-students. No disease of an epidemic nature occurred, and with the new buildings, now complete and in progress of construction, the general health of the school will surely improve, as exposure to colds and drafts will be lessened and general comfort greatly increased."

THE REMAINS OF WILLIAM PENN.

The question of marking or removing the remains of William Penn is again discussed in some quarters. At a meeting of the "Bi-Centennial Club," (a social organization growing out of the Bi-Centennial celebration of 1882), on the 24th instant, in this city, the subject was brought up. The report in the Philadelphia *Ledger* says:

Daniel Sutter said the club was engaged in perpetuating and keeping before the world the honored name of William Penn. He described his visit to England some time ago, and his search for the grave of William Penn. In this connection he recounted the difficulties he experienced in finding the spot, and his final discovery in the old graveyard at Jordans. Through the almost utter ignorance that prevailed it required a long time to find any one in London who could give him information of how to reach Jordan's, and, when he finally arrived at the place, he found the surroundings dreary and dilapidated, and such as to make an American feel sad. On account of the decadence of the sect of which Penn was a member, he believed the time was not far distant when the old graveyard would be abandoned and sold. He suggested that in the meantime a suitable plain block of marble or granite might be placed over the remains of Penn, to which the Friends still living would have no objection.

E. C. Knight spoke of the two efforts that had already been made to have the remains taken to Pennsylvania, both of which had been unsuccessful.

Dr. J. J. Levick thought the matter was well worth serious consideration. While he had great regard for the English Friends, the sect was growing less and less in numbers, and in a comparatively few years it would not be known in England as a distinctive body. The graves were poorly cared for, and if action were not taken the grave of Wm. Penn in another generation would be entirely neglected. It was not likely the remains could be brought to Pennsylvania during the present generation, but he thought a permanent stone should mark the grave of the founder of the Commonwealth. There could be no objection by the Friends to such a proposal. Mr. Alexander, Mr. Lucas, and others made remarks upon the question, the discussion determinating in the acceptance of Mr. Sutter's suggestion as a resolution, and a committee, consisting of Dr. Levick as Chairman, Mr. Alexander as Secretary, Mr. Sutter, Mr. Colesberry, Mr. Knight, Mr. Smedley, and Mr. Lucas, was appointed, with power to act.

[The following letter is also published in the *Ledger*, drawn out by the above report]:

Mr. Editor:—The *Ledger* of October 25th contains an account of some steps taken by the Bi-Centennial Club the night before to place a monument

over William Penn's grave, which was said to be in a neglected condition.

I visited Jordans Meeting-house about the 20th of last August, for the third time during the past five years, and found that the grounds had been cleared up and greatly improved within a short time. There is now little or nothing to be desired in the way of embellishment. The spot is one of the most beautiful and sequestered in all England, and wonderfully suggestive of the purposes to which it is put. The little burying ground is surrounded by great trees, and Penn's grave is marked by a small but substantial stone. I should be very sorry to see it give place to a monument of any kind. The grounds are in a deep ravine, approachable by some of the most charming lanes and hedges in England, and are about two miles from an old Roman village, Chalfont St. Peters, which should be the objective point of the traveler—otherwise he may stray around for miles without finding the place. A year ago this last summer I undertook to pilot a party of Philadelphia ladies to the spot, and came very near having to sleep under the hedge the first night. Down to within a short distance of Penn's grave no one had ever heard of such a man.

All, in my opinion, that is now needed, is a few sign boards along the road from Slough Station to the meeting house, a distance of perhaps eight miles, and this I am just having supplied, under the direction of the Congregationalist Minister at Beaconsfield four miles from Jordans. I have also ordered a large board placed at Slough, with a diagram of the road, from the station to the grave, painted on it. I am arranging to have one or two chambers fitted up at "The Greyhound," at Chalfont St. Peter's, for the accommodation of travelers who may be obliged to remain in the neighborhood over night. The inn is a very old one and dilapidated, but very interesting, having once been the stopping place of Jeffries, the cruel Judge, who held his court near by. It was formerly a mill, and a stream still runs under it; but with the special provision which is being made for their comfort, no Philadelphians need hesitate about trusting themselves there for one or two nights. Milton's cottage is only two miles away. Grey's country churchyard is on the road from Slough, and there are many other points of interest at hand.

I have been actuated in what I have done by the desire to honor the memory of the late George L. Harrison, Esq., who first drew my attention to this spot and who may also be said to have discovered Penn's burial place, for Americans at least. A supplemental objection which I have to the erection of any costly monument at Penn's grave lies in the fact that I expect to live until the very reasonable hope of Mr. Harrison is realized and the ashes of the founder of this city rest in the midst of the people whom he loved so well.

Mr. Harrison's chief opponent, a Mr. Littleboy, the only Quaker of influence in the neighborhood, died this last winter, and the time is not far distant when there will not be a member of the Society of Friends within miles of the place. They are now more numerous in Philadelphia, I am told, than in all England combined, and Penn's immediate descendants are in favor of granting the necessary consent for the removal of the remains.

Yours truly, J. E. Johnson.

THE INDIANS AND COLORED PEOPLE.

Providence, Oct. 24.—At the evening meeting of the American Missionary Society, after devotional exercises, Joshua Givens, a son of a Kiowa chief, gave a pathetic account of the forcible removal of his tribe to Texas. His father was shot because he refused to go. He went to school at Carlisle, Penn., with $800 which he had saved from wages earned in freight teaming for the government, and persevered till he was qualified for missionary work. He thought training schools were the best means of civilizing his people. He told of the ignorance, drunkenness, and dishonesty of an agent appointed by the present administration, who is now in prison for theft of $14,000 belonging to the Kiowas, which would have been $100,000 but for the acumen of educated Indians.

Three colored ministers then spoke. The first, Joseph E. Smith, of Chattanooga, Tenn., spoke about the evils of caste to the colored race. He described the gross injustice which educated and refined colored people have to endure in the South.

B. A. Imes, of Memphis, Tenn., was the second colored speaker. His subject was "The evils to the colored race of secret societies," which are very prevalent in the South, Memphis having 82 of them; and almost all the adults of both sexes are members of one or more of them; that they are formidable rivals to the churches, waste much time and money, and give great facilities to bad men to get power and influence.

J. R. McLean, a pastor from Paris, Tex., and a graduate of Talledega College, Ala., spoke on the evils to the colored race of intemperance. He said that the charge that the colored vote was very effectual in defeating prohibition in Tennesee, Alabama, and Texas, is, to a great extent, true.

MOVEMENTS OF THE WASHINGTON MONUMENT.

Great care is taken to note the movements of the Washington Monument, for it does move. The law of contraction and expansion of material by heat and cold operates here as well as elsewhere. When the sun shines full on the eastern face in the morning the stones on that side expand and throw the shaft slightly to the west. Then the sun goes round to the south and the apex of the monument makes a corresponding swing to the north. As the orb creeps about the sky to its final setting in the evening the glittering point on top of the monument makes a contra-movement around half a circle, gradually settling back to its normal position after the rays of the sun have lost their power. This movement has never been calculated, but is undoubtedly very slight. The wind, too, has an effect upon the structure. From the centre of gravity of the shaft, located 174 feet and 10 inches from the floor, is a cross-beam, from which is suspended a fine steel wire, protected by a galvanized iron tube about four inches in di-

ameter. This hangs to the floor of the northwest corner of the elevator well. At the bottom is a plumb-bob, weighing twenty-five pounds, suspended by means of the wire, and hanging in water. An iron cylinder protects the instrument from injury, and a little iron house, about four feet high, keeps off the draught. Through the cylinder is a telescopic eyepiece, in one end of which are two vertical wires about one-quarter of an inch apart. When a candle is held at an opening in the side of the box and the eye is applied to the outside end of the tube, the plumb line can be seen—a fine line between the vertical marks. Any movement in the shaft is recorded by a corresponding movement in the line. When the structure is at rest, and in its normal position, the line hangs still, midway between the others, but when the shaft is disturbed by the action of the wind it sways back and forth like the pendulum of a clock, always coming to rest in the center. This is observed every day, and if the custodian should ever notice the line hanging still at any point outside of the two cross-lines he will then know that the monument has been permanently moved from its level position. Until then, however, no one need be alarmed by the oscillations of the shaft from the action of the wind or the influence of the sun.—*Washington Star.*

DOING SENSIBLE THINGS FOOLISHLY.

How far is it actually true that women do sensible things in a foolish manner? We must remember, to begin with, that the way in which things are done, even more than the capacity of doing things, depends on habit and training. The farmer's daughter will go into the barn, bring out old Dobbin, and have him all harnessed, while the inexperienced city boarder, man though he be, is speculating how to get the narrow collar over the bulging eyes, ending, perhaps, in attempting to prove mathematically, like Coleridge on his pedestrian tour with Wordsworth, that the thing is utterly impracticable. The fisherman's daughter will pull or sail her father's dory out to the reef while the fresh-water fisherman, whom she carries as passenger, can only balance himself uneasily in his seat or cling desperately to the gunwale. Nay, the sailor who has been round the world in a man-of-war may gladly resign himself to being paddled by a young French girl down the rapids of the Saguenay, finding himself rated only as so many pounds of helpless freight on board. What we call doing a thing sensibly or foolishly is not, three times out of four, a matter of instinct or natural fitness in any way; it is a question of training.

It would, of course, be foolish to assert that sex creates no inherent differences in the way enterprises are undertaken or tasks done; but it is certain that the domain of these differences is being steadily narrowed as education becomes equalized and opportunities thrown open. I can remember when it was accepted as a sort of axiom, not merely that women could not with propriety learn to swim, but that they could not learn it at any rate, or only very clumsily, at least this side of the South Sea Islands; whereas now they are taught swimming as naturally and readily as boys. Fifty years ago, Mr. Comer, a well-known teacher of book-keeping in Boston, complained that it was "in the face of ridicule and sneers" that he took women as pupils, whereas now one can hardly enter a shop without seeing a young woman shut up in a glass case for this very occupation. She is doing a sensible thing, and nobody complains that she does it foolishly.—*T. W. Higginson, in Harper's Bazar.*

THE OLD TIMES AND THE NEW.

A REMARKABLE trait of human nature that is found among all peoples, and that has been manifested in all the ages, is a proneness to think of the past as a better period than the present; and this without any regard to the real facts in the case. It was while the Egyptians were at the very acme of their national greatness, that the conviction was strongest with them that prior to all the records of their ancient history there was a good old time when men were as gods, and the gods were as men. It was when the Hebrews were fairly out from their Egyptian bondage, and were on the very verge of a land of promised blessing, that they were almost of one mind in believing that their slave-life in Egypt had been better than was their life of freedom and hope in Arabia. It was in the best days of Grecian supremacy that the Greeks called their age the age of iron, and were sure that it had been preceded by a heroic age; while prior to that there had been successively an age of brass, an age of silver, and, first of all an age of gold. So universal was this tendency in the days of Solomon and later, that the Preacher rebuked its unreasonableness, in the earnest words: "Say not thou, What is the cause that the former days were better than these? for thou dost not inquire wisely concerning this." Don't spend your strength in an effort to account for a state of things which has no reality in actual fact.—*S. S. Times.*

Is not a soul to be deemed halt and lame, who hates voluntary falsehood, and is extremely indignant at himself and others when they tell lies; and yet receives involuntary falsehood, and does not mind wallowing like a swinish beast in the mire of ignorance, and has no shame of being detected?—*Plato.*

THAT man is great and he alone,
Who serves a greatness not his own
For neither praise nor pelf;
Content to know and be unknown;
Whole in himself.

—*Owen Meredith.*

The fairest action of our human life,
Is scorning to revenge an injury;
For who forgives without a further strife,
His adversary's heart to him doth tie;
And 'tis a firmer conquest, truly said,
To win the heart than overthrow the head.

—*Selected.*

MARGARET BRIGHT-LUCAS has been president of the British Women's Temperance Association for two years.

THE LOON, OR GREAT NORTHERN DIVER.

From the article on "Bird Music" by Simeon Pease Cheney in the *Century* we quote the following: "The loon is not a singer, but his calls and shoutings exhibit so great a variety of vocal qualities that we must consider him a member of Nature's orchestra.

"In the summer of 1887 I spent a few weeks on the borders of Trout Lake, St. Lawrence County, N. Y. This beautiful little island-dotted lake, some three miles long, has been inhabited for years by three or four pairs of loons. There they lay their eggs and rear their young, and there I found a good opportunity to study them. On one occasion a small party of us discovered a nest. When we were yet a good way off the wary sitter slid from sight into the water, darted along beneath our boat, and was far out into the lake before she came to the surface. The nest, simply a little cavity in dry muck, was on the ruins of an old muskrat house, not more than eight or ten inches above the water. There were two very dark eggs in it,—never more than two are found in the nest of the loon,—nearly as large as those of a goose.

"The time of sitting, as I was informed, is four weeks. Wilson says of the loons that 'they light upon their nests;' but a careful observer, who had several times seen the female make her way from the water to her nest, told me that they shove themselves to it on their breasts, very much as they push themselves in the water. I was also informed that the young are never fed upon the nest, but are taken to the water on the back of the mother, where they remain and are fed for a time, and then are launched upon the waves for life. At this age one can row up to them and take them in the hand, which they delight in, giving hard nips with their long and limber bills; but when a month old they seem as wild and cunning as their parents."

"Oh, it's very easy for *you* to trust God for your daily bread, when you always have a comfortable balance in your favor on your bank account!" This is a common enough complaint of poor and perplexed and harrassed souls, when counseled to cast off their cares on God. But it is a very mistaken complaint. It is *not* easy for the well-to-do person to trust God for his daily bread, just because it is so entirely easy and natural for him to trust his bank balance. In fact, our opportunity of trusting God is just in proportion to our occasion for anxiety. And so it is that our Lord says: "Blessed are ye poor."—*Selected.*

For he that once is good is ever great.—*Ben Jonson.*

The Lavanda, or ceremony of washing the disciples' feet, is still observed by the Pope once a year. It is a mere show or state ceremonial, and a great outrage on sacred things. No one is allowed to attend but the *élite* of Catholic Europe, in court or evening dresses. At this splendid piece of pageantry, the pontiff uses a golden ewer and basin; everything is well prepared and highly adorned, perfumes and nosegays of flowers are in profusion; and the whole forms a revolting contrast to a work of humiliation and charity.—*Roper's Romanism in Rome.*

NEWS AND OTHER GLEANINGS.

—John G. Whittier, in a letter to the Secretary of the Howard Association of London regarding the society's services, says: "I like practical Christianity and true following of the Master. I weary of creeds and dogmas more and more. I love the old way of Grellet and Woolman, but have no controversy with others. I am now in feeble health. My work is done. I wish it were better done, but I trust, and am thankful that I cannot glory in myself. My sole trust is in the goodness of God."

—There is a complaint that the new movement among women has produced a dearth of the maiden aunt. Instead of devoting her time and strength to the needs of her relatives she is writing, or clerking, or teaching, or in any other direction devoted to the enlargement of her sphere; all of which is pleasant for the maiden aunt, but inconvenient to her relatives, who feel an affectionate claim upon her services without pay.—*Boston Journal.*

—It is estimated that owing to the low state of the Nile, 260,000 acres of land in Egypt will remain uncultivated next year.

—A dispatch from Wilmington, Del., to the New York *Sun*, Tenth month 23d, says: There was a menagerie at Chestertown, Md., one day last week, and with it were seven elephants. Their car was run alongside a locomotive. One of the elephants put his trunk out through a crevice in the car, reached over to the tender of the locomotive, lifted the lid of the water-tank, and helped himself. The other six elephants did the same, and in a short time the tank was dry. The train hands did not see the performance, and only when the engineer tried to start his engine did he find that the water was gone.

—The president of the University of Southern California has asked the Clarks of Cambridge, Mass., their terms for a 42-inch lens, and the Clarks have replied that they can make it in five years for $100,000. This lens, eight inches larger than the Lick observatory giant, would give the university the distinction of owning the biggest telescope in the world. It is proposed to build an observatory on one of the lofty mountains near Los Angeles.

—"As a part of their botanical training," says *Garden and Forest*, "the students of the Miller manual labor school of Albemarle county, Virginia, have prepared a collection of the native woods of their county, including more than eighty specimens, for the Richmond exposition. The woods are prepared in blocks, in radial sections, with neat labels, giving the botanical and common name. The extent of the collection illustrates the richness of the forests of the foothills of the Blue Ridge in arborescent species."

—"Pundita Ramabai," says the New York *Sun*, "the high-caste Hindu woman who spent two years soliciting funds for the establishment of a school in India for the education of Hindu widows, has returned to India with $50,000. The churches of San Francisco contributed more than those of any other city, and she was helped by the influence of well-known residents, notably Major-General O. O. Howard, who gallantly championed her cause. From California she went to Oregon and obtained gratifying contributions there."

—Word has been received in El Paso, Texas, from Washington, that the Director of the Geological Survey is of the opinion that the recently conceived plan of constructing an immense dam across the Rio Grande at or near El Paso is perfectly practicable, but he thinks that the question of conflicting water rights must first be settled by the enactment of a general law of Congress. The chief purpose of the dam would be to irrigate the valley for about fifty miles and furnish motive power. It would

also prevent destructive floods below El Paso, and settle the Mexican boundary question by keeping the river in its proper channel. It is proposed to make the dam an international affair.

—Major J. W. Powell, of the U. S. Geological Survey, has recently written an interesting letter to the Kansas City *Times* in regard to the reclamation of arid lands. He says that it is an error to suppose that tree-planting, be it ever so extensive, can materially increase the rain-fall in a given section. The great service of tree-planting is to equalize the atmospheric conditions and preserve for longer use the amount of rain that falls. Irrigation and tree-planting, according to his conviction, will, in a few years, reclaim many areas now waste-land and convert them into productive farm and pasture lands.—*The American.*

—The total number of immigrants who arrived in the United States during the nine months which ended on September 30th last, was 432,802, against 411,282 during the corresponding period of 1887. Of the whole number of arrivals this year, 61,532 were from England and Wales, 62,423 from Ireland, 19,320 from Scotland, 85,098 from Germany, 57,801 from Sweden and Norway, 41,293 from Italy, 32,097 from Russia, and 34,702 from the Austrian Empire. The total number of immigrants who arrived in this country in September last was 39,865, against 48,443 in September, 1887.

CURRENT EVENTS.

THE yellow fever does not yet disappear from Florida, but on the contrary reports of its prevalence now come from points on the upper St. John. In Jacksonville, 36 cases and 4 deaths were reported on the 28th ult. Total cases to date, 4,095; deaths, 352. Ten new cases of yellow fever were reported in Gainesville on the same day. Seventeen cases and two deaths had been reported at Enterprise within the preceding forty-eight hours. Official reports also give word that the fever exists at Baldwin,—a place on the railroad west of St. John.

ON account of a letter written to a person in California it is expected that the British Minister to this country, Lord Sackville, will be replaced,—one report says by Sir Charles Tupper, of Canada. The California party asked Lord Sackville's judgment as to how he should vote, and the latter indicated his preference for Mr. Cleveland.

THE convention of the Women's Christian Temperance Union, in New York, adjourned last week. Frances E. Willard was reëlected President. Among the resolutions adopted were approval of woman suffrage, and national aid to public schools where it is needed, and a condemnation of the export, (from any country), of intoxicating liquors to Africa and other uncivilized countries. The difference of opinion as to "No party" and "Third party" action was again developed, but a large majority favored the latter.

FRESH difficulty is now (Tenth month 30th) feared at Chicago, from the newly hired street-car men on the Yerkes lines. They are dissatisfied over their wages and other matters.

DANIEL HAND, an aged man residing in Clinton, Conn., formerly a merchant in the South, has given one million dollars in good interest-bearing securities, to be held in trust and known as "The Daniel Hand Educational Fund for Colored People," the income only to be used for the education of colored people in the Southern States. The trustees are the American Missionary Society. This is said to be "the largest gift ever made in this country by a living donor to a benevolent society."

SAMUEL H. ALBRO, of New York, whose nomination as Superintendent of Indian schools failed of confirmation by the Senate, has been appointed to that position by the President and will enter upon his duties at once.

JOHN GUY VASSAR, "the last of the Vassar brothers," and nephew of Matthew who founded Vassar College, died on the 27th ult., at Poughkeepsie, N. Y., aged 77. He was a bachelor, and leaves a large fortune, part of it, it is presumed, to the College.

Two well-defined earthquake shocks were felt in New Bedford, Massachusetts, on the night of the 28th. Observers at one point say the shocks were felt at 11.25 o'clock, and were preceded by a rumbling sound, and three distinct oscillations were felt, followed by a tremulous movement. Others who were on the street say the movement was preceded by two reports, not unlike those of a heavy gun or thunder, and then came a distinct movement of the ground.

THE vessel on which the Babylonian expedition of the University of Pennsylvania set sail for the Orient was wrecked on the night of September 29th, on a rock off the Island of Samos in the Mediterranean sea. After thirty-six hours of waiting a Turkish brigantine took off the passengers and landed all in safety on the island, where they still were on October 2d. Much of the baggage and scientific apparatus of the party was lost or damaged.

NOTICES.

*** The annual meeting of the Association for the Promotion of First-day schools within the limits of Philadelphia Yearly Meeting will be held in Race street meeting-house, Philadelphia, Eleventh month 3d, 1888, commencing at 10 o'clock a. m.

Interested Friends are cordially invited to attend.

S. RAYMOND ROBERTS, }
CLARA B. MILLER, } Clerks.

*** Clerks of unions composing Philadelphia First-day School Association and Superintendents of schools not connected with any union within its limits, will please send annual reports with as little delay as possible to

S. RAYMOND ROBERTS, Clerk,
26 West Johnson street,
Germantown, Philadelphia.

TO-MORROW.

MYSTERIOUS One, inscrutable, unknown,
A silent Presence, with averted face
Whose lineaments no mortal eye can trace,
And robes of trailing darkness round thee thrown,
Over the midnight hills thou comest alone!
What thou dost bring to me from farthest space,
What blessing or what ban, what dole, what grace,
I may not know. Thy secrets are thine own!
Yet, asking not for lightest word or sign
To tell me what the hidden fate may be,
Without a murmur or a quickened breath,
Unshrinkingly I place my hand in thine,
And through the shadowy depths go forth with thee
To meet, as thou shalt lead, or life or death!

—*Julia C. R. Dorr.*

From Friends' Quarterly Examiner (London).

ON THE MINISTRY IN OUR MEETINGS.

DURING the course of the late Yearly Meeting I ventured one afternoon to call the attention of Friends to a fact which has long impressed me, and which it has been suggested I should here, by courtesy of the Editor, deal with rather more at length. That fact is that the meetings of our Society are losing their hold over a considerable portion of the more thoughtful of our younger members. On asking such whether they intend to go to meeting, I often get the answer, "No, I think not; there is nothing there that specially appeals to me." At the same time our meetings fail to prove attractive to those more cultivated minds outside our own borders who are becoming dissatisfied with the hollowness and formality of too much of the popular religion, and who might well have been expected—some of them at least—to find a refuge from doubt and unbelief in the deeper and more spiritual views of things which we have professed to hold.

Many causes may have contributed to this result,—a result which I never contemplate without wonder and deep regret. One of these causes is, I am convinced, a failure in the character of the ministry—a failure of quality rather than of quantity. My own experience has been,—and since my remarks were made at the Yearly Meeting I have had it confirmed by others from different parts,—that too much of the ministry which now occupies the time of our meetings is *poor and thin*—destitute of living power and unction, and unable to reach and appeal to the best powers of heart and mind of those who listen to it. In saying this I wish at once to guard myself against being supposed to take up a merely critical and censorious attitude. Faultfinding is very cheap and very destructive of whatever good might have resulted from any ministry either to one's self or others. It is not in this spirit, still less in that of wishing to cast any personal reflections on individuals here or there, that I offer these remarks. They are solely intended to point out what I believe to be a serious want, and to suggest what may possibly be needed in some measure to supply that want.

Let us first consider the causes that may have contributed to it. In the first place, a very large part of the spiritual force of our more earnest members is now expended on what we may call "outside" work,—in adult schools and mission-meetings, and in many different forms of social and philanthropic labor. The result is that many of those who have the good of our meetings most at heart frequently come to them in a state of greater or less exhaustion, feeling that the maintenance of a receptive attitude is the utmost of which they are capable, and that it is out of the question for them to think of having anything to impart. This is a very real difficulty, and one that intimately concerns the well-being of many of our meetings. Now I must not for one moment be supposed to undervalue the importance of that "outside" work; our adult schools especially are, I believe, one of the best proofs we have that Quakerism as a spiritual power still lives, and if faithfully carried on may yet be of quite incalculable benefit to English society. At the same time it is necessary to point out the danger we shall be in if nearly all that spiritual force and energy which was once devoted to our meetings for worship, comes to spend itself on outside work. It is hard to see how the inner life of Quakerism is to be maintained without a large share of energy being devoted to our own meetings. For the success even of this outside work must largely depend on the maintenance by the workers of a right attitude of soul, and a fullness of spiritual life, towards which a truly living meeting would surely be of the greatest help. And for the awakening and developing of spiritual life in those who are very young, or who for other reasons have no share in this kind of work, strong and lively meetings seem almost essential. If the life-blood is drawn from our meetings, how can the Friends of the future be spiritually strong and healthy?

The practical conclusion to which I am led is this: That just as in our ordinary work we have to check ourselves, and not do too much lest we should injure our health and destroy our power of doing anything, so here we must beware of draining the best spiritual

force of our most earnest members by excessive labors even in so useful a sphere as adult school and mission work; but must remember that the inward fire needs maintaining and renewing; that in theory at least our meetings for worship afford a chief means for such renewal; and that the only way in which these meetings can be what they are meant to be is for each one to be faithfully doing his share in them to promote the common good.

A second cause which has contributed to the present poverty of the ministry among us is no doubt the extension of its quantity at the expense of quality. The old oracular style of preaching is now almost extinct; our preachers no longer venture to imply that every word they utter contains a direct revelation from heaven. With this has gone to a great extent the feeling that our ministers are in any true sense *prophets*, which is a matter for great regret. In giving up the claim of direct Divine authority, many of them appear to have lost the power of speaking immediately to the needs of their hearers, which was once so conspicuous a feature of Quaker ministry.

We have been taught of late that the feeling of dread and awe that once accompanied the thought of offering words of exhortation or prayer was a mistake, and that it ought to be an easy and delightful thing to speak. Indeed in some places quantity of speaking has been so much encouraged that one would almost suppose that it alone was deemed sufficient,—that so long as something is said by way of "testifying," it does not much matter what it is,—that the spiritual condition of a meeting can be gauged by counting the number who rise to speak per hour. This I suppose has been the inevitable reaction against the old method of repression,—the pendulum has swung to the opposite extreme. Our duty, however, must be to strike the golden mean, and while refraining from claiming for ourselves or expecting from others a degree of direct Divine authority which reflection will refuse to justify, not to fall into the opposite and more serious error of supposing that any sort of communication is better than nothing.

Let me now try to indicate some thoughts which appear to me important for those who speak in our meetings to bear in mind. In doing so I may use unconventional language; I may even lay myself open to the charge brought against another Friend who once undertook in this journal a somewhat similar task,—of "going outside the recognized vocabulary of Friends." If so, I cannot help it; it appears to me that I shall best succeed in conveying my meaning to others by using such language as has most meaning for myself.

First and foremost, I believe that none should venture to speak without a distinct feeling of *urgency*: a conviction that the expression of some thought or the offering of words of prayer *is then and there imperatively required;* so that if the opportunity is allowed to go by unused a feeling of neglect of duty will result. This I take it is, in regard to the ministry, the peculiar tenet of Quakerism; together with the companion principles that it is not one only but *any* in the congregation, male or female, who may have this urgency laid upon them; and that our meetings must be held on a basis of silence, in order that to such full opportunity may be given.

If there is this urgency,—if there is in our minds a thought present, however simple, with a measure of power and warmth about it,—a feeling that it has helped us and would help others,—we ought not to hesitate to accept it as coming from the Divine Spirit, nor fail in giving expression to it. It may not be very new nor very startling, but if it so comes it will never be feeble or common-place. Those who listen will always, as a rule, be able to tell whether it is from the right source or not. "*I love to feel where words come from*" were the words of an uneducated Indian to John Woolman; and they ought to be graven on the minds of all who speak in our meetings. It is only as words come from the heart that they are likely to reach the heart. If there is something of the urgency of which I have spoken, we ought not to hesitate on the ground of not being sure that our experience is distinctly and undeniably supernatural. We must be on our guard against "quenching the Spirit" in its gentler as well as more powerful manifestations, and against "despising prophesyings," our own as much as those of others.

Next, there should be *definiteness* and clearness of point in what is said. There is too much speaking that lacks this quality,—in which the speaker is led on from one familiar expression to another that is like unto it, and from this again to something else, until one sees no reason why an end should come at all. Wandering thus, "as a bee from flower to flower so he from text to text," he leaves his hearers lost in a wilderness of pleasant murmurings, but with no solid spiritual food. There surely ought to be, if not a "rich repast," at least something that an attentive listener can carry away and inwardly digest.

Again, I think we may take as maxims that all really helpful preaching will be the result of experience; will be of matters that the speaker understands; and will be true to the facts of life. It is an excellent rule that preachers should not go beyond that which they have themselves experienced and know by experience to be true; they will then be most likely to appeal to an inward witness in the minds of their hearers. So also they will be speaking about things they understand, and it is such speaking that carries weight. It is hardly worth while to spend time in trying to controvert opinions which we think dangerous, but have only heard of at second-hand; it is apt to produce in instructed minds little but irritation. It is not well, for instance, to try to overthrow the doctrine of Evolution by asking triumphantly whether a frog can be turned into a man. It is when we "speak that we do know and testify of that we have seen," that our speaking is likely to come with authority, and that others will be likely to receive our witness. How much better to confine ourselves, like the Apostle, to "that which we have seen and heard," than to lay ourselves open to refutation at every point by speaking, however loudly, of things that we have not seen, and do not really know. No preaching is likely to be in the long run effective which is not based solidly on the real facts of life,

inward as well as outward. What we poor mortals want is something that will rouse us when we are spiritually asleep, comfort us in our sorrow, and aid us in the battle of life here below; something that will inspire our souls by making us feel the loving purpose of God as shown in Christ, and brace us to the conflict when our arms hang down and our knees are feeble. To accomplished this it should surely not be in the air,—not tend to enervate us with the luxury of castle-building,—but be plain, simple, direct, and practical, warning us of the dangers of sloth and the wiles of the enemy, teaching us how we may best meet, in the strength and love of our Great Captain, the foes that are most likely to attack us. It is when a preacher speaks from his own experience (which he may do without unduly calling attention to himself), that he is most likely to be able to meet the practical needs of others, warning them by the thought of his own failures, and encouraging them by the thought of what he has known of the working in himself of a "Power that makes for righteousness."

But it may be said our experience is so varied that what is true for one mind will not always find a response in others. Doubtless this is true, and here, surely, is one great reason in favor of the Quaker mode of worship. For it is not with us left to one man to attempt to meet, out of the narrow experience of a single life, the varying needs of his whole congregation, but one person can speak to the needs of some, another to those of others.

And if we are to have such a ministry as shall meet the needs of all, it is certain that there must be, at least in our larger meetings, a certain number of ministers who are in touch with the best thought of the age, and who know intimately the kind of thoughts that occupy the minds of the best educated among the rising generation. This, unfortunately, is at present a point in which our ministry is sadly wanting. It is hardly too much to say that the older and younger generations of Friends in some places are living in two different worlds; each speaks a language that the other hardly understands. Nothing less than a revolution has taken place in the last thirty or forty years in the whole attitude of men's minds with regard to the history of the world and of man, and to the true mode of studying and interpreting the Scriptures; and those who are alive to this change find it difficult at times to profit by the ministry of those who, hearing of it only at second-hand, regard it merely as a passing dream, or denounce it as a devil-sent delusion.

We want a larger number who are prepared to consecrate their powers of *mind* as well as heart and feeling to the important work of the ministry. We younger Friends want some to speak to us who read the same books that we read, and whose thoughts run in similar lines to our own. We want a ministry that is not only earnest and spiritual, but also abreast of the times.

This is not saying that we do not care to listen to anyone who is not highly educated. Speaking for myself, I may say I have profited much by the simplest utterances of working-men and women, speaking obviously under right feeling and direction. But we require something more than this.

Some of our ministers might well use their powers of mind to help them in *freshness of illustration.* If we would follow, however humbly, in the path of Christ and of Paul, it will not be by mechanically repeating their illustrations, keen and powerful as these are, for by very frequency of repetition they are almost sure to lose their edge. It will rather be by following them in having our eyes open to the world around,—the world of man and the world of nature,—and finding, as they did, suggestions to help us in impressing the principles we desire to enforce. If history is the working-out of a Divine purpose in the training of the human race, why should we feel restricted for our illustrations to the well-known incidents recorded in the Old and New Testaments, and why not occasionally show how the same great spiritual principles there brought out have been working also in a wider sphere? Again, if the outward world is truly the garment of the Unseen, how many ways will a thoughtful and observant mind discover of showing how the laws of the spiritual universe are discernable through the veil of the seen? Such a work as Prof. Drummond's "Natural Law in the Spiritual World," has, doubtless, been found by many very suggestive here.

Then I have often thought how much we miss by not more freely using the rich stores of spiritual thought and experience laid up in the works of our best poets,—as Wordsworth and Tennyson in England, Lowell and Whittier in America. The exact thought we want is often accurately expressed by them, with a force and beauty that we can never hope ourselves to equal. . . . . .

What we want is to combine depth and thoughtfulness with the freshness of spontaneity; definiteness and point with that unction that can only come from present spiritual fullness and the contact of heart with heart. Probably the way of attaining this will not be the same with all; some will feel that any attempt at conscious preparation would destroy spontaneity, and be to them inconsistent with an attitude receptive of Divine guidance; others, that they can sometimes speak with most power and helpfulness when a subject has been for some time gradually maturing in their minds. In any case it can hardly be wrong for a minister to bear the coming meetings on his heart throughout the week; and to have his eyes open for useful suggestions from the Scriptures, from history, poetry, biography, or science, and from the events passing around him.

Lastly, I may be allowed to emphasize the pernicious and desolating effect of controversy in meetings for worship. This, I hope, is not an evil that is rife in many places, but wherever it does prevail the consequences are undoubtedly disastrous. If we think that some one has spoken too long or otherwise amiss, or even that the opinions expressed have been unsound and dangerous, it is probably never right there and then to stand up and 'say so. There are other and quieter ways of correcting errors of judgment; and even as regards unsound teaching, it is possible to set forth what we may conceive to be

the truth without directly attacking what has previously been said. Controversy destroys the very essence of congregational worship by turning a meeting into a kind of theological arena, and dividing into hostile parties those who ought to be a untied body of worshippers. And even apart from open conflict, I believe the more our ministers avoid controversial and argumentative discourses, whatever line of thought they may take, the better. Those who are dissatisfied with the prevailing views, will find a better way of instilling that which appears to them deeper and more spiritual than by direct attack; while those who fear that the very foundations of the faith are being assailed by new teaching, will find that many more will be gained over to genuine Christianity by exhibiting the reality of the Christian faith than by arguing about it. The Christian faith we are agreed is true and real, but we differ as to the logical grounds on which it rests. Now whatever view we take about the latter, we shall all do more good by showing forth by our words and by our lives the reality of the former, and so justifying it to the hearts and consciences of others, than we can ever hope to do by argument, which appeals only to the intellect; still more than by using arguments that all instructed persons know to be untenable. Probably as many persons are driven away from the faith by the unwisdom of its supporters, who base it on a wrong foundation (confusing inspiration with infallibility), as are ever led astray by the assaults of its avowed enemies.

Let us aim at declaring and exhibiting, in a spirit of charity and brotherly kindness, that which we ourselves know and understand; let our motto be that of the apostles, "We cannot but speak the things that we have seen and heard," and the ministry in our meetings will not fail to meet the needs of the day.

EDWARD GRUBB.

GROWTH.

AN ADDRESS TO SWARTHMORE STUDENTS, BY ELIZABETH POWELL BOND.

THE helpless baby, with weak and untrained limbs, "with no language but a cry," could he forsee at a glance the days of effort and failure before him in the struggle for mastery of his feet and hands, would give up in despair and lie back in his mother's arms and die. But his course of devolopment and training comes to him a moment at a time. The brilliancy of the scarlet ball, or it may be a beam of sunlight catches his eye, and directs his feeble grasp towards itself, and after many vain attempts, his strengthened hand seizes and steadily holds the attractive objects presented within his reach. Then it may chance that the beautiful thing that he sees is beyond his reach, and now begins the struggle for the direction of his little legs. At first he learns to creep toward the object of his desire; but after awhile it dawns upon him that this is but an ignoble posture and gait for the embryo man, and he attempts to stand upon his feet and walk. Alas for the little man in these first tottering efforts! How easily a straw can overthrow him—scores of times in a single day he must lose his balance and fall heavily to the floor. But he was born to walk upright; and true to the law of his nature, his courage is dauntless, and he rises from each fall a stronger and securer little man. At last he has gained his footing, and all the world with all the possibilities of mountain and valley, river and sea, opens before him.

These infantile struggles for the mastery of hands and feet, are but typical of the whole course of life. We are born to walk upright. It is the word of Scripture that man is fashioned in the image of God; and this word is verified in our aspiration toward our best ideals. Our souls are stirred by every recital of great physical courage, and of great moral heroism; our hearts turn as do flowers to the sun, toward the gracious souls that make "Sunshine in the shady places," the souls that most embody the Infinite loveliness and graciousness of God. In the progress of our development, we catch glimpses of the great heights beyond and above us, and they draw us on. But it is not always by a firm-footed march that we advance. We come to by-paths that seem to promise more for us than the straight path forward and upward, and we linger by the way and lose time and strength; or there are obscurities and uncertainties in our pathway that confuse and perplex us; or we come to rough and rocky places over which we stumble and fall down. We are always as little children learning to walk. It will be well with us, if we keep the courage of the little child; if from every mistake and failure, humiliated though we be, we can go on with a sincere purpose to see the right way, and to walk in it. It is in the *sincere purpose* that our hope lies. Our judgment may sometimes be at fault, and our self-control fail us so that we mistake our way and our duty in consequence; but the *sincere purpose* to see will finally give us the clear sight that we pray for; and every step along the way of spiritual advancement, will make the progress more sure and more happy.

Have you considered how rich in opportunity for spiritual growth is this closely associated life of ours under our college roof? When you came among us as students, it was very properly the intellectual work of the college year before us, that was your chief thought,—how much of mathematics and science and language and literature and history you could add to your intellectual possessions. This was *your* absorbing thought, you who are earnest students; but in the moment of farewell, when fathers and mothers saw sons and daughters leave the shelter of the home-roof,—the close and loving care that nestlings have,—to begin the more self-reliant and responsible life awaiting them here, I know that the yearning thought that filled the moment to *them*, was the quality of manhood and womanhood that should return to them when the year's work is ended. And when the earnest appeal was made to me, as it was again and again, "I beg thee to place my boy or my girl, or my young brother or sister, (as the case might be) among the very best companions and the most refined influences," I said within myself, "How can I make these students see that in *their* keeping is the answer to the most fervent prayer breathed from the

inmost soul of fathers and mothers!" For, while you receive from your instructors the lessons that stimulate your intellectual growth, and receive also the impress of their manliness and womanliness, still you are each other's constant companions; you set for each other the standards of behavior; either debasing each other by tampering with honor, or holding each other up to high levels of conduct whose controlling principle is the law of right. This it is that makes this closely associated life so fine an opportunity for spiritual growth. And when I say this, I do not mean that your thought is to be turned inward upon yourselves, that you are to go about meditating upon plans for *getting* the most spiritual good; considering what choice morsels of spiritual food you can pick out for your own special growth; rather, let this be your concern—what you are *contributing* to the common fund of spiritual life in our little community. Does your presence here strengthen a spirit of straightforward truthfulness among us? Is your influence upon the side of good order, that makes available all the opportunities for intellectual advancement? Does your cheerfulness shine into dark corners and drive out all malarial influences? Does your gentle courtesy avert the friction that is always threatening the harmonious movement of people so closely associated as we?

These are the queries that test the quality of the spiritual life whose vitality is not in what it *gets*, but always in what it *gives*. And when you have attuned your lives to truthfulness and obedience and cheerfulness and courtesy you will have struck the key-note of the true religious life, you will be in accord with the true life of God.

Toward this end let us live. Toward this end, let us band together, a mutual aid and defense, supporting the faltering steps of the weak and timid, lifting up any who fall by the wayside, and, strong in the strength of God whose tides always wait for entrance into our souls, we may thus do our part toward the coming upon the earth of the Heavenly Kingdom for which men daily pray.

For Friends' Intelligencer and Journal.

BENEVOLENT AND CHARITABLE INSTITUTIONS.

Perhaps there is no feature of our modern civilization that is so marked as the one that builds homes and asylums for the destitute and endows benevolent institutions so that no individual within reach of human sympathy may suffer or be in want of the care and support which age or poverty or disease or helplessness require. And this kindly interest in the welfare of all who suffer the various "ills that flesh is heir to," and are not able to help themselves, increases as the years roll onward and of itself is the most conclusive evidence that the principles of the Christian religion are permeating the whole fabric of society. The wiser thought that "to help people to help themselves" is the better way, is rapidly taking the place of the old alms-giving that had done so much to pauperize the poor and destroy that self-respect which is man's best safe-guard against demoralization. To come with just the little assistance needed to bridge over an extremity,—to offer the quiet retreat when sickness threatens the loss of every comfort to the sufferer,—to give a week in the country to the tired mother and her little ones, when the fields and woods are green and inviting, and in the innumerable ways that the Christ-love in the soul of the true disciple is ever opening for helpful service will, as this thought is made the basis of all charitable and benevolent work, greatly modify if it does not entirely remove the destitution and want that arise from any or all of these causes. Is the old man or woman through misfortune or improvidence left without the means of support? Here is a comfortable home provided, where an entrance fee not at all burdensome to his or her friends is paid and the individual enters not as a pauper, but as one who by the payment of the fee is entitled to all the benefits of the institution until the final release comes. It is the same with our hospitals,—only those whose utter depravity and impatience of restraint have destroyed the last vestige of self-respect are outside the shelter of these helpful retreats.

Then what an uncounted blessing are the homes and nurseries where helpless infancy and childhood find the loving care and attention that the poverty of the mother, and the necessity it entails for providing by her own industry for their support, makes it impossible for her to bestow. Does any thing that one can do for another, bring us so near the blessed realization of the Divine compassion! "Inasmuch as ye have done it to the least of these ye have done it unto me" is the language that it breathes forth. The aged who is poor and afflicted may have become so because, like the prodigal of old, "he wasted his substance in riotous living." This can never be said of the little child who is here with no power save the wail of hunger or pain by which to make his wants known. And no work done for these helpless ones promises so much of future good as that of the nursery, which gathers them in from the alleys and tenements of our city in the early morning hour; feeds them; cares for them; and attends to all the wants of their waking or their sleeping hours, and as their intelligence develops, gives them that elysium of baby-life—the kindergarten; and when the labor of the day has ended, returns the happy little one to the arms of the parent, to gladden the few hours of home-life they may enjoy together.

Then there are the sweet lessons of kindness, of obedience, and of reverence learned in the kindergarten; and as they take their places at the table, and the little hands are folded and the child-voices join in a thank-offering to the Heavenly Father before the food is eaten,—how these things are taken up by the receptive mind of the child, and carried to the humble home. And when the day of blessed rest comes, and the little one sits at the home-table, and in the innocent prattle of its baby lips, so dear to the heart of the parent, repeats the lessons it has learned, and enforces them by its own example in the same sweet earnestness in which it has received them, who shall say the words of the Master are not fulfilled: "Their angels do always behold the face of our Father in heaven!"

And this is what the humanities of our own age, enlightened by the teachings of the Christ, as they are coming to be better understood are doing for multitudes of the young children of the struggling poor in our "Day Nurseries." These are not in any true sense charities,—they are helpful institutions where the smallest sum to which the food of a child can be reduced and yet be healthful and nourishing, is charged. The care, the instruction, and whatever else may be required are provided, through the willing efforts of earnest women who find in this benevolent work a mission of blessing to the struggling poor, and the promise of a better future for the children who are the recipients of this care. Let every heart give its "God-speed" to all these efforts, and the hand of the prosperous devise for them liberal things, remembering the promise, "by liberal things shall they continue." L. J. R.

THE SOCIETY AND ITS MINISTRY.

The remarks made some months ago upon the ministry of Friends, "that, if we would fulfill our mission in the world, there must be more earnest labor to make ours, by the influence of the Spirit, an acknowledged Gospel ministry," met with the warm approval of the present writer. But regret was felt that the course of the Intelligencer and Journal in occasionally publishing extracts from the sermons of pious and gifted ministers not of our body seemed to encounter disapproval. In the early and palmy days of our Society Thomas 'a Kempis's imitation of Christ, and Fenelon's pure and simple faith (although both were Catholics), and the writings of other pious and holy men had the sympathy of Friends. It was because these men looked beyond the symbols and rites of their creeds (even while believing in them) to the one only Head of the church for their spiritual strength. Spurgeon, the celebrated Baptist minister of the present time, when addressing some young men who were members of our Society, urged upon them to be true to the principles of their predecessors. In our day, the minds of many earnest religious souls have soared beyond the rituals and ceremonials that have for ages obscured the perfect knowledge of the spiritual nature of God. There has been a great awakening, especially among those even who claim to be "Evangelical." The late Dean Stanley's writings are such as no Friend need fear his family reading, and there are others of like import. Archdeacon Farrar says: "External service is not religion, nor is Orthodoxy or right opinion the essence of religion, and it is only a narrow and fanatical provincialism, which without charity, without humility, without toleration claims infallibility in all points for our own opinions." And again, "Men who claim to be religious should be the sweetest, the most trustworthy, the most amiable, the most beloved, but alas! too often they are not."

Shall we ignore such instruction as this? We receive much that is valuable through the Intelligencer, which has greatly increased in interest within the last few years. Its editors, I believe, encourage all articles that are in accordance with our highest profession. Are not the thoughts of such a Christian as this preacher and writer shows himself to be, as edifying as the list of Friends and their marriages and descendants of by-gone days, where no spiritual experience is recorded of them? The truth is many religious sects are growing nearer to us, though they cannot yet throw off the shackles with which they have so long been bound, and we are drawing nearer to them. In the early rise of Friends they had many testimonies to bear against evils which in the same form no longer exist, and we must yield a few unimportant things if we hold together; but if we keep to our great foundation principle, the light emanating from God himself according to the declaration of the apostle, "Ye are the temple of God and the spirit of God dwelleth in you," we have no need of fear that as a Society we shall fail.

Yet we connot live on the mere name of Friends or upon the love of its past associations. We have been lessening in numbers and some have thought if we had more ministry we would have prospered more. No; the idea is unworthy of a Friend; nothing but a prayerful spirit, more dedication of heart in and out of meeting can save us as a people. Then if it is best for us, our Father whom we seek to know, may raise up those who will proclaim his message among us and a truly baptized ministry is one of the greatest blessings to the church. But let us not too earnestly desire words; we have known wordy ministers who from self-importance have almost broken up meetings; nothing but humility and nothingness of self can be the right condition for those who minister and those who worship. *

For Friends' Intelligencer and Journal.

A VISIT TO INDIANA AND OHIO.

On Seventh-day of the week between Illinois and Indiana Yearly Meetings, I left the train, in the evening, at the depot in Richmond, to find the home of a pair whom to know is to honor and to love. I trust their kindness has found its proper reward. At the meeting on First-day morning a welcome was felt that made a home for me in the household of faith. Under impressions to visit the afflicted and such as neglect the attendance of meetings, I had spoken to one or more of the elders before we took seats. At the close of the sitting an elder opened my concern. During the week several dear friends went with me through the beautiful city. A goodly number were present at the monthly meeting, held near the middle of the week. Our visits were made in that dependence which desires and ensures satisfaction.

On Seventh-day morning, 9th mo. 29, many friends met me at the depot, I being on my way to Waynesville, Ohio. Having, on a low level, a facility in the use of the pen both in verse and prose, many knew me a great way off; and so, as my motives had not been bad, I was glad that I had not hidden behind a *nom de plume*. Making it a rule not to mention names without cause, this sketch will be impersonal. A home was found for me,—a free, good one, too,—suited to one who dares not do the little given in any other than the plain way opened for him.

The sittings of the yearly meeting were blest beyond the power of expression. There may be a slight numerical decline, but there is evidently an increase in love and mutual goodwill, both in our own [Illinois] and this [Indiana] yearly meeting. From out the troubled and seething deep, new and tried witnesses are being raised up to declare the living and eternal Truth. The dragon Self may sweep some of the brightest stars from the galaxy, but others will shine in new lustre. Here I met a widowed one whose sufferings and sorrows have been extreme, but out of these she has come to raise a voice that no criticism will question nor adverse spirit shall presume to fashion. I went to the home of one who a few years ago promised as few young men have done to be a star of the first magnitude We met not as men estranged; I was touched with pity and blessed with prayerful good will. The words "Come back" parted my lips. Whether reached from heart or head it is not for me to tell. A mother's heart is with him.

A dear friend and his wife offered a seat in their carriage; and in the evening, after the close of the yearly meeting we went to Springboro', and attended an appointed meeting blessed with a better preesnce than ours. The next day we reached the homes of the departed whose lives had spanned a century. The ancient meeting-house was opened for an afternoon meeting. Words were spoken; tears fell. The effect who can know? The morning following another dear friend took me to the Richmond depot where I got a ticket for Chicago. The familiar initials, J. W. P., indicate the home reached in the evening. The next morning we went to meeting, it being Flrst-day. It was blest to me, and, I trust, to them. To that meeting as a nucleus I look; to their homes so free, so unassuming, my heart is bound; fit type of earlier and better days. To the pretty home at Oak Park, to the dear parents, to the bright boys, memory recurs. To my own fireside and to one who adorns it I make a glad return, and there offer a grateful and serene farewell.

AMUSEMENTS AND CHRISTIANITY.

EVERY now and then we find in our religious papers and elsewhere discussions of these questions: Is it wrong for a Christian to attend the theater, to play cards, and to dance? While many arguments are presented on each side, it is seldom, if ever, that we find an article in which the writer touches anything much further below the surface than purely ethical considerations. After all that has been said and written, many Christians continue to ask these same questions as though they were new problems. Is not the indecision of Christians as to the right or wrong of these and other amusements due to a superficial conception of the religion of Jesus Christ? To such as regard that religion merely as a system established for the regulation of petty matters of conduct, and look to it only to discover "Thou shalt" or "Thou shalt not," it is quite natural that they should sometimes find it difficult to determine the exact line which they imagine divides the lawful and the unlawful amusements. But true religion surely means more than this. It establishes a principle of action which regulates and controls all our activities—whether mental, physical, or spiritual; so that we choose certain occupations or indulgences, not simply because they are abstractly right, but because we are under the influence of God's Spirit within us imparting an impulse to do right.

In the majority of plays (speaking from extended personal experience) the spectator, if he is thus quickened by the Holy Spirit and is endeavoring to conform his life to Christ's life, will, because of what he hears, sees, or is forced to imagine, find himself amid sounds, sights, or thoughts out of harmony with his spiritual aspirations. Unless he is thoroughly familiar with the play before witnessing the performance of it, he can have no guarantee that nothing inconsistent with his standard of purity and virtue shall be presented. He exposes his spiritual sensibilities to a possible shock, and while they may be sufficiently established and developed to endure the strain, they are nevertheless injuriously affected in so far forth as the pernicious influences brought to bear upon them are positive. This does not argue against strength and stability of character; it merely suggests a voluntary choice of possible evil when no necessity demands it.

When our controlling desire is to do God's will, and when our constant effort is to seek the kingdom of God and his righteousness, to develop our spiritual nature, and to lead some soul to Christ, then, because our purposes, desires, enjoyments, and efforts are controlled by a Christ-born principle of action, we shall have but little difficulty in determining, for ourselves at least, what amusements are "right" and what "wrong," and shall prefer to direct other Christians to their own consciences for approval or condemnation of any particular form of amusement.

A thoroughly consecrated Christian requires no advice to refrain from this or partake of that when he desires recreation; he will find his own place by the operation of a natural law. He may not necessarily avoid the theatre because he believes it, as an institution, to be wrong, but perhaps for no other reason than that of absence of desire to attend, though it may be that before his birth into the kingdom of God he found in the theatre one of his greatest enjoyments.—*C. M. E., in The Christian Union.*

"GOD never sends one inspiration to chase up or correct another. Ask light from him, and trust the light he sends for your present use, and follow it; never take other men's consciences in the place of your own. For no child of the Highest shall ever find that he has been forsaken or left to grope among the shadows when he was seeking to know his duty, and was honestly willing to do it if he knew."

THERE is no liberty to men whose passions are st ger than their religious feelings; there is no liberty to men in whom ignorance predominates over knowledge; there is no liberty to men who know not how to govern themselves.—*Selected.*

AS EXAMPLES.

To any person possessing optimistic tendencies it is a most difficult task to suffer the eyes to be opened regarding personal defects anywhere, and most especially where the affections are centred, and where we greatly desire to see only the good. And often it is best to cultivate this tendency where no benefit can arise from the opposite course, and where no harm can come if there be self delusion.

Not so, however, if the case stands out prominently as needing a closer walk in the line of a well-rounded, consistent Christian life. So great is the need of such lives everywhere that we cannot too often examine ourselves, and keep the loving watch over those with whom we have influence, that we are not lacking as good exemplars to our kind. Especially do we who are of the Friends' "household of faith" need to be careful of conduct and character if we would gather to us, and keep the love and interest with us, of the young in our Society. With no acknowledged leader other than the Spirit of the Divine within, it behooves us all to look well to our steppings lest the keen eyesight and ofttimes keener insight of these, discover spots and blemishes in those to whom they will look as examples; for deprecate it as we may and urge upon them not to place any dependence upon man "whose breath is in his nostrils" the fact still remains, that to the elders and those in authority they will look up, and happy will they be who can withstand the scrutiny and retain that reverence and affection that truly harmonious lives can claim as rightfully theirs.

Some years since an observing, zealous Friend, with large love for his fellows, while lamenting over the small attendance at some meetings, remarked, that "this is caused as much by those who attend regularly as by those who are irregular," the explanation being that some of the first class signally failed in being in themselves good examples as Christians. Not that they lacked in many ways, but in some one way or other they fell short of the perfection expected. Could each one but see his defect and try to remedy it, his influence would be increased many-fold.

One particular point mentioned as being more prominent than any other was the allowed presence of the domineering spirit. The determination to control by what is understood in our vocabulary as the weight of the meeting in contra-distinction to the prevailing sense of the meeting. The spirits that have been crushed and the hearts that have been estranged by the failure to detect the difference between "the will of the Creator" and the "will of the creature" have been countless. Better permit some errors of judgment, and banded together by love work out the consequences, than suffer estrangements that check the flow of love and scatter the flock. There is for this state of things but one true remedy—to seek in humility of spirit, to examine ourselves as to the motive that actuates us, whether it be the love of self, or the good of the whole body that we seek. In order to aid us in this, a study of the life and character of Jesus will most surely, if we apply it to ourselves, enable us to pass in and out before our fellows as examples for good and not evil.

WE are obliged to close the forms of this issue without receiving a report of the proceedings of Baltimore Yearly Meeting, which was held last week,—very satisfactorily, as we understood. It was found that none of the editors were able to be present, and arrangements for a report were endeavored to be made at a late hour. We hope to have some notes of the proceedings next week.

MARRIAGES.

CHAMBERS—SMYTH.—Eleventh month 1st, 1888, at 921 North Broad street, under the care of the monthly meeting of Friends of Philadelphia, James Howard Chambers to Frances Canby, daughter of William C. Smyth, all of Philadelphia.

KENNEDY—CRAFT.—Tenth month 29th, 1888, by Friends' ceremony, before the mayor of Philadelphia, Henry C. Kennedy, son of Catharine A. and the late Samuel W. Kennedy, and Mary, daughter of Edwin and Elizabeth W. Craft, all of Philadelphia.

DEATHS.

AMBLER.—On Third-day, Tenth month 23d, 1888, Mary R., widow of Edward Ambler, formerly of Montgomery, in her 86th year; a member of Gwynedd Monthly Meeting.

ATKINSON.—Suddenly, Tenth month 30th, 1888, Ida Fouche, wife of Henry C. Atkinson, of Germantown, Pa.

CARTER.—In West Philadelphia, Tenth month 28th, 1888, Abraham Carter, son of the late Sharon Carter, aged 83 years; a member of the monthly meeting of Friends of Philadelphia.

DAVIS.—In Camden, N. J., Sarah Davis, in her 98th year; a member of the monthly meeting of Friends of Philadelphia, held at Spruce street.

HIBBERD.—At his home, near Mason City, Illinois, Sixth month 30th, 1888, after an affliction of 6 months from paralysis, Israel Hibberd, aged 81 years.

Those who enjoyed the acquaintance of this Friend through his long life can bear testimony to his worth

through different channels of usefulness into which he was called to serve. Being of a social turn of mind, and genial in his disposition, together with a qualification as an instructor among the youth, which bears its own record, he was ever ready to seize such opportunities as truth opened the way. His wife and children have experienced the loss of a kind and affectionate companion. He was a member of Benjaminville Monthly Meeting, McLane county, Illinois.

MEARS.—On the morning of Tenth month 27th, 1888, at his residence, Branchtown, Phila., Dr. Benjamin R. Mears, in his 84th year.

REEDER.—Near Mount Rose, Mercer county, N. J., at the residence of her brother Aaron B. Reeder, Seventh month 13th, 1888, Elmina B. Reeder, in her 34th year, youngest daughter of the late Charles Reeder, of Wrightstown, Bucks county, Pa.

ROBERTS.—Tenth month 30th, 1888, at his residence, Montgomery township, Montgomery county, Pa., Aaron Roberts, aged 69 years; an elder of Gwynedd Monthly Meeting.

TOMLINSON.—At his home, near Marietta, Marshall county, Iowa, on Seventh-day, Ninth month 20th, 1888. Thomas D. Tomlinson, an approved minister of Marietta Monthly Meeting, in the 68th year of his age.

He has left to us the example of a life spent in striving for the higher and better part. He was a man of superior culture and refinement, which fitted him for the position of teacher and leader that he has occupied for a long time

The loss will be sorely felt in the meeting which he helped organize and to which he has ministered since that time.

H. H. N.

MEMORIAL TRIBUTES.[1]

WITHIN the past year two of our band have left us for that eternal city "only in vision beholden," and their vacant places fill our hearts with sadness. One, Sarah Hoopes, was full of beautiful years, and fell quietly asleep as after a long day's loving labor into rest well earned, peace well won. Her passing away seemed but as the ready dropping of ripened fruit at the gardener's touch, or as the silent setting of the star into the still sea; and while we miss the kindly cheeriness of her smile, the sweet composure of her manner, the gentle wisdom of her words, and all outward expression of her love for her young friends, yet something tells us, with unmistakable truth, that she has but crossed the line into a higher state of being to which we can as yet look up only as a babe looks up to the uncomprehended wonders and beauties of its parents' maturer souls. Still may her serene, wise, happy, trustful spirit pervade our school and actuate us in the willing performance of our regular duties. She stood for the thought that trust kills worry. "Just do thy best and *leave* the rest!" we have heard her say. With a fine appreciation of the incongruous and a wide social feeling, she would have been beloved by young and old even had she not been so true to all that is gentle and good; but as it was her friendship seemed to lift those fortunate enough to share it, into a better and brighter atmosphere of faith, hope, and love.

[1] A memorial presented at the meeting of Concord First-day School Union, Uwchlan, Pa., Tenth month 27, 1888, from the West Chester School.

The other, Sallie A. Sharpless, was taken from us in her early prime,—called away in the very midst of an active, earnest, useful life, a martyr to her own unselfish energy, thoughtfulness, and care for others. One is tempted to demand, why should a fair plant be cut down while in full flower? Of many answers this one appeals most strongly for utterance,—"But the end is not yet." Questions will throng to our minds when anything occurs so apparently far from the order of nature: who did sin that this sad, puzzling thing should have happened? Is He who hath ordered the universe unkind, or powerless? Not ours to judge, to wish, or to speculate; only to trust, and live as truly as we know. This sister-worker was a skillful teacher, instilling into her pupils a love for the good, true, and beautiful, and keeping them interested, orderly, and happy. The stimulus of her active mind roused theirs to healthful growth and vigor. The weaker leaned on her, the stronger felt with her the oneness of kindred spirits; all loved her dearly and missed her greatly when anything detained her from her accustomed place. Warmly interested in everything which concerned the First-day School, she was always ready to sustain it in any way she was desired, as faithful in her performance of duties imposed as willing to undertake them. Her beauty and freshness, as well as the precision and sweetness of her character, made her unusually attractive and able as a teacher and caused her loss to be deeply and widely felt among her friends and co-workers. Yet how can we mourn the peaceful close of so true a life, even though it be plucked like a flower from its stem unfinished, yet perfect in healthful growth so far as it went? And then, One who knew more than all others concerning the after life said, "If ye loved me ye would be rejoiced, because I go unto the Father."

West Chester, Pa., Tenth month 15, 1888.

SCRIPTURE LESSON, No. 44.

ELEVENTH MONTH 18, 1888.

TOPIC: HELPFULNESS.

GOLDEN TEXT.—"Bear ye one another's burdens, and so fulfill the law of Christ."—Gal. 6:2.

READ Joshua 21:43-45; 22:1-9.

THE land had now been apportioned to the tribes according to their families, and the quiet ways of peace succeeded the clamor of war. It was time to release their brethren who six years before had crossed the Jordan with them in the full panoply of battle. We pass over the events immediately following the close of the war, the most important of which was the setting up of the Tabernacle at Shiloh (believed to be Salem), where it remained 328 years, and the beginning of the Sabbatical year from which the Jubilee is reckoned.

Then Joshua called the Reubenites and the Gadites and the half tribe of Manasseh. These were of the tribes that had received their allotment on the east side of the Jordan river; these tribes on taking possession of the land had made a promise that they would help the rest of their brethren to conquer the country west of the river which was to be their inheritance. (Num. 32:17.) They had continued with the nine

and a half tribes, and seen them located, and are now before Joshua to receive their discharge, return to their home in Gilead (as the country east of the Jordan was called), and take up again the tending of their flocks and the quiet pursuits of agriculture.

Take diligent heed, etc. This advice from their aged leader and chief must have come with great force and pathos, seeing that in all his goings he had been so true to the Divine revealings. He knew from experience that "to walk in all the ways of the Lord and to keep his commandments," was the only path of safety for them as individuals and as a part of the nation of Israel. And now as they take their departure they receive his blessing. This was accounted of great value in those early times; it was believed to have some supernatural efficacy upon the person or persons who received it from the lips of one whose good life and exalted station gave evidence that he had "power with God."

We often speak of the "helplessness of children," but do we often think of the helplessness of any one person in a civilized community? We are each dependent upon all for the conditions of our lives. To prepare each of us to make our appearance at the meeting-house on First-day morning, many forces and many individuals have been put to work. The necessities of the toilet, the clothing to cover our bodies, and the food to nourish them, has brought together articles from distant places, and manufactures of great variety. No man, however wise or dexterous, could prepare all these for himself. We put the world to our use, as we satisfy our every-day needs. As it is in material things, so it is to a great extent in the world of thought—men have worked long years and many have gone through great suffering, to give to us the truths that we learn in our school books, and in the literature that develops our minds.

In spiritual matters Friends do not feel that the conditions are the same. They teach the fulfillment of the words of Jeremiah: "And they shall teach no more every man his neighbor, and every man his brother saying, Know the Lord; for all shall know me, from the least of them unto the greatest of them." The Holy Spirit teaches each individual. At the same time, much is often done by instrumental means; and sometimes by the kind deeds of a neighbor, a hardened heart is softened to allow the good teaching to have sway.

In all ways in our power we should obey the injunction of the golden text. We can often, by a little exertion, ease the life of another to a great extent; and when we can do but little, the thought that some one has been sympathetic will give the strength that was lacking when one felt "all alone."

We do not know until the opportunity offers how we shall help; what we shall feel to be our duty; but the important thing for us is to be in a state of readiness, to do what we can, when we feel the opportunity is here.

There is a band of Christian workers recently organized, who call themselves "The King's Daughters." Each one is trying to do some good to others. One cares for small dumb animals as opportunity presents. One, a teacher of little children, tries to be more patient, remembering constantly how very young they are. And there is written a pretty story of one who made it her duty to smile at little children whom she saw in the street or stores with their mothers, when they were tired and cross, and the mothers would become impatient and vexed. She says a smile from her to the little one would please both mother and child, so that good humor would be restored.

These are little things, but they all help to make the world better and happier; and "The King's Daughters" are only doing, banded together, what we should all strive to do, each in his own way.

GOD IN HISTORY.

I HAVE no question that this lesson—God in history—is the first lesson to be learned from the Old Testament annals; and that it is a true, a fundamental, and an important lesson. It is possible that God's intervention was somewhat more notable and apparent then than now. We know that a father intervenes more in the direction of his children's affairs while yet they are young and ignorant than he thinks it either necessary or wise to do as they grow older. It is possible that it was somewhat more frequent. Still, we must remember that within the narrow compass of only a part of the Old Testament we have recorded the history of over fourteen centuries; that more than ten times as many years elapsed between the exodus under Moses and the restoration under Nehemiah as between the Declaration of Independence and our own time. Perhaps the devout historian who should search our history simply for the special tokens of Divine blessings and help could find almost as many as the inspired historian found in the history of Israel. However this may be, it is certain that they recognized far more fully and readily than we do the hand of God, both in the phenomena of nature and the events of life. This may be partly due to their simplicity; but it was also partly due to their spiritual insight. The scientist undoubtedly speaks a truth when he says that the thunder is the detonation of a bolt of electricity echoing from the clouds and hills; but the poet speaks a profounder truth when he says it is the voice of God. The secular historian speaks a truth when he says that Joshua led Israel across the Jordan; but the sacred historian speaks a profounder truth when he says that God led Israel across the Jordan.

It is useless to attempt to reconcile the Old Testament narrative with that phase of modern thought which denies to God the power to use the forces of nature which are in so many ways obedient to man's will, or which denies that in fact he ever exercises that power. The two philosophies of history are simply irreconcilable. It does not help the matter to say that the Old Testament miracles can be explained by reference to known natural laws. It may be that an earthquake demolished the walls of Jericho, as a much more terrible earthquake demolished the major part of Lisbon. It is certain that a great wind drove

back the Red Sea and made it passable for Israel, and that a volcanic eruption destroyed the cities of the plain. But in these and kindred cases the miracle consists in the fact that the event occurred at a specific time, for a specific purpose, at a specific command, and accomplished the predicted and purposed end. That we can trace the phenomena to laws with whose nature we are now measurably familiar does not decrease, it rather increases, the miracle; for the control of a law, for a specific end and in ways wholly beyond all possibility of human control, demonstrates the presence and power of the Law-giver.

I believe that God is as truly in modern as he ever was in ancient history; that he intervenes in human affairs as truly now as he ever did; that he led America through her Revolution and her Civil War as truly as Israel through her wanderings in the wilderness and her conquest of Canaan. He is in history none the less that modern history shuts its eyes to his presence, and sees only the instruments which he employs and knows not Him who employs them. A Hebrew historian, writing the history of the American Revolution, would have said, "The Lord prepared a great cloud which hid the host of America from the British until the American host had been able to complete its retreat from New York City while the British fleet was detained in the Narrows, unable to prevent, or even to perceive, the retreat; the Lord opened a pathway in the ice for the host of America across the Delaware River at Trenton, and then sent a great frost which hardened the roads and made Washington's retreat to the heights of New Jersey possible, with his artillery; the Lord prepared a great storm which defeated Lord Cornwallis's attempt to cross the York River and escape from the surrender which closed the war." He would certainly have seen the act of God in the destruction of the Spanish Armada by a terrible storm, and in the deliverance of beleaguered Antwerp by a rising tide and a strong east wind.

God did not intervene in Old Testament history except when intervention was necessary, nor except to aid those who in faith in him and obedience to his commands had been brought into straits where their resources failed. He opens a way across the Jordan, which they could neither bridge nor ford. He makes a breach in the walls of Jericho, which they can neither scale nor batter down. He leads them through a wilderness in which no guidance could serve except his own. But when they attempt invasion of Canaan against his will he deserts them: and never once does he reward mere supineness, or despair, or idle expectation with undeserved help and victory. God is still Captain of the Lord's host; and he who enters on his work in obedience to God, and trust in him, may be sure that when his own resources fail reinforcements will not be wanting from Him who never calls his soldiers to a battle and then deserts them.—*Lyman Abbott, in Christian Union.*

When we are most filled with heavenly love, and only then, are we best fitted to bear with human infirmity, to live above it, and forget its burden.—*Maria Hare.*

For Friends' Intelligencer and Journal.

SCENES OF GRANDEUR IN COLORADO.

A visit to Dr. Smedley's new house in North Denver afforded opportunity for a very extended view of the whole city and surrounding country, also of Pike's Peak and a most brilliant sunset, all of which was greatly enjoyed. And in some delightful rides afforded by a kind friend I was enabled to form some idea of the rapid growth of the city, its many educational and charitable institutions. Among these are Jarvis and Wolf Halls for boys and girls respectively, boarding and day schools under the care of Episcopalians,—very commodious buildings. It is astonishing to see houses going up everywhere, many of them very costly and showing a great variety of architectural skill. The cellars are just being dug for many, and when I expressed surprise at this, the reply was, that winter is the building season. They do not have the changes we are subject to in the East, freezing and thawing, and the air is so dry that they have no fear of moving into newly plastered houses.

I parted with my relatives and friends in Denver on the 25th, coming to Colorado Springs. It seemed strange to see creek beds empty. Cherry Creek has very little water at present, yet I am told it is sometimes a violent, wide-spreading stream. I enjoyed the mountains all the way; a light covering of snow had fallen that morning and partly whitened them. There were rocks or "spurs" on either side, with a valley between, some of it very rough after passing Sedalia. Many parts of it and the spurs are covered with a small growth of spruce and pine, and some of them had a flat mesa-like appearance. One, "Castle Rock," at a station of the same name, looked as if capped with an immense square stone before a nearer approach; but afterward I saw others which looked quite as much like a castle. It seemed a cause of inquiry why the solid, masonery-like structures should be at the summit, but doubtless the underpinning, though hidden from view, was as firm as the apex. The sides of these ranges often looked,—at least in the distance,—like loose earth and stone, which made the castle summits appear all the more strange. Some of the structures looked like a continued solid wall, built for protection. It is truly wonderful to conjecture just the forces which combined to form them. We passed Palmer Lake, with a little town by that name. It is a clear, beautiful body of water, named for William J. Palmer. A station called "Monument" led to the query, Why? when I was shown an upright shaft of stone 175 feet high by that name, standing at the base of a mountain. A little farther on was a still larger one.

Reached Colorada Springs, at 4.30 p. m., with the mountains still nearer to view, and was delighted to be met by E. McAllister, Henry's wife, and taken to their home; also very unexpectedly, our neice and her husband Phebe and Carl Fogh, whom I was to visit at Pueblo,—but business being ended there, they concluded this was a more attractive place. They spent the evening with me. Next morning bright and lovely we took a ride to Manitou, with a view of Pike's Peak all the way. Passing over the mesa or

table land, I saw the Yucca plant in great abundance, bearing in its season beautiful blossoms, white and pink bells. It is used by the Indians for soap. Also the Mexican poppy, which bears a very large white flower. We passed through the "lodge" to the fine residence of Wm. J. Palmer, "Glen Eyrie." He and his family are now in Europe, but we had a very pleasant call with his wife's mother and sisters. We saw in one room a mantle built of solid lava rock, with deep fire place, and the whole room, walls and ceilings, of red cedar from the place. After looking through the green-house, which has a great variety of rare plants, we found in the stables a pet elk, who would not even rise at our approach, until tempted by a wild-cherry branch. The place here is all closed in by mountains, and leaving we soon came to the "Gates" leading to the "Garden of the Gods." These rocks are of different colors—red, gray, green, and white. Towering high above us, we saw an eagle's nest on the side of one of the mountains. It was interesting to decipher the figures our guide named as represented by different formations of rock, "Irishman's Face," "Mountain Rat," "Lion's Head," "Kissing Camels," "Seal facing the Bear," "Turtle," "Bullfrog," "Pulpit and Altar," "Baker's Shop," "Egyptian Mummy," "Eagle ready to fly," "Ant Eater," "Porcupine," "Mushroom Park," "Siamese Twins," "Saratoga Trunks," tiers of casks and many others; —we could mostly find some resemblance. Some monuments with flat stones piled high resembled plates. We came to "Balance Rock," of great size, looking as though it would tumble upon us. We saw a deer's head and antlers impressed on the side of a rock; the different formations truly seem wonderful. At Manitou, most of the hotels are closed. We visited the sulphur and soda springs, tasting the latter, which was very strong. A Sanitarium is located here. Saw Rainbow Falls on Fountain Creek, alighted and walked close to them, as they rushed down between the mountains, which rose very high above us. The sun was not in position to give its bright hues to the falling cascade. Still we ascended, higher and higher, seeing Castle Peaks, and approaching Manitou Grand Caverns through the famed Ute Pass, entered the dark chambers, lighted by lamps, following our guide Indian file to the vestibule or rotunda, from which there are three hall-ways leading to different departments. Stalactites and stalagmites grace the ceilings and floors. The Grant Monument is in the vestibule, most of the stones containing the names of their contributors. We pass into the "Opera House," its ceilings 50 to 60 feet high, and thence to "Concert Hall," where the "Grand Organ" is situated. The keys are composed of musical stalactites, and give forth sweet sounds one of our guides being the performer. We pass through different departments until we come to the "bridal chamber," which is the most beautiful of all. Stalactites are still forming here, the tiny drops trembling on their tips. This is the only damp chamber. To those of us who had never seen Mammoth Cave or Luray, it was a novel and interesting sight. We were glad however to come out into the pure mountain air, and enjoy the far more majestic grandeur of the everlasting hills. We saw the cars on the Colorado and Midland Railroad entering the great tunnels far below us. It is a wonderful road showing the inventive power of man, and his energy to overcome great obstacles. There is a succession of tunnels on this road.

We returned through Colorado City, after a five hours' most enjoyable ride. In the afternoon I made a visit to Wm. S. Jackson's, the former home of "H. H.," a very pleasant place, and saw the table where she sat to write with inspired pen so much that has contributed to our enjoyment. On Seventh-day morning took a ride to Cheyenne Mountain over the toll road. It was a most charming scene, as we ascended the great height and looked back over the country for many miles, (our driver said over sixty). Colorado City and Colorado Springs appeared in the valley far below us, their buildings looking like white stones strewn over the ground. We could see in the distance the "Gateway to the Garden of the Gods." Great boulders capped the summits of the peaks; high and jagged they towered above us; and, as we climed the narrow ledge road, close to great precipices, we came on a level with the peaks which had seemed so high, yet still looking to those far above us. The spruce, pine, and balsam trees were very fine as we came close to their very tops, some of them very tall, though seen from the valley we had thought them only bushes. The sight almost made one dizzy, as though riding far above the lower world. Circle after circle we made around the mountains, seeing the winding stairway beneath us. O, the grandeur of the scene! The everlasting hills seemed to close in upon us.

Then we alighted in the stillness, going down a little descent to the memorable grave of "H. H.," on the mountain side. They call it Pine Hill Forest. A monument of stones marks the place, piled high, placed there by appreciative friends and visitors, many having the donors' names written on them. Not a sound was heard, not even the song of bird or chirping insect. How solemn it seemed! It is said she used to write in this retired height. Surely, the surrounding influences were inspiring.

We parted with our guide here, who was to meet us after traveling a long way back to the mouth of South Cheyenne Cañon, but unintentionally he misled us as to the distance we had to walk, which was greater than our strength. We descended narrow slippery paths on the edge of deep ravines, hearing in the distance the gentle sound of falling water, growing clearer to the ear, until we came in sight of the Seven Falls, first going out upon a projecting pier built far above the beautiful sheet of water which falls from ledge to ledge over the mountain. It was a grand scene; but the slight wooden stairs erected on one side of the Falls, 367 steps in all, which must be descended after winding around to the head of the Falls, was indeed quite an undertaking. However it did not seem so difficult as appearances indicated, and looking up from the foot, we had a grand view of the Falls. Had it not been for the long deferred hope of seeing our carriage, the walk through South Cheyenne Cañon would have been a most charming experience, but it seemed quite two

miles,—though they say it is not that far. The path was well defined, the creek running by one side, but the way seemed interminable, and at every fresh anticipation of an opening view, and the comfort of a conveyance the walls around seemed to grow solid, as though we had come to the end and certainly could find no egress. We passed through the narrow path between the "Walls of Hercules," which rose very high above us, seeming like a mountain cleft in two. A cold blast of wind met us here, for the morning was quite cool and windy,—a crust of ice to be seen in many places. This was perhaps the grandest sight of all we had beheld, and when once we emerged from the great cañon and found our coachman waiting, if only we could have driven over the ground to emphasize the grandeur, free from anxiety and fatigue, it would have been a great pleasure. We did not pursue any other marvellous ways, but bent our course homeward, where he arrived about noon, after a four hours' journey,—glad to rest with my kind friends, the McAllisters, from whom I parted in the evening to come to Dr. Solly's (whose wife Elizabeth is the daughter of Thomas and Martha Mellor) to spend the remainder of my stay at Colorado Springs. They have a delightful home, with an uninterrupted view of the mountains. I met here Dillwyn Parrish, (son of William) whose home is now in England, also James, son of Dr. Isaac Parrish of New York. Thomas, son of Edward, lives in Colorado Springs. Charles B. Lamborn, whose family is now in Italy, called with them. I spent First-day quietly resting,—sat in the porch and enjoyed the superb mountain scenery. Called to see Edward Ferris and family, who have resided here for several years. He and his daughter go East in a few days to visit relatives and friends. Very few who come here ever incline to return East to live. They enjoy the climate so much,—able to sit outdoors many days in winter, in the warm sun rays. There is so great a variation of temperature in the shade and in the sunlight. L. H. P.

Colorado Springs, 10th mo. 29.

THE FIRST-DAY SCHOOLS.

MEETING OF PHILADELPHIA Y. M. ASSOCIATION.

The annual meeting of the Philadelphia Yearly Meeting Association of First-day Schools was held at 15th and Race streets, on Seventh-day last, the 3d instant. There was a large attendance, many interested Friends being present from different sections. S. Raymond Roberts and Clara B. Miller acted as Clerks. Reports from all the Unions, eight in number, (there are none in Southern, Caln, or Fishing Creek), were read, and their contents generally regarded as satisfactory and encouraging. There were also reports from the schools at Sadsbury, Pa., (Caln), and Rancocas, N. J. Delegates had been appointed to the number of 114, of whom 89 were present, and the absence of 4 was explained. There were some remarks upon the number of absentees.

A proposition sent up by Abington Union, suggesting the preparation of a blank form, to be supplied to all the schools, upon which they may report their numbers, etc., to the monthly meetings within whose limits they are, was discussed and generally approved, but was referred to the executive committee with power to act. It was explained that the object o the proposed form was to secure a statistical statement of a systematic and uniform character, so hat an orderly summary of the whole might be made, and it was remarked that heretofore the lack of uniformity and completeness has made it impossible for the clerks of the yearly meeting to compile a summary.

S. Raymond Roberts, who had acceptably served the Association for some years as one of its clerks, desired to be released, it being very difficult for him to leave his business engagements. Lewis V. Smedley and Clara B. Miller were appointed clerks, and Comly S. Lobb, Treasurer.

At the afternoon session, Abby D. Munro, principal of the school for colored children at Mt. Pleasant, S. C., being present, she was asked to explain to the meeting some features of the Sabbath School and other work among the Southern colored people. She suggested the advantage which might accrue to the Friends' First-day Schools by having their classes adopt some object of charitable help,—as to give so much per month toward the education or the maintenance of a colored child. She particularly described an orphanage which she has individually cared for, at Mt. Pleasant. Its origin grew out of the fact of five destitute children being thrown upon her care and there being no public provision in the State of a "Home" or other institution, she felt that the duty of keeping them was imposed upon her. She had had altogether forty children in her orphanage, of whom 16 remain. She made a very interesting address, and was listened to with much attention, additional questions being asked at the close, by some of those present.

THE VALUE OF THE LESSON LEAVES.

[The following essay was prepared by Edwin R. Buffington, and read to Nottingham Union, and therefrom was forwarded to Baltimore Yearly Meeting F. D. S. Conference, held Tenth month 29th, 1888.]

The question for which an answer is requested, reads, "Do the Lesson Leaves, as at present prepared, meet the needs of our First-day schools?" This admits of being viewed from somewhat different standpoints. If they are allowed to fill the sphere for which they were intended, I would answer most emphatically, they do; but like many other valuable aids, if not judiciously used, they may be the means of defeating their own intent and purpose. If the man with his sickle in his field of grain, one hundred years ago, had been asked if that instrument was adapted to the purpose intended, he most likely would have answered, "Yes,—if you work hard enough yourself;" but if asked if anything could be invented that would lessen individual labor, he would have said, "I do not know; possibly there might." This is my position in reference to the "Lesson Leaves;" they are valuable aids in the performance of good work, but possibly there might be something devised that would make it easier for the teacher. I hold that First-day school teaching if confined to the text-

book, (it matters not how good that text-book may be,) falls short of its highest good. There must be some immediate inspiration on the part of the teacher, if life is infused into the lesson. One of the objects of religious teaching is to encourage the young mind to think; to enable teachers to do this they must first think themselves; hence those who do not thus endeavor to enter into the spirit of the lesson, but console themselves with the idea that they will have the Lesson Leaf when First-day comes around, and all the questions necessary will be printed there, will find no profit for themselves and fail to impart any to their pupils.

In our preparation for the weekly work we often need some data, some subject and suggestion upon it; this, and this only, is the sphere of the Lesson Leaf as I understand it, and for this end I find them useful, and would think it very difficult to get along without them.

True religion is the same in all parts of the world and in all ages of the world's history, but teaching and leadership have differed widely in their adaptation to the various conditions of the people; outward teachings and surroundings to an outward conceiving people prevailed throughout the Jewish era. A history of their wanderings and religious observances has been the object of the Lesson Leaf for the last quarter. I found them both interesting and profitable in giving us an insight into the thought prevailing with those who preceded us, and as we are in a great measure in thought and deed the children of our predecessors, it remains for the teacher to draw the connection there exists between this incipient thought and the popular sentiment prevailing to-day, and as Friends, show wherein spiritual conception of religion transcends all others. I have seen in print the idea advanced that we need something to teach Friends' principles more than was to be found in the Lesson Leaf as at present prepared; this may be true from one standpoint. As to myself, I have never yet met with a lesson that did not open a field for that purpose, and if we do not impress upon the minds of the class their superiority over that outward religion of which the "leaf" gives us a history, the object and intent of their preparation has been defeated.

In conclusion I would say get away as far as possible from the Lesson Leaf; in your teaching use it only as a reminder; if this is done it will meet the needs of our schools, if this cannot be done, then something else, I know not what, might be an improvement.

FIRST-DAY SCHOOL MEETING AT BALTIMORE.

The Youths' Meeting, at Baltimore, held on First-day, the 28th ult., was one of deep interest, the house being completely filled with the bright faces of the young and their friends. The reverent solemnity that spread over the meeting at the opening, upon the reading of the well known poem "Prayer is the soul's sincere desire," etc., was most impressive. The responses by the representatives appointed, two from each school in the Yearly Meeting, were excellent, and the entire exercises, consisting of the responsive reading of the 19th Psalm, the concert reading of "The Blessings," and the closing address by Jonathan K. Taylor were all very satisfactory and the meeting was felt to be a most valuable one.

For Friends' Intelligencer and Journal.

THE CHILD AND THE MOTHER.

Let me relate an incident which I recently witnessed. A little girl was running to her mother, her face all full of the smiles of happiness. She opened out her hand to show some little trifle she had just received; the mother turning around, met her little one, not with the welcome smile, but with a dark frown extended her own hand and demanded, and of course obtained, what the little girl had, and stowed it away within her own pocket. It was a study of human character to witness this, but all the while my own heart was pained to see how quickly the bright face, and the heart beneath, were so ruthlessly robbed of innocent joy.

The query comes up—"why teach the law of Christ, and practice the law of Moses?" If God is love, as we so often say he is, why do we still go back to the old dispensation for authority when we admit that we have a better and higher one in the Sermon on the Mount and in all the other teachings of Jesus? Oh! I fear that we are not the Christians that we claim to be, or that we are yet much farther from the millenium than we think.

This gives me opportunity to say that I firmly believe that injudicious parents are often directly responsible for the deceitfulness of character growing up within their own offspring; because of the harshness towards their little ones, they drive confiding childhood away from the God-given love of father and mother, and thus encourage hate, revenge, ill-will, and finally, a habit of hiding things from the very ones they should feel most free to go to at all times. And this through fear of a reprimand when they did not know they were doing a wrong. Oh! parents, if you but realized, that when a child has come to fear you, that you were loosing the strongest cord that binds your child to you, that of God's own love, you would strive to change your system. We may be firm, but let us always guide through love.

H. H. W.

SWARTHMORE NOTES.

—The Lecture Course will open on the 30th inst., with a very attractive lecture entitled "Acres of Diamonds," by Russell C. Conwell, of Philadelphia. (For a full programme of the course as arranged, see the advertising columns.)

—Dr. C. Herschell Hoyl, Professor of Physics and of Electrical Engineering, had resigned, to devote all of his time to perfecting and introducing upon the railroads of the country, his new and highly valuable invention of an illuminated semaphone. His resignation takes effect as soon as his successor can be appointed. Applications for the position should be addressed to the President. (A Friend preferred.)

—The Alumni and other friends of the College will be rejoiced to learn that it was decided at the meeting of the Managers on the 2nd inst., to admit only *two* classes (1st and 2nd) to the Preparatory School, after the present year.

—The annual report of the President, including the reports of the Heads of the various departments, was presented at the last meeting of the Managers. It is the most encouraging report ever presented in the history of the College.

Swarthmore completes with the present year her second decade.

—Daniel Underhill, of the Board of Managers, attended the meeting on First-day, the 4th inst.

—A new Department—called "The Department of Art and of Mechanical Draughting"—was created at the meeting of the Managers on the 2nd inst. Milton H. Bancroft was placed at the head of it.

THE COLORED SCHOOL WORK.

The Yearly Meeting (Philadelphia) Committee on the Education of the Colored People of the South had a meeting at the parlor, 15th and Race Sts., on the 3d instant. There were a number present. Authority was given Henry M. Laing, treasurer of the committee, to draw upon Mary Saunders, treasurer of the special funds of Women's Branch of the Yearly Meeting, for the $250 given by that body, last Fifth month, and he was instructed to send $150 to the Schofield School at Aiken, and $100 to the Laing School at Mt. Pleasant. Abby D. Munro, principal of the Mt. Pleasant School, was present and made an interesting statement of the work in her charge. George L. Maris desired to be excused from further service as clerk of the committee, and Lydia A. Schofield was appointed.

The members of the Committee were earnestly desired to interest themselves, as individuals, in securing contributions from those interested in the colored school work,—to be forwarded to Henry M. Laing, treasurer, 30 N. 3d St., Philadelphia. Reports, showing the collection and application of funds for this work, during the past year, (Seventh mo. 1, 1887 to Sixth mo. 30, 1888), were distributed among members of the committee, and additional copies will be sent out as far as possible to all interested.

THE KING'S DAUGHTER.

She wears no jewels upon hand or brow;
No badge by which she may be known of men;
But, tho' she walk in plain attire now,
She is the daughter of the King, and when
Her Father calls her at His throne to wait
She will be clothed as doth befit her state.

Her Father sent her in His land to dwell.
Giving to her a work that must be done;
And since the King loves all His people well,
Therefore she, too, cares for them, every one.
Thus when she stoops to lift from want and sin
The brighter shines her royalty therein.

She walks erect thro' dangers manifold,
While many sink and fall on either hand.
She heeds not summer's heat nor winter's cold,
For both are subject to the King's command.
She need not be afraid of anything.
Because she is a daughter of the King.

Even when the angel comes that men call Death—
And name with terror—it appals not her;
She turns to look at him with quickened breath,
Thinking "It is the royal messenger!"
Her heart rejoices that her Father calls
Her back to live within the palace walls.

For tho' the land she dwells in is most fair,
Set round with streams, like picture in its frame,
Yet often in her heart deep longings are
For that "imperial palace" whence she came;
Not perfect quite seems any earthly thing,
Because—she is a daughter of the King.

—*Rebecca P. Utter.*

FLAX FLOWERS.

Blue as Heaven, light as air,
All their slender stems can bear;

Nodding, swaying, as they float,
Each one like a restless boat;

One would think they'd anchored there,
Just to wait till winds were fair.

On their stems they tug and strain,
Longing to be off again.

If the wind that murmurs sweet
Would but start the tiny fleet,

Surely their light keels could pass
Over seas of meadow-grass.

Safely they could sail and steer
Round the islands of the air,

Trees and bushes, growing low,
Where the rippling wind does blow,

Over waves of bold sunshine,
Down the moonbeams, pale and fine.

Sail and sail, and find the port
Where I've left my willing heart;

Bid the holder set it free,
Or return her own to me;

Then, by breath of flowers blown,
Haste to tell me she's mine own!

—*Margaret Deland, in Harper's Magazine.*

LOSS AND GAIN.

I sorrowed that the golden day was dead,
Its light no more the country side adorning;
But whilst I grieved, behold!—the East grew red
With morning.

I sighed that merry spring was forced to go,
And doff the wreaths that did so well become her;
But whilst I murmured at her absence, lo!—
'Twas summer.

I mourned because the daffodils were killed
By burning skies that scorched my early posies;
But while for these I pined my hands were filled
With roses.

Half broken-hearted I bewailed the end
Of friendships than which none had once seemed nearer;
But whilst I wept I found a newer friend,
And dearer.

And thus I learned old pleasures are estranged,
Only that something better may be given;
Until at last we find this earth exchanged
For Heaven. —*Good Words.*

DUTY.[1]

The will that obeys may not have the eye of reason or the capacity of asking the philosophers questions, but it can lead the reason where its eye can see larger horizons, and the philosopher where truth is so beautiful and so evident that he cannot ask, Why? The duty of the philosopher in religion is to come to a knowledge of his own powers by doing his duty. The worth of the improved religion is found in the fact that it instructs and blesses all men. The common souls who have not the power of subtle inquiry can acquire the most wonderful religious knowledge by obeying what they know. Few can learn theology, the *science* of religion, but all can learn sacred biology, the *law* of life. Every one can have a vision of the inexplicable by following that which is easily explained. No man can explain the kingdom of God, but by becoming a child in obedience he can enter in where, in the rapture, solidity, and reality of his knowledge, he will not ask for explanations. Through the will men learn truth; the saint realizes religion though he cannot tell it to the philosopher, as the bird cannot tell the flower the meaning of its song, or the soul with an upward look tell the selfish man how or whence the breeze of the Heavenly Spirit comes. Religion thus becomes more than culture of heart or brain, more than a sense of absolute dependence. As water touched by fire makes steam-power, culture touched by duty makes religion. Culture says, "Study yourself, your forces, and their surrounding and nourishment; with Gœthe, look upon every man as capable of teaching you what you did not know before; refine your passions, discover the roots of life, and become a creature of sympathy and power." To such culture, beautiful and wise, it must be said: One thing thou lackest—the knowledge that comes from an unreserved obedience. The imperfect religion looks *at* a mountain and enjoys its form and strength; it is quite another thing to look *from* that mountain; and between the religion that looks *at* truth and the religion that looks *from* truth, there is the labor of the ascent which is only achieved by obedience. In every man who would be possessed of the best religion, duty is the power to guide from the religion of the valley to the religion of the mountain. . . . . .

The age in whose currents we are set is full of questions. In one respect it is like the angels, "it desires to look into." Our teachers bring us as many interrogation points as periods. When we listen to the words of men concerning the solemn facts of life, we sometimes reach the melancholy conviction that faith is dying, that there is an increasing divergence between intelligence and piety, that the critic is not a child in the home but a skeptic without. To those who wish to doubt, no word is sufficiently wise to be useful; but to those who doubt and wish to believe, the word is already spoken. Duty is the teacher of a reasonable and comforting faith. Whoever *will* do shall know the doctrine. He who solves his doubt by obeying his knowledge is the true seeker. We learn two truths by obeying one. The great question for the learner is, How am I related to what I know? One must step upon the ship which he knows to be well made and well commanded, or he will only learn the ocean from the shore. Duty completes the wisdom of the student. The wisdom of truth is seen when men obey the law of truth. The inquirer will have no cause to fear his own or his neighbors' questions if the first question is, Lord, what wilt thou have me to do?

Ignorance is the penalty that follows the violation of duty. Robertson, whose soul was illumined by the dawn of the new day, calls "obedience the organ of knowledge." Matthew Arnold, the apostle of culture, in whom the ideal man was a kind of deity, called conduct "three-fourths of life," and God "the power that works for righteousness;" Kant felt that the sense of obligation was the centre of man, that with the stellar universe made the twin facts of the universe; but the worth and largeness of the power of duty is felt when the Hebrew prophet names God "the Lord our righteousness;" and the Sovereign Redeemer, in his clear, self-conscious life, said, "I come to do thy will," and left as his large, divine, and comforting legacy to the world the superior wisdom, "If thou wilt enter into life, keep the commandments."

We need a better art, a better education, a better home, a better society, a better politics, a better religion. All these shall come when human hearts are changed by the power of duty.

"Three roots bear up dominion: knowledge, will,
These two are strong: but stronger still the third,
Obedience: 'tis the great tap root, which still,
Knit round the rock of duty, is not stirred,
Though storm and tempest spend their utmost skill."

[1]Extract from an address before the Hitchcock Society of Inquiry, at Amherst College, by C. M. Lamson.

JUMPING SPIDERS.

These spiders, jumpers, belong to the group which naturalists call the saltatory spiders. Some of them are disguised, as if for protective resemblance, with the costume of a hymenopterous insect, or under an aspect resembling that of ants. Producing only a small quantity of silk, they hide themselves in cracks in the walls or in fissures of bark in the shadow of the foliage, and make themselves a lodge out of a smooth or flossy tissue. At the laying of its eggs, the jumper shuts itself up in its shell. One species deposits its eggs without any covering; a more careful species closes them in a sack with thin and almost diaphanous walls. Not having the faculty of spinning webs, the saltatory spiders are hunters, and have to fast if the weather is bad. On pleasant days they are to be found all around, and, having eyes all over the cephalic region, some of them quite small and others of enormous size, they can look accurately through all the surrounding space which they explore slowly and with care. If a fly is in sight, the spider lances itself upon it with dizzy rapidity. It measures its distance so well that it rarely misses; but, if this should happen, no harm comes to it, for it has fixed a thread to its starting-point, which, unrolling as it leaps, prevents its striking upon the ground, and affords an easy road back to its position.

HEAT FOR HOUSES IN AUTUMN.

With November's chill days furnace fires are aglow, and the great stove in the cellar has begun its season's work. After watching sick beds in rooms heated by steam, by open fires, by stoves, and by furnace heat, I am decidedly in favor of the last, provided sufficient moisture be added to the heated air before it comes into living rooms. Steam heat is too dry, open fires cannot keep up an even temperature nor warm a room in northern mid-winter, and stoves burn oxygen from air too rapidly without providing a fresh supply. In a certain house where professional duty led me every day of last December, there was not a daily variation of temperature of two degrees from 70 deg. F. the whole month. Plants grew luxuriantly, and flowered in wide halls, and climbing vines converted more than one room into an amateur conservatory. The master, a man of leisure and scientific mind, told me that his delightful winter home was heated by two furnaces; that he had discarded steam after a year's trial, and was satisfied. Ventilation was fully provided for, and the sick chamber, whence my patient soon emerged, was attractive enough, even to one who was leaving for summer islands of the Caribbean.

What is essential, from a sanitary point, in heating houses, is to have the temperature even throughout. There is probably no better way of catching cold, of laying foundation for pneumonia or bronchitis than stepping out of a warm bed into a cold or cool hall. Every skin pore is open or relaxed, every nerve of resistance is half asleep, and the insidious chill that has proven forerunner to so many dangerous diseases of chest and throat, sends one shivering back to blankets that are some time in getting warmed up again. While sleeping, room temperature should be lower than the rest of the house, kept so by open windows, and if this suggestion is followed there can be no harm done by needful nightly wanderings. A proper range at night is 60 to 65 deg. F. Beside the bed of those who are given to these nocturnal excursions should always stand a pair of bedroom slippers, ready to be slipped on at short notice; for cool currents of air are always playing about floors, and bare ankles are exceedingly sensitive to small temperature variations.

There is a change of late years in the winter heat of American homes. With almost universal substitution of better forms of heaters for old-time stoves, and better understanding of ordinary health law by the people, has come a cooling down of the suffocating temperature that made our homes dry forcing-houses and sent our people out into wintry cold as about as well fitted to face it as if they were naked. Except in rooms where sick are, or aged persons, mercury should never rise above 70 deg., nor fall below 65 deg. A narrow range, truly; but within such strict limits lies the zone of health.

Foreigners coming here in cold weather used to find our houses insupportably hot; and more than one visiting medical man has said to me, "Now I see one of the causes at work to produce American nervousness."—*Dr. Wm. F. Hutchinson, in The American Magazine.*

ABOUT BOOKS AND READING.

Desultory habits of *study* are not to be commended; but I do not advise you to pursue any systematic course of *reading*, because I am looking upon reading for the moment, not as an exercise but as a recreation, and I fear lest, if it were reduced to a rigid and regular system, it should become a wearisome task. I would have you omniverous of books: devour all the *good* books that you can come across; your life will certainly not last long enough to leave you time for the trumpery ones.

However warmly you may admire a particular author, do not permit yourself to lose the consciousness of his fallibility. Do not accept as gospel what any man, however great, says or writes. Never make a blind surrender of your own judgment, either to the author whose writings you affect or to the society which for the time sets him up as an idol. There is a fashion in these things which is very like affectation. Yesterday the rage was for Carlyle; to-day it is for Matthew Arnold or Herbert Spencer; to-morrow it may be for some as yet undiscovered literary planet. Do not let yourself be swept away by the stream. Form your own judgment on the best materials you have, and do not hesitate modestly to express your own preference or dislike, even if it be out of harmony with the popular sentiment of the moment. "Books are a guide in youth, and an entertainment for age. They support us under solitude, and keep us from becoming a burden to ourselves. They help us to forget the crossness of men and things, compose our cares and passions, and lay our disappointments asleep. When we are weary of the living we may repair to the dead, who have nothing of peevishness, pride, or design in their conversation."—*Notes for Boys.*

DON'T SMOKE.

Why not? From the fact that at Yale College an investigation has just been made into the influence of tobacco on the scholarship and standing of the students who use it. The results are as follows: Each class is graded into divisions according to scholarship, the best scholars being in the first grade, and so on down to the fourth, where they are, in the slang of the campus, "not too good" scholars, but "just good enough" to keep hanging by the eyelids. In the junior class it was found that only ten out of forty in the first division were addicted to smoking; eighteen out of thirty-seven in the second; twenty out of twenty-seven in the third; and twenty-two out of twenty-six in the fourth. The proportion of smokers, it will be observed, increases in regular ratio with the falling off in scholarship. These figures are exceedingly suggestive; but no one who has paid attention to the scientific evidence of recent years, which establishes the deleterious influence of the weed, will be surprised at it. The aggregate loss of mental power and of its precious fruits in a nation like ours, which consumes annually two hundred and fifty millions of dollars worth of tobacco must be enormous. Of course we shall hear the usual twaddle about the Germans, the finest scholars and the greatest smokers in the world, just as we

have heard the strengthening properties of beer demonstrated by the incessant use of it by the same people; but careful observation and scientific study of the question have proved to the satisfaction of all who have properly weighed the evidence, that the German people are great not because but in spite of their tobacco and beer, and that immeasurable progress awaits them and every other nation which can be persuaded to give up these vices.—*Selected.*

THERE is a state of heart which makes truth credible the moment it is uttered. It is credible to some men because of what they are. Love is credible to a loving heart; purity is credible to a pure mind; life is credible to a spirit in which life ever beats strongly: it is incredible to other men. Because of that, such men believe. It is of such a state—a state of love and hope, which makes the divine truth credible and natural at once—that Jesus speaks, "Blessed are they that have not seen, and yet have believed."—*F. W. Robertson.*

IT is of no advantage to a man to know much, unless he *lives according to what he knows.* For knowledge has no other end than goodness; and he who is made good [that is, pure and unselfish in his character] is in possession of a far richer treasure than he whose knowledge is the most extensive, and yet is destitute of goodness; for what the latter is seeking by his great acquirements the former already possesses.—*Selected.*

LET us remember that in our best achievements lie hid the seeds of danger, and beware lest the dethronement of Custom to make place for Right should displace along with it that principle of Reverence which bestows a discipline absolutely invaluable in the formation of character.—*Wm. E. Gladstone.*

WHAT one gets for nothing is the least value of anything. What one earns—is all value.—*Exchange.*

NEWS AND OTHER GLEANINGS.

—The Association for the Advancement of Women, of which Julia Ward Howe is president, will hold its Sixteenth Congress in Detroit, Mich., on the 14th, 15th, and 16th of this (Eleventh) month. There will be executive sessions at 10 a. m., and public sessions at 2.30 p. m., each day. A number of subjects, including Dress, Manual Training for Girls, Organization among Women, Legal Aspects of the Temperance Question, and Social Purity, are announced for discussion.

—Herr W. Meissel, second officer of the North German Lloyd steamer "Werra," has devised a means of calming the sea by the use of oil, from on board a vessel, over a greater distance than has hitherto been possible. He employs rockets filled with oil, which are shot off in such a way that the oil itself is made to fall like rain on the troubled waters, and smooth a path for the vessel. The rocket consists of an oil-cylinder of tin, together with a chamber filled with gunpowder. Experiments with the invention have been very satisfactory, demonstrating the practicability of calming a surface from fifteen hundred to two thousand square feet in extent. The inventor intends to extend his idea, and prepare oil-bombs on the same principle.—*Popular Science News.*

—A part of the results of the work of the United States Commission to observe the latest transit of Venus have been made public by Prof. William Harkness. That gentleman read, not long since, a paper describing the labors of the Commission, the instruments used, and the numerous photographs obtained. A few of the calculations made are as follows: the sun's distance from the earth, 92,521,000 miles; the moon's distance from the earth, 238,852.4 miles; the moon's mass in proportion to that of the earth, as 1 to 81,519; the velocity of light, 186,298.4 miles per second.—*The American.*

—Florence Nightingale, on the verge of her threescore and ten years, has become a confirmed invalid.

—Effie A. Southworth, a graduate of the University of Michigan and of Bryn Mawr College, is assistant botanist to the botanist of the United States Agricultural Bureau, Washington.

—According to the census of 1880–1, the last one taken, there were at that time 20,980,626 widows in India, of whom 669,000 were under 19 years of age, and 278,900 under 14 years. According to the native custom, none of these widows are at liberty to marry again. The same census gave the total female population as 99,700,000, and of these only 200,000 were able to read.

—No one can definitely predict what changes in the international trade channels will follow the successful opening of a canal at the Isthmus of Panama, or on the Nicaraguan route. The most general effect, perhaps, would be a reversal of the direction of the time-honored flow of trade between Asia and Europe. Hitherto the products of Asia have moved westward; and the products of Europe have been carried eastward,—first by the Cape route; later, through the Suez Canal. On the opening of Panama canal, only slow and heavy freights would take the Suez route for India and China; other vessels would prefer the Atlantic and Pacific route on account of the uniformly favorable winds, and other conditions favorable to quick passage.—*The American.*

—When Europeans first visited New Zealand, they found in the native Maoris the most finely developed and powerful men of any of the tribes inhabiting the islands of the Pacific. Since the introduction of tobacco, for which the Maoris developed a passionate liking, they have from this cause alone, it is said, become decimated in numbers, and at the same time reduced in stature and in physical well-being so as to be an altogether inferior type of men.—*C. W. Lyman in Medical Journal.*

—One of the grandest gifts ever bestowed upon the colored race is the million of dollars given by Mr. Daniel Hand, of Connecticut, for the education of young men of color in the South. The money is to be expended under the direction of the American Missionary Association, which is the organ of the Orthodox Congregationalists; and it is estimated that it will suffice to educate five hundred young men a year to take their places as the ministers, the lawyers, and the physicians of the emancipated people of the South. As the religious body in question already has in the South educational machinery which will only need some enlargement, no part of the million need be spent in creating new plant, but all of it in doing the direct work of education and support. The Congregationalists are excellent trustees for the gift, as from the first they have set their face against the isolation of the colored race by race distinctions.

Mr. Hand spent a good part of his life in the South, and owed the preservation of his fortune to the faithfulness of a confidential clerk who took charge of his affairs

BIRDS OF PASSAGE.

THE little birds trust God, for they go singing
From Northern woods where autumn winds have blown,
With joyous faith their trackless pathway winging,
To summer-lands of song, afar, unknown.

And if he cares for them through wintry weather,
And will not disappoint one little bird,
Will he not be as true a Heavenly Father
To every soul that trusts his holy word?

Let us go singing then, and not go sighing,
Since we are sure our times are in His hand.
Why should we weep, and fear, and call it dying?
'Tis only flitting to a summer-land.

—*L. G. McVean, in S. S. Times.*

For Friends' Intelligencer and Journal.

LAWRENCE AND KANSAS CITY.

I HAD another unexpected and delightful ride before leaving Colorado Springs with E. M. Solly, also taking E. McAllister. The morning was very fine; not a cloud flecked the deep blue sky. We took the same course to the base of the mountain as when we climbed its steep ascent on the way to Seven Falls and South Cheyenne Cañon, then turned and soon entered the mouth of North Cheyenne Cañon, it being wide enough to admit a carriage. It was a very restful and charming ride. The creek, flowing close beside us all the way, we crossed many times, with its innumerable little falls occasioned by the rocks and the steep descents over which it often passed. The mountains were very high, towering several hundred feet above us, and, as in South Cañon, we often seemed walled in, until, coming to a sharp curve, we wound around the deep pathway, thus finding continued interest amid the grandeur of the scene. The sun was often hidden behind the mountains, even as late as 11 o'clock.

They take these delightful drives all through the winter. Of course they would be more interesting when the trees are clothed with verdure and the flowers blooming, but the evergreens which grow to the mountain tops, add beauty and variety to the scene. We were scarcely gone three hours, and when we returned it seemed like taking a farewell of these stupendous heights, never expecting to look upon them again, yet I was so grateful for the privilege afforded of a fuller appreciation of the wondrous works of God. C. B. Lamborn thought after coming so far it was too bad to miss some of the still more sublime sights of the country, among them Arkansas Cañon which he considered, after much travel, the finest he had seen. But my cup was already running over, and the mind was turning eastward with the thought of much yet to be accomplished by the way. I parted with the kind friends in Colorado Springs on Second-day afternoon, at 4.40, taking a sleeping car for the first time since leaving home. We caught the last lingering glimpses of Pike's Peak and watched the mountains until they faded from view. It soon grew dark and when we came to Pueblo we peered out into the darkness to try to catch some idea of the place, but could see little save the lights dotting the city. I had a good night's rest and awoke to find a change of one hour in time and to see the eastern sky richly tinted, and the sun rising over the prairies of Kansas. It was pleasant to see the large corn fields, some in shock, but much yet uncut, also the fields of young wheat, making the scene more homelike. We passed through some flourishing towns, Hutchinson, Nickerson, Newton, and others, before coming to Topeka, which is quite a large city. The country grew more rolling as we proceeded; the Kansas River came into view and we followed its course until we reached Lawrence, where it widens into a beautiful stream. I was glad to be met in this city (which I had heard called the Athens of the West), by Emily D. Woodward, and was conveyed to their lovely home on the heights overlooking the city. It is a grand view, and still more extended by proceeding a little further up the eminence to the University buildings of the State. "Snow Hall" is the natural history building, so called for Professor Snow, Principal of this department, a very faithful and competent teacher, deeply interested in the work. The number of the students at the University averages about 500. There is a very large collection of minerals, some rare and beautiful specimens, Indian relics, birds of almost every size and species, animals from the tiniest to the skeleton or cast of the "Megatherium" found in South America, 17 feet long. A wonderful variety of petrifactions were here, some of immense size, as trunks of trees, and the impress or fossils of leaves, plants, fish, etc., were very distinct and fine. It was the finest collection I had ever seen. Thirty thousand species of insects are embraced in this great collection, indicating the labor, cost, and interest required for such rich results. We were too late to see all carefully, but were repaid by seeing the sun go down beyond the distant farms spread out before us like a garden, and could picture what the view must be in the spring and summer time. The Kansas river sparkled amid the setting rays and the city nestled in the valley below with many surrounding homes in

the bluffs. The scene formed a great contrast to the terrible times in 1863 when Quantrell with a band of armed men, marched in the early morning upon the town, burning the houses, calling the men out to shoot them down in the presence of terror-stricken mothers, wives, and daughters. B. W. Woodward resided here at the time. An intelligent class of people were here who had rigorously objected to the encroachments of the slave power, and so were particularly objectionable to these unscrupulous raiders. But these times are past, we hope never to return. A better spirit and understanding of the new dispensation prevailes. Yet so slow we have been to learn the golden rule and put away forever the thought of an "eye for an eye and a tooth for a tooth," practicing the sweet spirit of forgiveness as set forth in the life and precepts of Jesus.

We also visited the school for Indians called the Haskell Institute—there are 388 pupils, the boys greatly predominating. They have had 425. We saw some of them in the class-rooms, and were delighted with the progress made. One class had been exercised in writing, and it was very creditable. Some wrote a very clear and beautiful hand. There are two large buildings, one of them very fine, in course of erection. Dr. Charles Robinson, the first Governor of Kansas, is Superintendent. We were sorry to miss seeing him, he being absent at his farm some miles distant. Some of the Indians are very light, such a marked difference appearing in the tribes. A few words of heartfelt encouragement and counsel were extended in one of the rooms, the children being quiet and seemingly appreciative. It is such a comfort to find the government awakened to a sense of the need of this people, in consideration of all the wrongs which have been heaped upon them, and the wide-spread interest manifested is encouraging. May the good work go on to bear rich fruit in coming time.

It was quite a treat to see a large orchard in the enclosure of this suburban home (B. W. W.) Many of the trees still laden with apples, now in process of gathering for winter store. I left Lawrence and the kind friends there on Fifth-day afternoon for Kansas City. We were in sight of the Kansas River most of the way, and consequently passed through a section of timber-land, which seemed quite extensive. It was a comfort on arriving to be met by a familiar face, an acquaintance of earlier days, Sarah W. Coates, and taken to her home, to be the recipient of her kindness. To have missed seeing Kansas City would have been to lose an unique specimen from the list of our national cities. It seems cause of astonishment that such a rough site should have been chosen, but whatever disadvantages it has labored under, the advantages must have preponderated to produce such a wonderful growth. High banks rise up by the side of fine buildings, almost hiding them from view to be leveled in time, while other houses stand almost isolated upon these heights which sooner or later must be removed. The situation reminds one somewhat of Cincinnati. The cable cars are a great convenience, going up and down the very steep hills with seeming ease and rapidity.

I spent a day with Sarah W. Lacey and family sister of Anna R. Jackson, whom we visited so pleasantly at Fort Wayne. (She is now here visiting her sister.) They live a few miles out of Kansas City, and it was a great treat to us all to recount the olden times and talk of the loved ones East. It was also comforting to have their presence at a little meeting held on First-day afternoon in the Unitarian Church as well as others who gathered with us, feeling banded together in gospel love, irrespective of sect or the dividing lines of prejudice. This is a precious experience, bringing us unitedly nearer to the Father of all.

The Gurney Friends' hold a meeting in Kansas City, but the Unitarian Church was close by, and my hostess an attendant there, making it more available. We met several Friends from the East at the meeting among them Dr. Benjamin Lippincott and wife from Washington, D. C., visiting their son here; J. F. Perdue and his mother, also visiting her son and family; Wm. Fitzsimmons, formerly of West Chester, and others. This mingling in spiritual travail brings the north and the south, the east and the west nearer together, making us feel truly as one people with similar needs, subject to like trials and difficulties, while recipients of the same Heavenly bounty. I visited my cousin, Sally R. Lamborn, at the home of Edward and E. Vernon Stiles, taking a delightful drive with them to Independence, 10 miles east of Kansas City, one of the oldest towns in Missouri, and a southern stronghold during the rebellion and border raids. There were some fine buildings, but it has made small advancement compared with Kansas City. We rode through Elmwood Cemetery a few miles from Kansas City, a beautiful spot. It is the burial place of Kersey Coates. Many costly monuments rise here to mark the resting places of the departed. Yet we know it is but "dust to dust, the spirit unto God who gave it." The solid strata of wall-like masonry frequently lining the banks are wonderful, often making it difficult to decide in the distance whether natural or artificial. We saw much of this fencing on the road to Independence. It is quite picturesque, moss covered and vine clad, and would be an ornamental enclosure for a home. We could but think how it would outlast aught which man can build.

St. Louis, Eleventh month 8th. L. H. P.

It is a great thing to know that there is a Power and Wisdom which guides us and the world; and to feel that there is a Justice immense, immeasurable, irresistible, which sways the ocean of human forces. —*Theodore Parker.*

Robert Browning, it is said, has intrusted Prof. Norton, of Harvard, with some interesting letters that passed between Carlyle and himself over fifty years ago. They are to appear in the second series of Carlyle's letters, edited by Prof. Norton.

Wisdom does not show itself so much in precept as in life,—in a firmness of mind and mastery of appetite. It teaches us to do as well as to talk; and to make our actions and words all of a color.—*Seneca.*

For Friends' Intelligencer and Journal.

MIND THE LIGHT.

This expression has been a proverbial one for two hundred years in the Society of Friends; and the force of the truth that will be beneficial to us comes not in the thought that we are a body naming the name of George Fox with a reverence, looking to his words as the weight of life, but in our own experience fully realizing the same power to operate upon our souls. We may be kept waiting until the very heavens seem to us to be of midnight darkness through the power of our own wilful walking. Then we can truly ask, "What light are we to mind?" It is not that of reason alone, neither of education, nor of anything especially belonging to us because of our birthright in this Society. Nay it is a free gift bestowed on every one who comes to feel as Jesus told his disciples: "Except ye be converted and become as little children, ye cannot enter into the kingdom of heaven." We must enter into a Divine knowledge, and this by the illumination of the soul life, will produce a direct revelation of God to us; for we, like Samuel, do not understand the voice of God until we obey. We, too, may think it the voice of someone else or something else, and in our ignorance confound the two-fold nature of our being. Humility is a requisite to learn wisdom from God. His spirit which is the Christ to us, will make known this high law and this establishes the light; and this light is our Savior and will keep us quiet from the petty surges of our human nature. The Psalmist declared in his humility: "Lord my heart is not haughty, nor mine eyes lofty, neither do I exercise myself in great matters or in things too high for me. Surely I have stilled and quieted myself like a weaned child with his mother." He felt he could have no dependence upon any one, but was, by this Light of God's Spirit, weaned from all outward sustenance.

Let us remember that there are two doors to our being; one opens outward, and we see through it the allurements and fascinations of this world; the other opens inward, and we must enter into the tabernacle of transfiguration and learn of the serving necessary to qualify us to know the light of the Star in the East which will lead us to where the child spirit of our Saviour lay—which is within our own being. Blessed thought! Holy knowledge! Oh, let us not rest on any letter of religion, but wrestle continually until break of day; and the Lord will bless us with a spirit of understanding. A condition in which we will feel our own judgment taken away, and the clear light of the Eternal Christ will give us a judge whose verdict will always be right; and an evidence will be our reward which is peace and love —that love which is the badge of discipleship.

Oh, let us come to know this high light which is at the footstool of God! and as we seek to abide there, we shall realize that He is a strong tower, a mighty God, a loving Father, and to his government there is no end.

Hoopeston, Ill. Mary G. Smith.

Live to explain thy doctrine by thy life.—*Prior.*

EXTRACTS FROM A SERMON.[1]

My mind has been arrested with the account in the Scriptures of truth, in regard to the building of the temple that was to be dedicated to God. In that building, there was no sound of the hammer, the ax, or the saw. I have felt, my friends, that each individual of us is a builder of a temple that should be dedicated to God, and as we feel this responsibility, let us not forget this example. There must have been, on the part of the workmen in this temple that we read of, an instructor, who could give directions for the whole, and as the workmen were obedient to that instructor everything fitted closely and perfectly. And so in this temple that we are building, how quietly it goes on, how certainly it increases, as we are faithful to the One Great Master Builder. As each individual becomes acquainted with him and listens to his instructions and is faithful and obedient to them, the temple that we are rearing will give evidence that we are governed by a power that controls our life, and regulates every action and propensity. Our daily lives will become so quiet, so reliant, so trustful upon this Directing Power, that there will be no confusion, there will be no doubt, no trying this and that, but we will know that one part will fit into another. We know, because we trust in the excellency, in the competency of the power that directs us.

To-day as we gather together we are showing evidence of the temple that we are building for the church that our Heavenly Father has called us into, and in which we are better satisfied than in any other that we have been led into. How is the building coming together? How is the temple being reared? Is it by this faithfulness,—by this Power that has ever been the guiding power? O, how is it with us? Are we working under this power, or are we working with an indifferent feeling, that it makes but little difference what we are doing, the work of the building will go on just the same. Was it so of old? Would the building have gone on as it did if each workman had not been obedient to his instructor? And so I call your attention to this obedience and faithfulness. Each one of us has a work to do in this rearing of the temple for our God to dwell in. We have a daily work to do in this rearing of the temple. When we feel we are instructed we are met by the loving power of the Most High.

We have an organization into which we are gathered, and in this organization we desire to show this Great Instructor, this Father of life, of love, and the main object of worship, that we desire to feel and know that he owns us by his loving presence, that he gathers us into this feeling of worship where we can mingle heart to heart, so that when the whole building shall come together there shall be no clashing sound, but we shall manifest that we have been truly instructed by the voice of God.

As you are found drawing strength from this Fountain of Divine Life, he will come forth and shine in your heart, and you shall experience a greater strength to faithfully fulfill your duties. There will be

[1] At Philadelphia Quarterly Meeting, Eleventh mo. 6, 1888, by Margaretta Walton. From stenographic notes by Sue R. Wilkins

a building erected, it will be quietly done, and there will be a perfect fitting together of the different parts with the harmonious love of God. And so, too, all may grow together, and while one may bring one offering, and one another, there will be no confusion, for the temple will go together by this wonderful love of Christ. Then, my beloved friends, I feel to ask you once more to come into close communion with your Heavenly Father. O, take this home and see if there is a true faithfulness on your part, see if you are really one of the builders of God's temple, and are doing the work under his holy instructions.

THE CLOSE OF LIFE.

[A sermon recently preached by Dr. Storrs, from Daniel 8: 17, contains the following earnest, practical thoughts, which we commend to our readers.—EDS.]

AT the end cometh the vision. The only thing we are certain of in regard to our life is that it will reach an end. It may come this very week, it may come during this year, it may be protracted for many months and years to come, but it is one thing certain. We may have prosperity and we may have grief. We may pine along in sickness or we may have vigorous strength until the last. One thing we are positively sure of is that the end cometh. So at that point which is a point of consummation of life, will come the vision of life. What will it be at that last consummating point of vision that will fill the soul with pleasure and peace? One thing will be the assurance that we are leaving behind us a beneficent influence that has already wrought for God that will continue to survive us. Every thoughtful man wishes to be remembered by those whom he is parting from on earth, remembered as one who has helped them and made their lives more beautiful, given to them the results of his own experiences. Every thoughtful man desires to be useful. There is no satisfying the deep sense of duty in us unless with the power we have we are conscious of usefulness to others. Every man and woman and child has a chance for usefulness in the world in the relations which unite us to one another. With the power of the Gospel within our own souls every one can help others by example, by the outflow of character, by gifts—if they are appropriate and possible to us. Every one may give an influence—not great and signal perhaps, but real, beautiful, and abiding—to aid others. And then we must have the assurance of a character which is fitted for immortal development along lines of peace. When we enter the next life character there shall take sudden evolution. Death is the great crisis which brings character into exhibition. There, as we pass into the next life, is the supreme crisis of character, not for its change—for its exhibition and swift development. Then we want to have the soul free from all sinful passion, a love of divine things, aspiration after purity, desire to glorify God, the love of truth, the love of God. Every element of beauty in our character shall come to its triumphant consummation. If one is conscious of a character—not perfect, oh no—not perfected up to the measure of his own idea; but which has in it the germs of good to be developed along immortal lines in beauty and peace, death will have for him no terror. And then one must have a consciousness of being so affiliated with God that he has the sure expectation of the vision of God. We sometimes have the vision of God on earth. Sometimes, standing under the starry sky in the warm summer night and hearing the melodious songs of Nature and feeling the warm and balmy breath laden with the perfume of flowers, we stand and feel God's presence. Have you never stood thus and seen God in the universe? Sometimes we see him in the peace of one who is passing through great grief, but knows that God is near, is present and is hearing. We almost see His grace shining into the heart.

When we come to death, we want to have the sure expectation within us that we are to have this vision perfect, complete, and everlasting. It is perfectly apparent that whatever has tended to produce that will be a source of beauty and joyful remembrance. Whatever has tended to hinder that will be a source of pain.

For Friends' Intelligencer and Journal.

EMERSON.

IN the introduction to his "Life of Emerson," Dr. Holmes quotes the sage's own words: "I have a feeling that every man's biography is at his own expense. He furnishes not only the facts but the report. I mean that all biography is auto-biography. It is only what he tells of himself that comes to be known and believed."

After finishing this singularly attractive volume of the "American Men of Letters" series,—attractive both as to subject and as to author,—one cannot help feeling that the spirit of the quotation has been fully and sympathetically carried out. Instead of creating, as some biographers seem to do, an ideal man and giving it human form in the shape of the subject of the work, Dr. Holmes has allowed Emerson to tell his own story which shines out from every line of the Concord philosopher's writings. The biographer selects and arranges. He offers here and there a comment couched in his own inimitable language. He enters freely into the spirit of the life he describes. Yet it is Emerson's character and not Holmes's opinion of Emerson's character which the pages reveal. It is only after he has traced the life of his subject through to the end of his public work that the author turns aside and writes a criticism upon the character and writings of this great man whom it is so difficult to classify—who is preacher, poet, and philosopher all in one.

Dr. Holmes is only one of the too rapidly diminishing number who can testify to the magnetic presence, the inspiring manner of this noble and lovable man. All who heard him speak, whether cultured scholar or unlettered farmer felt the charm. Lowell writes of it in that delightful book, "My Study Windows," and grows so enthusiastic over it that even we, who were born too late to hear him, catch the inspiration and respond to the call to better things which the lecturer sounded forth.

But it was not the charm of his manner which

made Emerson great; it was not the delicacy and beauty of the passages in which he describes nature; it was not his keen sense of humor which he himself mentions as "an essential element in a fine character;" it was certainly not his value as a scientist which elevated him above other men, for he does not talk about science at all like a scientific man—a fact which seems to grate a little upon Dr. Holmes's nerves; neither was it the rather startling way he had of linking every-day things with the high truths of religion and philosophy, so perfectly exemplified in that striking aphorism, "Hitch your wagon to a star."

The dominating characteristic of Emerson's mind, that which caused him to stand out preëminent among the thinkers of his day, was the entire freedom which he gave to his individuality. His independence was sublime, and at the same time, his humility was wonderful. He asked only the right to be his own conscience. Leaving his pastorate because he could not conscientiously perform the rites of the church, he soon drew attention to himself by the freshness and daring independence of his thought. His utterances had that subtle, intangible force which accompanies the expression of an original idea. His advent marked an era in man's progress. Others had called the world to political or to religious freedom. He called man to "an original relation to the universe." With him everything had in it a touch of the divine—kindness—beauty—truth in any form. His trend of thought was eminently religious. Sprung from a long line of ministers, he seems to be the filtered essence of religion without the substance which a formal worship gives. "Without a church or a pulpit," says Holmes, "he soon had a congregation." He lifted his readers and his hearers far above the plane of their every-day thoughts. He was an inspiration to the thinkers of his day. He will continue to be an inspiration to every man who desires to be the living exponent of his own thoughts rather than of those of some long gone leader of mankind.

Emerson makes us feel that life in America to-day is as full of rich possibilities as was life in Greece in the age of Pericles or life in England in the days of Shakespeare. This is the Golden Age if we will but open our eyes and behold it.

He asks us to accept the responsibility laid upon every soul born into this hurrying, struggling world. He demands that each man break loose from the restraints of custom, from the trammels which the evolution of society has placed around him,and standing alone in the awful solitude which his own personality throws around him, ask himself how much of the daily action which he unthinkingly performs is necessary; how much of it makes himself or his neighbor wiser or better; how much of it is simply an ingenius method of wasting time.

Many of our habits are the result of former action, necessary at the time, but made so by an environment long since passed away. Much of that which we do and give assent to because it is expected of us is entirely without valuable result! Why shall we not dare to refuse to be bound by any custom, moral, social, political, religious, or financial for which there does not exist at the present time some good reason?

In his essay on Self-Reliance, our Yankee philosopher sums it all up thus: "And truly it demands something godlike in him who has cast off the common motives of humanity and has ventured to trust himself as a task-master. High be his heart, faithful his will, clear his sight, that he may in good earnest be doctrine, society, law to himself, that a simple purpose may be to him as strong as iron necessity to others."

ANNA L. NICHOLS.

SCRIPTURE LESSON, No. 45.

ELEVENTH MONTH 25, 1888.

TOPIC: SERVING GOD.

GOLDEN TEXT.—"The Lord our God will we serve, and unto his voice will we hearken."—Joshua 24: 24.

READ Joshua 24: 21-28.

IT is at Shechem that Joshua gathers all the tribes of Israel, that they may renew their covenant with Jehovah. This was an important city in the history of the Hebrews. It is mentioned in the migrations of Abraham as the first stopping-place in the land of Canaan, and was then, doubtless, in the hands of its original inhabitants. It was while he rested under the oak of Moreh, that he built his first altar to the Lord, and it was there that the Divine will was communicated to him concerning the possession of the land of Canaan by his posterity. The city is in the central part of Palestine, and in the New Testament is called Sychar. (John 4: 5.) It is now known as Nabbus, a corruption of the name Neapolis, given it by the Romans.

In this great congregation of the descendants of Abraham, Joshua recounts the dealings of the Lord with their fathers, beginning with the call of Abraham, when he is living with his father Terah, where they "served many gods," and following briefly the events which marked their history, he concludes with the exhortation to "serve the Lord; for he is our God." This brings us to the renewal of the covenant, which forms the subject of the lesson. Note the fact that this covenant is renewed at the place where the first altar, dedicated to the worship of one God, the Lord of the whole earth, was erected. Here began the worship which, through various backslidings and deviations from the simplicity of its original conception in the soul of Abraham, has continued until now, making good the promise, "In thee shall all the families of the earth be blessed."

Put away the strange gods which are among you. This shows us that there were those among the Israelites who were not entirely free from the worship of images, the likeness and representation of the deities worshipped by all the nations around them. In their unsettled and wandering condition it had been impossible for their leaders to preserve amongst them the spiritual worship which was to be expressed by communion with God through the lifting up of the soul to him as the author and dispenser of all good, and not by any likeness or image made by man to be the object of his devotions.

So Joshua made a covenant with the people. This was written in the book of the law, which was kept in the ark of the covenant that was placed in the Tabernacle.

A great stone. A memorial stone which was set up under an oak, a representative of the oak of Moreh, where eight hundred years before Abraham had set up his tent and built his first altar. In our own times we have need to recount the Divine mercies that have marked the pathway of our Israel, and renew the covenant made by our fathers, yet this should not be done in the oldness of the letter but in the newness of the spirit, whose fresh revelations are for us and our children.

There are two distinct ideas prevalent among intelligent people of to-day concerning the character of religion. One is that religion is a kind of supernatural influence that takes possession of the human character, if permitted so to do, radically changing its nature, instantaneously, perhaps, delivers it from a condition in which it previously had been, without hope of infinite mercy, and brings it into a state of acceptance with the Divine Father.

According to this view serving God involves specific forms of faith, of which but few of the great mass of mankind have become possessed, so that humanity generally is thought to be without a knowledge of true religion, and is dependent largely upon the efforts of the true believer for an opportunity to learn how to acceptably worship God.

The other view is that religion is as natural to man as his life or his intellect; that it is not an influence that meets him by the way on some special occasion, or after some mysterious transformation of his character, but that it is the result of an inherent spirit of truth and love, which is constantly acting for good in the human soul. This view teaches that human nature is not radically bad, but that as a creation of the Divine Father it is pure and good, until by disobedience to the revealed will of the Creator it becomes sinful.

Both views inculcate a recognition of God as the worthy object of worship and obedience, but they differ widely in their conclusions as to the method of obtaining a knowledge of God's will, and of bringing the human soul into harmony with the Divine.

Serving God according to the teachings of Friends is being "led by the spirit of God," or, as George Fox termed it, "minding the Light." It is no mysterious transformation of character; it is rather a steady growth towards all that is good, all that is pure and all that is true in mankind's highest conception of what is good and pure and true. To those whose religion is of this character God reveals himself in many ways. Primarily and most authoritatively, the impress of truth on the soul, that comes without our own volition, and often in direct opposition to our own desires, is the manifestation of God's will that Friends revere. Less,—but still exceedingly important for the purpose of obtaining a knowledge of the Divine Will, and by this to know how to serve God,—is the contemplation of the manner in which the spirit of Divine Truth has been received by, and has affected the characters of other human beings. Hence the inspiration of the Scriptures has its place in affording Divine revelation. So, too, in the lives of all good men and women, in the heroic human endeavor to rise above the debasing influences of life into the purity and nobility of sons and daughters of God, we may find an inspiration. In a thousand ways the Divine Father reveals a knowledge of himself, and leaves us not without a witness that teaches how best we shall serve him. Every soul has its own revelation, and blessed is he who follows not the counsel of men, whether it be in the acceptance of creed, the adoption of forms of faith, or the observance of rituals and modes of worship, but that steadily adheres to a faith in the divinity within his own nature, that is served only when it is implicitly obeyed, equally in its gentlest monitions as well as in its more imperative requirements. We may be well content if each shall be, according to Divine pleasure, not up to the standard of some human plan of righteousness, but up to the standard of his own conviction of right and duty, whatever that may be, varying as it will according to the opportunities for growth in a knowledge of Divine Truth.

TRIFLES AND REALITIES.

In one sense of the word, nothing is trifling. To everything is attached a certain importance, a certain result, and often those things which we pass over as too insignificant to notice are fraught with tidings of weal or burdens of woe to many a human heart. Yet life is too short and human faculties too limited to give attention to everything which the eye and the ear can report, or the head and the heart can suggest. Only a few of the chords which strike upon our lives dwell in our memories, and only a part of those ever powerfully affect our purposes or conduct. It becomes, therefore, of the first importance to us all to be able to distinguish what are really trifles, for which we have neither time nor strength, and what are the matters which we can by no means afford to thrust aside or ignore.

Civilization has a constant tendency to lift things that were once regarded as trifles into more and more prominence. Luxuries once rare and exceptional gradually become necessities, and their absence is finally held to be a grave cause of distress. Rules of etiquette that were considered of trivial importance when first introduced, come to be commands of fashion that one disobeys at his peril. Dress, for example, certainly has its serious aspects to every one. Its warmth, its comfort, its convenience, its neatness and cleanliness, its good taste, are not trifles; they are so many helps to useful and happy lives. But when we see multitudes of people spending life, thought, and labor upon the exact shade of color, the precise texture, and the cut and form of every garment, and being made unhappy by any deviation from the stern decrees of fashion, we can but think that they have made a sad mistake in deciding what are and are not trifles. So in food, a necessity of life: its wholesomeness, purity, and palatableness are very far from trifling matters, but when time, thought, aud temper are expended upon exquisite flavors, rich condiments and expensive delicacies to tempt the appetite, or to outdo a neighbor, surely trifles are assuming a place which is not rightly

theirs. Friendship and society are precious boons to mankind. It is impossible to over-estimate the benefit and happiness which are drawn from this source. Character and congeniality, respect and sympathy should be their foundation stones. Yet how often are these treated like trifles in comparison with the dress, the manners, the house, the equipage, the wealth, or the social standing of those who are chosen or rejected. What depths of affection, what fountains of joy are thus wasted in mistaking trifles for realities. So in education, business, art, politics, every department of life, whatever their importance, they all have their comparatively trifling points, and there are always some persons, who, instead of keeping them in subordination, are so attracted and carried away by them that they have but little vitality left for the realities.

Perhaps, indeed, the chief evil of living among trifles is that they crowd out and push aside the great purposes of life. . . . and in domestic life; there are faithful and intelligent women who do discriminate between the beneficent purposes of the home and its mere trivialities, and who devote their lives to the former, and only their odd minutes to the latter; while there are others so wrapped up in showy furnishings, luxuriant surroundings, and general appearances that they lose sight of the truth that the home exists for the welfare and happiness of the inmates.

It is true that it is not always easy in any sphere to discriminate between the trifling and the momentous. It is often largely a matter of comparison, and judgment and experience are needed in the selection. Trifles are not to be confounded with details, which are often most important. Neither are things necessarily trifling because they are small. A kind look, a gentle warning, a cordial greeting, a slight service, are sometimes despised as trifles, when in truth they are signs of a generous and kindly nature, and carry untold blessings to their recipients. Many little things are far more important than what we miscall great ones; they may indeed be the true realities, while the others may be insignificant. Usually the dweller in trifles has *drifted* into them. It is not so much a misjudgment as a lack of thought and of earnestness of life that has brought him where he is. If each one will faithfully examine the meanings and purposes of the various spheres in which he moves, and endeavor conscientiously to make them *first* in his heart and life, the trifles will sink into their proper and subordinate place.—*Phila. Ledger.*

Alexander arrested a pirate. He said: "Why are you always making such a disturbance and robbing ships?" The prisoner replied: "For the same reason that you have for disturbing the whole world. You do it with a large fleet and they call you an emperor. I do it with one little ship and they call me a robber. The only difference is in the size of it."

Pundita Ramabai expects to sail from San Francisco for home in about two weeks. Unfortunately she has not raised all the large sum she wanted for her school in India.—*N. Y. Independent*, 15*th*.

WILL POWER.

We live in the age of what the Apocrypha calls the "holy spirit of discipline." It is the privilege of those who seek education for themselves to elect among many truths the one that shall enlarge the sympathy that chooses it. But the great elective, for which there cannot be provided a text-book nor chair of ethics, is the study that shall establish a clear, strong will upon the throne. The society for which schools exist demands of the schools not only men who can will firmly, but rightly. It has a vivid conviction of the truth of Wilhelm von Humboldt's saying, "Whatever we wish to see introduced into the life of a nation must be first introduced into the schools." All social life is awakening to the necessity of giving its questions to the schoolmaster. . . . . The times demand of our schools power,—power to manage circumstance and men, power to build railroads, do business, make opportunities and hold them; but they need more the power that is illumined by the spirit of the centurion when he said, "I am a man set under authority, having soldiers under me." The student of education may settle as he may the relative worth of language, science, or philosophy to enlarge men; he cannot provide a total or royal education till he secures the education of the will. The will is educated when its power of authority has a respect for authority. "Indeed, the intellect may be so trained as to enfeeble and dissipate the will, and it is because this is so widely seen and felt that it is come to be one of the chief endeavors of educational thought to-day to moralize as well as to mentalize children, and to devolop will as the chief factor of character." (President G. Stanley Hall.) The children in the home or school ask, "Why?" when law meets them, betraying at life's beginning an imperfect reverence for authority, not knowing that the knowledge of the reason of law comes after, not before, obedience; and men repeat the error of the child, in refusing to learn the meaning of law through obedience. As a means of education, which with the real man continues through life, and is to continue forever, one should study the habits and forces that make the will supreme. The strength of self-assertion is gained through obedience, and the authority of self-control through submission to the divine control. The strong will must be the wise will and the pure will; education is culture touched by duty. Of such an education it is always true:

"So close is glory to our dust,
So near is God to man,
When duty whispers low, Thou must,
The youth replies, I can."

C. M. Lamson.

"The most certain softeners of a man's moral skin and sweeteners of his blood are, I am sure, domestic intercourse in a happy marriage, and intercourse with the poor."—*Dr. Arnold.*

A man is more prone to pride himself on his omission of sins, than to blame himself for his sins of omission.—*Selected.*

SELF-DISCIPLINE.

SELF-DISCIPLINE is a large and important factor in the storage of vital force and the building up of character, and to do its work with thoroughness it must be begun for the child before he "shall know to refuse the evil and choose the good."

To have been well-born is of inestimable value since heredity is responsible for so large a part of the inherent qualities of the individual, and being well-born implies a social condition best expressed in the words of the Psalmist, "The righteousness of the righteous descends to children's children." It represents the accumulation of the physical and moral forces which the child inherits as his birthright.

But these will not do all they are capable of unless there is a parental oversight that takes cognizance of the development of every part, and suffers no organ or trait to be out of proportion to all the rest. It is just here where the harm is done, sometimes through ignorance, more frequently by unwise indulgence; or there may be an unwillingness to give the time and thought to the subject which it must have if the work of training is undertaken, and an earnest effort made to bring into constant exercise those traits of character that are of permanent value and by use become second nature to the child.

Restraint is his earliest lesson. It is of great significance to the human family that in the allegory of man's first conscious existence upon the earth,—in his Eden-state,—the only law given him was the law of restraint to the appetites, and this is the order of development still; the largest liberty consistent with full enjoyment in those things that have no tendency to mar or degrade or demoralize the bodily functions, the strictest self-denial where indulgence would bring sorrow, pain, or loss. "I keep under my body and bring it into subjection; least by any means, when I have preached to others, I myself should be a cast-away," is the language of Paul "the aged," in his letter to the Christians in the voluptuous city of Corinth. And this was no hardship to the man who from his first entrance into life was guarded and watched over, so that in his young manhood he could claim to be living "in all good conscience;" and though it was in the letter, it gave him a solid foundation to build upon when the revealing power of Divine life came to be understood by him.

If the child is started on the path of obedience and self-restraint these come to be the law of life to him; and as his knowledge of things increases, and his impulses assert themselves, it needs but to keep the channel open between him and the parents in the most unreserved but confidential manner, until the desire to do right becomes so established that he is a law to himself, having in his experience as a child been made sensible of the reward that follows obedience, and of the strength he has gained through self-restraint.

The tendency of all the training based upon the consciousness of moral accountability is toward the recognition of a faculty in man, that as it develops under the best influences of our modern civilization becomes the rule of action for his whole life. We speak of it as conscience, and its highest attainment is the doing of the right, because of the conviction that it is right. And this is as far as the moral and physical forces in man can be cultivated, yet the soul will not be left without its helper as it is willing to come under the directing power that sanctifies and makes holy all that it has been striving after. In the peace and joy that it brings to the life the commonest things are glorified and their performance comes to be with glad thanksgiving.

How full and complete, "wanting nothing," is a life rounded out and perfected through self-discipline, that finds no task too trivial to be left unperformed, no duty so insignificant that it may be set aside. What a power for good in a community one such life becomes! How it acts as an incentive to many another individual, who has not the strength within himself to hold firmly to the right. It is such lives that the simple religion taught by Jesus is capable of developing; and as these are consecrated, through the revealing of the Christ in themselves, they come to be the saviors of men, even as it was said of the Blessed Son who, in the fullness of that which he received "without measure," gave to as many as believed on him, "the power to become the sons of God."

WE call the attention of our readers to the list of periodicals advertised elsewhere, as usual at this season of the year, it being those which we can furnish to our subscribers in connection with the INTELLIGENCER AND JOURNAL, at a materially reduced rate. We have been forwarding orders for quite a large number in this way, for three years past, and have found the arrangement giving general satisfaction.

FOR he that once is good is ever great.—*Ben Jonson.*

MARRIAGES.

BARTRAM—PRATT.—At the bride's residence, Eleventh month 8th, 1888, under the care of Goshen Monthly Meeting, held at Willistown, Pa., Thomas P. Bartram, of Newtown Square, son of the late Samuel and Massey Bartram, and Susan G., daughter of the late Henry and Susan Pratt, of Newtown Square, Pa.

HICKS—ALBERTSON.—At the residence of the bride's parents, Roslyn, L. I., Tenth month 23d, 1888, in accordance with the order of the Society of Friends, John S. Hicks, of Roslyn, L. I., to Carrie, daughter of Silas W. Albertson, of the same place.

DEATHS.

WINDER.—At Andalusia, Pa., Eleventh month 6th, 1888, Mary S. Winder, in her 62d year. Interment at Langhorne meeting ground.

NEWS OF FRIENDS.

PHILADELPHIA QUARTERLY MEETING.

Philadelphia Quarterly Meeting, held at the usual hour 10 o'clock, on the 6th inst., was a large and interesting gathering, though from the non-observance of the hour very many came in late. Perhaps one third were not in their seats when Robert Hatton broke the silence that had overspread the assembly with earnest words of encouragement to some who were cast down, reminding them of the truth of the declaration, "Man's extremity is God's opportunity." James Griscom, of Woodbury, followed with the injunction of the Master: "Pray without ceasing, and in everything give thanks,"—and the message that if we would be strengthened we must be true to every requirement of duty.

Margaretta Walton then spoke, taking for an illustration of the truth she wished to hand forth, the building of the Temple at Jerusalem.

She said in substance: "There is a beautiful lesson conveyed in the account of the building of the great temple. Each part of it was so adjusted that they went together without the sound of a hammer. The temple of God is in man, and the building of that temple is the work of our lives. As in the outward temple the master builder must have given exact directions for the preparation of each part, or they could not have been put together without the sound of a hammer, and so fitted as to make a very perfect temple; so in the spiritual temple, the great Master Builder must give directions for every thought and act of our lives, and when we are thus under these directions all will be brought together without confusion, discord, or the sound of a hammer. We are all called to build temples for the living God to dwell in, and he will never dwell in any temple which he has not planned and directed us to build. So that the whole course of our lives, if we are true to this Master Builder, will result in the construction of perfect temples, such as God would have us to build, and such as he will come and dwell in with us."

L. J. Roberts gave brief expression to an exercise that had overspread her mind as the meeting was gathering, in the query of the Master to his disciples: "Have ye any meat?" and said, as the words of encouragement, advice, and exhortation had been handed forth, each had been invited to partake of the bountiful supply, provided for the sustenance of all by the great Head of the Church.

In the business meeting the proposed changes of Discipline on the subject of marriage were read and considered and in women's branch generally united with, but men's meeting, not being prepared to come to a judgment at this time, the matter was referred to a committee.

The Temperance Committee presented their report, which was united with in both meetings, and the committee continued, and the appropriation of $50 was made for their current expenses. A few changes were made in the membership of the committee, by request, and it was encouraged to continue its labors as way opens.

R.

WORK OF QUARTERLY MEETINGS.

The Committee of Philadelphia Quarterly Meeting appointed to visit and encourage the several monthly and other meetings that compose it, are actively engaged in the work. On First-day, the 11th inst., Margaret P. Howard, Richard K. Betts, and others of the committee, were present by appointment at Germantown meeting. Notice having been given that they would be in attendance, the audience, which has become very small of late, was largely increased by Friends and others who are seldom there except on such occasions.

The impressive silence that followed the gathering together in the Divine Name, was broken by Margaret P. Howard, who spoke with earnest feeling in regard to the attendance of our meetings, the help we receive by associating together in this reasonable duty, and the increase of influence that the Society of Friends would be enabled to have in the world, if all who have a right of membership in the body were faithful in this respect.

Robert Hatton took up the same train of thought and enlarged upon the work that Friends as a religious body had been called upon to perform. He cited the action of the German Friends who were the pioneer settlers of Germantown, and who, near the spot where we were then assembled, had in their meeting taken up the question of African slavery and been the first to utter their protest against it. His sermon was a strong and earnest testimony to the influence that the principles and testimonies held by the Society, if lived up to, will have not only upon those who hold them but upon the world at large.

L. J. Roberts followed with an exhortation to individual faithfulness, and a fuller consecration of heart and life to the work and service which our Heavenly Father lays upon us. After a brief supplication, an impressive silence followed, and the meeting closed under a feeling shared by many that it was "good to be there."

—The Denver *Republican* of the 3d instant, contains an extended notice, by E. P. J., of the religious meeting in that city, on 10th mo. 22, appointed by our friend, Lydia H. Price. It says: "The service was a novelty to those unaccustomed to the peculiar

method of worship adhered to by Friends—that of silent worship—and a season of refreshment to those who are yet Friends in opinion and at heart, but who have wandered beyond the pale of their Society, to be privileged to sit and enjoy the eloquence of silence, an introduction of thought, and a spiritual communion with the All Father, which to them is the highest type of worship and the most acceptable in the divine sight."

—In printing the report of the proceedings of Philadelphia Yearly Meeting First-day School Association, last week, we did not have at hand the statistics of the Association, which since then Lewis V. Smedley has kindly sent. There are 63 schools, with 618 officers and teachers. 1,720 adults attend, of whom 1,172 are members of our Religious Society. There are 3,384 children, of whom 1,029 are members, and 433 have one parent a member. The number of books in the libraries is 17,791. There are 32 schools reported as under the care of monthly or preparative meeting committees.

THE LIBRARY.

The Writings of John Greenleaf Whittier. In Seven Volumes. (Riverside Edition.)—Volume I. Narrative and Legendary Poems.—Volume II. Poems of Nature, Poems Subjective and Reminiscent, Religious Poems. Boston: Houghton, Mifflin & Co.

We have here the first two volumes of a new and complete edition of Mr. Whittier's works. The design is to make seven in all. The form is a neat duodecimo, with excellent paper and press work, and bound (the cloth edition), in that olive green which looked so well as the cover to the recent issue of Mr. Browning's works. The garb is every way becoming and certainly must be satisfactory to all of the many readers of Whittier who will desire to possess this edition.

The editor is the poet himself. He explains in a brief Introduction that undertaking to look over his work at the invitation of his publishers, he cannot flatter himself that he has been able to add much to its interest beyond the correction of errors, "the addition of a few hitherto unpublished pieces, and occasional notes of explanation which seemed necessary." And he adds: "I have made an attempt to classify the poems under a few general heads, and have transferred the long poem of 'Mogg Megone' to the Appendix, with other specimens of my earlier writings. I have endeavored to affix the dates of composition or publication, as far as possible." Under this system we have in the first volume the Narrative and Legendary pieces, beginning with "The Vaudois Teacher," written in 1830, and running all through the years down to "The Brown Dwarf of Rügen," dated 1888. So also in the second volume, the range of the poems of Nature is from "The Frost Spirit," dated 1830, to "A Day," dated at the end of November, 1886; the Subjective and Reminiscent Poems extend from "Memories," 1841, to "A Legacy," 1887; and the Religious Poems from "The Star of Bethlehem," 1830, to "Revelation," 1886. No doubt this topical arrangement is the most satisfactory, and the successive dates, besides gratifying our interest as to the time of each poem's origin, disclose also the course of his thought, and the influence of time upon his powers.

It is decidedly better to remit "Mogg Megone" to a supplementary limbo, and to send with it some other of the earlier pieces. They had their value, perhaps, when the maturer and fuller work had not yet unfolded, but they serve rather to foil and overload this if placed now in its close company. For we have in these two volumes examples of Whittier's best work. In the first there are pieces which present his well appreciated qualities of description and narrative—"Cassandra Southwick," "Barclay of Ury," "Maud Muller," "Telling the Bees," "Mabel Martin," "My Playmate," and the "Pennsylvania Pilgrim." In the second there is a much larger list of favorites, chief among them all, "Snowbound," that charming idyll upon which after all his perpetuated fame is not unlikely in good part to rest. Besides it there are many subjective and reminiscent pieces,—"The Barefoot Boy," "My Psalm," "In School Days," and others,—which will be turned to gladly by the lover of Whittier, and among the religious there are other pieces such as have especially marked his later productions, in which his sincere soul looks out upon the mysteries of life and immortality with a faith which all the world must recognize as broad, tranquil, and true, and which give to his work that praticular quality which must cause it to be turned to as long as our language and literature endure.

There is a portrait in the front of each of these volumes,—in the first an etched one by S. A. Schoff, after a painting made in 1836–37 by Bass Otis, a pupil of Gilbert Stuart; and in the second an engraving on steel by J. A. J. Wilcox, from a painting by A. G. Hoyt, in 1846. They add to the other attractions of the books.—*The American.*

THE PENN SEWING-SCHOOL.

[We are asked to print the following report of the Penn Sewing School, of Philadelphia, for 1887–88. It will no doubt be interesting, as exhibiting the character of the work under its charge.—Eds.]

The Eighteenth Session of Penn Sewing-School opened Eleventh month fifth, 1887, with 32 colored, and 25 white girls, the largest attendance during the winter being 140. The number enrolled during the season of 1887–88 has been equal to that of last year, but the need of additional teachers is still felt.

It remains to be a source of regret that the valuable object of Penn Sewing School is retarded, owing to the insufficient number of helpers, thereby increasing the size of the classes and rendering the individual instruction less satisfactary than is desired.

The average attendance has been generally good, and the increased neatness in the appearance of the girls has been an encouragement to those who are earnestly working to promote the best interests of this class, the home influence so frequently fostering habits of indifference to all that would tend to elevate the lives of children.

To reduce the expenses of the school, the teachers continued the practice of last year, cutting and pre-

paring the garments for making, 65 of which have been made for us free of cost at the Northern House of Industry, 702 Green street, 58 have been made by the children, 104 bought at the Western House of Employment, 268 distributed.

The Friends of Race Street Monthly Meeting have generously allowed us the use of rooms and fuel during the winter. The usual distribution at Christmas, of books, toys, etc., donated by Friends' Schools and persons interested, was eagerly welcomed by the children, who seemed very happy with their presents.

It is gratifying to announce to our friends that four girls have successfully completed the course of sewing laid down, and received, on the closing day, the Certificates of Merit awarded, bearing the Seal of the School.

On this occasson a number of visitors were present and helpful suggestions were offered looking towards securing regular work by the hour or day, for the graduates of Penn Sewing School, whose excellent sewing would entitle them to such employment.

On behalf of the Committee,

EMILY T. EVANS, *Chairman.*

SWARTHMORE NOTES.

—Frederic Andrews, Principal of Ackworth School, England, visited the college in company with David Scull, of Philadelphia, on Third-day, the Sixth inst. When visiting the class of Myrtie E. Furman, who was giving an exercise in the Delsarte system of gesture, Frederic Andrews gave the class an interesting account of the difference between the public speaking of John Bright and W. E. Gladstone.

—Benjamin T. Leggett, Principal of Ward Academy, at Ward, Delaware county, presented to the library of the college during the past week two volumes, of which he is the author. One is called "A Tramp Through Switzerland," and gives a vivid idea of that picturesque country, and the other is a volume of poems, entitled "A Sheaf of Song."

—At the close of the First-day school exercises, on the 11th inst., the matron had an impressive message for the students, and for all, upon "Learning to be glad;" cultivating the spirit of gladness. She believed that the familiar proverb, "To be good is to be happy," is equally true when inverted, "To be happy is to be good."

GENELOAGICAL RESEARCHES.

THE following item is sent us by a friend in Michigan. It may be of interest to some of our readers interested in genealogy.

Ambrose M. Shotwell, the blind genealogist of Concord, Mich., reached his home on the 6th inst., after an absence of several months spent with relatives in New Jersey, New York, and Canada, in collecting necessary data for a genealogical and biographical record of the Shotwell, Brotherton, Gardner, Greene, Hampton, Hartshorn, Hicks, Hoag, Kester, King, Laing, Lundy, Marsh, Martin, Moore, Pound, Taylor, Thorn, Vail, Watson, Webster, Wilkinson, and Willson families and their descendants. He will be grateful for information from any source as to the residence and post-office address, occupation, public services, marriages, births, deaths, removals, and similar items concerning any members of such families and their wives or husbands.

THE PRINCE AND THE CHILDREN.

THERE runs a story of an Indian prince,
Who wished the origin of speech to know,
And so he turned to little children—since
It is to them for knowledge wise men go.

He took these little ones while yet around
Their new-born souls the silence lingered still,
And placed them where no human speech or sound
Was ever heard—it was his royal will.

No happy nursery rhymes, no lullabies
These little children ever sung or heard;
No mother waited for the sweet surprise
Of hearing the first precious lisping word.

But after many years the prince one day
Ordered the children to be brought him where
He sat upon his throne in grand array
And all his learned men were gathered there.

Shrinking, though innocent, and shy with fear,
Before the august prince the children come.
The wise men watch them eagerly to hear
Their language, but the children all are dumb.

They ask them many questions, as they try
Out of the voiceless depth some sound to bring;
The children never utter word or cry,
But only stand there mute and wondering.

And so the prince's queer experiment
Was but a failure. All the tongues were tied;
The children silent came and silent went.
They could not speak, for they had never tried.

Sometimes I wonder, should His kingdom come,
That kingdom, full of joy and peace and love,
Would we be found, like those poor children, dumb?
Or could we speak the language from above?

What if its words and meaning all unknown
Should fall upon an unaccustomed ear!
How can we make that heavenly tongue our own,
Unless we try to learn and speak it here?

—*Bessie Chandler.*

OUR HOMESTEAD.

OUR old brown homestead reared its walls
From the wayside dust aloof,
Where the apple-boughs could almost cast
Their fruit upon its roof;
And the cherry-tree so near it grew
That, when awake, I've lain
In the lonesome nights, I've heard the limbs
As they creaked against the pane;
And those orchard trees, oh, those orchard trees!
I've seen my little brothers rocked
In their tops by the summer breeze.

The sweet-brier under the window-sill,
Which the early birds made glad,
And the damask rose, by the garden fence,
Were all the flowers we had.

I've looked at many a flower since then,
Exotics rich and rare,
That to other eyes were lovelier,
But not to me so fair;
For those roses bright, oh, those roses bright!
I have twined them in my sister's locks
That are hid in the dust from sight.

We had a well, a deep old well,
Where the spring was never dry,
And the cool drops down from the mossy stones
Were falling constantly;
And there never was water half so sweet
As the draught which filled my cup,
Drawn up to the curb by the rude old sweep
That my father's hand set up.
And that deep old well, oh, that deep old well!
I remember now the plashing sound
Of the bucket as it fell.

Our homestead had an ample hearth,
Where at night we loved to meet:
There my mother's voice was always kind,
And her smile was always sweet;
And there I've sat on my father's knee,
And watched his thoughtful brow,
With my childish hand in his raven hair,—
That hair is silver now!
But that broad hearth's light, oh, that broad
hearth's light!
And my father's look, and my mother's smile,
They are in my heart to-night!

—*Phœbe Cary.*

THE REFORMER.

Before the monstrous wrong he sets him down—
One man against a stone walled city of sin,
For centuries those walls have been a-building;
Smooth porphyry, they slope and coldly glass
The flying storm and wheeling sun. No chink
No crevice lets the thinnest arrow in.
He fights alone, and from the cloudy ramparts
A thousand evil faces jibe and jeer him,
Let him lie down and die; what is the right
And where is justice in a world like this?
But by and by earth shakes herself, impatient,
And down in one great war of ruin, crash
Watch tower and citadel and battlement.
When the red dust has cleared the lonely soldier
Stands with strange thoughts beneath the friendly
stars.

Edward R. Sill.

LENGTH OF YEARS.

[Interview furnished by Dr. H. T. Child to the Philadelphia *Ledger*.]

There is an appointed time for every living thing, extending from the brief period of the ephemera, often less than an hour, to the age of some of the larger trees, which may reach to several thousand years. Among animals we have been able to note the ages of many classes, that is the time when most of a species die. It has been estimated that we may determine the probable duration of life by that of the various stages of growth, maturity, and decline, which are somewhat regular. The old adage, soon ripe, soon to decay, has a foundation of truth. We judge of the age of animals by their rate of growth, and we speak of precocious children as having grown too rapidly for long life.

Observation shows that the first 20 years of man's life is the stage of growth, then 30 years of maturity and 20 for the period of decline, making the allotted 70 years. Dr. Richardson, of London, divides life in seven periods: (1) from birth to 15 years completed childhood; (2) from 15 years to 30 completed adolescence; (3) from 30 years to 45 completed manhood or womanhood; (4) from 45 to 60, ripened manhood or womanhood: (5) from 60 to 75, first period of decline; (6) from 75 to 90, second period of decline; (7) from 90 to 100 or upward, period of senile maturity.

Prof. Gustafson, in his work, "The Foundation of Death," says: "The present average age of man is not over fifty years. Herodotus says of the Macrobians (Ethiopians), in the time of Cambyses, that they were remarkable for their beauty and their massive proportions of body, in both of which they surpassed all other men; they lived to be a hundred and twenty years old, and some to a longer period, and yet they fed on roasted meat and used milk for their drink." Dr. John Richard Farre, when examined before the Parliamentary Committee, in 1834, appointed to inquire into the cause and extent of drunkenness, gave it as his opinion that the life of man is 120 years.

Prof. P. Flourens, of the College of France, in his work on human longevity (Paris, 1854) considers 100 years to be the normal length of man's life. "Few men, indeed," he says, "reach that age, but how many do what is necessary to reach it? With our way of living, our passions and worries, man no longer dies, but kills himself." To prolong life, that is to make it last as long as the constitution indicates that it should, there is a means, and a very certain means, and that is to live soberly."

Science and observation have furnished proof that the chief enemy of the longevity and health of the race is alcohol. The main cause is ignorance—I mean the pernicious ignorance which knows a thing in a general sense without acting upon this knowledge in a particular sense, and thereby developing both knowledge and practice into a true science of living in our own individual behalf and for others. Every man knows that his physical body is his means for being and doing. He knows that to this end he must respect, care for—yes, revere his body. Nobody, when the matter is brought plainly before him, will hesitate to admit that he ought to live in such a manner that all his faculties, capacities, and powers should receive the best development and activity; but in practice this truism is almost unknown. And with our social life and institutions only an exceedingly small proportion of mankind, even with the best intention in the world, could approximately reach this ideal. Sufficient and agreeable rest, enough of undisturbed sleep, congenial and healthy occupations, sufficient amount and variety of healthy foods, fresh and pure air and water, healthy dwellings—these are all essential for bodily vigor and health; but to how many of the toiling millions who labor for bread, either by muscle or brain, are these essentials vouchsafed?

It is of the highest importance to keep these views prominently before mankind that the ideals of a better life may be constantly held up; for, although we may not reach these ideals, they are essential far our progress, and every step we gain in the direction of these is important. The records which have been kept for more than 300 years prove conclusively that there has been a continued and progressive increase in the average longevity of the human family. The most complete records of the kind referred to are to be found in the statistics of the town of Geneva, in Switzerland, where a detailed account of the population, of the deaths, the births, and the marriages, has been kept since the year 1549. It appears from these statistics that the proportion of the number of deaths to the number of the whole population, which, in 1600, was one to twenty-five. In the next half century was one to twenty-seven, in the next one to twenty-eight, in the next one to thirty, and in the next one to thirty-four; and during the half century lately passed over, the proportion is known to have decreased still more rapidly.

"The average duration of life—that is, the average age of all persons at the period of their death—has increased from twenty-two years and three months, at the end of the sixteenth century, to forty years and eight months, during the period between the years 1814 and 1833, and not only has this increase of longevity been uninterrupted, but the rate of the increase during the present century is greater than that of any former time."—Dr. B. F. Craig, in Pat. Off. Report for 1859. At the present time it ranges very near fifty years.

Dr. Craig adds: "It would be difficult to imagine an equivalent that men would be willing to exchange for this incease of life, or to appreciate the amount of sorrow enflicted if we were to retrograde to the rate of mortality of the sixteenth century. The value of man to society is very much in proportion to the length of his life. If he dies he fails to make return for the care and expenses bestowed upon his infancy and childhood; if he lives long and exercises his matured strength and practical skill in industry profitable to the community, he adds by so much to the general wealth.

"As the period at which man is fitted for labor does not begin much before the twentieth year, it can easily be seen how important an element in the progress of the race is a change from 22 to 50 years as the average length of life; and what an increase of intelligence and productive industry is implied in that simple fact. The amount of work done by each person before he dies is more than twice what it was."

By desiring what is perfectly good, even when we do not quite know what it is, and cannot do what we would, we are part of the divine power against evil, widening the skirts of light and making the struggle with darkness narrower.—*Selected.*

South Australia has before its House of Representatives a bill extending suffrage to all women, married or single, who are twenty-five years of age.

WAIT FOR RESULTS.

The besetting sin of most men is impatience; unwillingness to wait until their experience bears fruit, or their thought has traversed the whole field of fact, before arriving at a final conclusion. This has always been the besetting sin of men. They have constituted themselves arbiters and sat in judgment on the universe when their knowledge included only a few facts and a very small field. They were ready with the naked eye to formulate the science of astronomy before the telescopes had opened up the heavens to them; they hastened to create for themselves images of God before their minds had yet opened to any large revelation of him; they manufactured systems of theology while they were still ignorant of some of the most important facts concerning themselves and the world in which they lived. Theories of literature and art once held, and now abandoned, strew the road along which men have traveled as the deserted shells line the seashore. Only the most thoughtful and reverent have been content to wait patiently on the Lord; the great mass have rushed on and ended in some dark ignorance which they have established as a system of knowledge. It is one of the healthy signs of human growth that thoughtful men are becoming more and more shy of systems and theories which claim to be final, and are holding more and more to what are known as working theories; explanations of facts, in other words, which afford the basis of further observation and reflection. The mere expansion of thought, without conscious destructive purpose, has relegated most of the systems of the past to the limbo in which are collected all manner of discarded and worn-out things. The world and life and literature and art have disclosed so many new aspects, have revealed such unsuspected depths, that the most thoughtful men are content to wait for fuller knowledge before attempting a final explanation.

The same impatience is manifested by most of us in our personal experience. We are unwilling to submit ourselves to the discipline of a wisdom larger than our own, to the guidance of a power superior to ourselves. We demand every night an explanation of the events of the day. Every painful experience, every self-denial, every sorrow wrings from us an impatient cry because we do not understand it at the moment. Our conception of life is so small and mean that we feel as if we ought to be able to understand every part of it from hour to hour. We are not content with the revelation which makes it clear to us how to live justly and rightly; we demand that fuller revelation which makes all things clear to thought; we are unwilling to sit as pupils at the feet of life; we continually demand to be accepted as equals of the great teacher to whose care God has committed us; we refuse to learn the lesson of experience, whose perpetual word is, Be patient. Again and again the years have brought to us the knowledge which the earliest moments of loss and sorrow denied us; but with each new enforced surrender of our purposes and our pleasures we repeat the old blunder, and instead of waiting patiently until the fruit of the experience is

ripened, we interrogate the silence which surrounds us, and when it refuses to answer we cry out in bitterness and despair. A nobler view of life would make us content and even glad to wait for the larger truths and the deeper joys which an unfolding experience contains for those who are patient and faithful.—*Christian Union.*

POLICE BECOME SOLDIERS.

The shocking murders of wretched women in London have so far not been followed by the detection of the perpetrator. The *Christian World* of that city comments upon the failure of the police to discover the murderer as follows:

"There is surely much reason in the prevalent belief that our police force, at least in London, and probably elsewhere, is more akin to an army, than to a constabulary. The men have been drilled and exercised as soldiers. They march like soldiers. The resemblance is heightened by the existence of a cavalry force. Unfortunately, also, they have operated in banded regiments against the invaders of Trafalgar Square, and other forbidden places. Now, the result of military drill is to suppress individual judgment, and to enforce mechanical obedience. This is all very well, in the case of soldiers, though even amongst them it may be carried too far. But amongst the police it is the very reverse of what is wanted. Each constable ought to be accustomed to give his common sense free play, and to exercise his best individual judgment on the immediate case before him. Again, the drill and instruction which make a good sentry, will not make a good policeman. The sentry is supposed to be confronted with hostile forces; the policeman is surrounded by friends. For it is a monstrous assumption, though too often implied by Sir Charles Warren's language, to suppose that the common people are the enemies of order, and that the purpose of a police force is to keep them down. The common people are just as anxious for order and safety in the streets as any Commissioner of Police can be. And so long as the police confine themselves to preserving the public safety, the multitude will always be their friends. But if they are to be continually employed to enforce the extremest interpretation of crude regulations against public meetings, this friendliness between the police and the public cannot long be maintained. The unfortunate occurrences in Trafalgar Square have, we fear, confirmed Sir Charles Warren in his militarism. The result is, that the police act with the unintelligent regularity and precision of animated machines, and march about their beats with the tramp of sentries, but prove themselves wholly incompetent and inefficient when confronted with the very dangers they were originally designed to guard against. If recent experiences should decide the Home Office to discourage the employment of distinguished military officers as policemen, and to set their faces against too much drill for police constables, our recent terrible experiences will not be without some benefit. At any rate things cannot be allowed to go on as they are at present."

From The Woman's Journal.

NEW YORK POLICE MATRONS.

New York, Nov. 1, 1888.

The police matron bill was drawn up by Hon. Walter Howe, and pushed by the Woman's Prison Association, our Society aiding. The great difficulty with the bill is that the most important provision, that of securing the salaries for the police matrons, is not mandatory, and herein lies the obstacle to securing the benefits of the act. If in any city the local authorities do not choose to make an appropriation for the salaries, the women cannot be appointed. There is at present a dead-lock in both this city and Brooklyn because of this deficiency in the bill.

I recently met Mrs. H. N. K. Goff, the indefatigable laborer for reform in Brooklyn, and she told me that in that city the police department was most anxious to appoint police matrons, but the mayor and comptroller were opposed; therefore no appropriations had been made, and the whole matter must wait another year. In this city, exactly the reverse is the case. A committee was appointed at the last meeting of our league to investigate the subject, of which I was made chairman, the two other ladies requesting that their names should not be made public. Enquiries were first made at the police department. The commissioners had complied with the first mandatory provision of the bill, that saying that they *shall* designate certain station-houses for the detention of women under arrest, by designating them all—an action taken, apparently for the purpose of defeating the objects of the bill, since it is obvious that, considering the comparatively small number of women arrested, they need not be sent to all stations, ten or twelve being quite sufficient, while the large sum of money necessary to pay the salaries of so many matrons would certainly prove an obstacle.

We visited the Mayor, Mr. Abram Hewitt. He was, as usual, curt in manner, and simply said that he could do nothing unless the police department sent in estimates asking for an appropriation.

Mr. Storrs, the Deputy Comptroller, who has been in office since 1857, and has had, of course, a wide knowledge of the business of the department, was next called upon. He produced the budget sent in by the police department, and there were contained in it no estimates for salaries for matrons at the station-houses.

The Comptroller, Mr. Theodore W. Myers, received us most courteously, and said that he heartily approved of the appointment of police-matrons, and would make it his business to enquire why the police-commissioners had refused to ask for money for the salaries of such matrons. A few days later a letter arrived from him, in which he stated that the following reply to his communication had been received:

"The Board of Police did not ask for such appropriation in their departmental estimate for 1889, for the reason that they deem the appointment of police-matrons in this city to be neither wise nor expedient."

This answer seems little short of amazing in view of the facts in the matter, the reasons for placing women in charge of the women under arrest in our

station-houses are so many and so important. Under the circumstances only agitation is possible to us now, and this will be vigorously pushed by our Woman Suffrage League and the Woman's Prison Association.

LILLIE DEVEREUX BLAKE.

HOW THE GREAT SOUTHERN TORTOISE BURROWS.

HERE and there, but rarely perhaps in one amid a hundred of these mounds, we find the place where the reptile entered the ground. This opening is at once seen to be quite separate in character from the mounds which first attract the eye. It consists of a clearly defined tunnel, the sides commonly somewhat smooth and compacted by the energy with which the body of the creature has been driven through it. The passage inclines steeply downward, descending at the outset at an angle of from 20° 30°, then turning at the depth of two or three feet to a more horizontal position. On the surface, a little beyond this entrance, is a heap of dèbris which consists of sand taken from the passage. A few feet in from the opening, the passage appears to be closed by loose material which was not ejected from the mouth of the tunnel. Although I have been unable to catch these tortoises at work, I have succeeded by tolerably safe inferences in tracing their method of operation. When they begin the burrow, they endeavor at once to penetrate downward to the level in which they obtain their food. At the outset they manage, by frequently backing out of the passage and thrusting the earth behind them in their retreat, to clear a considerable opening. When they have advanced a few feet in the excavation, they cease to discharge the material excavated in their advance, but thrust it behind them, and leave it lying in the chamber, which it entirely closes. With this storage-room provided, the gophers are able to advance through the earth for the distance of some yards; but as the earth, compacted by its own weight, by the pressure exercised through the expansion of roots, and the action of the rain, occupies less space than the same material loosened in the progress of the burrow, they soon become hampered in their movements. They then turn toward the surface and continue the excavation upwards until they have attained very nearly to the open air. They then use the great strength which they clearly possess to thrust a quantity of the burrowed material upward until it rises above the surface in the form of a cone, and by the space in the burrow thereby gained they are able to go a few feet further in their tortuous line of advance, when they must again seek to discharge a portion of the earth in the manner just described.—*Prof. N. S. Shaler, in Popular Science Monthly.*

"WILL you tell me why our colleges and our seminaries want money more and more?" "Yes, we will tell you. They are living and growing. The dead ask for no more. You stop spending on your dead child when you put him away in his little coffin; but the living child—you find every day some new thing you may do for him."—*Religious Herald.*

NAVIGATION OF THE ST. LAWRENCE.

IF the seamen of the St. Lawrence are exceptionally superstitious even in this superstitious class, they have some justification in the exceptional dangers and eccentricities of these waters. The river just below the Isle d'Orleans is eight miles wide—merely the beginning of the lower St. Lawrence; in the next 150 miles it gradually attains a width of thirty-five miles at Metis; in another hundred it becomes about sixty miles at La Baie des Sept Isles. As a matter of fact the lower St. Lawrence is an estuary rather than a river. I presume that the gulf may be safely recognized at La Baie des Sept Isles. It is a triangular sea, about 500 miles long from northeast to southwest, and about 350 miles wide from Newfoundland to this bay. The region of the St. Lawrence has such remarkable natural features that even the matter-of-fact reports of the Admiralty are not without interest. The navigation of these waters presents exceptional difficulties: the existence of numerous islands, reefs, bars, and rocks in the channels; the irregularity of the tides and currents; the severity of the climate, especially toward the close of the navigable season; and, above all, the frequent fogs—these are difficulties that may well cause much anxiety, and call for the exercise of all the seaman's vigilance, prudence, and ability. Besides the recorded variations and deviations of the compass, the magnetic attractions of the shores are said to complicate the captain's problems. Ice is often a dangerous element here: in the spring—May in this latitude and often June also—the entrance and the eastern parts of the gulf are frequently covered with drift ice that besets vessels for many days; icebergs are common there during the summer, and navigation is closed by ice, as a rule, from November 25th to May 1st.

Such is the nature of the river that ships often spend more time in sailing up the St. Lawrence than in crossing the Atlantic; generally they require eight or nine days to beat up to Quebec from Bic, 140 miles; they can sail only during the flood, five hours, and then must anchor, unless the wind changes. The clumsy coasting schooners, requiring always a fair wind, sometimes spend a month in going sixty or eighty miles.

With so many dangers as I have set forth, the reader might think that the St. Lawrence is not navigable; but thanks to an efficient system of lighting and piloting, these waters are one of the great commercial arteries of the continent; they are frequented during six months of the year by several lines of trans-Atlantic steamships, a fleet of Norwegian barks for timber, and a limited number of coasting steamers and schooners.—*C. H. Farnham, in Harper's Magazine.*

THE fairest action of our human life,
Is scorning to revenge an injury;
For who forgives without a further strife,
His adversary's heart to him doth tie;
And 'tis a firmer conquest, truly said,
To win the heart, than overthrow the head.

—*Selected.*

THE INTERNATIONAL DATE LINE.

The International Date Line is the line at which dates must be made later, by one day, when crossing it from east to west, and earlier by one day, when crossing it from west to east. The line passes just west of Behring's Straits, west of Clarke's or St. Lawrence Island, west of Gore's Island, thence southwesterly between the Aleutian Islands and Asia. Some authorities place it east of Behring's Island. It then passes southwesterly some degrees east of Cape Lopatka and the group of Kurile Islands, thence just east of the Japan Islands, Jesso and Niphon, keeping west of Gaudalupa and Margarete's Islands, but east of Bonin, Loo Choo and Patchoo Islands, and southeast of Formosa. The line then passes through Bashee Channel, just north of the Bashee Islands. It enters the China Sea east of Hong Kong, then passes south just west of the Philippine Islands. It is just here that it reaches its most western point, being about 116 degrees east longitude. It then takes a southwesterly course, passing through the Sooloo Islands, south of Mindanao and north of Gililo. Thence it passes east, nearly parallel to the equator and just north of it, to a point about 165 degrees, just north of Schauk Island; thence southeasterly, leaving High Island, Gilbert Archipelago, Taswell Island, and the De Peyster Group on the northeast; thence past the Navigator or Samoan Islands to longitude about 268 degrees west; thence it turns south, keeping east of the Friendly, Tonga, Vasquez, Kermadee and Curtis Islands, and west of the Society Islands, and Harvey's or Cook's Islands; thence it continues south, bearing a little to the west, so as to cross, according to some authorities, Chatham Islands, hence to the south pole.—*American Notes and Queries.*

THE PROBLEM OF A FLYING-MACHINE.

We must admit that a bird is an incomparable model of a flying-machine. No machine that we may hope to devise, for the same weight of *machine*, *fuel*, and *directing brain* is half so effective. And yet, this machine, thus perfected through infinite ages by a ruthless process of natural selection, reaches its limit of weight at about fifty pounds! I said, "weight of machine, fuel, and *directing brain*." Here is another prodigious advantage of the natural over the artificial machine. The flying animal is its own engineer, the flying-machine must *carry* its engineer. The directing engineer in the former (the brain) is perhaps an ounce, in the latter it is *one hundred and fifty pounds*. The limit of the flying animal is fifty pounds. The smallest possible weight of a flying-machine, with its necessary fuel and engineer, even without freight or passengers, could not be less than three or four hundred pounds.

Now, to complete the argument, put these three indisputable facts together: 1. There is a low limit of weight, certainly not much beyond fifty pounds beyond which it is impossible for an animal to fly. Nature has reached this limit, and with her utmost effort has failed to pass it. 2. The animal machine is far more effective than any we may hope to make; therefore the limit of the weight of a successful flying-machine can not be more than fifty pounds. 3. The weight of any machine constructed for flying, including fuel and engineer, can not be less than three or four hundred pounds. Is it not demonstrated that *a true flying-machine, self-raising, self-sustaining, self-propelling, is physically impossible?*—*Prof. Joseph LeConte, in Popular Science Monthly.*

THE STRENGTH OF RIGHT LIVING.

Whilst a man seeks good ends, he is strong by the whole strength of his nature. In so far as he roves from these ends, he bereaves himself of power, of auxiliaries, his being shrinks out of all remote channels, he becomes less and less,—a mote, a point, until absolute badness is absolute death. The perception of this law of laws awakens in the mind a sentiment, which we call the religious sentiment, and which makes our highest happiness. Wonderful is its power to charm and to command. It is a mountain air. It is the embalmer of the world. It makes the sky and the hills sublime, and the silent song of the stars is it. By it is the universe made safe and habitable, not by science or power. Thought may work cold and intransitive in things, and find no end or unity; but the dawn of the sentiment of virtue on the heart gives and is the assurance that Law is sovereign over all natures. This sentiment is divine and deifying. It is the beatitude of man. Through it the soul first knows itself. It corrects the capital mistake of the infant man, who seeks to be great by following the great, and hopes to derive advantages *from another*,—by showing the fountain of all good to be in himself, and that he equally with every man, is an inlet into the deeps of reason. When he says, "I ought," when love warms him, when he chooses, warned from on high, the good and great deed, then deep melodies wander through his soul from Supreme Wisdom. In the sublimest flights of the soul, rectitude is never surmounted, love is never outgrown. Meanwhile, whilst the doors of the temple stand open, night and day, before every man, and the oracles of this truth cease never, it is guarded by one stern condition; this, namely,—it is an intuition. It cannot be received at second hand.—*R. W. Emerson.*

THE SCRUB-OAK.

It is a peculiarity of the scrub-oak that its tough, leathery leaves do not fall off in the autumn, but may be seen withered, curled up, and clinging to the boughs all through the winter, and they cannot be torn away even by the boisterous winds of March. But the time comes when they must loosen their hold. When the sap begins to flow in the spring, the new leaf-bud emerges from its hiding-place, and pushes off the old leaf. It is so with our old sinful habits. We do not succeed in tearing them off from us by strong resolutions. It is only when there is a new life within, when we enter into the consciousness that God is love and that he is our Father, when we begin out of sheer gratitude to serve Him—it is then that, by virtue of the activities of the Christian life, we slough off the old evil habits, finding that we have no more use for them than a snake has for last year's skin.—*Selected.*

INVENTIONS BY WOMEN.

The commissioner of patents, Mr. Benton J. Hall, has prepared a list of women inventors, or women to whom patents have been granted. The list has been printed and makes a folio pamphlet of forty-four pages. It gives not only the names of the patentees, but also the title of the patent and date of issue. The first patent issued was to Mary Kres, May 6th, 1809, for straw weaving with silk or thread. Six years later Mary Brush obtained a patent for a corset, and then four years elapsed before another inventive woman appeared. This was Sophia Usher, whose patent was for carbonated liquid cream of tartar. Then, again, in 1822 Julia Planton secured a patent for a foot-stool. During the four following years a patent was issued each year to a woman, and from that time down to the present the number of woman patentees gradually increased. In recent years feminine inventiveness has shown marked progress. For instance, from the 1st of January 1888, to the 26th of June last, no less than sixty-six patents were issued to women, while during the year 1887 179 patents were so issued. This latter is the largest ever issued. While the names of the articles patented show that they were generally in the line of feminine wearing apparel and household labor-saving devices, yet many were of a character that shows the multiplied interests of women. As an instance, one woman patented a submarine telescope and lamp. Others were granted as follows: Improvement in reaping and mowing machines, improved war vessel, furnace for smelting ores, apparatus for punching corrugated metals, method of construction for screw propellers, low-water indicators, material for packing journals and bearings, conveyers of smoke and cinders for locomotives, burglar alarms for windows, etc.—*Washington Star.*

Oliver Wendell Holmes describes old age in the following exquisite lines:

"Youth longs and manhood strives, but age remembers—
Sits by the raked-up ashes of the past;
Spreads its thin hands above the whitening embers
That warms its creeping life-blood till the last."

That man is great and he alone,
Who serves a greatness not his own
For neither praise nor pelf;
Content to know and be unknown;
Whole in himself.

—*Owen Meredith.*

NEWS AND OTHER GLEANINGS.

—Eleven years ago, the thirty-five-acre ranch of William Riley in the Truckee Meadows (Nevada) was a rocky, arid waste of sagebush. Now the Reno *Gazette* says Riley grows on it all sorts of marketable vegetables, apples in endless variety, raspberries, strawberries, currants, gooseberries, pie-plant, pears, peaches, quinces, plums of all kinds, potatoes (both sweet and Irish), blackberries, grain of all kinds, and 135 tons of hay a year. Moreover recently a swarm of bees made 106 pounds of honey for him in 42 days.

—The Massachusetts association of fruit-growers, cider, and vinegar makers is circulating petitions among the farmers to have cider omitted from the list of prohibited intoxicating beverages in the legislation of that State. It asks everybody concerned to "bear in mind that this is the last season that farmers can find sale for their cider apples, if no change is made in the law by the coming legislature."

—John W. Sanborn, chief of the Seneca Indians on the Canandaigua, N. Y., reservation, says that the common notion that his race are dying out is incorrect. At present they are increasing at the rate of about 600 a year, he says.

—The legislature of Texas has appropriated $30,000 to build a reformatory for women.

—Ada M. Bittenbender has been admitted to the Supreme Court of the United States, being the third woman to achieve this standing in the legal profession.

—There are 493 mountain peaks in the United States more than 10,000 feet in height. The highest mountain east of the Mississippi is Mount Balsam Cone, in the Black Mountains of Carolina, that is 6,671 feet high.—*Exchange.*

—Captain Thompson, whose vessel, the steamer Benvenue, was caught in the recent great typhoon in the China sea, says of the centre of the typhoon: "It was filled with lightning, and a heavy roar made it impossible to distinguish the noise of the wind from that of the thunder. The smell, too, of electricity, like the smell of burning sulphur, was so intense as to cause an almost overpowering sensation of suffocation, and the biscuits and food not washed away by the storm tasted so of sulphur as to be unfit for use."

—The argument for educating the Indians has been set forth again and again, and no white person would venture to offer an argument to the contrary. The only question is, Shall the educational work be carried on in a fitful way through the occasional benevolent impulse of private citizens, or by the trustee of the Indians, the responsible guardian, the United States?—*Brooklyn Eagle.*

—A remarkable book by an American naturalist, Mr. S. H. Scudder, of Cambridge, Mass., is about to appear, having been in preparation since 1869. It has the title: "The Butterflies of the eastern United States and Canada, with especial reference to New England." It is claimed that no systematic work on butterflies has ever appeared in any language comparable with it in the complete elaboration of a single fauna, in attention to every stage of life, and in careful detail of all structural features. The book will contain about two thousand figures on ninety-six plates, of which forty or more will be colored. The printing of the plates has occupied three years.—*The American.*

—In reply to the question, "Are water filters safe?" from a New Orleans subscriber, we give the views of the Rhode Island Medical Society, through Dr. Swarts. He shows that some filters when first used do remove a proportion of disease germs. But, after being in use only a few days, there is a marked increase in the number of colonies of germs in the filtered, as compared with the unfiltered water. In one instance, the unfiltered water showed the presence of thirty-six colonies, while the filtered contained the enormous number of two thousand, three thousand, nine thousand, and even more. That is, the poison caught up by the filter the first few days becomes the source of a vast multiplication of the dangerous element. So look to your precautions, and then be on your guard. If you cannot constantly cleanse your filters, you had better destroy them.—*Herald of Health.*

—The Franklin Institute of this city publishes in its

Journal for the present month an appreciative obituary notice of Dr. Thomas U. Walter of Philadelphia, who died in this city last year. He was a pupil of William Strickland, the architect of the Mint and Custom House, and was himself the designer of the Philadelphia County Prison and the Girard College. St. George's Hall on Arch street was another of his creations. In 1851, he received the appointment from President Fillmore, of architect for the Capitol extension at Washington, and in the execution of this commission, designed and built the present dome of the Capitol buildings. This was the beginning of a series of Government commissions which continued until 1865, when Dr. Walter returned to Philadelphia. He was associated until a short time before his death with John McArthur, Jr., the architect of the new City Hall.—*The American.*

CURRENT EVENTS.

At the national election on the 6th inst., Benjamin Harrison, of Indiana, the Republican candidate for President, was elected, receiving the votes of all the Northern States but Connecticut and New Jersey. These States, and all those of the South, except perhaps West Virginia, in which the result is not yet ascertained, voted for President Cleveland. Excluding West Virginia, Harrison has 233 electors, and Cleveland 162. The Republicans will have a small majority in the House of Representatives,—probably about 10; the full control of the Government thus passing into their hands.

In New Jersey, the Democrats have a majority in both branches of the Legislature. It is apprehended that the High License and Local Option law passed at the last session will be repealed.

Despatches from Lower Quebec say that two feet and a half of snow has fallen all along the lower St. Lawrence. The Government steamer *Napoleon* has been sent out to patrol the coast and aid wrecked vessels.

Thirty new cases of yellow fever and three deaths were reported on the 12th inst., in Jacksonville. Total cases to date, 4,511; deaths, 388. There was a white frost at Decatur, Alabama, on the same morning, with ice in many places. Five new cases of yellow fever were reported there that day.

At Pittsburg, Kansas, on the 9th instant, a terrible explosion occurred in a coal mine, by which 39 miners are known to have been killed, and about 20 badly injured. There were about 100 men at work, but most of them fortunately were able to escape.

On the 11th instant, the Cunard steamship, *Umbria*, just out from New York, ran into a French freight steamer, the *Iberia*, off the shore of Long Island, damaging the latter so that her crew were taken off. No lives were lost. The *Umbria* returned to New York, had some repairs made to her bow, and sailed again on the 12th.

The captain of a vessel which came into the port of Philadelphia, on the 12th instant, from Kingston, Jamaica, reported having lost two of his men from sunstroke at sea on October 24th. The thermometer on deck, he says, averaged 110 degrees for four successive days.

NOTICES.

*** A Social Reception at Friends' Parlor, 1520 Race street, under the care of the Monthly Meeting's Committee, will be held this (Sixth-day) evening, (16th inst.), between 7.30 and 9.30 o'clock. All are invited, especially young people from the country and strangers.

*** Friends' Charity Fuel Association holds its annual meeting Seventh-day evening, Eleventh month 17th, at 8 o'clock, in the Parlor, 1520 Race street.

The summary and Treasurer's report will be read, officers selected, etc. Friends generally are invited.

Wm. Heacock, Clerk.

*** The Visiting Committee of Abington First-day School Union proposes to hold a Conference at Byberry at the close of their morning meeting, on First-day, the 18th of the present month. Friends are invited to attend.

Charles Bond, Clerk.

*** A Temperance Conference will be held at Byberry meeting-house on First-day, the 18th inst.. at 2 30 p. m. All are invited.

S. C. James,
Clerk of the Committee.

PUBLISHERS' NOTICES.

*** We particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also to help avoid mistakes.

***As a definite number of copies of the Intelligencer and Journal is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

***Matter intended for insertion in the Intelligencer and Journal should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans.*
Royal Baking Powder Co., 106 Wall-st., N. Y.

TEA AND COFFEE.

If $3.00 is sent to me I will send 2lb real good Tea, Black, Green, Japan, or mixed, and 8lb of fine Coffee, roasted. Express charges prepaid in the following states: Pa., New York, New Jersey, Del., Md, Va., W Va., D C., Ohio, Ill., Wis, Ind And I will refund the cost of registered letters when the goods are shipped.

WM. S. INGRAM, 31 N. Second St., Philadelphia, Pa. Established —1856.—

A THOUGHT IN A SILENT MEETING.

VAST is the universe : the dizzy mind shrinks back
From estimate of that the eye can see ;
Yet in the space beyond, and in the farther space,
A myriad systems keep their ordered place,—
O, what am I, that God should think of me?

* * *

BALTIMORE YEARLY MEETING, 1888.

THE Yearly Meeting (Men's Branch) was held in McKim's Free School Building, Baltimore and Aisquith streets, and the Women's Branch met in the old Eastern District meeting-house, at Aisquith and Fayette streets,—these accommodations being temporarily secured while the new meeting-house on Park Avenue was building. The meeting convened Tenth month 29, and adjourned Eleventh month 2. From proof sheets of the minutes, kindly sent us by Edward Stabler, Jr., Clerk of Men's Meeting, we present the following details of the proceedings in that branch.

The names of the representatives being called, 51 in all, 8 were absent, and for 7 of these reasons were assigned. Minutes from Women's Meeting, for Elizabeth H. Plummer and Abigail R. Paul, ministers, and for Elizabeth M. Cooper, elder, and companion to A. R. P., were read. Edward Stabler, Jr., was appointed Clerk, and George B. Passmore, Assistant Clerk. In reference to absent and isolated members the following action was taken :

"The subject of the names, the location, and situation of our absent and isolated members, was brought up by the reading of our minutes of last year, and the information brought up by the quarterly meetings and embraced in their respective reports, was laid before the meeting at this time and read.

"After due consideration of the subect, as reported upon by the several quarterly meetings, it is apparent that there is a want of uniformity of action in our different monthly meetings, in collecting and forwarding the information as directed by the Yearly Meeting last year.

"It is therefore decided to appoint the following named committee—to unite with a similar committe from Women's Branch—to take the whole subject o isolated and absent members into consideration and if way opens therefor, to present to a future session a systematic and uniform plan for obtaining the information desired, and also for coöperation in this matter with other yearly meetings, as proposed in some of the Epistles received by us at this time, viz : Henry Stabler—[and others.]"

The proposition of the Representative Committee that the Yearly Meeting make a special appropriation of $2 500, to complete the upper portion of the rear building of the new meeting-house, and furnish the same for the use of our members who may hereafter be in attendance upon the Yearly Meeting, was considered separately, and after a full expression thereon, the meeting ordered that the amount named, $2,500, be raised for this purpose the ensuing year.

Epistles from the other six yearly meetings were received and read, Illinois being the last. "Feelings of encouragement were expressed upon the reading of this excellent epistle, and also in reference to those read at the former session ; it being thought these greetings from the other bodies of a people, united in the advancement of Truth and Spiritual Religion, though widely separated by distance were of unusual excellence and value."

A proposition from the Meeting of Ministers and Elders, for that body hereafter to meet at 11 o'clock, instead of 10, was approved, and the Discipline so altered.

The Committee on First-day Schools presented a report, which was considered and approved, and the committee continued, with an appropriation of $200 for its expenses. An elaborate statistical table accompanying the report shows 25 schools, of which one is a mission school, in Baltimore. The total number of pupils is 1,236, of whom 801 are Friends, with 110 teachers and 86 officers. There are 1,077 volumes in the libraries. The report says : "It has been gratifying to us that, throughout the whole yearly meeting, have been found earnest and competent workers for this concern of the yearly meeting, and furthermore that the *youth* of our Society have shown themselves always ready to second the efforts of those who seek them as helpers in this work of the Church.

"We consider the outlook of our work more encouraging than ever before, because we are now assisted therein by our elder brothers and sisters as by our meetings, yet from reports we infer that there are neighborhoods where some members are not willing to come forward and *help*. The Committee are willing to assert that the best way to have these adjuncts of our Society work to accomplish their highest possbilities, is for all members to use their influence to have them conducted on a sure basis, which is Truth, for which we are seekers. We know the probabilities of finding what we seek are greatly increased if a multitude earnestly engage in the search.

"In the work of our schools to-day the devotional feature is more prominent than ever before, and is

constantly on the increase. Teachers, we think, are coming to rely more and more upon the Divine Source of all strength and wisdom for guidance.

"From reports received we find that nearly all Frst-day school children, as well as adults, attend regularly our meetings for worship, and that teachers are giving attention to that matter too.

"Since last Yearly Meeting all of our schools have been sustained. In most instances reports say those engaged therein are encouraged. In the aggregate our schools show an increase of 166 scholars over last report, while only one or two show a decrease, attributable mainly to force of circumstances but not to any lack of interest in them.

"Nine schools meet before and sixteen after meetings. All schools except one meet every First-day during their terms. Some vacate in summer time, others in winter.

"In addition to Lesson Leaves, the Discipline, and the Bible are books usually taught, though many books of reference are also used by our teachers."

The Committee appointed two years ago to assist Friends in obtaining homes, when in attendance upon the Yearly Meeting, made a report, that being without funds during the past year, and the necessity for such a committee having apparently passed away, they desired a release; which was agreed to.

The committee to visit Subordinate Meetings and to encourage Friends to greater faithfulness in their religious duties, made the following report:

The Committee appointed last year to visit Subordinate Meetings, and encourage Friends to greater faithfulness in their religious duties as way opens, reports:

That but little organized work has been entered upon during the past year. It has not seemed practicable to lay out plans involving much travel, owing to the inability of most of our members to leave their homes or incur the expense incident to visiting our widely separated branches. But if it is considered practicable for the yearly meeting to reënter upon the labor contemplated in the minute of our appointment, we see throughout all of our branches, channels for usefulness, and works productive of abundant fruitage. A few of our number, however, have gone out in labors of love for the truth, to distant members of our Society in the discharge of their duty.

Feeling our inability to meet the want that still exists of more intercourse amongst our members, the Committee have endeavored to stir up more interest in many of our meetings by encouraging the formation of Friends' Circles, for the promotion of social and spiritual growth, and a more intelligent understanding of our principles.

The benefit derived from this course of action is attested by an increase of interest in the Society, as manifested in several neighborhoods.

In the desire for a proper discharge of the duty imposed upon us, the isolated members have not been wholly forgotten in their lonely situations, nor the infirm in their afflictions.

On behalf of the Committee,

SENECA P. BROOMELL,
ELIZABETH M. KOSER.

Upon the recommendation of Women's Branch, this meeting decided to continue the committee during the ensuing year, for further service, with a recommendation to the quarterly meetings, to direct the monthly meetings—if way opens therefor—to appoint committees to coöperate with the Yearly Meeting's Committee.

The committee to disburse the income arising from the Fair Hill Educational Fund, now presented the following report, which was read, viz:

The Standing Committee to disburse the Income of the Fair Hill Fund, for educational purposes, report, that owing to lessened resources, the work of the Committee has been chiefly confined to the payment of former promises made for aid.

These obligations are now all satisfied, and also all new applications that have been made have been responded to, amounting in all to the sum of four hundred and thirty-two dollars and fifty cents (432.50), one hundred and fifty dollars of which are in orders, which did not reach the Treasurer in time to be included in his report. The Committee is now ready to consider applications for the next year.

By the death of James Smedley, of Little Britain Monthly Meeting, there is a vacancy in the Committee.

Signed on behalf of the Committee.

JOB HIBBERD, *Clerk for the day.*

The report was approved and the name of James Wood added to the committee, in lieu of that of James Smedley, deceased.

Memorials of Sandy Spring Monthly Meeting for Mary L. Roberts, and of Goose Creek Monthly Meeting for Hannah Jane Taylor, were read and approved. The joint committee on Education presented a report, (which we shall print at length in a later issue). It was approved, and $200 appropriated to the use of the committee.

The committee to audit the accounts of the Treasurer reported them correct, with satisfactory vouchers for all disbursements. There was a balance in his hands of $1,077.49, (deposited in the Farmer's and Planter's Bank, Baltimore), belonging as follows: Fair Hill Fund, $510.52; Indian Fund, $251.57; Yearly Meeting, $315.40. The committee recommended that $3,200 be raised for the use of the Meeting, the coming year, and that Elisha H. Walker be appointed Treasurer,—both of which the Meeting approved.

[*Report Continued next Week.*]

LEARNING TO BE GLAD.

AN ADDRESS TO SWARTHMORE STUDENTS, BY ELIZABETH POWELL BOND.

THIS silence, which may be golden in its opportunities to many a soul, I would not break, did I not hope that a golden message has been committed to me for you; did I not hope that a word spoken now, may find lodgment in these young hearts and perhaps spring up in blessing all the rest of their lives. The word that I would speak to you is on *learning to be glad.* It may be a new thought to you that we can *learn to be glad,* that we may practice gladness as we would our elocution or gymnastic lesson. You may have been accustomed to think that gladness comes from without, that it is the sunny day that shines upon us; that it is the luxurious house that makes a happy place; that it is a satisfactory wardrobe that brings peace of mind; that it is the deposit in the bank that secures joy to us. It is true that all these things have to do with our gladness. It is true that

when a bright day dawns, flooding the sky and the earth first with rosy light and then with the warm golden sunshine, it is easier to be glad,—it seems a natural impulse to speak some special joyous greeting to our fellows; just as Lowell has written of June,—

"'Tis as easy now for the heart to be true
As for grass to be green and skies to be blue
'Tis the natural way of living."

And yet our hearts may be so darkened by our own unhappy conceptions and forebodings that sunshine is quenched in the gloom. I know that the perfectly apppointed house with artistic upholstery and all beautiful belongings promises peace; and yet one discordant soul in the "house beautiful" may make all its velvet and linen and polished woods, as dust and ashes. It is a comfortable thing to have a wardrobe to our mind that money cannot buy any coat or gown with magic to put joy into a joyless heart. If the heart be glad to begin with, then the sunny day, the beautiful house, the satisfying wardrobe, the favorable bank account, all these things conform to the oft repeated law "to him that hath shall be given" and add gladness to gladness.

But how can we form the *habit* of gladness? First, perhaps of all, by cultivating a spirit of thankfulness. We read in the beautiful story of "Ramona" that it is the custom in some Mexican households to greet the first beam of the morning sun with a glad hymn of thanksgiving. Our quieter, northern temperament may not prompt us to this outward expression; but it is good for our souls if the first beam of the morning finds us not indifferent to the daily coming of the blessed light, but sensitive to it as a message from God. It is good for our souls to accept our daily bread as a gift straight from the hand each day of our Heavenly Father. It is good to speak within ourselves our thankfulness for the work of the day, the activities of body and mind. It is good to name our precious ones in the presence of the Lord. Every time we say in our hearts "I thank thee, Heavenly Father," we lift ourselves toward the region of perpetual gladness.

We are used to the thought that our conduct has much to do with our joys. We have all learned to say "Whatsoever a man soweth, that shall he also reap." We sing our evening hymn:

"Sow love, and taste its fruitage pure;
Sow peace, and reap its harvest bright;
Sow sunbeams on the rock and moor,
And find a harvest-home of light."

Perhaps one of our earliest copy-book exercises was the familiar exhortation "Be good, and you'll be happy," which may have as much truth in its converse statement "Be happy, and you'll be good."

Between conduct and thought there is close connection.

Whether it be true or not that thought is the mightiest power in the universe, it cannot be doubted that our habit of thought has much to do with the gladness of life. Good George Herbert wrote:

"The man that looks on glass
On it may stay his eye,
Or if he pleaseth, through it pass,
And then the heaven espy."

And so in our observation of things about us, it may easily come to be the habit of our minds to *stay* our thought upon the imperfections, the crudities that so often offend us. This is one of the special dangers of the young who have not yet had time to learn to

"Look largely, with lenient eyes
Upon whatso beside us may creep and cling
For the possible beauty that underlies
The passing phase of the meanest thing."

When we have a garden plot to weed (and a good deal of life has to be given to weeding in some form or other) we can afflict ourselves at our task by counting the weeds, by groaning at their number and their size. But it is a better way for our souls to think, as we work, how clean and beautiful the garden plot will be when the task is over; how our roses and vines will thrive and bless us in their growth and bloom, that we have taken the hindrances out of their way. The awkwardness, the unloveliness of our neighbor offends us, obtrudes itself upon us, becomes like the irritating buzz of gnats to us, till we ourselves are untuned and give back the discordant notes that have put us out of harmony. But it is in the power of our thought to close our ears to discord, to keep our eyes fixed steadfastly upon that which is lovely, toward which we ourselves would grow. When evil or disturbing thoughts arise in our minds we can bring our will to bear upon them and turn away from them to that which is good and helpful.

I have not learned how much it is in the power of thought to heal the diseases of the body, but it cannot be doubted that evil, discordant thought is poison to the body as to the soul, unnerving it, depressing its vital forces, and so creating disease; nor can we doubt that harmonious thought, that gladness in the soul may keep the nerves in tune, and vitalize the whole physical structure.

When we look over the great broad world there is much to disturb our serenity of thought, there are problems of human woe and wrong that are past our solving; but for all these things, we have done the best that we can, when we have striven to make our own lives, insignificant though they seem, centers of gladness and harmony. And so, if there be one among you who is led by this hour's thought to study how to be glad, and how to seek the "peace that passeth understanding," then this will have proved a golden message.

And I will leave with you these words of a poet:

"Take joy home,
And make a place in thy great heart for her;
And give her time to grow, and cherish her;
Then will she come, and oft will sing to thee,
When thou art working in the furrows; ay,
Or weeding in the sacred hour of dawn.
It is a comely fashion to be glad;
Joy is the grace we say to God."

You find yourself refreshed by the presence of cheerful people; why not make an earnest effort to confer that pleasure upon others? You will find half the battle is gained if you never allow yourself to say anything gloomy.—*Lydia Maria Child.*

For Friends' Intelligencer and Journal.

REMARKS ON EDWARD GRUBB'S PAPER.

The article by Edward Grubb, on the ministry, in your paper of Eleventh month 10th, is so clear, so deep and far-reaching that it awakens a lively desire in my spirit to endorse it as the truth. Especially does the witness within warmly respond to this "urgency" of which he speaks, that impels us to hand forth our spiritual exercises to the meeting; simply accepting this *urgency* as the divine call to service; without waiting, like a rebellious child, for the "Woe is me" to *lash* us into obedience. Then, after relieving our spirit of its burden, without any anxiety whatever as to results, leave its acceptance or recognition with Him whose begetting it is. I was also much impressed with that important truth, that our exercises best meet the witness in others when they savor most of that which we have seen, tasted, and handled in our own experience; this gives the true vitality that opens the way for the reception of any truth. What comes in the life will reach the life. But what most rejoiced my soul in Edward Grubb's excellent article was the point so seldom touched upon by Friends, that our spiritual openings *may* come to us at any and all times, and may be "borne upon the mind during the week," and, like the ripening fruit upon the tree, gradually mature; that they are not *necessarily* confined to the four walls of the meeting-house, and there have their birth, as is so often said, "Since I took my seat in this meeting."

Wonderful spiritual illuminations often come to the dedicated mind as we lie upon our pillows. In the darkness, and in the silence of all flesh, the soul comes into very close communion with its Maker, and precious, clear openings of the truth present, sometimes for our own private use and strength, then again to be reöpened in the meeting, with the urgent feeling that here and now is the time to hand this forth. We can set no bounds or limits to the inspiration of the loving Father that, like the sunshine, is ever ready to pour itself into hearts that are open and receptive. Let me also call attention to one serious drawback to the ministry, not mentioned in the article of Edward Grubb. In the delivery of many otherwise powerful sermons, there is a painful weakness perceptible in the too frequent use of the personal pronouns, such as "I believe," "I know," "I think," "I call you," "I entreat you." This oftentimes unconscious repetition, weakens the effect upon the hearers, by an appearance of egotism, entirely inconsistent with the meek and lowly spirit of the Gospel.

We are only poor, unworthy instruments through which the Holy Spirit operates, and self should be kept out of sight, and it *will be*, as we become more and more humbled under a sense of our own shortcomings, and God's boundless love in calling and qualifying us to labor in his blessed service.

May all who feel the call to testify in public ponder these things deeply; and in true humility of soul strive to make ourselves "worthy of the vocation whereunto we are called."

Anna M. Starr.

Richmond, Indiana.

YEARLY MEETING WORK FOR THE INDIANS.

We print below the reports of the Indian Committees of Indiana and Baltimore Yearly Meetings, presented at the recent sessions of these bodies.

Indiana Report.

Since the meeting of this body a year ago but little apparently has been accomplished, yet the interest of the Society in the welfare of the Indian is not abated. Effective work has been performed by the Central Executive Committee of the Seven Yearly Meetings, although we have not a single tribe under our care. It has made frequent trips to Washington City to consult with members of Congress, the Secretary of the Interior and the Indian Commissioner, regarding legislation affecting the Indians, and we trust it has been instrumental in at leastone case, viz: in preventing the passage of a very unjust bill relating to the Seneca Indians of New York.

The Land in Severalty bill—a measure Friends have long advocated—has become a law, and its passage opens the way for labor in securing its proper adjustment and the necessary preparation of the Indians for citizenship and for instruction in building up and securing homes on the lands that now will become their own.

Although Friends are not responsible for the conduct of a single Agency, yet the Santee-Flandreaux and the Ponca tribes, which have been under the management of Friends for nearly eighteen years, are yet in charge of a Friend (Charles Hill) with his very efficient corps of assistants. The progress of the tribe in the arts of civilization is very gratifying. The men of the tribe are nearly all industrious, and many of them are skillful farmers. Their habits and morals are exceptionally good. But the women are not well advanced. They have not been taught the art of making home attractive and comfortable and healthful.

We have labored to secure the appointment of a matron for this tribe at least. The commissioners told us last winter that they had no funds applicable to that purpose. We then asked the Seven Yearly Meetings to join in bearing the expense, but failed to get the consent of all. We reluctantly gave it up. We then prevailed on the Commissioner to recommend an appropriation of $750 each for five matrons —for as many tribes—and we worked to secure said appropriation with a fair prospect of success, but that success seems to be postponed.

We have again earnestly set about to secure through the aid of the several yearly meetings the appointment of a matron for the Santees. Your committee favor the proposition, and ask that the Yearly Meeting allow us to draw upon its treasury for the necessary funds. It will probably cost us near $100.

Wm. C. Starr, *Clerk.*

Baltimore Report.

The Committee on Indian Affairs has, during the past year, given attention to the subject under their care and has endeavored to close in with such opportunities for usefulness as have been presented.

We find, however, that the field of philanthropic labor in this cause by the Society of Friends is narrowing year by year. There are several reasons for this. One is that other religious denominations have gone into the work so largely and have had such abundant means, that they have in a measure crowded out those who have not been able to bring such facilities to bear. Another reason is that those Indians in whom we have been especially interested and for whom we have been working more particularly, are themselves very nearly self-supporting, and so almost beyond the need of outside help.

There is no ground for discouragement in this outlook, except in the fact that the Society of Friends is perhaps not contributing its full quota of usefulness in a cause wherein it has been a pioneer. But the work is going on and great good is being done the Indians by the different religious denominations engaged in it.

We think that the Indian question has reached that point where it is safe to assume that there is now no danger of the Indian degenerating, but, on the contrary, under such influences as at present surround him, he must advance.

As was intimated in our last report, an effort was made by this Committee to unite with other yearly meetings in the appointment of a matron for the Santee Sioux, to instruct the women of that tribe in the art of housekeeping.

Up to Fifth month last we had every reason to believe that the effort would be successful. All the yearly meetings but one had agreed to coöperate with us, and we had assurance that that one would also join in the enterprise. From the many applicants who came forward to fill the position one was selected whom we feel assured was well qualified and who would have discharged the duties faithfully, and she was ready to go forward at once. At the last moment, Philadelphia Yearly Meeting declined to coöperate in the measure, and the subject was necessarily dropped.

An effort was subsequently made to carry it through with the coöperation of such meetings as would consent to join in the measure. Illinois Yearly Meeting agreed to do so, provided not less than five meetings united. Ohio and Indiana, after considering the matter at the recent sessions of their meetings, both declined, and Genesee has not been heard from. This state of affairs made it seem best to the Committee to abandon the effort for the present.

We hope at the next session of Congress to obtain such legislation as will provide for the appointment of matrons in at least five of the Agencies, and we have reason to believe it can be done.

A delegation from this Committee attended the last annual meeting of the Board of Indian Commissioners held in Washington City in First month last, and took part in the discussion of the Indian Question which was had at that time. It was a very satisfactory and profitable occasion. We met there many of the leading workers in the cause of Indian civilization and advancement from all parts of the country, and were pleased to find that the unceasing labor by Friends in behalf of the Indian was acknowledged and appreciated by these co-workers.

Members of the Committee have made a number of visits to Washington during the past year to see the President, Secretary of the Interior, Commissioner of Indian Affairs, and members of Congress, on subjects connected with Indian work, and have endeavored to influence legislation in a direction that we thought favorable to the best interests of the Indians. We have always been received by the officials at Washington with great cordiality, and our views in regard to the treatment of the Indian Question have been listened to with respect and generally acknowledged as correct.

We have a copy of the Annual Report of Charles Hill, Agent at the Santee Agency in Nebraska, which is encouraging, and from which we make brief extracts,

"At Santee Agency the Indians cultivated lands as follows:

Wheat,	1,162 acres.	Oats,	792 acres.
Corn,	1,502 "	Barley,	3 "
Flax,	196 "	Sorghum,	1 "
Potatoes, etc.,	229 "	and Ploughed	210 "

Making 4,095 acres of land planted and ploughed during the past year.

"The land was all prepared and planted in proper season, and with an energy that was very commendable. The prompt and energetic manner in which they gather their ripe crops is very gratifying indeed. They never allow grain to become over-ripe unless it is unavoidable, always commencing preparation as soon as the fields begin to turn yellow, asking for machines long before they are needed, and arranging which machines shall cut their grain in due season; which action on their part greatly facilitates the work of preparing the harvesting machines. Indians are very careful of the machinery put into their hands, especially the reapers and mowers.

"Twenty-six dwelling houses have been built for the Indians the past year, all located on their farms, at a cost of $7,715.82—more than that number have been plastered, painted, and otherwise repaired, and 11,100 rods of fence built, all this work being done by the Indians themselves. There are about 33 skilled mechanics among the Indians under my charge, and they have earned during the year $6,033.47, exclusive of outside jobs not reported. Except physician and clerk no white persons are employed at any of the Agencies under my charge.

"A Temperance Society was organized at the Santee Agency; the idea originating among the Indians themselves, and composed wholly of Indians. They number twenty-nine members, who each wears a badge of white metal with the word "Temperance" engraved thereon.

"I consider the Flandreaux homestead settlement a success, demonstrating that the Indians can go among white settlements and support themselves. Had they an equal chance they would have fully coped with the whites, but they have been a constant prey to the white man. Having fine lands, every device known to sharpers was used to induce them to part with them, mortgaging being the most success-

ful, and was legal, as many of their lands were patented before the restrictive law was enacted. White settlers generally help each other, but they are apt to consider the Indian their natural prey."

The Report also gives an account of the destruction of the main building of the Government Industrial School at Santee. This loss would have been far more disastrous to the children than it was, had it not been for the energy and determination of the Agent, who by promptly availing himself of other contiguous buildings and fitting them up hastily, managed to accommodate 69 of the children the balance of the year. Plans were made at once for new buildings and forwarded to the Department, and the Agent is daily expecting an order for their erection.

The Report of the Treasurer shows interest accrued on the Fund in our care,	$296.47
And Disbursements, ...	44.90
Leaving a balance of	$251 57

which the Committee will endeavor to use with judgment.

Signed by direction and on behalf of the Committee.

JOS. J. JANNEY, *Clerk.*

Baltimore, Tenth month 31, 1888.

From Young Friend's Review, Eleventh month.

SIGNS OF NEW LIFE.

IF we cannot, or if a Society cannot, in ordinary times, estimate its true bearing and influence on the world, it should not become impatient, and blindly judge that it is of no more use. We cannot see the tree grow, but we know by comparison that it has grown, that it grows. If we plant a seed we must not be over anxious and dig it up daily to see if it has started. Nature must have its course, its time. If we would have the seed to sprout, and the plant to grow, we must not disturb the laws of birth and growth. The seed needs earth, moistened by the rain and dews, and warmed by the vivifying sunlight. The plant needs more sunlight and rain and air. Not more necessary is it for a plant to obey the laws of growth, than for a Society, if it would fulfill its mission.

We hear from our foremost members the encouraging report of a reäwaking within our borders. A new life is being infused from some source, and for some purpose. To what extent we do not know, we may not prophesy. Enough for us to find out our own part in the work, and finding out to *act;* for Society depends upon individuals,and its success upon individual faithfulness. Might we not, profitably, learn a lesson from the plant life? We must check our impatience, and keep our over anxiety from disturbing the laws of growth. "Consider the lilies of field, how they grow; they toil not, neither do they spin." They do not fret and worry and get over anxious about their growth. They just simply drink in God's sunlight and air and grow unconsciously until they open out their white lips in thankfulness for all. Position is everything to them. So is it with Society. But as Society depends upon its members for position, it is our duty to place it where it will drink in the sunlight of God's love and the free air of his favor. Then will this reäwakening into new life continue and result in outward works that will diffuse an odor of sweetness over the earth like what comes to us from the glorious deeds of our brave and faithful ancestors.

But Society, we said, depends upon individuals. Therefore we, the members, must get ourselves into the position and condition where we will be surrounded by God's love and favor. This is the duty of every Christian. It is the law of spiritual growth. To live in the favor and love of God we must carry out his commands and do his will. Nothing but implicit obedience will bring us into the sunshine of his countenance. He has a work for each individual and for each Society. What that work is he will make known sufficiently clearly. I apprehend that no one can have a reasonable excuse for not knowing. With a fervent desire to know and with as fervent patience to limit the source of knowing to God's own revealing—the only true source—the simplest need not err. And by obedience they will move in his sunlight all the way; and be found unconsciously obeying the various laws of the highest spiritual growth. And since Society is not only dependent upon individuals, but as it is expressly for the help and mutual benefit of individuals, we are serving it best when we are serving best our own souls. It results in this—individual faithfulness—and if this were maintained throughout our Society, it need not point to the glorious deeds of our ancestors for an excuse to exist, but would be continually developing outward living evidences that it is an important factor in the course of the earth onward and upward to the higher, purer, and more perfect life.

SCRIPTURE LESSON, No. 46.

TWELFTH MONTH 2, 1888.

TOPIC: TURNING AWAY FROM THE LIGHT.

GOLDEN TEXT.—"Take heed, brethern, lest haply there shall be in any one of you an evil heart of unbelief."—Heb. 3: 12.

READ Judges 2: 18-23.

THE death of Joshua occurred at the age of 110, and he was buried in the border of his inheritance in the tribe of Ephraim. After his decease the elders that outlived Joshua ruled, but when they were gathered to the fathers, and all the generation that had participated in the conquest of the land had passed away, the people who succeeded them forsook the worship of the God of their fathers, and joined in the service of the Canaanites to worship after their way. This brought trouble upon them, and they were not able to stand before their enemies. They were greatly distressed, and when Judges were raised up, and through their wise counsels, the people were delivered from their spoilers, yet did they not return to the God of their fathers, but turned quickly from his law and gave themselves up to follow the ways of those whom they had subdued. It is when the Israelites are in this condition as a nation that our lesson is dated. It is but a continuation of the same sad story of declension and going back to the idolatrous usages from which they had been delivered. In

the peace which followed the settlement of the tribes in their several apportionments, they had found it easier to adopt the habits of life of the remnants of the former possessors of the land who were permitted to remain, than to observe the strict laws instituted by Moses, which, in their sanitary measures, and their strict requirements in regard to food and cleanliness and social ethics, were far in advance of any of the nations of antiquity. The observance of these regulations was a religious duty; they came to the people as given by Divine direction, and were wise and wholesome laws, the observance of which would insure them freedom from disease and a just administration of the laws of equity between man and man.

And when the Lord raised them up Judges. We may infer from this that the Judges who ruled over the people in this time of degeneracy were true men, having the Divine favor, and that during the lifetime of a Judge some semblance of authority was maintained. How these Judges were appointed we have no means of knowing. They were temporary and special deliverers, called by God to rescue the Israelites from their oppressors, and not supreme magistrates as were Moses and Joshua.

The period covered by the rule of the Judges is variously estimated. It could not have been much less than 300 years, and by some it is reckoned to have been a little more than 400 years. It seems safer not to attempt to settle the question.

The lesson for us to gain from this study is fidelity to the Divine will as it is revealed to us. Every deviation from this standard makes the path of wrongdoing easier than it was before. The promise that the light of Divine truth, if followed, will lead us into all truth, is as effective now as it was when first promulgated.

In the parable of the Prodigal Son, Jesus represents the Divine Father by the type of a human father of wonderful tenderness, whose heart was moved with compassion as he beheld his repentant child, so that he "ran and fell on his neck and kissed him." So too in the parables of the lost sheep, or the lost piece of silver, he represents the "joy in the presence of the angels of God over one sinner that repenteth." In all his teachings Jesus ever brought prominently into view the undeviating care and infinite love of our Heavenly Father of those that have gone astray—Divine forgiveness is unbounded—Divine love has a breadth and depth not to be conceived by human understanding. It is seeking always to bless, always to restore. "Why callst thou *me* good," says Jesus, "there is none good but one, that is God." Hath an earthly parent thought, care, affection for an erring child? Our Divine Father hath infinitely greater. "His sun shines and his rain falls on the evil and good, the grateful and the unthankful." Yet how great is the difference between the evil and the good, between the grateful and the unthankful! Both classes surrounded with God's infinite tenderness and love and care, yet is the life of one filled with the sunlight of contentment and peace and joy, the other with the darkness of sorrow, remorse, and despair!

Can we not, by the aid of the Parable of the Prodigal Son, discern the reason for this difference of experience. Those who have left the Father's house, those who have separated themselves from his presence, *those who have turned away from the Light*, are they that dwell in darkness and in the wretchedness of sin.

Experience proves this to be true as every rational being knows, for well does every human heart realize the verity of the promise: "Cease to do evil, learn to do well; though your sins be as scarlet, they shall be as white as snow; though they be red like crimson, they shall be as wool."

Down through the ages has come this message of tenderness and pity to the disobedient, saying to him that Heaven is close at hand if he will but turn from his evil ways and accept the Father's love.

The "Light within" is never quenched, but the wanderer may turn from it and be clouded by the shadow he has thus cast over his own soul. "The light shineth in the darkness" though "the darkness apprehendeth it not."

MORAL SUASION.

We do not believe that moral suasion has been a failure; it has been a success. Great progress has been made in the temperance cause, great advance in temperance sentiment, since Bolingbroke spent whole nights in debauchery, and Robert Walpole was urged on to intoxication by his own father; since retailers of gin in the streets of London hung out signs announcing that their customers could be made drunk for a penny, and dead drunk for a twopence, with straw to lie on for nothing; since in New England all stores kept New England rum, and gave a drink to every considerable trader; since at Congregational ordinations the minister's sideboard was covered with decanters, and according to the graphic description of Dr. Lyman Beecher, "with the spilling of water and sugar and liquor looked and smelt like the bar of a very active grog-shop;" since, in Virginia, a quart of toddy was the customary ration for each guest's supper, and Sunday afternoon was often spent by the best gentlemen in a drunken sleep under the dinner-table.

The temperance cause has made great progress within the last hundred years, and that in spite of the immigration of beer drinking Germans, wine-drinking Italians, and whisky-drinking Irishmen. And that it has made such progress is due primarily not to political parties or new methods in legislation, but to lecturers such as Mr. Gough and preachers such as Dr. Lyman Beecher, and to the example of men and women whose social influence has made temperance reputable and drunkenness a disgrace. There is one village in this State, in a town where licenses are granted, in which there is no liquor shop, and no liquor is obtainable, even at the hotels or summer boarding-houses, simply because for twenty years a weekly temperance prayer-meeting has been maintained and a temperance sentiment developed so strong that even greed and appetite cannot, combined, resist it.—*Christian Union.*

AGREEING TO DIFFER.

VERY few, comparatively speaking, see things from the same point of observation, and those who stand upon the same level have their individual attention directed more immediately to the objects that present the greatest attractions for themselves. We have all recognized this, as we have stood with others, admiring a beautiful landscape; the clouds moving in majestic grandeur, the undulations of hill and valley; the verdure of field and meadow, the pebbly brook or quiet lake or the wide river,—the little "sights and sounds" that charm the eye or delight the ear, all these have their admirers, each of whom sees some peculiar charm in the diversified scenery that is spread out before him, not one perhaps taking all in, with the keen delight that the single object of attraction gives.

It is the same with what we read and what is spoken, and the broader and fuller the speech or the writing, the greater number of points will there be presented. In our eagerness to appropriate and make our own that which harmonizes with our line of thought we sometimes fail to see the modifying clause that is essential to the proper rendering of the words of the writer or speaker.

It is in this many-sided peculiarity of the human mind that our differences in regard to the same thing or subject, have their origin, and this should be looked upon as a wise provision for that intellectual stimulus which is the great factor in the development of the mind. In recognizing this diversity, we accord to each the right of private judgment. Were it not that by common consent certain lines of action are pronounced right, and their opposites wrong, we might find ourselves, socially, in the same unsettled condition that the world of thought in matters relating to dogma and confessions of faith, presents at the present time. If common consent would do as much for these as it has done for the moral life of enlightened communities, what an immense gain it would be to the Christian church. There are as clearly marked lines of thought concerning the Creator and Upholder of the universe, and our relations to him as those which regulate our intercourse in the ordinary transactions of business and social life.

Accepting these as the basis of the christian faith, and in the spirit that "thinketh no evil," agreeing to stand together on common ground as the children of a common Father, the sectarian peculiarities that now divide us, would represent only separate households, in which the individuals composing the family worked together in their own way to advance the best welfare of their own members and carry out the Divine purposes, as understood and accepted by them. The differences would be no bar to fellowship; rather would they represent different lines of labor, essential to the true knowledge of God and the increase of that knowledge among mankind.

MARRIAGES.

FORD—EVANS.—Eleventh month 14th, 1888, in Philadelphia, by Friends' ceremony, in presence of Mayor Fitler, Charles W. Ford, of Fisher's, Ontario county, N. Y., to Hanna A., daughter of Joshua R. and E. Lizzie Evans, of Hartford, N. J.

LYND—SMEDLEY.—Eleventh month 14th, 1888, at the residence of Charles M. Swain, brother-in-law of the bride, by Friends' ceremony, James F. Lynd, son of the late Judge James and Margaret H. Lynd, and Anna F., daughter of Sarah A., and the late Nathan Smedley.

DEATHS.

BARTRAM.—Eleventh month 11th, 1888, Isaac Bartram, aged 56 years, son of Elizabeth Bartram, of Darby, Pa.

BOWNE.—At the residence of her son-in-law, Isaac F. Wood, Rahway, N. J., Second-day, Eleventh month 12th, 1888, Emily Louisa, widow of Richard Hartshorne Bowne, of New York city, and daughter of the late Thomas Cock, M. D., in the 74th year of her age.

BUNTING.—On the morning of Eleventh month 16th, 1888, at her residence in West Philadelphia, Mary, daughter of the late Philip Syng and Elizabeth Bunting, in her 85th year; a member of the Monthly Meeting held at Green street, Philadelphia.

COMLY.—In Philadelphia, Eleventh month 12th, 1888, Seth I. Comly, aged 73 years.

JOGGER.—On Second-day afternoon, 11th mo. 5th, 1888, at her residence, Great Neck, Long Island, Sarah E., widow of the late John Jogger, in the 79th year of her age.

LIVEZEY.—In Abington, Montgomery county, Pa., Eleventh month 13th, 1888, Anthony Livezey, in his 79th year; an esteemed elder of Abington Monthly Meeting.

MILLER.—At the residence of his son-in-law, Samuel C. Bunting, West Philadelphia, on the morning of Eleventh month 12th, 1888, Charles P. Miller, Sr., in his 73d year, son of the late Daniel L. and Hannah Miller.

WILLIAMSON.—At Waynesville, Ohio, Tenth mo. 13th, 1888, Miriam Peirce Williamson, in the 67th year of her age. She was the mother of six children all of whom lived to the age of maturity, yet while she bore a large share of the household duties and cares, she had for thirty-five years practiced healing the sick.

She was engaged in active duties till within two hours of her death, which was sudden and unexpected. She leaves many warm friends to mourn her loss, besides the afflicted ones who were looking to her for relief.

E. B. M.

THE LIBRARY.

PAUL'S IDEAL CHURCH AND PEOPLE. A Popular Commentary, with a Series of Forty Sermonettes on the First Epistle of Paul to Timothy. By Alfred Rowland, LLB., B.A., London University. American Publisher, E. S. Treat, 771 Broadway, New York.

THIS work is a recent contribution to religious literature, and must prove a valuable aid in the study of the earliest history of the Church. The two Epistles of Paul to Timothy are justly regarded as a rich mine of instruction to the Gospel minister, and unlike much that was written centuries ago, as applicable to the times in which we are now living, as to the ministry in the first century of the Christian Church. This may be regarded as entitling these Epistles to rank among the inspired writings of the "chosen" ones, whose words are for all time.

There is a largeness of scope that takes in conditions, not as they appear through the narrow vision of prejudice or one-sidedness, but as seen from the broad compass of a mind capable of grasping the length and breadth, the height, and the depth of his subject and to comprehend its fullness and significance.

Of his purpose in writing, the author says in the preface, "I have attempted to give my readers a popular exposition of a singularly interesting Epistle. . . . . It is my hope and prayer that, while the thoughtful reader may find here some guidance amidst the difficulties and controversies of the present day, the homilies may not be without value to those whom God has appointed to be the religious teachers of their age, whether in the pulpit, in the class, or in the home."

These homilies follow the Expository notes and are brief discourses in which the important points in each chapter are considered and briefly commented upon.

The Expository notes take up every verse in each of the six chapters into which the Epistle is divided and give valuable information as to the literal meaning of the language used, and of the words and phrases common to the age, and to the people among whom Timothy was called to labor. The text of the Revised Version has been followed, it being so "universally recognized as a valuable result of modern scholarship."

We regard the book as of more than ordinary value to the earnest inquirer who, not himself acquainted with the language in which the New Testament was written is most desirous to get at the true meaning of what he reads, and no one who reads attentively can fail to discover the deep spiritual earnestness that breathes through every page. The Sermonettes are models of terse and simple language that commend them to every class of readers. Those on the first chapter are ten in number, and treat of "Paul's claim to Authority," of "Timothy's Charge and Warning," and "The Summons to Service." Of the subjects that form the basis of those on the second chapter the two that relate to "The Position of Woman" and her "True Dignity," are very instructive, throwing much light upon the social condition of woman in the Grecian Cities of Asia and especially at Ephesus, where Timothy was called to labor. "The Atonement" is also considered, and while it is viewed from the standpoint of a vicarious sacrifice, it is moderate in tone and divested of many of the objectionable expressions that are found in the extreme orthodox views, so called. There is one statement our author makes on page 104 that invites criticism. He has tenderly and convincingly portrayed the unsparing love of our Heavenly Father, and passing from this to the Godward side of the Atonement, he says: "It is as important as it is mysterious but it is not to be insisted upon as if it were all. The Scriptures assert again and again in types and in texts that it is in virtue of the death of Christ that God can justly forgive; that except for his sacrifice the Divine love could not reach us; that by Him satisfaction was made to the law of God and that pardon was not, and could not be a bare act of grace. All who accept that assurance and turn in penitence and confidence to God, are at once fully and freely forgiven."

He continues, "*These statements are beyond proof.* They concern a sphere of existence about which we absolutely know nothing except what is revealed in scripture. They have to do with the relations between the Eternal Father and the Only Begotten Son, about which the wisest of us are profoundly ignorant."

The candor of this admission leads to the inquiry, Why attempt to elaborate precise doctrines concerning these relations about which we know nothing except what is found in the Scriptures? And why should we be asked to accept as final what was written two, three and four thousand years ago by men having no nearer access to the Divine Father than those now living? If their declarations do not meet the witness for truth in our own souls, why should we be adjudged guilty? What said the Christ, he in whom the fullness of the Spirit which is the "Only Begotten Son" dwelt, "without measure?" What was his testimony on the subject of forgiveness? Hear him in the parable of the prodigal: "While he was yet afar off his father saw him and had compassion on him!" This is the testimony that commends itself to the highest and best within us as to the relationship between our Father in heaven and his repentant children.

There are four sermons on the third chapter. The first is a faithful delineation of "The Ideal Minister," that might be read with profit by everyone who is called of God to minister in holy things. On the fourth chapter there are also four discourses, one of which deals with the "Characteristics of the Christian Teacher." There are six on the fifth chapter, that treat of "Home Responsibility," of "Charity," of "Duties toward the Ministry," etc. The sixth and last chapter has eleven—mostly brief and very earnest exhortations to the observance of the duties that our Christian profession calls far.

There is very little to be found in all these short discourses to which exception is likely to be taken, save in that which relates to the Atonement, and as has been before stated, the arguments advanced are very moderate, and without the extreme insistance th t usually marks the presentation of that subject.

The book can be had at Friends' Bookstore, 15th and Race streets, Philadelphia. (Price $1.50.)

L. J. R.

A book relating to old experiences at Westtown Boarding School, and bearing the title "Old Westtown," is about to be issued by Ferris Bros., (6th and Arch Sts.), Philadelphia. The prospectus states that "the entire collection is contributed and edited, and the illustrations drawn, by old Westtown scholars and teachers." The book is to be sold by subscription, and orders received before the end of the present month will be at a rate somewhat reduced.—Ferris Brothers also announce the intended issue of "Friends' Calendar for 1889.

NEWS OF FRIENDS.

NINE PARTNERS HALF YEAR MEETING.

Pursuant to adjournment the Meeting for Ministers and Elders convened, a small number being present. No Friends with minutes were in attendance. Some being prevented by indisposition, while the morning being rainy deterred others. The usual reports were read, as received from the preparative meetings, the answers showing no breach of harmony and love, since last report.

On First-day morning the clouds had disappeared, the bright sun appearing instead. At the 11th hour Friends again met in goodly numbers, and were favored with the acceptable company of Samuel B. Haines and Elias H. Underhill, members of New York Monthly Meeting. The former first addressed the meeting after a commendable silence, in his usual loving and entreating manner, drawing all hearts in close communion to the swift witness for Truth within our own souls. His concluding remarks were of an impressive character, impressing the feeling that we were drawn together with one accord, in the same place, and over all was our Heavenly Father's love. After a brief pause Elias Underhill addressed the meeting to our edification. S. N. Smith also ministered to good satisfaction producing the feeling that we had been fed from the same bounteous table, supplied by the "Master of all rightly gathered assemblies, where none may go empty away."

Second-day, 5th of Eleventh month, the meeting assembled for executive business and worship, in joint session, agreeably to the decision reached at our last session in Fifth month. After a time of silence, the audience was addressed by Elias Underhill and S. N. Smith with words of cheer and encouragement for renewed dedication of heart and purpose. The opening minute was read by the clerk, the clerk of Women's Branch being also present at the table. The representatives were all in attendance. We felt some anxiety as we began, it being a new experience, that of joint session, but with a hope that the service might be rendered with satisfaction to the meeting,—it also being the close of the present appointment of clerks. The representatives being called, informed they were united in renominating the present clerks to the service, which the meeting approved.

The answers to the usual five queries reported few deficiencies,—only one case where intoxicants were used unnecessarily. Some pertinent advice was given in regard to the first query. Extracts were read from Women's Branch of our late Yearly Meeting, causing a feeling of solemnity to spread over all, under which the meeting closed.

SOCIAL RECEPTIONS AT RACE STREET.

The Friends of Race Street Meeting, Philadelphia, have a very pleasant and satisfactory way of becoming better acquainted with each other and increasing the interest in their meeting. For two or perhaps three years they have held during the fall and winter months social receptions, occurring about once a month, at which, by special invitation issued by a committee which has the matter in charge, members of that meeting and others are invited to be present. The large Library room is well adapted to the purpose, and was prettily decorated with flowers on the occasion of the first reünion for the season, given on Sixth-day evening last, from 7.30 to 9.30 o'clock. Although the evening was quite unfavorable, a large company gathered, and the occasion was one of great enjoyment, young and old sharing together the pleasant intercourse it afforded.

Four generations were represented in the gathering, and no one added more to the social interest of the occasion than our beloved friend, Catharine Laing, now in her 92d year, yet bright and entertaining as if still in her youth.

The Committee of Arrangements purpose to extend the invitations to members of the three monthly meetings in this city, with the hope that the social intercourse among all the Friends of our city and its outlying districts may be promoted by such intermingling.

VISITING IN ST. LOUIS.

I left Kansas City on election day. Some of my friends thought it would be better to defer starting for a day or two, but I found no inconvenience in travel. S. W. Coates kindly saw me comfortably fixed on the train. Going on the 9th street cable car I had an opportunity to see the steepest line in the city, which in the distance looked almost perpendicular. It is a great comfort to have the horses released from such a slavish life. It seemed strange to see buildings far above us as we left the city. Some standing on the edge of deep cuts, which railroads and other works had necessitated.

A few miles on our way we came to a number of large oblong formations of stone, resembling a sarcophagus, or at least reminding one of such a structure, and also of the beauty and variety seen in the Garden of the Gods. There is some very fine farming land in Missouri and the wheat looked well. The land was less rolling as we proceeded. We crossed the Missouri river at Glasgow. It was quite refreshing after experiencing the scarcity of water in some of the Western States to see so many ponds or lakes, and frequently to cross large streams. The land grew rougher about Bowling Green, and some quite mountainous peaks reminded me of the majestic slopes left far behind. We crossed the Mississippi

river at Louisiana; the noble stream is very wide at this place, and high rocky bluffs arose to the south. A small growth of trees, a species of willow, were still green; the sun shining upon them and the river added to the beauty of the scene. Some lingering autumnal tints skirted the woodland, reminding one of the rich variety of eastern foliage we had missed this season. I did not see many fine building in the railroad towns we passed through in Missouri, and missed the tasteful, commodious school buildings so prominent in some of the Western States. May virtue and true prosperity characterize more and more its growth in the future as in all our wide domain. Journeying by the way I have been led to reflect upon the great responsibility of wealth. We do not always sympathize as we should with the trials and difficulties attendant thereon,—might we not add the temptations, as well? It requires judgment to decide in the bestowal of gifts,—how rightly to dispense, and when to withhold,—and these are so frequently appealed to, and sometimes deceived, that in the desire for judicious direction there may in some instances be a withholding which tendeth to poverty of spirit at least. But on the other hand, what cause for encouragement and thankfulness in the wise distribution of earthly possessions;—the warm heart, the open palm and purse, ready to contribute to the help and comfort of those less fortunately circumstanced in life, and also for the best interests of the community. We know that the truest help is of a character which leads to self-helpfulness. And in all material aid this should ever be kept in view, giving of the very best we have from the treasury of love, appreciative sympathy, and wise counsel.

We had now passed the boundary line of Missouri and Illinois. We crossed the Illinois River at Pearl, and soon after enjoyed the splendor of a bright sunset, the new moon arched in the blue above, and the evening planets one by one lending their presence to enhance the scene. Then when the lamps were lighted, and the outward glory could no longer be enjoyed, we could but catch snatches of conversation around regarding the national interests of the day, all so far as heard confident of the continuance of the present administration,—on their way to the great city to join with comrades in rejoicing. However it might terminate there was the arising of desire that we might grow as a people less partisan in spirit,—more truly patriotic,—that the best interests of our country should ever be prominent, and its government so conducted that the purest minds might not hesitate in participating, on a basis of contributing to the general good. For is it not true now as ever that "righteousness exalteth a nation, but sin is a reproach to any people." On arriving in St. Louis after 7 p. m., I was met by sister Mary P. Wilson and her daughter Alice W. Good, and felt truly at home under their hospitable roof. The rain which followed for several days made it a delightful season of rest.

The city has grown wonderfully since my last visit in 1879. We took a drive to Forest Park, which is a beautiful place containing 1,300 acres with a commanding view of Cabanne and other suburban places. There is not the display of flowers found in some parks, but the trees and lakes are very fine, affording a pleasant resort in the heated season. We rode through Lindell and Washington avenues, also Vandeventer Place, seeing many fine residences, mostly separate buildings, with handsome grounds, beds of geraniums and other flowers blooming as fresh as ever, not having had any frost, which had blighted vegetation weeks ago in other localities. When in Iowa I met with friends who wished me to see while here Anne Phillips Neare, daughter of Isaac Phillips, whose residence, when living, was in the neighborhood of Parkesburg. She and husband, Alexander, are members of Orthodox Friends, and formerly lived in Cincinnati, but for several years have resided in St. Louis. I had a most delightful visit in their home on Locust St., finding her related to my relatives here through the Jacksons. They were glad to meet with Friends, feeling so isolated, though often attending the Methodist Church, but still having a yearning for the old associations and privileges of religious organization. After a few days spent with J. M. and A. W. Good, I came to the home of another niece, Rachel W. Sterens, on the south side, close to Lafayette Park, which though comparatively small is a very attractive place. Much labor has been bestowed to render it rural and artistic; grottoes and rustic bridges across streams, with vine-clad rocks conduce to its picturesque appearance. And noble trees afford shade for visitors, supplying in a measure the need, which those reared amid the grandeur of the woodlands must ever feel. Flowers are still blooming, and while many have faded, they bespeak the beauty and fragrance which have been. I met with John C. Learned and wife, who are still earnest in good works, contributing their share towards the better condition and enlightenment of the people.

Eleventh mo. 16, 1888. L. H. P.

MARRIAGE.

God is thy law, thou mine, to know no more
Is woman's happiest knowledge and her praise.

Thus does Eve speak to Adam, in the Garden of Eden, in Milton's poem of "Paradise Lost." John Milton and George Fox were both living in England at one time. They were contemporaries from 1624 to 1674. Very different, however, were the teachings of George Fox, who recognized the spiritual equality of woman. And very different is the spirit of our Discipline on the subject of marriage from the practice of the churches generally. The promises of the bride and groom are identical in our Discipline; but in the Roman Catholic, the Episcopal, and other churches, the wife promises "to obey" the husband. A member of one of the latter once told me that in their church persons are sometimes married with the ring, in the Episcopal manner. "And does the wife promise to obey?" I asked. "She nods her head," was the substance of the answer.

In my album, Lucretia Mott wrote a favorite sentiment of hers: "The independence of the husband and wife should be equal, their dependence mutual,

and their obligations reciprocal," and beneath this her husband placed his name, James Mott. They were married when he was almost twenty-three and she eighteen. Soon after the death of a beloved little boy, she began to speak in religious meetings, at the age it seems, of about twenty-four. After the last war with England, her husband being in some trouble about business, she began to teach school. She and one of her cousins were quite successful, but she ceased to teach within a year, shortly before the birth of her second daughter.

James Mott was a dignified and quiet man,—and Friends have not been given to strong protestations, so that some of his expressions are the more remarkable. Thus, in 1853, he wrote to Lucy Stone: "The money that S. J. May is out of pocket for printing tracts will be paid to him out of the proceeds of the lecture at Cincinnati, and the balance handed to thee when thou comes to Philadelphia, so says the best woman I know in this world." Earlier, in 1843, speaking of the pro-slavery spirit, he says: "Some hard things have been said about one who is dearer to me than life; but she heeds them not, nor turns aside from the outward path of duty and labor."

On her part, Lucretia writes to him on his 61st birth-day, he being away from home: "Fourth-day, my dear husband's birth-day, would that we could pass it together! . . Forty years that we have loved each other with perfect love." And again James writes concerning marriage: "I have lived in that state for more than forty years, and it has been one of harmony and love, though we have had our trials and difficulties in life. As age advances, our love, if possible, increases."

How far our dear friend James was from feeling jealousy of his wife's talent and of the attention bestowed on her is shown by a little anecdote that I remember reading, told by Robert Collyer, who lived for some time in their neighborhood. They had a pleasant country home at Chelten Hills, about eight miles from the city. Robert was walking by one day and our friend James was in the front grounds and was laughing and smiling. He told Robert what amused him. Some persons had passed and one said, "There is Lucretia Mott's husband." He knew his own worth; he may have reverenced her gift.

Thus we have seen what a marriage can be, solemnized by such a mutual contract. The preservation of our simple ceremony of marriage is greatly in the power of women Friends. As it is the custom for the bride to choose *how* she will be married, our young women can do much. Those who would rather marry those whom they love while in their youth, without waiting for increased means, will notice that a simple marriage by the ceremony of Friends is less costly than the pomp and circumstance of a "fashionable" wedding. A Friend whom I lately met at Girard Avenue meeting told me of a church wedding where the groom paid thirty dollars for the playing for a few minutes of a "wedding march," and he was a man of moderate means. Is this the way to begin a union which may last for half a century, and to be able to say, "As age advances, our love, if possible, increases?" G.

AMERICAN AND ENGLISH RELATIONS.

[The following letter was sent, some weeks ago, to the *Herald of Peace*, London, by its writer.]

To the Editor of the HERALD OF PEACE;

Esteemed Friend:

READING, from month to month, with sympathy for the cause of Arbitration and Pacification, the contents of your journal, I am frequently struck with what impresses me as a want of intelligent comprehension of the attitude of Americans,—a large majority, at least, of those in the Northern States,—toward England and the English people. Thus, I may instance in the issue for Ninth month an extract from the London *Globe* on the rejection by the United States Senate of the recently negotiated "Fisheries Treaty." The article has the tone,—not unnatural, perhaps, in an English political journal,—of censuring the Senate, and its assumption evidently is that the treaty deserved, upon moral grounds, to have been confirmed. The reproduction of the *Globe's* article in the *Herald of Peace* is followed by an article in the latter's issue for Tenth month, of somewhat better temper, but concluding with the hope that after the Presidential election "shall have definitely removed from partisan politics their present temptation to obstructive action, the well-considered and wisely-devised provisions of the Fisheries Treaty may pass into international legislation and acceptance,"—the plain implication of this, like the *Globe* article, being that the Senate has acted on partisan grounds, with the intent to influence pending political issues, and in disregard of the moralities involved.

Let me, therefore, in a very brief manner, state a few facts, and make a few suggestions, calculated, I hope, not only to give a fuller understanding of the case to your readers, but to promote in some small degree the formation of "a good understanding" between the two countries to which we belong.

Let me remark, in the first place, that under our constitution, treaties with other nations require the approval of the Senate, and that by a vote of two-thirds. The remark of the *Globe* that the treaty in question was rejected "by a very narrow *majority*" is therefore inaccurate and misleading. The vote was, Yeas 27, Nays 30,—19 being absent. To have confirmed the Treaty, the vote must have been, Yeas, 38; Nays, 19; so that, as you will see, the Treaty fell far short of the approval required.

So far from its being true that those disapproving the Treaty are representatives of a quarrelsome disposition, let me point out to you that all but one of them are from the Northern,—the old non-slaveholding,—States. They, with those absent who also disapproved the Treaty, represent every seat except six which those States have in the Senate,—that is to say 38 out of 44. In the light of history, I suppose no one will claim that the people of the industrial North are especially the enemies of Peace, and I think you may therefore infer from the facts of the vote, as I have stated them, that the Treaty was not disapproved as an attack upon Canada and England. And I may add that among the thirty who voted gaainst it was Senator Jonathan Chace, of Rhode

Island, a member of the Society of Friends, and an active advocate of international peace and good will.

One highly important fact in connection with the Senate's disapproval you seem to overlook. This is that the Senate had given timely notice that it did not advise such a treaty. Several months before its negotiation was begun by the Executive branch of the Government, (to wit, on the 18th of Fourth month, 1886), it passed a formal resolution, declaring that in the judgment of the Senate "a commission . . . . . charged with the consideration and settlement of the fishing rights of the United States and Great Britain on the coasts of the United States and British North America ought not to be provided for by Congress." The vote on this resolution was, Yeas 38, Nays 10, and was not a party division, nine members of the Administration party voting in the affirmative. But the President nevertheless proceeded to name members of such a Commission, (without the approval of Congress), and the treaty, when prepared, failed, as has been stated, not only to get the required two-thirds of the Senate's vote, but even failed of a majority, as had been foreshadowed by the vote of 1886, and had been anticipated by unprejudiced observers generally.

It will not be claimed, I suppose, that all treaties are good ones; or that every treaty tends to establish peace and good will. If not, then there may be permitted an inquiry as to the character of this particular treaty, and even the friend of Arbitration is not bound to assume that its rejection was an act of hostility. I do not propose to go into any examination of its provisions, here: I leave it to reasonable people whether the manner in which it was treated by the Senate, in the light of the facts I have stated, does not create a fair presumption that from the standpoint of an American citizen it was unsatisfactory. I suppose you will hardly insist either that the 38 Senators from the Northern States represent a benighted section of the Union, or that they are conspicuously unfriendly to peaceful measures. If not, I trust you will permit them to exercise their functions under the Constitution, under the obligation which they have solemnly taken, without imputing to them, (as in your issue for Tenth month), a low and cunning partisanship.

There is not in this country any desire to injure our neighbor Canada, or to extort from her any unfair advantage, and the idea of making war upon her or upon England is entertained practically by nobody. Peace is the natural condition of this Republic; whenever it has been forced into war the aggressive influences, (like those of the colonial oppression which many Englishmen denounced in 1776, the arrogant militarism which outraged American seamen's rights in 1812, and the cruel and barbarous spirit of Slavery which took up the sword in 1846 and 1861), have always been those of a diabolism exterior to and in defiance of the true interest and feeling of the nation. Yet unfortunately all these four wars were either begun, promoted, or sympathized with by most of the ruling class of Englishmen, and upon the skirts of that class, humanly judging, lies a great part of the stain of blood shed in the battles on American soil from Lexington down to Appomattox. I pray you, in the interest of that Peace and Good Will which can only be built upon Justice and Truth, to concede to the Americans that right of judgment as to their own affairs which was denied them a century ago, and which is still apparently denied in your articles on the Fisheries Treaty.

HOWARD M. JENKINS.

Philadelphia, Pa., 10th mo. 24, 1888.

LETTER OF SENATOR JONATHAN CHACE.

[As bearing on the subject discussed above, we print herewith some extracts from a letter of U. S. Senator Jonathan Chace, of Rhode Island, addressed to Richard Esterbrook, of Camden, N. J., and dated at Washington, on the 18th of Ninth month. Senator Chace says:]

IN my judgment, the relations between the governments of the United States and Great Britain are as amicable to-day as they ever were. The action of the Senate of the United States in rejecting the treaty negotiated last spring between the plenipotentiaries of the two governments is in no sense a step in the direction of war. It was not so intended, and it is most unreasonable for any person to assume that it has such a tendency. . . . The conditions of the treaty, commonly called the Fisheries Treaty, were so onerous towards the United States, and were so largely a concession to Canada, that there was little difficulty in plainly showing that fact during the debate in the Senate on the question of ratification. . . . . The case, as I understand it, and I believe I do understand it thoroughly, is this: after the Colonies had established their independence and were recognized as a free and independent government, Great Britain entered into a treaty with us in 1783. Amongst other matters which were agreed upon between the two governments, the government of Great Britain conceded the fact that the people of the United States had the joint *right* (please notice that word right) to fish in the waters of the sea near the maritime colonies of the Dominion of Canada. In order that thee may see the extent to which this right was conceded to us by the government of Great Britain, I enclose herewith a copy of Article 3 of that treaty. By reading the same thee will see that the acknowledgment of that right was very broad and full. . . . In this last treaty our fishermen were put at a very great disadvantage. I will cite thee a few of them. First, by the provisions of the treaty our fishermen are put to the humiliating necessity of wearing a number upon each bow of their vessels. Second, the government of the United States bound itself to submit any regulation it might make in regard to the fisheries to the government of Great Britain before its adoption; a most humiliating and unconstitutional provision. Third, the provisions of the treaty require that our fishermen should at all times be subject, not only to the statutes of the Dominion of Canada as they exist at the present time, *but by fair implication, to any amendments* that the Dominion of Canada or either of its provinces might make in regard thereto. Fourth, that the provisions in regard to trial of the fishermen who should be seized by a Dominion cruiser were onerous and harsh

in the extreme. That, in fact, although it provided for ninety days in which to make answer in court, they would really have only thirty days. That, in short, we were to submit our legislation to them but they did not submit their legislation to us, but we were bound by it whatever it might be. By its terms they gain our market, but we gain no market in Canada. That the head-line theory debars us from a large amount of the most valuable fishing territory in the northeast waters, which we possess of a right, and that this theory was never heard of until a few years ago. The provisions of the treaty are such that instead of simplifying these matters they are made much more complex and there will be more danger of vexatious annoyances and collisions than at present. . . .

Now the case is simply this. Shall we as the trustees of the American people, injure a great interest and sacrifice that interest; or shall we reject an unfair and one-sided treaty and again *resort to negotiations*: and is it not wrongful to charge that because we are not ready to surrender the principles of protection and the rights of the fishermen of the United States that so far we are taking a step that will tend to plunge the country into war? My friend, this is most unreasonable and very unjust to us who have been conscientiously acting up to what we believe to be our duty in this case. I affirm that, according to my deliberate judgment, we could do no act *short of an absolute declaration of hostilities*, which would tend more to break up that peaceable and honorable relation between the two countries, which I am sure it is the desire of every honest-hearted Christian citizen to maintain. I well remember, when I was a youth, hearing a Friend, who was a prominent member of our Society, say that while he was a trustee of the interests of others he had no right to sacrifice those interests under a threat; that he must do his duty, and if then collision ensued between the parties his hands would be clean. I do not understand that it is a principle of the Society of Friends that because we are non-resistants, that we are, therefore, to tamely surrender that which is rightfully ours without a protest. Such a principle would strike at the very foundation of our social system. . . .

FRIENDS' CHARITY FUEL ASSOCIATION.

The fifty-third annual meeting of Friends' Charity Fuel Association was held on the 17th inst. The annual summary showed that last winter 412 orders each for a half ton of coal were drawn relieving about 1,350 persons connected with the several families, of whom 626 are reported as minors. In 211 cases the head of the family was a widow or widower; 45 others were single persons; 119 are entered as colored, 98 Irish, 29 German, 5 English, 242 Americans; the others of various nationalities; 214 of the applicants are given as over 50 years of age.

In really needy cases coming to their notice, each contributor has the right to draw orders for half a ton of coal each,—not exceeding the number of dollars contributed, a very liberal arrangement for those who contribute little or much, as the cost of the fuel is considerably greater; therefore it is desired that the relief of suffering be not shifted to others—which a donation to the funds gives the right to extend, also that care be taken not to waste the fuel as well as promote pauperism by ordering coal where the parties can well depend on their own resources.

If any should be in want who are members amongst Friends they should be relieved by their monthly meetings, and not by this charity.

The Treasurer's account having been examined was found satisfactory, and T. Morris Perot, as Treasurer, Wm. Heacock, Clerk, and John Comly, Recorder, were reäppointed, with Wm. B. Webb, Thomas Woodnutt and Edgar Kirby to oversee the order book.

THE SINS OF OMISSION.

It is'nt the thing you do, dear,
It's the thing you leave undone,
Which gives you a bit of a heart-ache
At the setting of the sun.
The tender word forgotten,
The letter you did not write,
The flowers you might have sent, dear,
Are your haunting ghosts to-night.

The stone you might have lifted
Out of a brother's way,
The bit of heartsome counsel
You were hurried too much to say;
The loving touch of the hand, dear,
The gentle and winsome tone,
That you had no time or thought for
With troubles enough of your own.

These little acts of kindness,
So easily out of mind,
These chances to be angels
Which even mortals find—
They come in night and silence,
Each chill reproachful wraith,
When hope is faint and flagging,
And a blight has dropped on faith.

For life is all too short, dear,
And sorrow is all too great,
To suffer our slow compassion,
That tarries until too late.
And it's not the thing you do, dear,
It's the thing you leave undone,
Which gives you the bitter heart-ache
At the setting of the sun.

—*Margaret E. Sangster.*

PRAYER.

It is not prayer,
This clamor of our eager wants,
That fills the air
With wearying, selfish plaints,

It is not faith
To boldly count all gifts as ours—
The pride that saith,
"For me his wealth he'ever showers."

It is not praise
To call to mind our happier lot,
And boast bright days,
God-favored, with all else forgot.

It is true prayer
To seek the giver more than gift;
God's life to share
And love—for this our cry to lift.

It is true faith
To simply trust his loving will,
Whiche'er he saith—
"Thy lot be glad" or "ill."

It is true praise
To bless alike the bright and dark;
To sing all days
Alike with nightingale and lark.

—*James W. White, in Christian Union.*

THE FALLING LEAF.

In the tranquil light of the Autumn sun
The world is resting—labor done;
Before the straying breeze
The brown leaves fall in eddying showers,
Then singly, softly, through stillest hours,
Leaf after leaf
They float to the silent earth.

Leaves that sheltered the summer homes
Of birds, and painted the forest domes
In tints of living green,
That spread a shadow, cool and sweet,
For the weary laborer's noon retreat,
Leaf after leaf,
They float to the silent earth.

Children laugh in the forest old
And bury each other in tombs of gold.
The dreamer in pensive mood
Rests on a hillside carpeted brown
While the hours float by and the leaves float down,—
Leaf after leaf
They float to the silent earth.

—*Alice Gordon, in Unity.*

From the *Christian Register*, Eleventh month 15.

TO A FAR COUNTRY.

Before this number of the *Register* will have reached all its readers, two "Little Women" will be on their way to a far country. It is barely thirty years since either was born, years since childhood full of life's earnest thought and experience. In ways that they knew not, and through paths that they would not have chosen, a wise Providence was fitting them for large duties and responsibilities. One was born and reared among the forests and jungles of Hindostan, unfolding her marvelous soul and mind under the tuition of her learned father. The other, born in the luxury of New England life, inherits the grace and culture of New England ancestry developed by years of study and application. We need hardly say that we refer to Ramabai, the devoted Hindu, who has aroused a continent in behalf of her countrywomen, and her first teacher, Miss Abby H. Demmon, who might almost be called her disciple, who goes to India to initiate the work for the widows of that land. The story of what this little Hindu woman has accomplished reads like a romance. The sketch of her life has been nowhere so well told as in her pathetically charming book, "The High-caste Hindu Woman." Had her career consisted of the remarkable mental development that she has attained, it would have been something far more than ordinary. But added to her intellectual gifts is a soul that can find no happiness except in striving to help those who need succor. Naturally, the condition of the women of her own land touches her deeply; but what a resolve it was for her to come alone to a strange country, to acquire its language, to travel back and forth from north to south, from east to west, twice to the Pacific coast, to try to interest Americans in their far-away sisters! Well has she merited the great success and enthusiasm which she has created by her quiet, forceful words. It was her ambition to raise enough money to build a school and to establish circles of constant donors whose subscriptions should carry it on, that unsectarian instruction might be given to the most oppressed women of all lands. Many of these circles have been formed, so that she feels reasonably sure of continued support. A good nucleus toward the building fund has been raised, though her brave and persistent efforts have not met their full desert in this direction, and she must begin in a hired house instead of building the simple, suitable structure best suited to her school. It has not been easy to convince the people that "the field is the world," and that the dark-skinned women of Hindostan have as much claim on our love and helpful sympathy as those nearer home. Others have said, "Let the English care for their own." But the English have had this opportunity a great many years, and have not embraced it. Now, when the appeal comes directly to the women of America, from one who may be accredited and who is prepared to make the work a success, it seems as though race and sectional feeling might be laid aside, and hearty support be awarded to the noble faith that Ramabai has placed in her American friends.

Weary in body from her self-imposed but arduous task, the little woman is about to return to her native shores. Those who care most for her urge her to retrace her steps, lest like her distinguished kinswoman, the sorely lamented Dr. Joshee, she shall fall by the way before her task is done. As her last efforts here have been in California, where she has vainly hoped that the great souls of that rich land would complete her building fund, she sails from San Francisco, by way of Japan and Calcutta, to begin the life work to which she has devoted herself.

Almost at the same time, possibly on the self-same day, her assistant sails from New York for Bombay. So, between them, the two little women will encircle the globe before they are reünited in their future home.

Meantime, the widows of India, hidden away in their homes, cut off from every association that can give value to life, debarred from knowledge, despised, insulted, cruelly thwarted in every aspiration, are as unconscious of the coming of these angels of mercy and life as were the shepherds with their flocks before the angels waked them with the song of peace on earth, good will to men. What a new world of beauty and goodness and love will open to them

when these gracious messengers find their way to their hearts and open to their bewildered and trammeled feet new paths of freedom and hope! It is a blessed work that they have undertaken. And, though one cannot forget the sacrifice that it involves for the young American to give up the sweetness and amenities of life in this favored land, and may well pity her when the waves of homesick longing, which are sure to come, sweep over her soul, we may also congratulate her on the brave determination and the pure consecration which have led her to give her fair life to the uplifting of those in the darkness and shadow of night. May substantial support in the way of money cheer and encourage Ramabai in her noble undertaking, and may the strength of sympathy and love follow our beautiful countrywoman whom the waves are every day carrying eastward to that far land!

[In connection with the above, the following clipping from a Boston newspaper is furnished us by Mary P. Elkinton, of this city, whose attention had been called to a paragraph reprinted in this paper from the New York *Sun*, in which it was stated that Ramabai had secured large subscriptions on the Pacific Coast, enabling her to take $50,000 back to India. M. P. E. says: "Knowing, from personal intercourse with Pundita Ramabai that the statement in the New York *Sun* must be incorrect, I sent a copy of the clipping to the Executive Committee of the Ramabai Association in Boston. This is the central association, and has full information of Ramabai's movements and success. I have received the enclosed reply. . . . There is still need of active effort to aid the brave little Hindu woman and her noble cause."]

The executive committee of the Ramabai Association desire to correct a statement that is appearing in the daily papers to the effect that Pundita Ramabai, having raised $50,000 for her school, has left for India, and they feel that the following facts are due those who know of her delay in leaving this country, but not the causes leading to it.

When Ramabai left Boston, June 2, she intended to fulfill her Western engagements and sail from San Francisco in August or early in September. The death of her friend, Dr. Rachel L. Bodley, recalled her from the West to Philadelphia. The entire management of her book, "The High Caste Hindu Women," had been in the hands of the late Dean Bodley. To settle this business and transfer it to the Woman's Temperance Publication Association, who consented to take it on terms as generous as Dean Bodley's, occupied several weeks. It was then that Ramabai received an urgent request to hasten to San Francisco and plead her cause before the great educational convention held there in July. Always ready for any summons that will forward her work, she was soon on her way thither. In September she wrote enthusiastically of the kind reception she had received, and of her hopes. She had already addressed *fifty* meetings, the collections from which would amount $1,500. Many circles had been started; and a "Pacific Coast Association," officered by prominent men and women of San Francisco, had been formed, to be auxiliary to the association here. She has presented her cause in the large cities and towns of Washington Territory, of Nebraska, Oregon, and other States, and is again lecturing in California. She hoped to raise $10,000 on the Pacific coast; but to accomplish this her presence seemed to be indispensable. Therefore, at the request of her friends there, and with the approval of the executive committee here, she consented to remain longer. The Western friends are working with a will and an enthusiasm that cannot but lead to success. Several of the prominent women of San Francisco are now canvassing the city, having in their hands a circular indorsing Ramabai's work, signed by all the prominent clergymen of the city and many of the laymen.

It is now Ramabai's intention to sail from San Francisco the middle of November, which will enable her to reach India and begin her work in the cooler months. Miss Abby H. Demmon, the teacher engaged by the executive committee, will also leave in November. No other teacher will be sent out until after the opening of the school.

There are now $18,325.96 in the treasury, without any return from the Pacific coast. About $12,000 more is needed for the general fund, to insure the erection of a school building. And this, with the supposition that the land may be given by friends in India. The committee earnestly ask the public to bear this fund in mind.

It is desirable that circles and individuals, in remitting funds to the treasury, should be careful to specify the objects for which they are given: whether for annual subscriptions, scholarships, or the general fund, the latter of which may be used for the building fund, if necessary. Remittances not specified will be credited to the general fund.

The treasurer, Mr. T. Jefferson Coolidge, Jr., 87 Boylston street, receives the funds, but cannot give the information, so often asked of him, concerning Ramabai and her work. Such information is to be obtained of the corresponding secretary, Miss A. P. Granger, Canandaigua, N. Y., to whom all circles are requested to report. A general report of the work may be found in *Lend a Hand*, a monthly magazine, edited by Rev. E. E. Hale, in the interest of charitable, philanthropic, and educational work.

The "High Caste Hindu Woman" may be had at present from the W. T. P. Association, 161 La Salle street, Chicago.

Boston, Oct. 29, 1888.

LONG, long ago, that Man of men,
Whose life makes human life divine,
Took little children in his arms,
And blessed them with his words benign.

Dear lover of the souls of men,
Still little understood or known,
Did not the children bring to thee
A blessing precious as thine own?

Methinks their gentle touches healed
The deepest wound thy scourging made,
Their kisses helped thee to forgive
The kiss that once thy love betrayed.

Did not thine eyes, thus blessed, behold
What still in childhood's face one sees,—
A glimpse of what the world may be,
When men become "like one of these"?

—*Edith Callender, in Christian Register.*

A WORD ABOUT HAMPTON INSTITUTE.

A short time ago, in these columns, comment was made upon the work accomplished by Atlanta University in reducing the ratio of illiteracy in the South and in demonstrating the ability of the freedmen's children to procure a liberal education. A worthy rival in this field of effort is Hampton Institute. Though the Virginia institution has never taken so advanced ground as did the Atlanta Faculty in provoking the Glenn bill, it has done excellent service in preparing teachers for the colored schools of the South and for the Indian tribes on our Western frontier. Taken conjointly, the two schools may be declared the pioneers in the work of educating America's dependent races, and in preparing the way for the reservation schools now taught by native Indians and for the several really excellent colleges throughout the South which are managed by colored teachers exclusively.

Hampton Institute owes its existence and its present prosperity to the fact that directly after the close of the war General Armstrong became interested in the Freedmen's Bureau. In his position of Superintendent of the Hampton branch, he had every opportunity to study the most urgent needs of the Southern negro population, and in 1867 he urged upon the American Missionary Society the desirability of purchasing the site upon which the present Hampton School stands. The association placed him in charge of the institution, and the Government gave it material encouragement. The essential feature of its curriculum was the combination of intellectual development with industrial education—not mere manual training as now advocated by leading educators, but the actual learning of trades in order that graduates might be prepared to enter immediately upon self-supporting careers. General Armstrong's activity in traveling the country over, explaining his purposes and collecting money for the support of his enterprise, is well known, and particularly, we may say, to old readers of these columns. New buildings sprang up around the old Butler Hall as if by enchantment. The work was extended to include the training of the Indian youth, and the record of the institution is one of steady progress.

A circular from Hampton shows the Institute's present condition and its present needs. In all, Hampton has nine hundred pupils, including representatives of Cuba, China, the Hawaiian Islands and Africa. Class rooms, dormitories, shops, and tables are crowded. For two-thirds of its support the school depends upon the gifts of friends. Sixty thousand dollars a year must be raised from contributions. The work which Hampton is doing among the Indian and the negroes is most practical. Concerning the colored graduates, the following statement is made: "In the earlier stages of a people's progress, the teachers, sphere is on the farm, in the shops, home, and church, as well as in the schoolhouse. During the past twenty years, our army of seven hundred and fifty graduates and ex-students has, in the South and West, done this many-sided work among an ignorant people, eager for knowledge and needing help. Gaining self-respect, they have secured the respect and good will of all; prejudice has weakened, and peace and progress have followed them. The great majority of them are, in a small way, property holders." Concerning the work among the Indians the retrospect is no less gratifying. The announcement from the managers says: "Of the two hundred and fifty-six Indians returned from Hampton to their Western homes, three-fourths have done better than we had reason to expect. Of the one-fourth who have disappointed us, the majority were poor material, of whom we expected nothing. The large majority are supporting themselves as farmers, laborers, mechanics, teachers, etc.; their influence is already felt for progress, and it is steadily increasing. Many more than we can accommodate are willing to come. Our ten years' work for Indians has fully demonstrated the success of practical education for the red race." The Government provides board and clothing for one hundred and twenty Indians, while twenty-two are wholly dependent on charity. The pressure for funds is constant and serious; and as the institution is clear of denominational influences, it appeals to all for support in its marvelous growth and its widely extended usefulness.—*Philadelphia Bulletin.*

THE PROPOSED NICARAGUA CANAL.

The general effect upon commerce would be approximately the same whether the canal had been opened at Panama, or, as now seems determined, at Nicaragua, but with one exception. If the Panama route had been possible, it would have made impracticable the general use of sailing ships, on account of the windless area which extends into the Pacific from the vicinity of Panama Bay, resembling in some degree those vexatious calms at Suez which have embarrassed navigation in the Red Sea in all ages. There will doubtless be much encouragement for steamers upon the completion of the Nicaragua Canal, but this will be caused by the increase of general traffic, not by any disadvantages for sailing ships. The position of Nicaragua in the heart of the Northeast trade-winds, offers especial convenience to all sailing craft, both in the Atlantic and the Pacific, and, though the increase in steam tonnage may be greater than that of sail tonnage, there will quite surely be some increase in the latter. The details of the commercial changes resulting from the canal need not be presented here, but, without considering any of the trade which the completion of this canal would bring into existence, there would be in 1894, at the opening of the canal, a shipping of between six and seven millions of tons annually ready and anxious to use the canal, and paying in tolls a gross sum of over $16,000,000. Allowing generously for maintenance and repairs, there would be a net annual revenue of $15,000,000. It is needless to discuss the vast gains destined to result from the growth of trade fostered by the existence of such a canal. A prominent member of President Cleveland's Cabinet has said: "The profits which can now be exactly calculated of the Nicaragua Canal are very large, and it is unwise to consider the additional gains which must come from the rapid in-

crease of its business, for to those who have not studied the question these gains would seem fabulous." The mind dwells with interest upon the various problems which confront us, now that the canal is an assured fact—questions auxiliary and collateral, but whose importance grows as we approach them, and which may in time overshadow the canal itself.

The possible changes are worthy of deep study. Commercial centers have in the historic period, moved from point to point, with a certain regularity and with a constant regard for geographical position. Constantinople was the great *entrepot* for a time. Later, Venice centered in herself the exchange of the commodities of the East and West, and held it with imperial grasp until the scepter passed to Genoa. Still later, passing further to the westward, it halted for a time about Cadiz and Lisbon, and thence, after a short delay in the Netherlands, it moved from Amsterdam and Antwerp to London. Here the heart and centre of trade has long remained, as is natural, for its next leap to the westward must be across 3,000 miles of ocean, and to a new nation. For this, much prepartion is needed, and when that is completed, there is still needed the immediate cause for the change. This preparation has long been going on, and no one will deny that New York is now ready, when the change shall come, to assume the position of a world's *entrepot*. The immediate cause will be provided by the opening of the Nicaragua Ship Canal.

But not alone will a great change be thus effected and a long leap of the world's center of trade, but a phenomenon new in history will be witnessed, whose far-reaching results can only be vaguely foretold. The currents of trade will be revered in their direction. Hitherto, from the dawn of history the products of Asia have moved westward, and European products have gone eastward in return. Some slight indications of change are to be noticed lately in the movement of a few commodities from China eastward across the Pacific, America, and the Atlantic, to Europe; but a complete reversal of circulation through all the veins and arteries of commerce will be established by the opening of the canal. There is much food for thought in this fact, and he would be a wise man who could foretell the many important results which will flow from this unprecedented and singular occurrence. Who will grasp this great opportunity? What group of capitalists, what nation or race, shall absorb the profits of this vast increase of trade, the advantages of these great physical changes in the position of trade-centres and in the direction of trade-currents? Shall the sagacious Germans, already intrenched upon the shores and islands of the Pacific, seize and hold this power? Or shall a second East India Company grow up in London and Liverpool, with another centre in Australia and New Zealand, controlling the wide trade of the Pacific and pouring its gains into the already swelling money-bags of the merchants of England? Or is there at last a sufficient foundation for commercial greatness to build upon in this country? Have we among our financiers, whose keenness of vision and business ability is unexcelled, a few men of such broad and comprehensive grasp of mind as to realize how simple is the problem of drawing to themselves and to their nation these sure and steady currents of commercial supremacy? Practically, New Orleans will be a closer neighbor to Ecuador than to New England; New York will be nearer to the Pacific than to Europe. If these significant facts do not impress our merchants, the near approach of the canal's completion must soon awaken them.—*Commander H. C. Taylor, in the Forum.*

NEWS AND OTHER GLEANINGS.

—An interesting astronomical expedition is being fitted out at Harvard College for a two-fold purpose. The first in order of time will be an expedition to California for observation of the total eclipse of the sun on January 1, 1889. Immediately after the eclipse one of the corps of observers will proceed to Peru, taking with him a part of the apparatus. He will be joined later by others, and the work will then be entered upon, which has been a year or more in contemplation, of making a complete survey of the southern heavens.

—Since Fifth month, the most powerful artificial light in existence has been that of the St. Catherine's Point light-house in the Isle of Wight, England. It is an electric arc, produced between carbons two and one-half inches in diameter; and it is estimated to be equal in illuminating power to rather more than 7,000,000 candles. It is made to revolve, and every half minute a mighty flash of five seconds' duration sweeps around the sea, and is visible at distances that seem incredible.

—"Russian colonization in Central Asia is beginning to make progress," says the St. James *Gazette*. "The *Invalide* says that there are now eighteen Russian and German Nennonite villages in the Syr Daria, counting 864 households in all. Colonization in those regions commenced in 1875, but for some years it advanced so slowly that in 1880 the colonists numbered barely 200, and it is only during the last three or four years that there has been any notable progression. One-third of the existing villages were founded last year. The Central Asian Railway will no doubt have the effect of considerably enlarging the Russian population of the less sterile portions of the Muscovite possessions that are within reach of its facilities."

—The work of the United States Labor Bureau, under the able management of Colonel Wright, is likely to be of great value through the fullness and variety of its statistics in social and economic directions. A noteworthy feature of the forthcoming annual report will be statistics of the social, sanitary, and economic condition of women employed in factories. The facts given were collected by women employed as special agents for the purpose, and who, in the course of their labors, have interviewed more than seventeen thousand women. Statistics of marriage and divorce, collected from all the courts of the country having jurisdiction in such matters, and covering the years 1876 to 1886, will be the subject of a special report of the Bureau. The facts classified will include the cause for which separation was granted, whether husband or wife obtained the judgment, the length of time the marriage lasted, the number of children (if any), and other facts that throw light upon the subject. The compilation of these statistics covers ground hitherto untouched, and the result will be a summary of the records of over twenty-seven hundred courts.—*The American.*

—Superintendent Chase, in charge of the Indian School at Genoa, Neb., in his annual report states that never before has this school been in such a healthy and prosperous

MILK, CREAM, AND BUTTER ALWAYS ON HAND.

LUKENS WEBSTER,

120 S. FIFTEENTH ST.

Butter delivered twice a week to all parts of the city and surrounding country We are dealing with the most reliable dairies Orders by mail solicited and promptly filled.

GOD REVEALED.

NOT in "the great strong wind" and storm,
Nor mountain rent, nor riven rock,
Nor thunder tones, nor scathing fire,
Nor in the earthquake's awful shock,—

But in the sweet and "still small voice"
Of mine own little heaven-sent child,
Did God reveal himself to me,
And my vain-questioning soul beguiled

From cavil, doubt, and unbelief
Of truths beyond mere mortal ken,
To faith in things "revealed to babes"
And "hid from wise and prudent men."

—*Virginia Dare, in S. S. Times.*

BALTIMORE YEARLY MEETING, 1888.

[*Report Concluded from Last Week.*]

THE consideration of the Queries and the answers thereto was concluded (Men's Branch), on Fifth-day afternoon, (1st of the month), the following being the summary answers:

1. All of our meetings for Worship and Discipline have been held, except twelve for Worship and three Preparative meetings; those in default being chiefly confined to our smaller branches.

The meetings held on the First-day of the week are reported to be attended by most of the members thereof. All of the reports refer to a small attendance upon mid-week meetings.

Unbecoming behavior when assembled is generally avoided, and the hour for assembling is nearly observed.

2. That love which characterizes our Christian profession and which discourages tale-bearing and detraction, appears to be generally maintained, though one report confesses a weakness in this direction.

Most of our members extend the proper care to reconcile differences when they become apparent.

3. So far as appears most of our members endeavor by example and precept to educate their children in accordance with this Query. We believe other children in Friends' families are properly provided for. Care seems to be taken to guard them against pernicious reading and corrupt conversation.

More encouragement is given for the reading of the Scriptures of Truth.

4. With an exception noted in one report our members maintain, in a good degree, our testimony against the use of intoxicating liquors. The unnecessary frequenting of taverns is avoided, but some of our members attend places of diversion. Moderation and temperance are observed on most occasions.

With the exception of one report none of our members cultivate tobacco, and its use amongst us is generally discouraged.

5. Relief is extended to such of our members as require aid, when their condition becomes known.

6. We believe our members maintain in a good degree our testimony in favor of a free Gospel Ministry, resting upon Divine qualification alone.

7. Most of our members appear to live within the bounds of their circumstances, and do not involve themselves in business beyond their control. They also seem to be careful to comply with the other requisitions of this Query.

8. Friends are careful to bear our testimony against Oaths, Military Services, Prize Goods, Lotteries, etc., as queried after, and seem generally clear of oppression in its various forms.

9. In the spirit of love, as enjoined by our Discipline, we believe Friends endeavor to fulfil the requirements of this Query, though one report notes a weakness in dealing with offenders.

10. Our several reports show that care is taken to keep a regular record of births, death, and membership.

11. No new meetings have been settled during the past year, and none have been discontinued.

12. Friends are shown to be careful, as far as practicable, to place their children for tuition under the care of suitable teachers in membership with our Society.

A number of minor changes were reported in the answers to the 11th Query. Warrington Quarterly Meeting is now held in joint session. The meeting at Dunning's Creek has been changed from the former place near Spring Meadows to the new house at Fishertown.

The statistical statement showed a nett loss of 19 members during the year,—caused by the excess of deaths over births. The gains were: births 24, certificates 27, convincement 13, request of parents 2; requests of minors 2; total 68. The losses were: deaths 45, resignations 21, removals 18, disownments 3; total 87.

During the consideration of the Fourth Query and its answers, concern was expressed in regard to weakness disclosed in Baltimore Monthly Meeting. The Clerk's minutes say: "As weakness in one monthly meeting lowers the standard so long upheld by this Society—the members of which were among the pioneers in early temperance work—it is evident that we should clear ourselves as a Religious Society of this violation of one of the vital and distinctive testimonies, that we profess to the world. We therefore recommend that the monthly meeting in which this delinquency occurs be advised to treat in a spirit of Christian love, such of its members who may continue to sell intoxicating liquors in the course of their business, with a view of convincing them that such a course cannot be justified in any manner by a member of our Society, and cannot in the end con-

duce to their well-being in this life or in the life to come."

The draft of an epistle to the other yearly meetings was submitted on Fifth-day afternoon, and approved.

On Sixth-day morning, a communication was received from Women's Branch requesting that men Friends "in making their arrangements hereafter to attend the Yearly Meeting, should set aside the week till Sixth-day evening, for this purpose, in order that all undue haste may be avoided during the several sessions we may hold, and that the closing hours may be crowned with the true dignity and solemnity befitting the occasion." Upon being read, the paper was carefully considered and united with, and ordered to be printed with the proceedings, for the information of members attending the next yearly meeting.

"The subject of the holding of our preparative, monthly and quarterly meetings in *joint session* was spread before the meeting, and a very general expression was given in favor of such change. It was conceded that the assembling in joint session would promote the more general attendance of our members, of both sexes, and would add renewed life and strength to the Society in the administration of its Discipline.

"The subject of holding the yearly meeting in joint session also, engaged the weighty attention of the meeting, and the proposition to make such change in the assembling of that body, in the near future, is now directed to the careful and serious consideration of our members."

In Women's Branch Anna F. Matthews was appointed Clerk, and Elizabeth B. Passmore, Assistant Clerk. In connection with the reports of the quarterly meeting on isolated members, the minutes state:

"These have encouraged us, as bearing evidence that the early training of many of those corresponded with, has proved a lasting impression; and a general desire has been expressed by these that they may be continued in membership, hoping that circumstances may sometime render it possible for them to mingle with Friends and enjoy the privileges of the Society."

The Committee appointed to propose the name of a Friend to fill the vacancy occasioned by the death of Mary L. Roberts, reported the name of Sarah E. Stabler, which was satisfactory to the Meeting.

Separate epistles to the several yearly meetings were drafted, approved, and ordered to be forwarded.

"A communication from Men's Meeting of an exercise introduced by the reading of the Philanthropic Report on the weakness shown in one monthly meeting regarding the violation of the Fourth Query, relating to the sale of intoxicants in connection with their other business, was read and occasioned much exercise, and this meeting could not unite in judgment with Men's Branch, which information was forwarded to that meeting.

From the Minutes of Exercises adopted in the two branches we make the following extracts:

[Men's Branch.] "We are glad to see such a spirit of love and forbearance as is constantly exhibited by our members, one for another, in the discussions arising in the course of business meetings, each member seeming to have the welfare of the Society at heart and all trying for the best methods, that there may be an advancement in keeping with the times; for we think it very evident to all that we must go forward, not stand still, if we hope to be a force for good in the world and do our share of the great work that is constantly presenting to all those who are led and guided by our loving Father and called to do His work. It seems to us that we ought to indorse all right methods of reform that are so much needed in the world and are being so heartily prosecuted by our sister churches. The meeting of the Philanthropic Committee was especially interesting, and we think many of us came from there with a better understanding of what is needed in this great work and a determination to do more. By the answers to the Queries received from our different quarters we find the spiritual health of the Society to be good, but still capable of improvement."

[Women's Branch.) "While we sadly note many vacant seats, and have fewer ministering friends than usual, we are favored with the presence of dear sisters from another yearly meeting, whose ministrations of loving counsel have been truly acceptable, and we have been earnestly exhorted to wait quietly in our tents for spiritual direction before moving along in the performance of life's duties; remembering the command to the Israelites—Go not forward while the cloud rests upon the tabernacle, but move as soon as it is lifted and follow the commands of the leader. The desire has been expressed, that our faith may increase, and that love, the great key-stone of the arch may be complete, and that we may recognize our Father's hand in the stoppings as well as the steppings. We realize that the future of our Society depends largely on the training of our children; unless the small streams are kept flowing the larger ones will fail. We feel encouraged to note that our younger sisters have beautifully responded to the invitation to share in the work of the Church, and the language "without me ye can do no good" is as true as it ever was, and never did the world need the spread of our testimonies more than now."

Does any one complain that the best of affections are transient visitors with him, and the heavenly spirit a stranger to his heart? Ah! let him not go forth on any strained wing of thought in distant quest of them, but rather stay at home and set his house in the true order of conscience, and of their own accord the divinest guests will enter.—*Martineau.*

Lead, kindly Light, amid the encircling gloom
Lead Thou me on.
The night is dark, and I am far from home;
Lead Thou me on.
Keep Thou my feet; I do not ask to see
The distant scene,—one step enough for me.
—*Newman.*

MEMORIALS OF DECEASED FRIENDS.

Testimony of Goose Creek Monthly Meeting Concerning Hannah J. Taylor.

Hannah J. Taylor, daughter of William and Hannah Brown, was born within the jurisdiction of Fairfax Monthly Meeting, held at Waterford, Loudoun Co., Virginia, Fifth month 11th, 1806, and passed the early portion of her life a member of that monthly meeting. In 1827 she united in marriage with Henry S. Taylor and transferred her membership to Goose Creek Monthly Meeting, where she was a consistent member during a long and useful life, and we who were especial recipients of the love and sympathy of our departed friend, are united in offering a brief tribute to the worth of her estimable character, that by its remembrance we may be incited to more fully appreciate and exemplify those Christian virtues that so fully adorned her life from youth to old age. The beauty of her life shone more brightly in the home circle, for she was "given to hospitality," and the warm welcome given to friends as well as strangers, made visits to her home occasions of pleasant remembrance. Simple in her tastes, modest and retiring in her nature and wants, she was withal generous and a cheerful giver to the needy, as many grateful hearts can testify. A kind and sympathetic friend and neighbor, her gentle ministrations to the sick and sorrowing around her will long be tenderly remembered. Industrious in her habits, the humble duties of life were ever faithfully performed. She was ever thoughtful of others before herself, and never in a long and useful life could it be said "she ate the bread of idleness," for she ever "looked well to the ways of her household." She was a Friend indeed, and loved to be with Friends and Friendly people, and so sensible was she of the importance of the attendance of religious meetings that she rarely suffered anything but indisposition to prevent her from performing this duty. A loving and faithful wife, an unselfish and devoted mother, she was the centre of the home around which clustered so many loving memories, drawing with tender sympathy, winning by love rather than command the wayward feet to better paths, teaching by example rather than precept, the beauty of an humble christian life, and showing by deeds, not words, the importance of faithfulness to every duty shown. Her sympathies, even at an advanced age, were ever with the young, and these as well as little children loved her company. She filled the important station of an elder for many years. Her simplicity, meekness, and propriety of conduct ever gave her a place in the minds of Friends, being ever conspicuous for loving kindness and charity, she being adorned as becometh women professing godliness even with "the ornament of a meek and quiet spirit, which is in the sight of God of great price." When one by one her loved ones were removed by death, her Heavenly Father, in whom she put her trust, was her strength and comfort, and she bore these bereavements with sweet submission to his will and left unfaltering testimony in her last painful illness that he had not forsaken her, but was still her refuge and support. She departed this life on the 27th day of Fifth month, 1888, aged eighty-two years and sixteen days. A large and solemn meeting was held in Friends' Meeting-house at Goose Creek, on the occasion, during which living testimonies were borne of her worth and blameless life, after which her remains were interred in Friends' burial-ground. "Blessed are the dead which die in the Lord, from henceforth: yea, saith the spirit: that they may rest from their labors, and their works do follow them."

Memorial of Sandy Spring Monthly Meeting concerning Mary L. Roberts.

This our beloved and highly esteemed Friend was born of exemplary parents, John and Eliza Matthews Needles, the 31st of Fifth month, 1812.

Her mother having died when Mary was quite young, and she being the oldest of a large family of children, early assumed the care and responsibility and discharged her duties in such a manner, that she became not only endeared to her family but to all who knew her.

In the meantime she received an injury from which she never entirely recovered, but with Christian patience she bore it and accomplished much.

She was united in marriage with B. Rush Roberts, in 1836, and remained in Baltimore till the latter part of 1850, when she removed to Sandy Spring, where she became a useful member of the Society; an approved elder and overseer, and was frequently concerned to impress the young with the importance of attending to the cause of Truth and Righteousness.

Notwithstanding her weak physical condition, her charity and attention to the poor and needy were proverbial, and her many acts of kindness and liberal deeds will long be remembered by them.

Her husband, with whom she lived in true affection for forty-four years, was removed by death in 1880, and left her a widow without children. From that time she seemed not to desire to live, as the dearest tie of earth was broken, and after a lingering illness she passed from works to rewards, on the 18th of Sixth month, 1888, in the 77th year of her age.

Her large family connections and friends assembled to pay their last tribute on the afternoon of the 20th, and one of her nieces read the following extract from her Diary, dated First month 1st, 1883:

"In the beginning of this year I have earnestly desired to live so near to Thee, my Heavenly Father, that nothing can lead me from the path of Truth and Righteousness. I desire that every thought, word, and deed may be so pure, that I can retire each night feeling prepared to be called with an acceptance sure; and if not wrong may I soon be called and taken where my beloved husband dwells with saints and angels."

A little paper by Vera Hjelt, issued by the Finnish Woman's Association, urges the importance of technical education for the women of her country, and especially mentions agricultural schools. There are, she says, 7,655 women land owners, and in all 14,078 women who are cultivating land on their own account, besides a large number of day-laborers; yet there are no woman gardeners in Finland, and no schools in which to learn the business.

CONTENTMENT.[1]

(I. Timothy: 6: 6-8.)

The apostle having urged Timothy to withdraw from fellowship with those who wished to use godliness as a means of getting on in the world, goes on to declare that when godliness is sincere—cherished for its own sake—it brings its own reward. He aimed this vigorous protest against the restless discontent and unhealthy ambition which will use any means, even hypocritical pretense to piety, to gain its ends. This is obviously quite a different thing from the wholesome enterprise which naturally brings a man more important work, and prepares him to do it. The motive of such enterprise determines whether it be a virtue or a sin. To be honest merely because it seems the best policy to be so, is not real honesty; and the first strong temptation which offers advantage as a price of dishonesty, will get into its grip the man who acts on that maxim. To do right because it pays, is not righteousness in the judgment of God. Here, therefore, the apostle gives us teaching which may find practical application in the life of every one of us. In effect he says to each—

I. *Seek the Blessedness of Godly Contentment.*

No doubt contentment apart from godliness is a good thing. Seneca and Lucretius, and other Pagan philosophers, were never tired of singing its praises; and Socrates, when he walked through the streets of Athens, and saw around him the evidences of wealth, art, and culture, exclaimed, "How many things there are which I can do without." To some this feeling of contentment with their present condition seems constitutional. There are men and women who have an easy-going disposition, which makes the best of everything. They are not greatly troubled by events which would crush others who are less happily endowed. They rise and fall on the waves of a stormy sea, ever buoyant, while their neighbors are like the piles driven fast into place, ragged and torn by their hopeless contest with the fret and wear of the water. Others again are content not so much from happy temperament, as from the fact that the lines have fallen unto them in pleasant places, and they have a goodly heritage. Belonging to the rich and leisured classes, they have no temptation to win a position, or to make money by unworthy means, for these are already theirs without effort.

It is not contentment, however, which is inculcated here so much as "godliness with contentment." Many a man has been content without being godly, who might have been saved had his content been disturbed and destroyed. "Godliness" is more comprehensible to us who know God in Jesus Christ, for in Him we see God among men living and laboring in the circumstances by which we are surrounded. To be godly is to be Christlike, and besides the stainless purity, the changeless love of that most wonderful life, there was about it the sweet serenity which Paul here inculcates, arising from unfaltering trust in Divine wisdom and love. The Son of Man had not where to lay His head; women from Galilee followed Him, and ministered unto Him, but though He seemed dependent on their charity and thoughtfulness, yet there was no discontent or murmuring. It is harder to receive kindness graciously than to do it generously, but no feeling of pride ever led Him to refuse any well-meant effort to please or to help Him—Almighty Son of God though He was. And by His lowly life He has taught us the truth of His own words, "A man's life consisteth not in the abundance of the things which he possesseth." This leads us to another lesson enfolded in these verses—

II. *Entertain a Lowly Estimate of Yourselves.*

"We brought nothing into this world." Of all God's creatures, the human child is most helpless, most dependent upon kindly care; and one of the lessons taught by the coming of an infant into the home is the lesson of human dependence. What have we, indeed, through life that we did not receive? The very powers which enable us to win position or wealth are as much divine gifts as the wealth itself. A successful man is apt to say, "Well, everything I have I fairly won. I am not indebted to any one. I am not one of those who merely step into the possession of property amassed by another. Whatever I have I made." Yes; but remember that it was God who gave thee power to get wealth. The strong physique, which has borne so well the wear and tear of life; the steady nerves, which in a crisis do not fail you; the resolute will, which never quails,—all these are a heritage, a gift from God, perhaps granted through a long line of ancestors, who have lived honestly, soberly, and godly in an evil world. No one here has reason for boasting or pride, but only for reverent gratitude to Him who has crowned us with loving-kindness and with tender mercy.

III. *Estimate Justly the Value of Earthly Things.*

However precious worldly things may seem, it is certain "we can carry nothing out" of the world when we leave it. It is a narrow bed which will form the last resting-place even for the owner of a province or the ruler of a nation. The Revised Version gives us a more correct, though more obscure, reading here—"For we brought nothing into this world, for neither can we carry anything out." In other words, not only do we enter and leave the world in a state of destitution, as the R. V. suggests, but "our entering it is ordered with regard to our leaving it." The lesson exemplified in death, when we must leave everything, is exemplified also at our birth; so that from the very first we are taught to keep in view this great lesson of the subordinate value of worldly things. Our real blessedness lies not in what we have, but in what we are. Of course, there are some things needful for us while we dwell in this fleshly tabernacle—the "food and raiment" referred to here; but, having these for ourselves and for those entrusted to our care, we may be therewith content; not ambitious to die like one of those of whom men say, "He was worth tens of thousands," while God said, "He was poor and miserable." So short is the time in which we can use our present possessions that we may well pray for grace to use them to the utmost for the comfort and help of our

[1] From Rowland's "Paul's Ideal Church and People."

fellows, and for the glory of God. Sad is the career and dark is the destiny of those who lay up treasures for themselves, and are not rich towards God.

For Friends' Intelligencer and Journal.

ST. LOUIS AND HOMEWARD.

The St. Louis visit was not yet completed in the closing of the last letter. It was a pleasure to meet while there with Mary W. Plummer, daughter of J. W. and H. A. P., of Chicago, and to visit her in the Public Library, where she has a position. The books number almost 80,000, and the mode of cataloguing, which has been in operation eleven years, is very convenient and complete. The building is old, and not so well adapted to its purpose as would be desirable, but they hope ere long to erect a new one with all the modern improvements. The reading-room is commodious and well lighted, and it was a cheering sight to see so many availing themselves of the privilege afforded. No conversation is permitted and the silence was complete. There is a department containing some very valuable and costly works mostly pertaining to science and art, embracing charts, maps, etc., which cannot be taken from the building, but a private room and desk are appropriated for their use.

I met here with Oliver E. Cope, great-grandson of Jesse Kersey, (his mother, Hannah Cope, residing in Salem, Ohio). He is engaged in business and far removed from a Friendly centre. He was very glad to meet with Friends, and the pleasure afforded was reciprocal. It is comforting to meet with young people in the heart of great cities who are living uprightly and endeavoring to build upon the true foundation, even if they do not observe the usages of their forefathers. Yet always there is the arising of desire that we might have planted through greater faithfulness religious homes, even as other sects have done.

I attended a meeting of the Women's Auxiliary of the Western Unitarian Conference, where reports were read of their post-office Mission, and a paper by L. W. Learned on "The New Theology, and What is Andover Orthodoxy?" which evidenced research and intelligent thought concerning the interesting subjects suggested. Among the topics for other meetings are: "What are the cardinal virtues of mothers?" "How shall mothers develop responsibility in their children?" "What is the mother's duty in regard to her children's associates?" "The Hindoo religion and the errand of Ramabai," etc.

After a very pleasant visit and rest with relatives and friends in St. Louis, I left for Richmond, Ind., on the 17th. Snow had fallen, and the weather became colder. which somewhat reconciled one to leaving Blue River settlement unvisited, hoping other feet would turn their way thither, though life abounds in their midst, and there is much to build upon in home material,—thus causing regret that I should miss the influence of encouragement which might have been gained by closer mingling with them. The beautiful snow tipped the bushes and trees as with white blossoms, and mingling with the verdure, still bright in many places, made a pleasing contrast. The country was quite rough after leaving St. Louis, one of the passengers remarking, "How we should enjoy some of these hills on our Kansas prairies!" She had formerly lived in Ohio, and had not become entirely reconciled to the monotony of the plains. We came to level land, however, with wide-spread fields of wheat and corn,—much of the latter not yet husked. We looked almost regretfully upon the one-story cottages in the towns we passed, having seen how much comfort is to be found in them, with the saving of so many steps, and how those who live in them, though previously accustomed to our several story Eastern homes grow to prefer them, and enjoy the convenience thus afforded. Yet in view of all these considerations, one still feels a preference for lodging rooms higher in the air.

It was almost dusk when we reached Richmond, where I was glad to be met and taken to the old familiar home of my cousin, Elizabeth Starr, who since a former visit has passed from earthly surroundings to other mansions of our Father. Her son James and his wife Sarah now occupy the house, and have made many improvements. It was a comfort to gather with Friends in the silent meeting, for it had been many weeks since I was privileged to meet with those accustomed to our manner of worship, at least with few exceptions. Some of the meetings, it is true, had been precious seasons, wherein all sense of being among strangers was lost sight of, and a grateful, appreciative spirit recognized, love banding us together in the bonds of a common humanity and a Providence about us all; yet it was good to mingle with those who naturally understood our usages, and there was a yearning of spirit that our lives might correspond with our profession, that each member might feel the responsibility of holding all our meetings in the life, and never as a dead formality. And how much these occasions would be enriched by the earnest receptive attitude of every spirit,—not depending on the two or the three to conduct them, but realizing a united privilege and duty in wrestling for the blessing.

The social mingling in the homes of relatives here was very enjoyable—embracing Wm. C. and Anna M. Starr, Benjamin and Mary B. L. Starr, with their families, also Catherine W. Braley, the only remaining member of Elizabeth Starr's brothers and sisters. Among other interests I visited the hames factory and brass foundry of W. C. Starr, and was surprised to find the variety of labor constituting the manufacture of that simple piece of harness, the hame. They are all made from stumps or roots having the natural bend in the wood, passing from one lathe to another until perfected in form and made ready for the attachments of brass, etc. I had the pleasure of seeing them mould the castings,—a process requiring the greatest care, beyond aught we had imagined, leading to the thought of how essential is skilled labor, each one being fitted for his or her department in life. I saw a "bit" or mouth-piece for the horse perfected in a very short time, also the welding of chains, the sparks flying from the anvil in every direction. Having seen very little of any kind of manufacture, I was led to think of the pleasure and profit which would accrue to the young minds

by more frequently affording them such opportunities.

A company of enterprising citizens of Richmond are having the natural gas conveyed to the city from Chesterfield, fifty miles distant, at a great cost, and many are having the pipes laid into their buildings, anticipating greater convenience and comfort from this mode of heating. It seemed as though there would be a feeling of uncertainty as to the continuance of supply, but it may be as extensive as the beds of coal, which seem inexhaustible. On Fourth-day morning I gathered again with Friends for worship, realizing anew the vital importance of being banded together in love, not in an exclusive or sectarian spirit, but on a broader basis, embraced in the declaration of Jesus: "By this shall all men know that ye are my disciples because ye have love one unto another." In the afternoon we visited several Friends not able to attend meeting, among them Cornelius and Mary Ratcliff who live a short distance from the city. He has lived in the same place for seventy-eight years, and they have been married sixty-seven years. Both are now blind,—he for nearly ten years, she about three. It was pleasant to see them sitting together by the cheerful hearth fire, so companionable to each other and those around them, recounting many blessings by the way, and trustful for the future. In the course of conversation, speaking of the comfort and profit of assembling for spiritual refreshment, Cornelius remarked that for many years he kept a diary, and in referring to it found he had only been absent three times in forty years from their week-day meetings, and had never sustained any pecuniary loss, but rather experienced gain thereby.

We rode out to the beautiful suburban home of Caroline Reeves, and had a pleasant call with her; also in sight of Earlham College, under care of Orthodox Friends. We saw in the distance new buildings, one of several asylums for the insane in Indiana; and while it is a comfort to know that provision is made for this class in the community, yet the crowded population of these homes leads to serious inquiry as to the causes contributive thereto, and what can be done by right living and thinking to stay this tide of infirmity. I bade farewell to the kind relatives in Richmond the evening of the 22d, taking a sleeping-car for Philadelphia, but kept awake after leaving Pittsburg at 3 a. m., to watch for our own mountain scenery, wanting to compare it with the granduer so recently enjoyed in Colorado, and was pleasantly surprised to find it so enjoyable, even by moonlight. It was daybreak when we made the "Horse Shoe Curve," and it was as beautiful as ever. As we proceeded the rising sun tinted the slopes, enhancing the beauty of the scene. The mountain scenery was more extensive than I had remembered, continuing longer after leaving Altoona than I thought, and the country was so fine and highly improved, it seemed to me no State could excel, if equal, our own. Coupled with this was a feeling of deep thankfulness for the privileges and opportunities afforded in these weeks of travel, and for a safe return to home and friends,—arriving in Germantown Sixth-day afternoon to find all well.

In writing these letters there has been a feeling of freedom as if corresponding with the home friends, and this has afforded me a pleasure in the long absence which I trust has not been unprofitable.

L. H. P.

West Chester, Pa., Eleventh month 24.

EDUCATIONAL REPORT IN BALTIMORE YEARLY MEETING.

To Baltimore Yearly Meeting:

Dear Friends: The Committee on Education one year ago entered upon the work for which it was appointed with a full realization of the importance of the concern allotted to them, and of the existing necessity for doing nothing that would involve the expenditure of much money. Relying upon the Committee for the Disbursement of the Fair Hill Fund to extend aid to all who needed help to secure educational facilities, the Committee have not until lately invited any calls for help to establish schools, or to improve those already in existence. For these reasons the schools of the yearly meeting have had to depend entirely upon their own resources during the last twelve months.

Early in the summer the Executive Committee issued a circular letter to all members of the General Committee in reference to educational matters in their respective neighborhoods, and requesting answers to certain questions. From time to time replies to these have been coming in, and now we are in possession of information that indicates that there has been *no* progress made, since stress of circumstances forced us to suspend active operations in 1887, while in some places what vantage ground had been gained has been lost, or is in danger of slipping from our grasp, for lack of aid which we could not extend. Of the $150 given us for use by our last Yearly Meeting, but $12.50 has been spent, the appropriation being so small that we feared, in the start, that we would fall short should we begin by encouraging schools to hope for assistance from the Yearly Meeting.

In Seventh month last to the circular letter, addressed to our correspondents, a very general response came, and from time to time since the Committee have been informed that languishing schools might be revived, and others might come nearer to their highest mark, if aid could be obtained to procure some little additional equipment that might enable them to offer advantages somewhat superior to the neighborhood schools by which they are surrounded. It has always been said to us that Friends' schools are preferred, all other things being equal, and that if they can be made a little, or much better, by having good teachers and books of Reference, a few Charts, etc., people not in membership with us will be willing to patronize them and thus aid in their support.

If it is important that Friendly influences be put around our children the school is preëminently the place to do it, and while the large percentage of children of our Society attend schools where there is no Friendly tone, but, on the contrary, are wholly an-

tagonistic to it, we cannot expect much spread of a knowledge of Friends' principles and testimonies.

To our question: "How many children of your monthly meeting attend schools not under the care of Friends?" answers have come from eleven. Five of them say all attend such. One says none, and the other five say 100 of 211 attend schools not under the care of Friends. One encouraging feature of these reports is that in Sandy Spring, where we have worked to establish a school, only 6 of 55 are not in Friends' Schools, and Dunning's Creek reports none attending schools not under care of Friends.

It seems to the Committee that there should, therefore, be no relaxing, but, on the contrary, greater vigor than ever thrown into this work. Now that First-day Schools are doing the work of strengthening the interest in the principles of our Society, our children should not be drawn away therefrom during the other six days of the week. Should we not rather try to supplement the work of home and the First-day School and of the meeting in our every-day schools?

With the reports just received came requests for some assistance, such as has been given by the Committee in the past to our subordinate meeting schools and several members have given notice that others would come. Seeing this evidence of renewed interest, and the anxiety of many now present to put their children among Friends, the Committee feel that we may again start forward with abundant hope of reward.

Inasmuch as the appropriation made last year has been carefully retained in the treasury, hoping that our work could, for a time, go on without our encouragement or help, in which we have been disappointed, and anxious to make due amends by greater care and effort in the future, the Committee would ask that the amount unexpended and $50 additional be set aside for their uses for the coming year, if it be the pleasure of the yearly meeting to continue the work.

Respectfully submitted,
ELI M. LAMB, *Clerk.*

Baltimore, 10th mo. 30, 1888.

SCRIPTURE LESSON, No. 47.

TWELFTH MONTH 9, 1888.

TOPIC: NECESSITY FOR SPIRITUAL SUPPORT.

GOLDEN TEXT.—"Not by might, nor by power, but by my spirit saith the Lord of Hosts.—Zech. 4: 6.

READ Judges 7: 1-8.

WE pass over the administration of several Judges whose names are given,—among them is Deborah, a prophetess,—and come to Gideon, upon whom "the spirit of the Lord" rested. After testing, by a custom that was universal in ancient times, and that the world has not wholly lost faith in, even in our day, Gideon is assured that the Lord has chosen him to deliver Israel from the host of the Midianites.

Our lesson portrays the wisdom and far-sightedness of Gideon, who will not go up against their enemies with the whole armed force of the nation, but choosing picked men, only three hundred in all, he trusts in the strong arm of Jehovah for deliverance. We have need again to remember that the people of Israel had no higher conception of God at this time than what comported with the thought of themselves as his chosen people, before whom all other nations were as nothing. He was their God and they were his people, and whatever injury they could inflict upon these idolaters was approved of God. It seems a monstrous idea of the Divine Being, the Creator of all things and the Ruler of the universe, but entirely in keeping with the low standard of justice and morals that then prevailed, and that continued to govern men in their intercourse as nations, long after the blessed Jesus declared "one is your Father, even God, and all ye are brethren." It was reserved for the Gospel to disclose the great truth, "God is no respecter of persons, but in every nation he that feareth him and worketh righteousness is acceptable to him.—Acts 10: 34, 35.

Gideon's faith and confidence in God was an inspiration to the little band of warriors who ranged themselves under his leadership. This is always the result of faithful leadership. The man who undertakes any work, whether it be secular or religious, in the courage of his convictions, is the man who rarely fails in his undertakings. The first element in success is the feeling that the effort is the right one, and with the Divine help will be accomplished.

Gideon had infused this thought into the minds of the men who went with him; the right of choice had been offered them; he had caused it to be proclaimed, "Whosoever is fearful and afraid let him depart and return to his place."

So the people took victuals. They prepared themselves with provisions. The Hebrew people were not allowed to partake of food prepared by the hands of idolaters; it might have been offered to heathen gods, or it might have died of itself or been cooked in the blood; in either case it would have been an abomination to the Lord. The trumpets were always an accompaniment of the army then as now. Notwithstanding all his precautions Gideon found that his main reliance was upon God, who, he believed, had chosen him to rescue Israel.

The artist who would give upon his canvas a truthful picture of some vast stretch of a beautiful land with its varied charms of hill and dale, lake and river, and the nestled homes that adorn the whole, takes his view from some elevation more or less remote from the scene he would depict. In this bird's-eye view the minor details, which a more intimate and closer view would discover, and which, if portrayed, would mar the beauty of the picture, are lost. In the broad survey only the prominent appears, and in this lies the peaceful serenity that satisfies the soul, the grandeur and sublimity that fills the heart with joy.

It is thus, also, that to arrive at a truthful realization of the moral and spiritual condition of the world one must allow his thoughts to run over great stretches of time, and from a standpoint so elevated above all bias of prejudice, as to enable him to behold the salient features that mark the broad field of human endeavor and human achievement. To him

that does this the evils of society, the wickedness and sinfulness of mankind, seem like the bogs and fens; the malign features in the grand whole that are lost in the contemplation of the steady growth toward the true and good in the history of mankind; a steady advancement towards the highest and best in morals and religion. We thus behold nations rising in majesty by the arts of peace; as gradually the human conscience is becoming attuned to the spirit of the Divine which we cannot fail to perceive is operating in the universe. The righteousness of a people becomes the permanent in their history that goes down to future ages and is revered. In the great heart of mankind springs up ever a new and grand inspiration that causes men to "rise on stepping stones of their dead selves to higher things." The hearts of the people in the most enlightened nations to-day are all aflame with duty. Their religion is taking on a practical form of philanthropy that is seeking to rid the world of its evil influences. War still has its votaries, great armies are marshalled, but where formerly nations were ever ready to settle their differences by the sword, now they join themselves together in efforts to maintain a peace, and the peaceful methods of arbitration are more and more finding favor in their councils. The higher intelligence of mankind is seeking, not as in Gideon's time, for Divine aid in planning and achieving battles, but in discovering the best way to avoid them. The souls of men to-day are becoming more and more open to the knowledge that spiritual strength abides with and inspires those that would remove all causes of war, and establish a universal brotherhood of men among whom there shall be no longer wars nor rumors of wars.

HONORING GOD.

"Honor God with thy substance and the first fruit of all thy increase; so shall thy barns be filled with plenty and thy presses burst out with new wine,"—not the wine we may not look upon when red in the cup, but the pure wine of the kingdom bearing the insignia of holiness unto the Lord, full of faith, hope, and charity that is not puffed up, exalteth not itself, thinketh no evil, suffereth long and is kind; always maintaining that sweet simplicity that becomes the followers of Jesus Christ; with meekness and humility advancing their profession, running the race set before them, doing the work assigned them, inviting by daily example to the world without—"this is the way, walk in it." One undying truth was understood long ago—the nations of those that are saved shall walk in the light of the Lord.

The time has come
When each happy home
Unite in fulfilling the law
Written in the heart;
And to such will impart
Grace the careless never saw.

Peace flows like a river,
With thanks to the Giver;
The oil and the wine
Both are divine.

PHILADELPHIA, TWELFTH MONTH 1, 1888.

OUR MANNER OF WORSHIP.

When we thoughtfully consider what it is to assemble for Divine worship and to whom the worship is offered, we can hardly fail to discover how nearly George Fox and his colaborers made practical the teaching of Jesus, in the manner of public worship which they adopted for the society of which they, humanly speaking, were the founders. It required a deep insight and a wisdom that drew its inspiration from the great fountain of spiritual life, to look beyond the forms and ceremonies by which the worship of our Heavenly Father was trammeled, and realize that the "hour" had indeed come, when "they who worship the Father must worship in spirit and in truth." And we cannot over-estimate the faith and courage that enabled them to be true to their convictions while the whole Christian world was without sympathy, and even intolerant towards them.

Let us inquire what is worship? The answer is not far to seek. It is homage, reverently offered, and its origin is traceable to that sense of obligation to the Supreme Being which inheres in the whole human race. But this Being cannot be approached as man approaches his brother-man, nor receive the homage that is offered through outward forms. The old prophets in their times of spiritual illumination called the people away from a dependence upon forms and ceremonies, and Jesus seeing the tendency to this outward, formal service was pointed and severe in his condemnation, charging the worshippers of his day with making long prayers, and being careful to observe the law that they might be seen of men. It was after he had accused the Samaritans of worshiping "that they knew not," in his interview with the woman at the well, that he gave utterance to the great fundamental truth concerning worship which the Christian world has been so slow to adopt and embody in the usage of the Church. "God is a spirit, and they that worship him must worship in spirit and in truth," He made the foundation of all worship. This calls us to gather in our assemblies in silence, for only in the stillness of all that is outward can the soul be made sensible of the presence of the Great Master of Assemblies, and prepared to hear his Inspeaking Voice.

Congregational services, beautiful as they may be made, and the eloquent sermon, full of strong, earnest thoughts of duty and responsibility, cannot supply the requirement of spiritual worship. They are the means adapted to awaken the thoughtless to a sense of the fealty they owe to God, to encourage the seeking ones to continue to ask until the promise is fulfilled, and to incite the faithful to greater diligence in the service of their Divine Master.

But to those whose minds have been turned into the channel of thought that leads to a more spiritual observance of this duty, the coming together with one accord in the place appointed for public worship and there waiting for the manifestation of the Divine Presence, is the highest ideal of true worship; and as the unity in service is felt, there is an overflow from one to another as each heart is open to receive, and, although not a word is spoken, the bread and the water that nourishes the divine life in the soul, will be dispensed. The life of the Church is to be found in the secret communings of its individual members and this as certainly in the congregational capacity as in their private devotions. "It is the Spirit that quickeneth, the flesh profiteth nothing," was the testimony of Jesus; and what an abounding favor that man who through his fleshly desires and instincts, is allied to the grovelling things which perish with the using, may, through the power he has to apprehend and comprehend God and eternity come into union and fellowship with Him, and be a partaker even in this life of the good things that He has in store for them who love Him.

Friends have need to observe diligence in the carrying out of this testimony and to acquaint themselves through study and meditation with the ground upon which it rests, that they may be able to commend it to those who are inquirers and have an intelligent understanding of the obligations that are implied in accepting as a doctrine of the Church, the spirituality of divine worship.

We call attention to the announcement of the Yearly Meeting's Committee (Philadelphia), of an Educational Conference, to be held at Race street Meeting-house on Seventh-day of this week, the 1st of Twelfth month. These conferences have heretofore been found very interesting occasions, the discussions being usually practical, direct, and intelligent.

Greatness is rarely born of the multitude. Individual power is the product of a wide horizon. Inspiration springs from solitude, and the Infinite comes nearer as the finite recedes from the mental vision, only solitude must not be filled with self.—*A. W. u e.*

MARRIAGES.

MERRITT—WILLIS.—At the residence of the bride's parents, Wading River, L. I., Tenth month 17th, 1888, in accordance with the order of the Society of Friends, Jesse Merritt, of Bethpage, L. I., to Pauline, daughter of Charles Willis, of the former place.

DEATHS.

DUELL.—Near Woodstown, N. J., Eleventh month 4th, 1888, Hannah T., wife of Elmer Duell, in her 58th year. She was a valued member of Pilesgrove Monthly Meeting.

In the death of this dear Friend, not only has the home circle sustained a great bereavement, but the meeting of which she was a member, and the First-day school where she took an active part as teacher, until her health gave way, since which time she was always found (health permitting), in the adult class.

During the past few weeks of her life she had much suffering and weakness of body. But she was favored to keep her mind clear, in that undying faith, that our Heavenly Father doeth all things well; and her cheerful countenance bespoke that she was resigned to whatever His will might be. She leaves besides her husband, a son and daughter who feel their loss deeply. Her consistent life should be an incentive unto us to follow her blessed example. J. B

DUNWOODY.—At Newtown Square, Pa., Eleventh month 21st, 1888, J. Penrose Dunwoody. Interment at Friends' ground.

MORF.—In Philadelphia, Eleventh month 21st, 1888, Lydia A., wife of Henry Morf. Interment at Evesham Meeting ground, N. J.

PERRILL.—Eleventh month 9th, 1888, Laura, wife of Alfred Perrill, and daughter of Penrose and Elizabeth Ambler (members of Little Britain Monthly Meeting) passed from earth life after a lingering illness, (consumption), aged 36 years.

In the early part of her sickness she hoped to be restored to health, that she might be a companion to her young husband, and aid in training their little son; and also have loving companionship with parents, brothers, and sisters.

Medical aid and all the tender care of husband, parents, and loved ones were given her; for the past year her mother was her constant nurse, and all was done that was in their power to relieve or stay the disease. But alas! all in vain! When she realized that her end was near she was calmly resigned, and often talked with those around her with strong faith in the Divine Power to soothe and comfort, and give her strength to bear her affliction; frequently expressing her resignation, saying "Oh! Lord, Thy will be done!"

It was a blessed privilege to the writer of this article to be with her and her loved ones the last day and night of her life here. She was so calm and peaceful; said "I am ready and waiting, am not afraid to go, all is peace, I find nothing in the way." Oh, what a blessing to know and feel the Divine Power was there in full measure to comfort all in their sad bereavement. L. M. B.

POWELL.—At Bethpage, L. I., Eleventh month 16th, 1888, Sarah T. Powell, widow of the late Richard S. Powell, in the 86th year of her age; a member of Jericho Monthly Meeting.

STOKES.—At Allegheny City, Pa., Fifth month 19th, 1888, John Lancaster Stokes, son of Henry and Anna P. Stokes, formerly of Rancocas, N. J.

For Friends' Intelligencer and Journal.

A GERMAN CITY.

TWENTY-ONE miles north-west from Leipzig, on the right bank of the Saale, lies the city of Halle. When first I heard the name, a vision of great halls with marble columns, filled my mind; but those who know Halle better, are aware that it gets its name from the deposit of salt in the neighborhood.

The bob-tail horse-car takes us from the station along Leipziger Strasse and past the Round Tower, the chief remnant of the old city walls. Here we cross the New Promenade, which is at the same time an ornament to the city, and a memento of the dismal past, when cities had to have great, ugly, confining walls and narrow, crooked streets. But, I suppose, if it were not for gunpowder, these European cities would still have battlements surrounding them. So the progress of the science of destruction leads the way towards the arts of peace.

And now we pass through one of these winding streets into the old town. In some places scarcely wide enough to allow two vehicles to pass, this main street opens out at the City Hall into the Market. This was the center of Old Halle. Here is the Rathhaus, where the Bürgermeister and the Council met and still meet; and here, in the open space around, where the statue of Handel stands, the peasants and flower-girls came and still come to sell their wares.

Yonder is the Red Tower, the bloody memorial of the executions: the condemned stepped out from its windows upon the scaffold erected in the square. On the west side of the square is the Marketkirche, a strange structure, formed by the union of two churches that formerly stood here; thus it comes to have four towers and two choirs. Some of the cosy apartments in the walls, which look like places for tombs, serve for pews and have windows opening into the body of the church, through which the pious occupants can hear and yet scarcely be seen. Of course those who come to church to show themselves and their clothes, do not rent these pews. If we climb one of the eastern towers, we obtain a good view of Halle and its surroundings. The two towers are connected by a bridge, and here the fire patrol lives, and marches to and fro, watching for fires over the city.

To the northwest, only a couple of squares distant, are the ruins of the Moritzburg, the citadel of Halle. But the view from the west bank of the Saale, opposite the crumbling walls, is the most picturesque. So, wending our way through the clean but narrow streets, in a few minutes we cross one of the arms of the Saale, and looking back, we see rising directly from the water's edge and blackened by the wear of the elements, Moritzburg, presenting a picture fit for the artist's pencil or the dreamer's fancy. For, during the latter part of the Thirty Years' War, Halle and the neighboring parts of Saxony was the fighting ground for the contending armies, and many a siege has Moritzburg sustained. Yonder to the southeast is the field where Graf Tilly yielded his glory to Gustavus Adolphus; and at a little distance further to the west is the field of Lützen, where, in 1632, Gustavus himself fell mortally wounded, but victorious, over his only rival, Wallenstein.

So that even the horrors of the past, the misery endured, and the mistakes committed, are a heritage to succeeding generations not wholly without advantages. The world would not be nearly so interesting nor so dear to us, if it were not for the struggles and failures, mistakes and worriments of the past; for the present and future are full of such trials, and the consolation needed in the midst of these discouragements comes from a contemplation of the past. The angels in heaven do not attract our attention half so much as our fellow-creatures around us, who have lived, suffered, and triumphed in the same difficulties in which we find ourselves.

Leaving Moritzburg and turning into the City Park, we are soon in the full enjoyment of one of the prettiest parts of the famous Saalthal. The river spreads out into half a dozen branches, forming a dozen or more charming islands, called the "Meadows." Here is the favorite promenade of the citizens. At the end of Nightingale Isle is a pontoon bridge across the Saale, and here begin the high banks that give additional beauty to the scene. On the left is a pretty afternoon resort and pavilion with a charming view. Along the river bank stretches the village of Cröllwitz; and there, right opposite are the tower and ruined walls of Giebichenstein. The vines and trees have done their part also to make the dismantled castle beautiful. There are more famous ruins, grander in size and more renowned in story; but Giebichenstein is unrivalled in picturesqueness. The eye has but to turn to the neigeboring "Rocks of Trotha" to remind the beholder of the lines of Eichendorf inscribed on a pillar erected at one of the prettiest points of view in the whole valley:

"Da steht eine Burg über'm Thale
Und schaut in den Strom hinein,
Das ist die fröhliche Saale,
Das ist der Giebichenstein.

"Da hab'ich so oft gestanden,
Es grünten Thäler und Höh'n,
Und seitdem in allen Landen
Sah ich nimmer die Welt so schön."[1]

Crossing the Saale to the right bank again and returning to Halle through the fine wide streets of the new town, we pass along the Old Promenade between the University and the Theater. Frederick I. founded the University of Halle in 1694. Frederick the Wise founded the University of Wittenberg in 1502. At the fall of Napoleon, in 1815, when nearly every thing was being reärranged, these two Universities were united, and the institution now bears the title "The United Fredericks University of Halle-Witten-

[1][These verses may be freely rendered in English as follows.—EDS. INTELLIGENCER AND JOURNAL.]

There looks o'er the valley a castle,
And down at a stream so fine,
'Tis the joyous river Saale,
And turreted Giebichenstein.

There have I stood, O, so often!
'Mid blossoming vale and height,
And since in never a country,
Have I seen this world so bright.

berg." So the present structure, erected in 1834, is the modern representative of the University of Wittenberg, where Luther was professor of theology in the first half of the 16th century.

As we are concerned more with the outward looks of Halle at present, we will not enter the University Building, but proceed down the Old Promenade to Steinstrasse. Here is the Post Office, and as we look down the street towards the Market, the liveliest scenes in Halle present themselves. Here comes a milk wagon drawn by two dogs. Yonder a girl and a dog share the pull together. They are drawing a load of coal. Behind them is a push-cart, loaded with trunks and beddings, and pulled and pushed by three "Dienstmänner." Here comes rumbling along, as if it were the Spirit of Thunder, a great heavy wagon, as large as a freight car, on very small wheels, pulled by two strong horses. This is the kind of conveyance the Germans use in moving household furniture. In front of the Post Office is a stand for "Droschken," and behind in the yard are the yellow package-delivery wagons of the the Parcels Post.

At the corner is the "Hotel zur Stadt Hamburg," and opposite is the office of the Royal Lottery. For the Germans still believe in throwing money away in the hope of gaining a fortune by chance. But in general they seem very well contented with their lot, and proud of their country and its past history. In the schools pains is taken to cultivate the national spirit, and just as American school-books tell us the United States is the greatest nation in the modern world, so the German geographies teach their young learners that "the German Empire is the first land-power in Europe."

HERMAN T. LUKENS.

Halle a. Salle, 10th mo. 29, 1888.

NEWS OF FRIENDS.

DUANESBURGH QUARTERLY MEETING.

THIS was held at Quaker Street, N. Y., on the 17th, 18th, and 19th of Eleventh month. Friends were in attendance from Purchase, Westbury, and Saratoga Quarterly Meetings. The meeting of Ministers and Elders, although small, was one of much interest. Charles M. Robinson, of Chappaqua, spoke with tender feeling, exhorting all to greater diligence in the performance of known duty, and fearful less some one in the little company might be suppressing a gift that was meant to be a help and strength to the whole body. On First-day morning many Friends gathered at ten o'clock to attend the exercises of the First-day school, which was full of interest and a source of profit to all engaged in the work. At the close Philip Dorland, of Saratoga, addressed the school in a few pointed remarks. At 11 o'clock the meeting was nearly all gathered and after a short season of solemn stillness, Philip Dorland bore a lively testimony to the truth of the gospel as held by Friends, claiming that with entire consecration of heart, such as the Father requires, we may become so permeated with his blessed Spirit that we become heirs of God, and joint heirs and co-laborers with Jesus Christ. His discourse throughout was earnest and impressive. Charles Robinson followed in a tender appeal to go down into the depths, and there be willing to put aside every thing that is harmful, that hinders the uprising of the pure life of God in the soul. Then shall we become willing to proclaim, like one of old, "Surely, Salvation is of the Lord!"

On Second-day the meeting was smaller than usual at this time, on account of the bad condition of the roads, several members of the different monthly meetings not being able to be present. Philip Dorland was led to speak at some length on the power and efficiency of prayer,—that all true prayer is a condition of the mind, and that this prayerful condition must be so constantly preserved and dwelt under that the words and actions of our lives shall be but the out-growth—the echo of a prayer. Charles Robinson followed, speaking to our peculiar needs as a Society,—that we are not to look backwards complacently, over work already accomplished, but come with willing hands to take up and carry on the work left by dear ones who have passed from our midst; and let us search deep, and see if it is not mainly through individual unfaithfulness that there has been a falling off in our membership, and so many vacant seats in all our meetings. Not in the way of discouragement, but with loving entreaty he led us to draw very near to the Fountain of all Good, to watch and wait for the little pointings of duty, and a willingness to follow the Divine leadings.

The business of the quarterly meeting followed in harmony and good order, and the meeting closed with a feeling of renewed spiritual strength, and of gratitude for the social commingling which these occasions afford. M. J. H.

THE WILLIAMSON INDUSTRIAL SCHOOL.

ANNOUNCEMENT was made last week of the plans of Isaiah V. Williamson, of this city, who proposes to endow an industrial school for boys, to be erected somewhere near this city. He has selected seven Trustees, Edward Longstreth, William C. Ludwig, Lemuel Coffin, John Wanamaker, John Baird, J. W. Brooks, and Henry C. Townsend, to whom he explained at a meeting on the 24th instant. The endowment is stated to be a very large sum, twelve millions of dollars, ($12,000,000), being mentioned, but it is probable that the work will be begun, and the endowment be fixed later. The institution, it is announced, will be known as the Williamson Free School of Mechanical Trades. It will be devoted to the education of boys in the old-fashioned trades, including carpentering, blacksmithing, printing, and other trades, so that they may be ready to enter upon life as skilled artisans instead of having to struggle for clerkships and other inferior positions.

I. V. Willamson is now over eighty years of age, and he found himself no longer young enough to bear the task of founding and controlling so large an institution, and therefore solicited the assistance of a number of successful business men to act as trustees under his supervision. He was anxious to live to see the plan put into operation, thinking that under his personal oversight it would be surer of successful accomplishment, and wishing to see the result of his plans for the good of the rising generation of young men.

For Friends' Intelligencer and Journal.

OUGHT.

THERE'S a sentinel stationed in every breast
Can neither be bribed nor bought.
He gives us the sharpest of keen unrest
If we disregard his slightest behest;
And he bears (ere this you doubtless have guessed)
The plain little cognomen, "Ought."

No man so uncivilized, heathenish, rude,
So savage, and wild, and untaught,
But this stern little guardian, with power imbued,
Holds a check o'er the nature else all unsubdued;
And, 'though often his teachings appear to be crude,
We must bow to the wisdom of Ought.

Mysterious monitor, tell us we pray
From whence thy authority's brought.
And why thou dost rule in such different way
These vitalized temples of humanized clay,—
And why many things we're forbidden *to-day*
To-morrow are sanctioned by Ought.

For ages philosophers, poets, and seers
The clue to thy nature have sought,—
Though ever eluding their grasp, it appears,
Thou dost pilot us still down earth's highway of years,
While each, 'mid the tumult, the whispering hears
Of his own individual Ought.

Full many the battles, fierce, nameless, and long,
With thee we have silently fought.
Sometimes in the closet, sometimes in the throng;
When the boundr'y seemed lost 'twixt the right and the wrong;
But, 'though weak from the contest, we knew we were strong
When the vict'ry was carried by Ought.

A guide without guile we can trust through all time,
A friend with no treacherous thought.
When the bells of the churches seem all out of chime,
And the creeds of the world are refusing to rhyme,
We can peacefully rest in assurance sublime:
All is well while we do as we ought.

L. W. W.

Newtown, Pa.

LORD KEEP MY MEMORY GREEN.

MY feet approach life's western slope,
Above me bend the arching skies,
Beyond me spreads the realm of hope,
Behind, the land of memory lies,
I know not what the years may bring,
Of dangers wild, or joy serene,
But turning to the east I sing:
"Lord keep my memory green."

Oh! land of winter, and of bloom,
Of singing bird, and moaning pine,
Thy golden light, thy tender gloom,
Thy vales, and mountains all are mine!
The holy loves of other years,
With beckoning hands toward me lean,
And whisper through their falling tears,
"Lord keep my memory green."

Dear memory, whose unclouded gaze,
Can pierce the darkest wilds of space,
I see her morning watch-fires blaze,
I feel her breezes fan my face.
I would not give the light she flings
Across my future landscape scene,
For all the pomp and power of kings.
"Lord keep my memory green."

Let memory near my soul abide,
With eye, and voice to warn, and win,
Till Hope and Memory, side by side,
Shall walk above the tides of sin.
Till from life's western lakes and rills,
The angel lifts the sunset sheen,
And hangs it o'er the eastern hills—
"Lord keep my memory green."

—*James G. Clark.*

WEBSTER AND BENTON: A TOUCHING EPISODE.

A CORRESPONDENT (W. P. T.) sends to the *Local News* of West Chester, Pa.. some matter extracted from Peter Harvey's Reminiscences of Daniel Webster, relating the story of Webster's reconciliation with Thomas H. Benton, after the estrangements of many years, and of a subsequent event of a like character. The details were related to Harvey by Webster himself, and appear in the volume which the former issued some years ago.

"We had," said Webster, "a great many political controversies; we were hardly on bowing terms. For many years we had been members of the same body and passed in and out at the same door without even bowing to each other and without the slightest mutual recognition, and we never had any intercourse except such as was official and where it could not be avoided. There were no social relations between us. At the time of the terrible gun explosion aboard the Princeton during Tyler's administration T. H. Benton and I were on board and he related to me with tears this incident. He said he was standing near the gun in the very best position to see the experiment. The deck of the steamer was crowded and with the scramble for places to witness the discharge of the gun his position was, perhaps, the most favorable on the deck. Suddenly he felt a hand laid on his shoulder and turned. Some one wished to speak to him and he was elbowed out of his place and another person took it, very much to his annoyance. The person who took his place was ex-Governor Gilmer, of Virginia, then Secretary of the Navy. Just at that instant the gun was fired and the explosion took place. Governor Gilmer was killed instantly. Upthur, then Secretary of State, was also killed, as was another man of considerable prominence. Colonel Benton, in relating this circumstance, said: 'It seemed to me, Webster, as if that touch was the hand of the Almighty stretched down there drawing me away from what otherwise would have been instantaneous death. I was merely prostrated on the deck and recovered in a short time. That one circumstance has changed the whole current of my thoughts and life. I feel that I am a different man and I want, in the first place, to be at

peace with all those with whom I have been so sharply at variance, and so I have come to you. Let us bury the hatchet, Webster?' Nothing, I replied, could be more in accordance with my own feelings. We shook hands and agreed to let the past be past, and from that time our intercourse was pleasant and cordial. After that time there was no person in the Senate of the United States of whom I would have asked a favor, any reasonable and proper thing, with more assurance of obtaining it than of T. H. Benton." One day as Webster was seated in his library he was waited upon by John Wilson, a lawyer of St. Louis, between whom and Benton had long existed an opposition so bitter and malignant as to be matter of notoriety. Often in public debates they had abused each other in most virulent terms. Wilson was now a broken down man, prematurely old and wrecked in fortune, and he had determined to emigrate to California, then but recently conquered from Mexico by Fremont, Benton's son-in-law. He had called on Webster to request a letter of recommendation to some one in California, certifying that he was a respectable character and worthy of confidence. The kind feelings of the statesman were awakened, and after thinking over the matter a few minutes he suggested that a letter from Benton to Fremont would be of greater service than anything he could write. What followed shall be told in his own words, as related by his biographer:

"He looked me in the face, half astonished and half inquiringly, as much as to say: Can it be possible that you are ignorant of the relations between Colonel Benton and myself?

"I said: 'I understand what you mean. I am perfectly aware of the past difficulties between you and Col. Benton, and the bitter hostilities that have existed. But I want to say to you that a great change has come over Col. Benton since you knew him. His feelings and sentiments are softened. We are all getting older. Our fiery hot blood is getting cooled and changed. It is hardly worth while for men when they are getting up pretty near the maximum of human life to indulge in these feelings of enmity and ill-will. It is a thing we ought to get rid of. Col. Benton and I have been engaged in a war of words as you and he have, and up to two or three years ago we both went out of the same door for years without so much as saying "Good morning" to one another. Now I do not know a man in the Senate to whom I would go with more certainty of having a favor granted than to Col. Benton. He feels that age is coming upon him, and he is reconciled to many of his most bitter opponents. 'Is thy servant a dog,' replied Wilson, 'that he should do this thing?' I would not have a letter from him. I would not speak to him. I would not be beholden to him for a favor—not to save the life of every member of my family! No sir! The thought of it makes me shudder. I feel indignant at the mention of it. I take a letter from Benton? I' 'Stop, stop!' said I; that is the old man speaking in you. This is not the spirit in which to indulge. I know how you feel.' While he was raving, and protesting, and declaring by all the saints in the calendar his purpose to accept no favor from Col. Benton, I turned around to my desk and addressed a note to Benton something like this:

"Dear Sir: I am well aware of the disputes, personal and political, which have taken place between yourself and the bearer of this note, John Wilson; but the old gentleman is now poor and is going to California and needs a letter of recommendation. I know nobody in California to whom I could address a letter that would be of any service to him. You know everybody and a letter from you would do him a great deal of good. I have assured John Wilson that it will give yourself more pleasure to forget what has passed between yourself and him, and to give him a letter that will do him good, than it will him to receive it. I am going to persuade him to carry you this note and I know you will be glad to see him.

"Wilson got through protesting and I read him the note. Then I said: 'I want you to carry it to Benton.'

"'I won't,' he replied.

"I coaxed and scolded and reasoned and brought every consideration—death, eternity and everything else—to bear, but it seemed to be of no use. Said I 'Wilson, you will regret it.'

"After a while he got a little softness, some tears flowed, and at last I made him promise, rather reluctantly, that he would deliver the note at Col. Benton's door, if he did not do any more. He told me afterwards that it was the bitterest pill he ever swallowed. Col. Benton's house was not far from mine. Wilson took the note, and as he afterwards told me, went up with trembling hands, put the note, with his own card, into the hands of the girl who came to the door, and ran away to his own lodging. He had scarcely been half an hour in his own room, trembling to think what he had done, when a note came from Col. Benton, saying he had the card and note and that Mrs. Benton and himself would have much pleasure in receiving John Wilson at 9 o'clock tomorrow morning. They would wait breakfast for him, and no answer was expected. The idea! said he to himself, that I am going to breakfast with Tom Benton! John Wilson! What will the people say and what shall I say? The thing is not to be thought of. And yet I must. I have delivered the note and sent my card: if I don't go now it will be rude. I wish I had not taken it. It doesn't seem to me as if I could go and sit there at that table. I lay awake that night thinking about it, and in the morning felt as a man might feel who had sentence of death passed upon him and was called upon by the turnkey to partake of his last breakfast. I rose, however, made my toilet, and, after hesitating a great deal, went to Col. Benton's house. My hands trembled as I rang the bell. Instead of the servant the Colonel himself came to the door. He took me cordially by both hands and said: 'Wilson, I am delighted to see you; this is the happiest meeting I have had for twenty years. Give me your hand. Webster has done the kindest thing he ever did in his life.' Leading me directly to the dining-room, he presented me to his wife, Mrs. Benton, and then we sat down to breakfast.

"After inquiring kindly about my family he said: 'You and I Wilson, have been quarreling on the stump for twenty-five years. We have been calling each other hard names, but really with no want of mutual respect and confidence. It has been a mere foolish political fight, and let's wipe it out of mind. All I have said about you I ask your pardon for.' We both cried a little. I asked his pardon and we were good friends. We talked over old matters and spent the morning until twelve o'clock in pleasant conversation.

"Nothing was said of the letter until I was just departing. He turned to his desk and said : 'I have prepared some letters for you to my son-in-law and other friends in California,' and he handed out nine sheets of foolscap.

"It was not a letter, but a ukase, a command, to every person to whom these presents shall come greeting; it was to the effect that whosoever received them must give special attention to the wants of his particular friend, Col. John Wilson, of St. Louis. Everything was to give way to that. He put them into my hands and I thanked him and left."

Webster continued: "Col. Benton afterward came to me and said: 'Webster that was the kindest thing you ever did. God bless you for sending John Wilson to me! This is one troublesome thing off my mind. That was kind, Webster. Let us get these things off our minds as fast as we can; we have not much longer to stay, we have got pretty near the end; we want to go into the presence of our Maker with as little enmity in our hearts as possible.'"

From the Herald of Peace, London.

ISLAM, OF THE SWORD.

One of the principal services rendered by the great cosmopolitan Missionary Congress, which was held in London, in June, 1888, consisted in the discussions which tended to refute the eulogies of Mahommedanism, lately promulgated by Canon Isaac Taylor and others. The array of facts presented by various gentlemen, long resident in Mahommedan regions, and profoundly acquainted with all the aspects of Islamism, sufficed to demolish the superstructure of theoretic credit, too often ascribed to the influence and operation of the system in question.

Islam is a religion founded upon the sword. By the sword it was first promulgated. By the sword it has maintained its sway; and it is essentially and thoroughly an organization relying upon force, and on the elements of fear, terror, and absolute submission. But its history, and especially its present condition, decisively demonstrate that it is lacking in those constructive and elevating influences which are so peculiarly and surpassingly characteristic of Christianity.

The following facts, amongst others, were mentioned by the missionaries and travelers who spoke on this question, at the London Congress.

Islam tends to produce poverty and pauperism wherever it extends. Witness the existing condition of the Turkish Empire, Morocco, Egypt, and Arabia. In these lands trade is in a mere embryonic state of development, compared with other countries. Agriculture utterly languishes. Even the trees are taxed separately. The olive-tree, for example, has a tax placed upon it when it attains the thickness of a man's finger, and years before it becomes valuable as a fruit-producer. If, in these regions, a man discovers a mine, or valuable mineral lode (and there are many such to be found there) he does not dare develop it, or even, in general, let it become known to the authorities, that such a treasure exists upon his estate. For if he did so, it would lead to his ruin. Such a burden of tribute, or exaction, would be placed upon him, in consequence, that it would be impossible for him to develop the mine to the advantage of himself or the community. Hence the vast mineral resources of Mahommedan regions remain, for the most part, undeveloped. Similarly as to the construction of railways, docks, or harbors. The authorities either refuse permission altogether for the development of such works, or they impose most unreasonable demands as the price of a concession, or even for the maintenance of a merely passive action on the part of the Government. Hence the backwardness, the half-civilized, and wretchedly poor condition of the Moslem Empires. What little trade is permitted, is mainly in the hands of foreigners, Jews and Christians, whose nationality and religion exempt them from the control of the Mahommedan authorities. The revenues and resources of the State are kept at an exceedingly low level by the immeasurable stupidity of these Powers. It is only at a few isolated spots, where independent Christian authority prevails, as, for example, in the Lebanon, or in certain towns of Palestine, that even a moderate degree of civilization is secured. Whilst almost every other country of the world has its network of railways, canals, and roads, these are either wholly or largely lacking in Turkey, Asia Minor, Syria, Persia, Arabia, Afghanistan, Beloochistan, and Morocco. It is only during the present year that Constantinople, the capital of the Ottoman Empire, has been touched by a railway.

Yet these are the people, and this is the system which the late Lord Palmerston, in his unpatriotic and unstatesmanlike lack of regard to British interests, upheld, at the cost of hundreds of millions of pounds to the tax-payers and capitalists of England!

In Algiers and Tunis, under the French, and in Egypt, under British interference, some social and commercial progress has been secured. But elsewhere, throughout the vast territories of Islam, poverty, beggary and semi-barbarism prevail. Their races have a great gravity of look and expression. They appear wise to superficial observers. But, as nations, they are so ignorant and practically stupid, that there are scarcely any schools or colleges amongst them, except those which have been established and maintained by foreign missionaries. There is, indeed, a celebrated college in Cairo, but it forms the notable exception to the general rule of Mohommedan ignorance and indifference to learning. In India, also, the presence of rival races compels the resident Mahommedans to put forth some efforts in the line of education. But even there they are far behind the Christians and even the Brahmins, in their attainments.

History shows that wherever the Moslem has reigned, he has acted as the thief and squanderer of other people's wealth, and not as a producer of riches for himself or for others. Tennyson and certain writers of poetic fiction have sung of "the golden prime of good Haroun al Raschid," and of the Caliphs of Bagdad and Cordova, in the days of their early conquests and supremacy. Yes, these could, and did, spend very freely and ostentatiously upon themselves the treasures which industrious Christians and Jews had amassed, and of which they had plundered the latter. But when this wealth was exhausted, what followed? Ruin, squalor, and beggary. And these remain, to this day, wherever the Moslem retains his rule. If the traveler walks round Cairo, or Teheran, or other cities of Islam, he sees ruinous structures, and everywhere the signs of neglect and decay, on the part of the rulers of the country.

Sentimentalists may prate about the bold Bedouin and the "free Arab of the desert;" but what is the condition of these tribes and of their homes? They are like a lot of dirty, squalid gipsies. Their tents are the nests of vermin, where a few cups and pots constitute the furniture. And as a people, they are a set of lying thieves and extortionate beggars. Their women are brought up in degradation and indecency. And it is such females that Mahommedans have for their wives, mothers, and sisters. How essentially degrading, then, is the whole system of polygamous Islam!

The above evils and defects of Islam are but a portion of the intrinsic badness of the fruits of the faith of Mahommed. That faith naturally developes cruelty and vice in its adherents. Mahommed himself, in his later years became notorious for his murders and unbridled licentiousness. Vices which may not be named in public society still flourish, with special development, amongst the races of Islam. Such, and much more, are the permanent and prevalent fruits of that system which has been founded, propogated, nourished, and characterised, by the sword.

The penitentiary system of treating crime cannot exist without prison employment more or less productive. The very purpose of it, namely, to protect society against crime by rescuing criminals from their crimes, so that they may be restored to society sooner or later as serviceable citizens, supporting themselves by their own labor, must utterly fail unless they are trained to industry for the sake of industry.—*Supt. Z. R. Brockway.*

Humerous views of life are well enough as an occasional relaxation. But we are not to find the chief joy and end of life in these accidentally distorted perspectives. Life itself is not a joke.—*S. S. Times.*

A teacher asked a class to write an essay on "The Result of Laziness," and one of the bright but lazy boys in the class handed in as his composition a blank sheet of paper!

HIGHER EDUCATION OF THE NEGROES IN THE SOUTH.

In the North all the great colleges and professional schools are as open to the negro applicant as to any other. He undergoes no different examination. He pays no different term bills. Whether he shall get an advanced education is purely a question of his own wishes, capacity, preparation, and means. What percentage shall go beyond the grammar school or high school is thus decided by the natural action of universal motives. There is no artificial blocking of a negro's opportunity.

In the South, on the contrary, not one of the old Southern colleges or professional schools will to-day admit a negro pupil. The institutions where negroes can attempt the higher education are all of recent origin, and for the most part still dependent on Northern benevolence. The contributors sometimes ask, What is the need of going beyond common school work?

1. The most obvious need is that of providing fit teachers for the tens of thousands of public colored schools in the South. At first these thankfully employed teachers could do little more than read and write, but their requirements have steadily risen. Good work in the public schools will not be assured till they have a perennial supply of teachers who know a great deal more than they are required to teach; while for principals of graded schools in the cities and teachers of high schools and normal schools, men and women of full college education will be increasingly in demand.

2. Thoroughly educated men are needed to take leading positions among negro physicians, lawyers, writers, and especially ministers. For many years the percentage of college-bred men in these callings must be much smaller among the negroes than among whites. The more rapidly it is increased the more rapid and secure will be the advancement of the race.

3. The higher education is needed as a stimulus to the lower. Every individual who has a noble career opened before him by education awakens an ambition for education in all the communities that know him. The presence of advanced classes in a school quickens the minds of all in the lower grades. There are plants that die if the top is destroyed. The life of the whole system of education depends on vigor at the top.

4. The higher education is needed to prevent the danger of a little learning. The charge used to be often made that educated negroes were conceited and arrogant. The charge cannot be maintained against those who are thoroughly educated, nor is it likely to be justified by those who get a partial education in schools where the presence of higher classes suggests continually how much they have not studied

5. The planting of strong institutions of high grade for the negroes was the best way that could have been chosen to win the respect of the Sohthern whites and lead them up to approve of negro education. This appears strikingly in the case of Berea College, Kentucky, against which the opposition was at first peculiarly bitter because it admitted both

white and negro pupils. The school was denounced as a "stench in the nostrils of decent people." Strenuous efforts were made, and sometimes with success, to dissuade white pupils from attendance. But the college kept its grade of instruction fully up to that of any in the State. The high quality of the school triumphed over all opposition. The white pupils continue to be nearly one-half of the whole number. Its faculty are cordially welcomed to membership in the College Association of Kentucky, and have had their full share of the honors of that body.

This general reputation and influence could not have been gained by a school that stopped with the lower grades. To retain such influence the college must grow in equipment as it is growing in numbers. It should not be occasion for surprise, but rather rejoicing, that it is now asking for increased endowment. There is no work more important for the elevation of the negro race and the right adjustment of the relations between the races than to make and keep such a school the leading college in its State.—*Christian Union.*

THE DEATH-RATE OF INFANTS.

It is a startling fact, which meets the student of vital statistics at the outset of his investigations, that from one-third to one-half of all persons born into the world die before reaching the age of five years. Or, to face the terrible reality from another point of view, so great are the dangers of infancy, that a child which has completed its fifth year actually has an expectation of life more than twelve years greater than it had at birth.

The exact proportion of deaths varies greatly in different countries and localities, at different times and under different circumstances. Statistics are of value only in showing average results. In Norway, for example, the proportion dying under five is stated by Dr. Farr to be 204.5 per 1,000 born; while in England it is 338 per 1,000 and in Italy 567 per 1,000. In fifty-one so-called "healthy districts" of England and Wales, according to the same authority, the mortality under five is 175 per 1,000 born, while in the Liverpool district, representing the most unfavorable sanitary conditions, it is 460 per 1,000.

In the different parts of our own country, we find nearly as great a variety as on the continent of Europe. Even in the same latitude, the proportion varies greatly, according as city or country districts are considered. In the State of Vermont, which contains no large cities, and represents essentially a rural population, the number of deaths under five, for the year 1883, was 23.8 per cent. of the whole number of deaths; in the State of Massachusetts, which embraces several large cities within its limits, for the twelve years ending in 1884, it was 34.74 per cent.; and in the city of New York alone, for the seven years ending in 1873, it was exactly 50 per cent. of the entire mortality.—*J. M. French, M. D., in the Popular Science Monthly.*

If man is capable of knowing God, it must be because there is that in him—that in every part of his being —which responds to something in God.—*F. D. Maurice.*

THE CAMEL'S HUMPS.

Structurally, of course, the humps are nothing—mere lumps of fat, collected under a convenient fold of the skin, and utterly unprovided for in the framework of the skeleton. When the animal is at its best and well fed, they are full and plump, standing up on his back firm and upright; but on a long journey they are gradually absorbed to keep up the fires that work the heart and legs, and in the caravan camels which arrive at the coast, the skins hang over, an empty bag, upon the creature's flanks, bearing witness to the scarcity of external food during the course of his long, forced march from the interior. A starved, small camel in this state of health far more closely resembles a Peruvian llama than any one who has only seen the fine, well-kept beasts in European menageries or zoölogical gardens could readily imagine.

But water is even scantier in the desert than food; and against want of water, therefore, the camel has had to provide himself, functionally at least, if not structurally, quite as much as against want of herbage. His stomach has accordingly acquired the power of acting as an internal reservoir, and he can take in as much water at the Bahrs or Wadys, where he rests for a while on his toilsome march, as will supply his needs for four or five days together. There are some differences in this respect, however, between the two chief varieties of the camel. The African kind is most abstemious, and best adapted to sandy deserts; the Bactrian, a product of more varied and better watered country, is larger and stronger, but less patient of hunger and thirst, while at the same time it can manage to subsist and to make its way into somewhat rockier and more rugged country.—*Grant Allen, in the Popular Science Monthly.*

If now we sum up the main points established, we see that to chemistry we owe the notions of the permanence of matter, of the gaseous condition, of the nature of the atmosphere, of combustion and of oxidation, of elements, of composition and decomposition in definite proportions, and of organic synthesis. Without this knowledge, it may well be asked, where would be, not merely our industry, our technology, but our whole modern civilization? Before looking more closely into the practical bearing of the lessons which the world has thus learned from chemical research, we may point out that chemistry more than any other science has taught us the art of experimental inquiry, or, as it might otherwise be called, the systematic interrogation of nature.—*Prof. William Crookes.*

The danger of riches increases with their increase. Abundance serves not as water to quench, but as fuel to augment the fire of covetousness.—*Selected.*

Speak a shade more kindly than the year before
Pray a little oftener, love a little more,
Cling a little closer to the Father's love;
Life below shall liker grow to the life above.
—*Selected.*

HOME.

Two birds within one nest;
Two hearts within one breast;
Two souls within one fair,
Firm league of love and prayer,
Together bound for aye, together blest.

An ear that waits to catch
A hand upon the latch;
A step that hastens its sweet rest to win.
A world of cares without;
A world of strife shut out;
A world of love shut in.

PREVENTION OF ALL INFECTIOUS DISEASES.

The science and practice of medicine and surgery are undergoing a revolution of such magnitude and importance that its limits can hardly be conceived. Looking into the future, in the light of recent discoveries, it does not seem impossible that a time may come when the cause of every infectious disease will be known; when all such diseases will be preventable or easily curable; when protection can be afforded against all diseases, such as scarlet fever, measles, yellow fever, whooping cough, etc., in which one attack secures immunity from subsequent contagion; when, in short, no constitutional disease will be incurable, and such scourges as epidemics will be unknown. These, indeed, may be but a part of what will follow discoveries in bacteriology. The higher the plane of actual knowledge, the more extended is the horizon. What has been accomplished within the past ten years, as regards knowledge of the causes, prevention, and treatment of disease, far transcends what would have been regarded, a quarter of a century ago, as the wildest and most impossible speculation.—*Dr. Austin Flint, in the Forum.*

An important event has recently occurred in India, and one that will have a most favorable bearing upon the social condition of the people of that vast empire. The Princes of Rajpootana have voluntarily abolished throughout their dominions the custom of infant marriages. This custom is one of the saddest and most productive of misery of any prevailing in India, and the present regulation is that in the future no girls shall be married under the age of fourteen and no boy under the age of eighteen, unless, prior to the adoption of this law, a contract of marriage had been entered into. These Princes of Rajpootana hold the highest rank in Hindu society, and apart from the authority, which they have in their own dominions, the example set by them will have wide influence throughout the whole of India.—*Exchange.*

We may give according to our means, and teach what we have learned, but not leave ourselves in the rough, to run about and exert a good influence, nor hurry to the uttermost parts of the earth to teach the heathen what we do not know ourselves.

A zealous soul without meekness is like a ship in a storm, in danger of wreck. A meek soul without zeal is like a ship in a calm, that moves not so fast as it ought.—*Mason.*

NEWS AND OTHER GLEANINGS.

—"The oldest rose bush of which there is any authentic record," says *Garden and Forest*, "is growing against the old church at Heldersheim, in Germany. Eight hundred years ago, it is said, Bishop Hepilo caused a trellis to be erected to support it. The main stem is thicker than a man's body."

—Only four gowns of American silk have been made to date. One of these was given to Mrs. Garfield by the Women's Silk Culture Society, and another was bought by Mrs. Tom Thumb. Mrs. J. T. Higgins, of Middleboro, Mass., is now having such a dress made for herself from material furnished by silk worms of her own raising.

—In Georgia, Judge Lumpkin, of the State courts, has been charged with what appears to be regarded as the heinous crime of appointing a colored man as one of the bailiffs of his court. He therefore published a card in the Atlanta *Constitution* to clear himself, in the course of which he says:

"The truth of the matter is as follows: In Hancock and Warren courts I had heretofore, at the request of the bar, sometimes designated a colored man as bailiff, but with the distinct announcement, and it was thoroughly so understood by everybody, that he was only to act as a servant, and do entirely menial duties, which white gentlemen serving as bailiffs did not care to perform, and by the appointment of the colored man they were relieved therefrom. No one of these colored men ever exercised or assumed to exercise any authority whatever. They simply brought water, made fires, swept the floor, cleaned spittoons, and did other such work about the courthouse. Last week, in my court here, I appointed a colored bailiff to perform the same duties as above set forth, and that is the whole matter."

—In certain London newspapers advertisements of clergymen desiring positions, and *vice versa*, are very common. The following is selected as an example of the more notable ones:

"Wanted, before Advent, unmarried Priest (earnest Evangelical High Churchman), for small country church, the congregation of which is largely composed of men. The six points. Choral services. Open air preaching. Cricket, football, and workingmen's clubs. No mustached or lawn tennis playing priest need apply."

—"Last summer," says the Newark, (N. J.), *Advertiser*, "Benjamin King, of Little Silver, lost a swarm of bees. He tracked them to a bee tree in the woods near by, and a few days ago he cut down the tree to get the honey. The tree had evidently been occupied by bees as a storehouse for their honey for years, for it was hollow for over eight feet below the knot-hole where the bees went in and out, and this cavity was completely filled with honey. Over six pails of honey were taken from the tree."

—"The New Century Guild of Working Women" has its headquarters at 1132 Girard street, Philadelphia. It has classes in dressmaking, cooking, type-writing, book-keeping, and embroidery; also music classes, to which men are admitted. A well appointed gymnasium forms an important feature of the Guild, and its value as a change from the sedentary and monotonous occupations of most workers cannot be over estimated. The rooms of the Guild are open on the first day of the week, and a well-supplied library is always accessible.

—The Australian Government is building a fence of wire netting 8,000 miles long to divide New South Wales and Queensland, in order to keep the jack rabbits out of the latter country. Australia is paying not less than $125,000 per year to keep the pests down in what are known as crown lands. The offer is still kept up of $100,000 to any man who will produce something that will exterminate the pests.—*San Francisco Bulletin.*

—One of the editors of the INTELLIGENCER AND JOURNAL, in a private note from Charleston, S. C., under date of the 24th of Eleventh month, says: "The city looks very queer. Its patched and supported walls tell too plainly of the earthquake's visitation, when as our fireman says, 'We was all Christians,—all praying hard as we could. I even prayed then myself, sir.' "

CURRENT EVENTS.

A SEVERE storm visited the Atlantic coast, from the Capes of the Delaware northward, on the 25th and 26th ults., and great damage was done especially to ships. At the Delaware Breakwater, five vessels were reported wrecked or beached. At Atlantic City the ocean front was badly washed, and many of the smaller buildings erected there were undermined and destroyed. Near Scituate, Mass., a schooner was wrecked, and 15 of her crew were drowned. Many other wrecks are reported from along the New England coast, with some loss of life. The storm is generally remarked as one of the most severe ever known, almost equaling the "blizzard" in Third month last, in some respects.

THE National Exposition at Augusta, Georgia, has now been opened two weeks and the exhibits are completed. The display of the natural resources and industries of the South is very large. Northern manufacturers are also represented.

JOHN BRIGHT continues very ill, and at this writing, (Eleventh month 28th), his recovery is apparently in much doubt.

THE Empress Frederick, of Germany, widow of the lately deceased Emperor, is visiting her mother (Queen Victoria), and the other members of her family in England. She arrived on the 19th.

NOTICES.

*** The Burlington First-day School Union will be held at The Mount, Seventh-day, Twelfth month 8th, at 10.30 a. m. Carriages will meet the morning train from Kinkora, at Juliustown.

Interested friends invited.

WM. WALTON,
SALLIE T. BLACK, } Clerks.

*** The Visiting Committee of Abington First-day School Union expects to visit Plymouth First-day School, at the close of morning meeting on the 2d instant.

CHARLES BOND, Clerk.

*** Philadelphia First-day School Union will hold its next session at Girard Avenue meeting-house on Sixth-day evening, Twelfth month 14th, at 7.30 o'clock. Brief reports with delegates from the several schools, etc., are requested, also class recitations or other exercises. Graded work in First-day schools will claim consideration to be opened by Samuel B. Carr.

Friends are urged to attend and participate.

DAVID L. LUKENS,
SARAH M. HOLCOMB, } Clerks.

*** A Conference on Temperance will be held at Plymouth meeting-house, Twelfth month 2d, under the care of the Committee of Abington Quarterly Meeting. John J. Cornell has promised to be present.

S. C. JAMES, Clerk.

*** Haddonfield Quarterly Meeting's Temperance Committee has appointed a Conference to be held in Friends' meeting-house, Haddonfield, on First-day, Twelfth month 16, at 3 o'clock in the afternoon.

A cordial invitation is extended to all.

WM. C. COLES, Clerk.

*** Friends' Charity Fuel Association will meet this (Seventh-day) evening (Twelfth month, 1), at 8 o'clock in Friends' Parlor, 1520 Race street.

WM. HEACOCK, Clerk.

*** Quarterly meetings in Twelfth month will occur as follows:

3. Prairie Grove, Marietta, Iowa.
6. Salem, Woodbury, N. J.
13. Haddonfield, Haddonfield, N. J.
20. Fishing Creek Half-Year's Meeting, Pa.

*** A Conference of Parents, Teachers, School Committees, and others interested will be held under the care of the Committee on Education of Philadelphia Yearly Meeting of Friends, on Seventh-day, Twelfth month 1st, 1888, at 15th and Race streets, Philadelphia, commencing at 10 o'clock a. m.

Subjects for consideration are: 1st. The Proper Training of Teachers. 2d. Arithmetic.

All interested are invited.

WILLIAM WADE GRISCOM, Clerk.

PUBLISHERS' NOTICES.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also to help avoid mistakes.

*** As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

*** Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans.*

ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

WINGS.

WELL may he sing—the careless bird—
Whose carol o'er the field I heard.
The day is chill and dark to see,
The fitful rain falls drearily,
The bough beneath him rocks and swings,
Yet still he bravely, blithely sings;
For he has wings.

O saddened heart! thou too canst be,
Tho' joy is dying, sorrow-free.
What need to reck the gathering night?
Trust thou to fancy's pinion light,
And when the sullen storms are nigh,
Love can find out a sunnier sky;
For wings have I.

—*George Meason Whicher, in Independent.*

From Friends' Quarterly Examiner (London).

THE GRAVE OF JOHN WOOLMAN.

ANY one who has read the "Life of John Woolman," and finds himself or herself with an hour to spare in the ancient and historic city of York, should ask for the Friends' old burial-ground, Bishophill, and spend a short time in contemplation above the dust of that pure and saintly servant of God. There, against the old brick wall, evidently the same which marked out the burial-ground when he reached York on his Gospel mission in 1772, and laid down his life in the service of his Master, is a plain sandstone slab, with the following half-obliterated inscription:

"Near this Place,
John Woolman, of Mount Holly,
New Jersey, North America,
Died 7th of Tenth Month, 1772,
Aged 52 years."

Not a word of eulogy; no record of his ministerial service; no tribute to the saintliness of his character; no mention of the shaft of death by which he fell. In close companionship with the remains of Lindley Murray, Hannah Murray, and the revered ancestors of the Tuke family,—almost in the heart of the ancient metropolis of the county,—lies the dust of one whose journal so touched Charles Lamb, that once in writing to a friend, he advised him whatever other books he read, to read John Woolman's journal.

The burial-ground, though within the city wall, has originally been in a much more open situation, but the arms of York during the last century have taken within the city proper many of the fields and suburban places. But though it is surrounded by houses, it is none the less a quiet resting-place; and any one who has read the journal in question, cannot fail while standing above his grave, to recall the circumstances of his last mission, and the sweet resignation and trust evinced in his last utterances.

He tells us in his journal, that having been for some time under a religious concern to visit Friends in the northern parts of England, and more particularly in Yorkshire, he obtained a certificate of the unity of his friends, at Burlington Meeting, dated 24th of Third month, 1772, and embarked at Chester, in company with Samuel Emlen, for London. Being a steerage passenger, from a desire to act in the spirit of simplicity, and seeing a good deal of the sailors, he was much shocked by their profanity, pitied their hard lot, thought they were not cared for as they should be, had frequent opportunities with them separately and in company, and condemned in his journal the spirit of avarice which made ship-owners indifferent to the comfort and moral condition of the seamen. After a voyage of rather over a month he arrived in London, attended the Yearly Meeting, and other meetings in Hertford, Warwick, Oxford, Nottingham, York, and Westmoreland, and retraced his steps to York, stating that he did not feel at liberty to appoint meetings so freely as he had done.

Here, at the house of Thomas Priestman, on the 27th of Ninth month, 1772, he was attacked with small-pox, which was of a virulent character, and ran its rapid course in ten days. We are told in a short account of his last illness which prefaces his journal, that he declined at first to see a doctor, signifying that he was wholly resigned to the Lord's will who gave him life; but subsequently, on a young apothecary coming in, he did not object to confer with him and other Friends, and take such remedies as they might consider best, provided "they did not come through defiled hands." In this expression we get a glimpse of his tender conscience, so careful was he not to be a participator in, or consumer of anything which had been slave-grown, or produced in an illegal or oppressive way. This was only in harmony with his previously expressed scruples against wearing dyed garments, "because real cleanness becomes a holy people, but hiding that which is not clean by coloring our garments, appears contrary to the sweetness of sincerity." Another example of his conscientious scruples was his refusal to send his letters in the ordinary way by the mails, or to ride in the stage-coaches, because of the overdriving of the horses, and the hardships of the post-boys. He had heard of the hard driving of the mails before reaching this country, and says he "cautioned Friends in the meeting of ministers and elders in Philadelphia, and in the Yearly Meeting of ministers and elders in

London, not to send letters to him on any common occasion by post. "And though," he continues, "on this account, I may be likely to hear seldomer from my family left behind, yet for righteousness' sake, I am, through Divine favor, made content." This same spirit of resignation was the covering of his mind to the end, for on one occasion when all the remedies seemed unavailing, and the Friend who was attending him asked in great distress, "What shall I do now?" he replied, "Rejoice evermore, and in everything give thanks;" but added a little after, "This is sometimes hard to come at."

Some of his remarks on the near approach of death are very touching. Thus, on one occasion during the night, he said to a young woman who had given him something to drink, "My child, thou seems very kind to me, a poor, helpless creature; the Lord will reward thee for it." Later on he said, as though he apprehended the fatal issue of his disorder, he had long had a view of visiting this nation; and sometime before he came, had a dream in which he saw himself in the northern parts of it, and that the spring of the Gospel was opened in him, much as in the beginning of Friends, such as George Fox and William Dewsbury; and he saw the different states of the people as clear as he had ever seen flowers in a garden; but in his going along he was suddenly stopped, though he could not see for what end; but looking towards home, fell into a flood of tears which waked him. How calm was his frame of mind may be further gathered from his remark to a woman Friend who was attending him, whom he saw weeping after he had given directions about wrapping his corpse. "I would rather thou wouldst guard against weeping for me, my sister. I sorrow not, though I have had some painful conflicts; but now they seem over and matters well settled, and I look at the face of my dear Redeemer, for sweet is his voice, and his countenance is comely." When the power of speech failed him, he made signs for pen and ink, and wrote thus with much difficulty: "I believe my being here is in the wisdom of Christ; I know not as to life or death;" and about a quarter before six on the same morning (the Fourth-day of the week) he expired without sigh, groan, or struggle.

It is satisfactory to know that the piece of ground in question is walled round and kept in good order; the entrance to it is through the cottage of a decent, elderly woman, who is the caretaker. Doubtless, the remains of John Woolman have long since mouldered into dust; doubtless, when we lay these bodies down we shall no more require them; doubtless, time and the exigencies of city life will wrest this quiet burial-ground from our grasp; doubtless, also, there is much of sentiment in the feeling that hallows the spots where our loved ones are laid. But, all the same, the feeling is *there;* and if we believe the inspired declaration, "that the memory of the just is blessed," then the thoughts begotten at the grave of a servant of God, who left a light behind him which reaches us at this later day, bring a quietness and calm to the soul, which comes as a precious balm and antidote to the spirit of unrest so characteristic of the present time.

J. LATCHMORE.

For Friends' Intelligencer and Journal.

WHERE CONSCIENCE LEADS.

How prone we are to attach a definition to a word to suit our relation to circumstances, and many times by so doing we mistake the connection of the true guide, and so blend (it may be unconsciously) the two elements and this mystifies. Thus we see such a varied thought and action, yet all justifying themselves by conscience; when it is really only a self-knowledge, it being an organ of education, the pivot on which the judgment turns according to the forces which govern us. I would not quibble over little things, but would ask all to examine and see to a power which is used in common, and yet separates the judgment and leaves a difference which sometimes is of vital force; and this, too, to the injury of our spiritual welfare. There are many illustrations of this: the account of Paul, where he declared that in all good conscience he was laboring to persecute the Christians; and persecution may come under different circumstances and still be persecution, and we feel conscience to justify us, to the detriment of true advance. It may be under the operation of the letter of the law, like that spoken from Sinai, which guides to bondage; and this letter, no doubt, comes under the spiritual dispensation and often adds a clog to the life of those who are faltering. Then let all be careful that they mar not the work which they are laboring to perpetuate. There are two ways this can be understood; and let all, I repeat, watch! Then the query comes, what is the criterion by which we may know absolutely what is right and wrong? We remember the woman of Samaria said, "Come and see a man which told me all things that ever I did; is not this the Christ?" And when some were doubting as to who Jesus was, whether John the Baptist or Elias, Peter, by an illumination, said: "Thou art the Christ, the son of the Living God;" and many other testimonies by the same power coming from the same great cause.

All of which we must know by experience ere we can have our judgment guided properly. Paul declared to the Corinthians, "no man can say that Jesus is the Lord but by the Holy Ghost." Then the thought requsite for our well-being is to "seek first the kingdom of God and his righteousness," and all things for our benefit will follow. Let us not set up any man for our standard of God's eternal truth, but earnestly and prayerfully seek, that we may find His throne so established in our souls that the seed of the Incorruptible may be brought forth and a plant of Divine intelligence grow to the stature of the true knowledge of good and evil. Every spiritually baptized son and daughter will bear their testimony to the inner conflict brought forth in their minds, to be settled there, and sometimes, too, contrary to their early education; sometimes calling us to do things we had thought we never could do, thus setting aside the commonly accepted conscience as the rule and guide in the high Christian pathway. O, let us, as a body professing the life of Christ in the soul as our type, cease stumbling on the mere letter of our predecessors, and come to God for ourselves and understand what he demands of us; and the life will fully coin-

cide with their lives, in that we will do justly, love mercy, and walk humbly before Him in the beauty of holiness.

Then we will no more check our growth in the higher life by our limited knowledge of His law and call it conscience. We will look farther than our own mere self to see the fruit that may be bitter to the taste of another. I say again, here is a vital thought; let us improve every avenue to that pure spiritual standard, being willing to lay down our natural will for the cause of the Gospel. MARY G. SMITH.

Hoopeston, Ill.

For Friends' Intelligencer and Journal.

GOING TO WASHINGTON.

THE assembling of our national Congress, on the 3d inst., renders the present a suitable time to extend a word of caution to Friends throughout our borders.

It may be laid down as an axiom, that the Congressional lobby is a dangerous place for Friends; and their too frequent appearance there may tend, not only to thwart the objects they have in view, but also to bring reproach upon the Society.

We now have seven yearly meetings, each with its Representative Committee; and when to these are added the Indian committees, the Friends' Philanthropic Union, and the numerous Temperance committees, it may be well for us to consider how great is the liability of overdoing.

Where any of our members are desirous of promoting some good work,—or what they regard as such,—if they would act on their own responsibility in the matter of petitioning, and not do it in the name of the Society of Friends, it would cause less trouble, and would avert what some of us regard as an imminent danger.

In former times Friends were a *marked* people; and the members of the Society, as individuals, carried the mark. In dress, in address, in look, and in manner, they were different from the world's people, and did not become incorporated in the general mass. Now that all these conditions are changed there is much less probability of our influencing others, and much greater liability of our suffering contamination by the intercourse. It is so much easier to adapt ourselves to our surroundings than it is to remain firm in our principles, and to appear eccentric in our practices.

We should also bear in mind that our Representatives, or our Senators, do not represent the Society of Friends alone; but equally with us, and numerically very much greater, are other religious denominations claiming the right to have their petitions presented, and their wishes regarded. With proper deference to all these claims, and with due regard to the fact that Congress is not a sectarian body, nor yet a philanthropic organization, our officials may be subjected to great embarrassment; and under the influence of undue pressure, or of too frequent urging, they are likely to admit what they do not approve, rather than refuse where they might give offense.

As matters now stand, it would seem safer and better, to limit all going to Washington—*as Friends*—to Committees appointed by the Yearly Meeting, or to those delegated by the Representative Committee; and even within these limits, not to move forward except where the concern is weighty, the unity full, and the proposition definite. H. *

Twelfth month 1st, 1888.

NEWS OF FRIENDS.

FAIRFAX QUARTERLY MEETING.

WE were favored to be able to attend Fairfax Quarterly Meeting, which has just been held at Woodlawn, Fairfax Co., Va. This quarterly meeting was established by descendants of William Penn's colonists, who settled here from one hundred to one hundred and fifty years ago. It is the most southern of the five quarterly meetings of Baltimore Yearly Meeting, lying wholly in Virginia, except the indulged meeting in the city of Washington.

The first meetings were founded and the first settlements were made at Goose Creek, Fairfax, Alexandria, and Hopewell,—the last beyond the Blue Ridge mountains. Some settlers came later, with the national government, as clerks and employees, and settled in and about the new capital of the nation, in the year 1800, and from these sprang the interesting meeting at the capital, which though always small, has never failed to be held during the eighty years of its existence on I street in the city of Washington, though for half a century no minister was settled there, and from its walls scarce ever resounded the spoken word.

At the suggestion, and by the efforts of Samuel M. Janney and other members of this quarterly meeting, supplemented by liberal contributions from members of our society in the seven yearly meetings, the valuable lot of ground in the central and best part of the city was improved by a handsome and commodious meeting-house with a school house attached. The school is well conducted by Thomas W. Sidwell, a member of our society, and it is clearly shown that in this city, as in others, the well conducted schools of Friends have no lack of patrons. These facts seem appropriate here, as this field of labor is within the limits of Fairfax Quarterly Meeting. The quarterly meeting maintains circular meetings in all of its monthly meetings, the one at Washington being held the first First-day in Third month next, at the regular hour, eleven o'clock.

Friends of this quarterly meeting can very easily answer the question, "Why do Friends not gain numbers?" When the great sin of African slavery came to be fully realized by Friends, those of them in the South were in great straits. They were obliged to hold slaves, hire them, or emigrate again and seek the free lands of the West. In many instances, the last course was chosen and hundreds of homes were abandoned and their occupants were scattered to the wilds of the West. Yet the four monthly meetings which compose this quarterly meeting, Alexandria, Fairfax, Goose Creek, and Hopewell, have not in the past century and a half, failed to be maintained. Even through the late war, though Friends were subjected to every form of persecution, by neighbors, by soldiers in gray, and by leaders of the rebellion, they maintained their meetings.

Alexandria Monthly Meeting is now held alternately at Woodlawn and Washington, there being but one family at Alexandria, and that one residing in the country. The old meeting-house in the last named city has been sold and the income is applied to the improvement of the other property in use.

The meeting was opened on Seventh-day at three o'clock, by the assembling of the ministers and elders. It was a small assemblage, as might be expected, in view of stormy weather and long distances to travel. On First-day at 10 o'clock Friends promptly assembled, notwithstanding the continuous rain, and soon settled down into a solemn silence. Darlington Hoopes, of Baltimore Quarterly Meeting arose and addressed the meeting and was followed by Jesse Hoge, of Goose Creek Monthly Meeting. Both Friends addressed the gathering which filled the little house, with earnest and appropriate words.

On Second-day Friends assembled again, and the morning hour was occupied with a suitable period of solemn silence, followed by addresses from those who spoke yesterday, and William Williams, of Fairfax Monthly Meeting; after which the partition was let down, and the meetings separately proceeded to attend to the business before them.

Of all those worthy Friends who settled on the estate of George Washington, before the late rebellion, only one, Jemima Ann Walton, is living. She was eighty years of age on the 17th of Eleventh month just passed. She attended meeting each day, and excepting rheumatism is in a pretty good state of health. She is all that remains of the original members of Chalkley Gillingham's colony in Virginia. She is the widow of David Walton who left a precious record. The descendants of the departed worthies now walk the paths their fathers trod and maintain their living testimonies.

Here on the immense estate of George Washington these Friends reside, and here and at Washington are the interesting relics of the warrior, statesman, and farmer. Here is his loved home, above all on earth preferred, now in his memory visited daily by many tourists, rejoicing as they leave the lovely place that the ladies of the Mount Vernon Association are maintaining everything as he left it. Here near the beautiful city which he founded for the Capital of a great country, and which was named in his honor, and here in a pure white marble sarcophagus lies all that remains of his body, and by his side his beloved wife.

I forgot to say in the proper place, that Hugh R. Holmes, of Goose Creek, was clerk, and Warrington Gillingham, of Alexandria Monthly Meeting, assistant clerk for the day, and that Representatives were in attendance from all the Monthly Meetings.

HENRY JANNEY.

Baltimore, 11th month 28, 1888.

BUCKS QUARTERLY MEETING.

Bucks Quarterly Meeting held at Middletown, (now called Langhorne), on the 29th of 11th month, was a large gathering of Friends and friendly people, —the large meeting house being pretty well filled, though not crowded, as it frequently has been. The hour of gathering of the quarterly meeting in this quarter, is not as well observed as would be desirable.

As soon as a comfortable degree of silence obtained, David Newport arose, and spoke at some length. He was followed by Samuel S. Ash, and then Elizabeth Paxson had an opportunity to address a few words to the attentive listeners. All the communications seemed to be gratefully received. David Newport then appeared in supplication, and the meeting for worship closed.

There was no business came up from the monthly meetings, except the answers to the First, Second, and Eighth Queries to claim attention. Some interesting remarks on the state of the Society were made by S. S. Ash, David Newport, and Samuel Swain,—the latter seemed to dwell particularly on the importance of interesting the young people by giving them something to do in the line of humanitarian and philanthropic labor, under the auspices of the monthly meetings. The meeting closed before two o'clock, with the feeling that it had been a satisfactory opportunity. E.

SCRIPTURE LESSON, No. 48.

TWELFTH MONTH 16, 1888.

TOPIC: REVENGE.

GOLDEN TEXT.—"Great men are not always wise."—Job. 32 : 9.

READ Judges 16 : 21-31.

A PERIOD of one hundred and twenty-eight years intervenes between the leadership of Gideon and the death of Samson, during which there were many Judges. The life history of Samson is peculiar. Being dedicated to God before his birth by his pious parents, who failed in no particular to carry out the instructions given them, he seemed to develop a self-will and waywardness that in no way corresponded with his early training. Only to the vows of the Nazarite was he steadfast and faithful. These required entire abstinence from wine and spirituous liquors, by his mother before he was born, and by himself in all his after life, nor was his hair to be cut. The first trouble which he seems to have brought upon his parents was his choice of a wife from among the Philistines. The historians make this an occasion against the Philistines, who by their unfairness towards Samson in the matter of his wife, left him at liberty to seek revenge. This he did, and made a great slaughter. We cannot help feeling regret that one whose birth-record is such a sweet story of parental love and devotion should have displayed in his manhood and later years so little of a noble character. He seems to have been ruled by his impulses, and being a man of great physical powers, he rather trusted to his own ability to deliver himself in times of danger than to God, who had heretofore been the reliance of the leaders of Israel. He was always rushing recklessly into danger, his love for strange women leading him on. Well might his parents have said to him, "Is there never a woman among the daughters of thy brethren, or among all our people, that thou goest to take a wife of the uncircumcised Philistines?" Samson judged Israel twenty years, and his death when it came was a fit ending to his adventurous life.

The Philistines took him and put out his eyes. This

was one of the cruelties practiced upon the kings and great men captured in battle.

The hair of his head began to grow. An indication that his strength would return, or was so understood by the writer of the narrative. There is a lesson for us in this story of Samson: we are shown that it is not doing our best with any exceptional gift or talent that we may have, unless we use it for the highest purpose of which we are capable. Samson, by frittering away his time between dalliance with women not of his own people, and the avenging of petty quarrels, growing out of such association, lost his opportunity to be a leader of his people, and take part in the subjugation of the Philistines and other nations who yet held possession of strongholds in the country, and died a miserable death by his own hands. We cannot have any other feeling than sadness that a life begun under such holy surroundings should end in such a miserable failure.

There have been in history so many examples of men of genius whose moral characters were extremely discreditable, that the words of our Golden Text, "Great men are not always wise," seem as applicable in modern times as they were applicable, no doubt, at the time they were written. In fact, so prone are the world's greatest statesmen, poets, orators, and learned men to become slaves to the baser passions of their natures, that there is a disposition among people of high moral sensibilities to draw a conclusion that the intellectual nature of man is at enmity with his spiritual. Hence, we frequently find among these an application of the words of Jesus, "I thank thee, O Father, Lord of Heaven and earth, that thou didst hide these things from the wise and understanding, and didst reveal them unto babes," to those whose intellectual attainments are great, as though by the mere fact of the culture of their minds, men lessened their opportunity for obtaining Divine wisdom. Well-meaning and good men have thus deprecated the thorough cultivation of the intellect as a matter accompanied with danger to the growth of the spiritual nature. That this is a mistake is conclusively shown by a careful consideration of the subject. While it is lamentably true that men may, by the *exclusive* cultivation of the intellect, dwarf the moral nature, it must be conceded that such dwarfing of the moral being is due to the neglect of its culture, and not to the development of the mental. Just as the over-training of the mental and the neglect of the physical may sap the vital forces of the student, so does such mental over-training weaken the spiritual nature.

But the truly wise man neglects not any part of the heritage the Divine Father has given him to improve, and he who underrates his duty in regard to the best development of his intellect lessens his influence for good in the world, no matter how spiritually gifted he may be. The world's great religious teachers, those who have left the impress of their life's work upon the history of the ages, have been those who were intellectually great as they were spiritually good. We know not what may have been the mental training of Him whose words of wisdom, even in his boyhood, astonished the doctors in the temple, "so that they were amazed at his understanding and his answers," but we may be well assured that a knowledge of human affairs was so combined with his knowledge of the Divine, that he could intelligently discuss all questions propounded by the most learned, as all sacred history shows he could. Rabbis, doctors, lawyers were met by him upon their own intellectual planes, and the most learned men of the present age justly marvel at the wonderful acuteness as well as profundity of his replies to their intended perplexing questions. The lesson for us to-day is, therefore, not that there is danger of getting too much intellectual training, but that there is danger in neglecting the proper culture of any of the good gifts of spirit, mind, or body that our Father in Heaven has endowed us with. If we ever bear in mind that it is not the care or culture of ourselves that harms, but the *neglect*,—the NEGLECT, that is where the harm lies. All error, all wrong-doing, all evil, all failure to fulfill the work our Divine Father would have us do, is the direct result of neglect to attend to our proper work in life.

HEBRON, TO-DAY.

FROM the article in the *Century* entitled "From Sinai to Shechem," written and pictured by Edward L. Wilson, we quote the following: "We found ourselves encroaching upon the land of the Azazimehs, the descendants of Ishmael, and were overwhelmed by a storm of abuse from a delegation of the tribe, who, having sighted us afar off, stood awaiting us at the ford of the river which led up Beersheba way. . . . No day in Petra held more anxiety than this one did; for parting with the mutinous wretches into whose hands we had voluntarily placed ourselves at Akabah, compromising with those who held us prisoners, and arranging with the new comers, required an amount of intolerable yelling and bluster which was more interesting than pleasant. Swords, pistols, clubs, spears, fists, and guns were all used; but nobody was hurt—very much. Even the moon looked troubled by the time we made our departure. If such people infested this region when the spies came this way, it is not so wonderful that they returned to Moses and said, 'We were in our own sight as grasshoppers, and so we were in their sight.' Certainly my long-felt sympathy for Hagar and Ishmael was much shaken by my dealings with their descendants. Nothing could be more lovely, however, than the region reached a day's journey farther north, when in the neighborhood of 'the brook Eshcol.' The land rolls through 'green pastures' and 'beside the still waters.' The wide valleys were clothed with verdure, spotted. with daisies, buttercups, dandelions, poppies white and red, and many other flowers. Large flocks were there, attended by their shepherds; the fellahin were at work, and the women, tall and erect, were everywhere carrying water in jars upon their heads. The fields were protected from the torrents by stone walls such as we saw in the wilderness, and olive groves and vineyards abounded. It was a grateful scene made more so by the resemblance of the gray-sided hills to those of good old Massachusetts. Each vine-

yard of Eshcol was protected by a high stone wall; in every one was a low stone structure which served as the house of the attendant. The roof was the watch-tower, whereupon the watcher spent the day, to keep the birds and the Bedouins away from the fruit. Nestled away down in the valley below lies Hebron, 'in the plains of Mamre.' There, reaching across, is the old camping-ground of the patriarchs, and in the distance, towering above everything else except the surrounding hills, are the minarets of the mosque which covers the cave of Machpelah. Hebron is the oldest town in the world which has maintained a continuous existence. The hills and the valleys alike are clothed with olive groves, orange trees, and vineyards; figs, mulberries, almonds, pomegranates, and vegetables like our own melons and cucumbers also abound. Streams of water run hither and thither and murmur music which gladdens the heart of the weary traveler."

For Friends' Intelligencer and Journal.

CHARLESTON AND VICINITY.

STRANDED for a week or more, by reason of physical weakness, in this historic city of Charleston, the thought presents, that while many of our readers may be familiar with it, many more, like myself, might not be, so by reason of some observation; and through the eyes of two indefatigable sight-seers who are my companions in exile, I will briefly describe it.

Situated in geographical phraseology, at the junction of the Ashley and Cooper rivers, it is very nearly surrounded by water; indeed it is difficult to divest one's self of the idea that we are not on an island. Its close proximity to the ocean gives it the benefit of the sea breezes, the waters of both rivers being salt, though their muddy appearance does not indicate it. This muddiness, however, we are told is characteristic of all southern streams. In railway language we are "only 23 hours from Philadelphia without change of cars," yet the climate is delightful, especially in early spring and late fall; the ground never freezes, though the frost kills such tender vegetation as sweet potatoe tops but the roots remain in the soil until used.

The city surprises us by presenting a somewhat ragged appearance on first sight, till one thinks of the recent earthquake and then we can easily account for the patched and seamy appearance of the walls, and the many piles of bricks looking as if they had done good service in the past. Indeed it is a marvel that it has so soon recovered from such a disastrous visitation.

The streets are well paved and clean, notwithstanding the fact that during the war the very paving stones were used to construct their batteries; the houses of the wealthy are built in true southern style, each one apart from his neighbor with porch and verandah to ensure enjoyment of the distant sea breeze. Some of these dwellings look very old with roofs of tile and walls of brick, the material of which must have crossed the seas in colonial times.

Unlike our northern cities, where private homes and public pleasure grounds would have to yield to business, much of the river front is reserved for promenade, park, and residences. The last with beautiful yards where flowers are still blooming in many colored variety. "Battery Park" has a fine array of live oaks, the shade of which is grateful as are also the seats, where one can rest and look across the water to Fort Sumpter and think of the shock the nation received near twenty-eight years ago, when the first blow was struck which was followed by such sad years that we would be but too glad, could we blot out the memory thereof forever. But these troublous times, the penalty of wrong, have passed into history, and we can but rejoice that so much of good feeling exists between the North and the South. "It had to come," remarked a Southern gentleman and an ex-slaveholder, "and we are glad the days of slavery are over, we would not now have it otherwise. There will never be another sectional war. Our city has prospered since it ended and we cannot afford to lose the millions that we make by our business intercourse with the North." And this is the prevailing sentiment. The chief industry, if we can apply the term, is the phosphate "rock" in which a large amount of Northern capital is profitably invested. Then cotton, of course, does not easily give up its kingship. Fruits and vegetables too claim their share and the wharves present a busy appearance. The negroes are industrious and well behaved, and compare well in respectable appearance with those in our Northern towns.

A ride of some twenty miles in the direction of Aiken brings us to Summerville, a pleasant town right in the heart of the pines, which is gaining quite a reputation as a health resort. It has no hotel, but numerous boarding-houses, the rooms of which upon inquiry were all taken for the winter. There were other houses in a state of preparation for opening later, however. In the business of affording northern invalids comfortable winter homes in the South at a moderate cost, there seem to be an opening for energetic Northern people.

The street in which we located being a leading thoroughfare and called Meeting St., we queried if there was a Friends' Meeting in the city? The reply was "not now but formerly there were many Friends and they still own some property, to see after which, one or two Friends (Orthodox) come annually, but" continued our informant "there is not now one Friend in Charleston." And we could easily imagine how existing conditions long before the war would make a residence here distasteful to any one at all imbued with our doctrine and testimonies. Evangelical churches abound and there is one Unitarian church.

Touching the question of schools, the remark was made, that more money was expended on the education of the blacks than the whites, which might be misleading did we not know they exceeded the whites in numbers in the proportion of four-sevenths to three-sevenths. "Our great need is an increase in our white population" was the observation of a citizen and we could plainly see where the difficulty lies if the black vote is to be allowed to pass unchallenged.

Towards the close of our stay one bright sunny morning we gladly accepted the kind invitation of our host of the Charleston Hotel, to drive to his farm, a distance of six miles from the city. We were anxious to get a nearer view of the country than we could obtain from the car windows. The city is very compact with but scant environs. Crossing the bridge over the Ashley river we come at once upon the country with a few negro homes dotted here and there. Mostly one story cottages on land rented to them where they raise a little cotton, vegetables, etc. Their wants are easily supplied and life does not seem to be burdensome by reason of their ambitions. The soil is well adapted to rice and we could see where a crop of it had been gathered. But it requires skill and means to properly drain and arrange for planting it and so rice fields are not numerous. Our road was through pine woods with much undergrowth, especially of vines and trees full of the pendent gray moss, so striking a feature of this Southern land.

But we were not prepared for such a beautiful sight as met our gaze as we approached this farm of 800 acres, a part only of the original plantation. Here was a broad avenue of live oaks, of immense size, nearly half a mile long, covered with gray moss, leading right up to the steps, which is all that is left of the old mansion of Ashley Hall on the banks of the river. Here is the garden now being restored, with its wealth of trees and shrubs and flowers, here stands the monument to a former owner, the last colonial governor of South Carolina, but the house itself was burned by one of the late owners to prevent its being fired by the Union army. All the surroundings told plainly the story of the life of ease and wealth that had once been passed here. The avenue of oaks had been planted in 1740, and their size and beauty were astonishing. At both ends of what was once a fine lawn were negro cabins, though many had been removed. The present owner takes great pleasure in restoring the grounds, and is building a neat frame cottage for his family to enjoy their winters here. For, strange to say, it is from the Eleventh month to the Fifth month, that they spend in the country, and many families were just now moving out, the city where there is good drainage being the healthy place in summer, only the negroes being able to resist the miasma of the low lands in the hot season. But the winter is very pleasant. Long rows of Camelia Japonica were just coming into blossom, their white wax-like flowers contrasting prettily with their glossy green leaves. The arbors were covered with running roses of which our host gathered for us buds by the handful. His wife was busy planting out her beds of hyacinths. April, we were told, is the month when all nature seems to burst into fullness of bloom, though in every month of the year there are flowers enough to delight the lovers of them.

Our ride back was made most interesting by the strange tales of wealth and poverty told by our host, of which he himself was witness in his 40 years' residence here. "I have passed," he said, "through periods of pestilence and have nursed the sick and the dying in yellow fever; I have passed through the war in a besieged city; I have been here during the earthquake and cyclones, but the worst of all was the war and its after effects. I never want to live to go through the like again. The unwritten stories of the South if they could be gathered would eclipse all the romances."

We leave the city with regret, for its atmosphere is at this season very invigorating, but the ties and associations of home are all-powerful and we prepare joyfully for a return to Philadelphia, or, as the expression fell pleasantly upon our ear from the lips of a Charleston clergyman with whom we conversed, "to the City of the Friends."

L. H. H.

Charleston, Eleventh mo. 26.

THE DANGER OF NOTE GIVING.

The Kennett, Pa., *Advance*, commenting on the failure in business of a young man of that locality, makes these remarks: The failure and flight of —— conveys several useful lessons, but the most potent is that furnished by the fugitive himself, in a letter he has sent back, which we reproduce in another column. In summing up his misfortunes he says, "No more notes for ——; they are the ruination of man." That is the rock upon which nine-tenths of all the local failures are stranded. The ninety-day note business is an abomination and a snare to every man who has to do with it, for it not only gives a man false credit, but it induces extravagant outlays and reckless investments which must sooner or later bring in the sheriff or the assignee. The credit business already overdone, is further extended and multiplied until almost all business is done by note and a cash transaction is a rare occurrence. It seems scarcely necessary to point out the many evils which come from this perversion of trade, which in the end bears equally hard upon the buyer and the seller. Men attend sales and because there is a liberal credit are induced to buy many things they do not absolutely need, and which they do not see their way clear to pay for. The result is an accumulation of obligations which begin to fall due and produce harassment which ultimately ends in ruin. Then the habit of giving notes being once formed it soon becomes chronic, and business becomes hazardous and unsecure; people are led into extravagances, and extravagance and debt too often lead to forgery, as we have seen in many unhappy instances.

Shall I ever forget my early home? Yes, when the flower forgets the sun that warmed it; yes, when the mariner forgets the star that guided him; yes, when love has gone out on the heart's altar, and memory has emptied its urn into forgetfulness—then, home of my childhood, will I forget thee.—*Talmage.*

There may be audible music in heaven; but its chief delight will be in the music of principles in full consenting harmony with the laws of eternal rectitude. There may be visions of loveliness there, but it will be the loveliness of virtue as seen in God, and reflected back in family likeness from all his children.—*Dr. Chalmers.*

CHRISTIAN SERVICE FOR THE YOUNG.

THERE is a large and rapidly increasing element in the Society of Friends that has developed under the influence of the First-day School, which for more than a quarter of a century has been drawing closer and closer the bond of sympathy and fellowship between the older and the younger portions of the Society. There is no more hopeful feature than this in its present outlook, and the main question that concerns the governing power,—the power that is set over the body for its preservation, in the proper exercise of the gifts and graces of the Holy Spirit and the maintenance of peace and concord among the members,—the main, the vital question pressing for answer is, How shall this growing element of young life be utilized that its force and value may conserve the church, and this young life be the recipient of the truest and best in spiritual life that fellowship in the Gospel of Christ has to offer.

A very large proportion of the working force of many of our meetings are the first-fruits of the First-day School effort. Many of these are the heads of families and are worthily holding their places in the home, in the church, and in the broader field of the world's endeavor, but by far the larger part await recognition as workers in the several meetings to which they belong. These need to be taken by the hand and tenderly led along,—to be appointed to such service as will give them experience and prepare the way for fuller and more extended usefulness. The order of our Discipline which calls for the appointment of not less than two persons on every committee, is admirably adapted to this training and if the matter were brought to general notice in the appointing of committees, and one of experience with one just coming into service were named to the joint labor, the beneficent effect would soon be experienced.

But there is a drawback to this process of training which the exigencies of the times make more and more apparent. From the fact that the meetings where the business of the church is transacted are held at a time when the trade and traffic of the world's industry must be conducted, few of the members engaged therein can leave their business without a greater sacrifice in values than their circumstances in life will warrant. Only such as conduct their own business and control their time and those whose condition in life frees them from active participation in trade or business are able regularly to attend meetings held during the week. By far the larger part of the adult members of our meetings in the cities and large towns are on this account cut off from participation in the secular concerns of the body, and this is true of the women as it is of the men though not to the same extent.

In other religious organizations where church work is shared by the whole adult membership, this condition is avoided by holding church and devotional meetings after the work of the day is accomplished. This gives opportunity for every member, not otherwise hindered, to be in his or her place at the hour appointed, and the effect must be beneficent not alone in the increase of interest in the affairs of the church that is awakened, but in the strength and efficiency it gives to the working force of the body. We may learn many helpful lessons from others if we are but willing to recognize the fact that changed conditions require corresponding changes in methods and usages, that the one may adapt itself to the other, and the best results possible be accomplished.

This is constantly taking place in our social and industrial circles, to the benefit of all. Why, we inquire, may not our usefulness as a Church, our efficiency as workers in the field of Christian endeavor, be promoted by similar efforts to meet the needs apparent in our religious affairs. Our helpfulness to one another would thus be promoted, the building up and cementing together of the material that is waiting to be utilized through the interchange and intercourse thus brought about would add strength and stability to the Society. The exalted testimonies it advocates and the simple faith in the Divine indwelling as the one thing needful, that forms the basis of its doctrinal teaching, give it a place in the Christian church not occupied by any other body of religionists, and this should encourage us to utilize our usefulness, while we continue "to hold fast the profession of our faith without wavering," or as the New Version renders it "Let us hold fast the confession of our hope that it waver not, for he is faithful that promised; and let us consider one another to provoke unto love and good works."—Heb. 10 : 23, 24.

WE are asked to call attention to the lecture by Prof. George L. Maris, at St. George's Hall, on the evening of the 11th instant, for the benefit of the Home for Friendless Children, 4011 Aspen street, West Philadelphia.

MARRIAGES.

TROUT—VAIL.—Eleventh month 21st, 1888, at the residence of the bride's parents, Abram P. and Jane D. Vail, of Quakertown, Hunterdon county, N. J., by Friends' ceremony, John D. Trout, son of Jeremiah H. and Sarah Jane Trout, and Laura D. Vail, daughter of Abram R. and Jane D. Vail, all near Quakertown.

DEATHS.

BOGARDUS.—Suddenly, from the effects of a fall, on Eleventh month 22d, 1888, at the residence of her parents, New York City, Bessie, only child of Joseph A. and Elizabeth F. Bogardus, aged 4 years, 1 month, and 11 days.

GARRIGUES.—In Baltimore, suddenly, Eleventh month 19th, 1888, Henry Hill, last surviving son of the late James R. and Elizabeth M. Garrigues, of Philadelphia, aged 48 years, 5 months, 24 days.

PRICE.—In Philadelphia, Eleventh month 27th, 1888, Richard Price, formerly of Gunpowder, Md., in his 74th year.

WILLIAMS.—In Philadelphia, suddenly, Eleventh month 29th, 1888, Charles B. Williams, aged 64 years.

THE LIBRARY.

WILLIAM PENN IN AMERICA: Or an Account of His Life from the Time he received the Grant of Pennsylvania in 1681, until his Final Return to to England. By William J. Buck. Philadelphia: 1888.

The author of this volume, two other of whose works have been noticed in this journal within the last two years, has taken up the subject of William Penn's visits to this country, and has made a very interesting book, containing numerous details not heretofore presented to the general reader.

Penn came first in the autumn of 1682. On the 27th of the 8th month, (October, Old Style), the *Welcome* anchored before New Castle; and on the 16th of 6th month, (August), he left the capes of the Deleware in the *Endeavor*. He came again in the summer of 1699, leaving Cowes in the *Canterbury*, on the 3d of 7th month, (September); and he took his final departure from his Colony on the 3d of 9th month, (November), 1701, in the *Dolmahoy*. W. J. Buck computes his absence from England altogether as four years, four months, and a few days; and his actual stay in this country as about three years and ten and a half months. Within these limits lie a great part of the interesting events connecting him with Pennsylvania, and a grouping of them, and their explanation and elucidation by the aid of the side lights which historical study has made available, is a very good thought, indeed. The voyage of the *Welcome* is itself a picturesque passage of history; that of the *Mayflower*, much as has been said and written about it, has no greater moral or intellectual significance. The meeting with the Indians, the much challenged but impregnable tradition of the great treaty under the Shackamaxon elm, the settlement of the government on its foundations of justice and equality, the coming of the many glad companies of settlers,—the Welsh of the Merions, Pastorius and his associates, the English Pilgrins in many ships,—these alone are enough to form a great theme.

Delving among the papers and documents which had not been available for earlier writers, W. J. Buck has enriched his narrative at many points. Without overloading the text, he quotes too from many letters that illustrate the character of Penn, and sets forth the true features of his great work. Here, for example, is his letter to the owners of the ship *Providence* which had been condemned in the Admiralty Court, under the harsh ruling of Colonel Quarry, who was always a spy upon Penn, and never his friend, and who was sent out, probably, by the British Government for the express purpose of representing its interests and purposes, as distinct from those of the colony. This letter exhibits Penn's disgust at the rapacity and technicality of Quarry's ruling, his own intent to have no complicity in it, and his sincere desire to aid the owners of the vessel to avoid further damage. Under the law one-third of the proceeds of a condemned vessel belonged to him, but he declined it, "denying to accept of it, as thinking it a barbarous case." Another letter to be noted is that written to the Countess of Bellomont, upon the death of her husband,—a rare piece of genuine and sympathetic composition.

The edition of this volume is limited to three hundred copies. It is printed for the author, but Friends' Book Association, 1500 Race St., are his agents for its sale. ($2.50.)

—A volume by Dr. B. Harry Warren, of West Chester, Pa., State Ornithologist, is expected to be issued by the State Printer, at Harrisburg, about the first of next month. It is a "Report on the Birds of Pennsylvania," with special reference to their food habits, and treats of over three hundred different kinds of birds, and of their food materials as ascertained by more than three thousand examinations and a field study of fifteen years. The book is printed at the cost, and by the order of the State, and can hardly fail to be a valuable addition to our authorities upon natural science.

EDUCATIONAL.

CONFERENCE AT RACE STREET.

ON Seventh-day the 1st inst., Race St. Meeting-house was well filled with teachers and others interested in the subject of Education. The first subject for consideration was "The Proper Training of Teachers." Annie Shoemaker, Principal of Girls' Department, Friends' Central School, was the first speaker. She desired to magnify the importance of *character* in teachers. Of the special training for teaching which is obtained in the Normal schools it has been asserted by some of the best instructors that the culture is usually not broad or thorough enough, and that those who desire to prepare themselves for this profession should have the larger opportunities to be had in the colleges and universities. Fitch, in his admirable "Lectures on Teaching," says he believes "it to be demonstrable that some acquaintance with the theory, history, and rules of teaching may often serve to turn one who would be a moderate teacher into a good one, a good one into an accomplished artist, and even those who are least qualified by nature into serviceable helpers."

A large class of those who desire to teach have not the opportunity to profit by the advantages which the Normal School or the College offers but must depend upon observation of the methods of others and their own skill to impart the knowledge which they possess. The most important qualifications of a teacher are not those which can be given by another. Love of children, earnestness of purpose, and consecration form an admirable basis upon which to build. As assistants in large schools, under the eye of a sympathetic principal, ever ready to suggest where improvement can be made in methods, or errors can be avoided, valuable experience may be gained.

The training thus obtained is sometimes the most effective.

A successful teacher must be a student; his knowledge of the subjects which he teaches should be much beyond that which he is required to impart; various authors should be consulted; that the resources from which he draws may be increased, his general reading should contribute to his store, though it should by no means be limited to the needs of his work. The celebrated Dr. Arnold said he read enough to keep his mind in the state of a running stream, which he thought it ought to be if it would form or feed other minds; "for it is ill-drinking out of a pond whose stock of water is merely the remains of the long-past rains of the winter and spring, evaporating and diminishing every successive day of drought."

She had found it most helpful to pursue some study entirely outside of her own work, and under the guidance and direction of an instructor; the change from teacher to pupil is delightful, and the professional intercourse with a cultivated teacher is restful and inspiring. From this comes the advantage of summer schools, now so popular. These are, however, not *always* profitable; at the close of a school year the greatest benefit can often be obtained by complete change and recreation.

She offered encouragement to any who feel a strong inclination toward the profession of teaching, for the difficulties it presents are not insurmountable, the lessons it teaches are among the loftiest; while wise teachers have almost infinite possibilities of power to influence the mind and character of those who come under their control.

Wm. P. Holcomb, Professor of History at Swarthmore College, said that the training of a teacher for his profession was concisely stated by Prof. Payne, of England, to be first, a knowledge of the subject of instruction; second, a knowledge of the nature of the being to be educated; third, a knowledge of the best methods of instruction. The truth of the first statement is self evident. No rule can be laid down for all as to how far they must go in their studies, but teachers should attend as high institutions of learning as their opportunities will permit, to gain a wider knowledge of teachers and their methods, and a greater breadth of culture. In relation to the second statement, teachers through all the ages have studied the minds and dispositions of their pupils, and many have recorded these investigations, which can be very helpful to inexperienced teachers. Many of the best teachers have likewise recorded their methods of instruction in works on teaching, and these writings abound in valuable suggestions and instruction, which if read, will save the inexperienced teacher from many a mistake. There is a great literature of education that is worthy the thoughtful attention of teachers. The writings of such educators as Plato, Aristotle, Locke, Rousseau, Pestalozzi, Horace Mann, and others, will help to broaden the culture of the teacher and make him desirous of elevating his profession.

It is highly desirable that teachers should have had some experience in teaching before entering upon their vocation.

Mary Wright, of the Girls' Normal School, was the next speaker. She said that principles underlie the art of teaching, and that they must be learned and applied. She teaches her class of pupils an elementary lesson in reading, and her teaching is criticised by her class. She thought it very improving to have them go into an ordinary school and observe and talk with the instructor. She has 250 girls under her care.

George L. Maris thought a person who wishes to teach should know it at the age of thirteen, in order that his course of instruction might be broadened and deepened. He would have such students leave college one year before graduation, teach one year, then return to graduate. Edward H. Magill approved of the class of pupil-teachers resolving itself into a class of students with one of the number acting as teacher under the oversight of a teacher competent to correct their errors and give them the best instruction. One advantage of this plan he believed to be that it trained out many candidates who have no fitness for the profession. No methods can be successful if they result in copying; any method to be good must be adapted to the individual and be original. He gave Dr. Francis Gardiner's three necessities for a successful teacher 1. Integrity, character expressed by life. 2. Power of control and tact. 3. Knowledge of subject to be taught.

Aaron B. Ivins would encourage and support the young inexperienced teacher, and teach him to make his methods such as will attract and interest his pupils. Young teachers had come to him and asked if they "ought not to resign," yet some who were almost failures in one school by being changed to another have become very successful. Many of our teachers make no preparation for the studies beforehand, but take the lessons in routine as they come. He thought committees should give teachers an opportunity to visit other schools.

L. J. Roberts wished that our young women would not enter upon the work too young or until they have learned to govern themselves. Elizabeth E. Hart: Some instruction in the mechanical part of school work should be given to a teacher before he takes the responsibility of a class upon himself. Practice in teachers' classes presents the difficulties one at a time. The power of discipline exists in the individual but it is helped by practice. Wm. Wade Griscom wished school committees would see the importance of giving teachers an opportunity to visit other schools.

Henry R. Russell spoke of the very valuable teachers' library on the meeting-house grounds, and of the inestimable value that such works are to him who studies them. He thought there is a tendency to decry method, but principles lie at the base of teaching and they must be known. To thoroughly interest the pupils he believed to be the best method of discipline.

Clement M. Biddle thought that after the teachers have been educated, they should be trained to teach, instead of the children being left to suffer while they were getting their experience. He believed there should be some one with ability to judge of the qualifications of young teachers, and those who would never make teachers, might be encouraged to utilize their talents in some other way.

Brief remarks were made by several others who had themselves been teachers.

After a short recess Arthur H. Tomlinson, of Abington Friends' School, read a paper on Arithmetic, which was thoughtful and original. He was followed by R. P. Leys on the same subject, and a brief discussion was participated in, after the reading of the papers.

The Conference was one of unusual interest, and must have a helpful influeuce upon both the teachers and the committees to whom our schools are entrusted.

NOTES ON INDIANA YEARLY MEETING.

As we did not have, at the time, a detailed report of the proceedings of Indiana Yearly Meeting, (though we have published its minutes of exercises, and the report of the Indian Committee), we make some notes from the pamphlet minutes, recently issued. The meeting convened at Waynesville, Ohio, 10th mo. 1st, and adjourned on the 4th. The representatives were all present but two,—one in each branch. It was decided to hold two sessions a day, at 10 o'clock and 2. In men's meeting, Davis Furness and George R. Thorpe, and in women's meeting, Mary W. Cook and Rachel M. Matthews, were appointed clerks.

A proposition to have a list of the names of all the members of the Yearly Meeting, with the post-office address of each recorded, so the location of any member may be known at any time, was considered and united with; the clerk was directed to inform the quarterly meetings that they will be expected to obtain the above information and report the result to the meeting next year.

The Benevolent Fund of the Yearly Meeting yielded a net income of $461.70, during the past year, which was directed to be divided between the two quarterly meetings. The answers to the Ninth Query disclosed that there are no schools among us under Friends' management. After considering, in joint session, the report of the Indian Committee, an expenditure of $100 for the employment of a matron, and $50 for expenses, was authorized. The sum of $100 was placed at the disposal of the Committee on Philanthropic Labor. The Yearly Meeting's general account showed a balance of $35.31 in the Treasurer's hands, and $400 was directed to be raised.

The statistical report showed the total membership of the Yearly Meeting to be 849 males, 981 females, total 1830. The changes of the year were as follows: Additions by certificate 4, by birth 7, by conviction 33, by correction of enrolment (Miami Monthly Meeting) 13, total 57; losses, by removal 6, by death 40, by dismissal 1, by correction of enrolment 5, by resignation 11, total 64; leaving a net loss of 7 during the year. (It will be noted that this is more than accounted for by the excess of deaths (40) over births (7).

FRIENDS IN NEW YORK CITY.

One of the signs that probably shows the constant gliding of the present into the past and the advance of civilization in this city as much as anything else is the appearance of the Quakers. The Society of Friends, quite numerous here at one time and owning six or seven places of worship, to-day boast only of two meeting-houses, one at the corner of East Fifteenth Street and Rutherford Place and the other at 144 East Twentieth street.

The early history of the Quakers in the Dutch colony of New Amsterdam contains several instances of persecution directed to the exclusion of its members. An old manuscript recounts that in August, 1657, five Quaker preachers landed on Manhattan island. That they did not long remain seems probable from the fact that about the same time two "Quaker maidens" were arrested for holding forth their peculiar doctrines in the streets of the town, and were shipped by the ungallant governor to New England, whence, perhaps, they had come. The first Quaker meeting was held at the call of William Edmundson, in 1672, in the dining-room of an inn. George Fox himself had already visited America, and had preached at Flushing, L. I., in the previous year.

The New York Yearly Meeting of Friends was organized in 1695. In 1696, the first meeting-house of the Society was built. It is supposed to have stood in Crown street (the name of which was changed after the revolution to Liberty) near the old thoroughfare, now extinct, known as Greene street. The plot of ground which it occupied was purchased from one David Lloyd for the sum of £25, whether "York money" or sterling is not stated. Another Quaker meeting-house was built in 1797 in Pearl street, near Chatham, but was torn down in 1829. At what time the first one was abandoned is not known. The second was succeeded by the building at the corner of Hester and Elizabeth streets, now used for offices by a gas-light company, and adjoining which was a well-known seminary belonging to the Society, since removed to the corner of Sixteenth street and Rutherford place, on the plot partly occupied by the meeting-house latest built.

The Society in the meantime had undergone the doctrinal schism of 1827, which left it divided into two branches, the one called simply by the ancient name of Friends, and the other by that of Orthodox Friends, but claiming to be the original sect. The latter were, as a matter of fact, the actual seceders, following the lead of an English preacher named Joseph John Gurney, and the former being left in

possession of all the ecclesiastical property. A third Quaker meeting-house had been built in Rose street, near the old revolutionary prison, but this was abandoned some time about the middle of the present century in consequence of the rapid northward growth of the city. In 1855, not very long afterward, was built the fifth meeting-house in West Twenty-seventh street, near Sixth avenue. For a time, after the sale of the Hester street house and before the one in Rutherford place was completed, it held within its walls both the Quaker congregations then existent in this city.

The plot of ground in Twenty-seventh street was acquired by William H. Macy, the well-known merchant and banker, one of the wealthiest and most influential members of the Society. It consisted of five lots, for which he paid $6,000 apiece. Four of them were purchased from him by the Friends. A fire interrupted the building of the meeting-house, but it did not long delay it, as little damage was caused. This and several other places of worship have, however, been abandoned, since 1870 until today the two mentioned above are the only ones left. —*N. Y. Evening Telegram.*

THE CRUSE THAT FAILETH NOT.

Is thy cruse of comfort wasting? rise and share it with another,
And through all the years of famine it shall serve thee and thy brother.

Love divine will fill thy storehouse, or thy handful still renew;
Scanty fare for one will often make a royal feast for two.

For the heart grows rich in giving, all its wealth is living grain;
Seeds, which mildew in the garner, scattered, fill with gold the plain.

Is thy burden hard and heavy? do thy steps drag wearily?
Help to bear thy brother's burden; God will bear both it and thee.

Numb and weary on the mountains, wouldst thou sleep amidst the snow?
Chafe that frozen form beside thee, and together both shall glow.

Art thou stricken in life's battle? Many wounded round thee moan;
Lavish on their wounds thy balsams, and that balm shall heal thine own.

Is the heart a well left empty? None but God its void can fill;
Nothing but a ceaseless Fountain can its ceaseless longings still.

Is the heart a living power? Self-entwined, its strength sinks low;
It can only live in loving, and by serving love will grow.

—*Eliz. Rundle Charles.*

In the soul, God reveals himself to man. It is the door into the infinite presence, once opened, never shut. Deep questions must be answered by deep thought. As we live from the spirit, so flows the spirit upon us; and the soul becomes the everlasting son, the continual recipient of God.—*Selected.*

POEM BY DR. HOLMES.

The corner-stone of a new public library building was laid in Boston on the 27th ultimo, and Dr. O. W. Holmes read the following poem:

Proudly beneath her glittering dome,
Our three-hilled city greets the morn;
Here Freedom found her virgin home—
The Bethlehem where her babe was born.

The lordly roofs of traffic rise
Amid the smoke of household fires,
High o'er them in the peaceful skies
Faith points to heaven her clustering spires.

Can Freedom breathe if ignorance reign?
Shall Commerce thrive where anarchs rule?
Will faith her half-fledged brood retain
If darkening counsels cloud the school?

Let in the light! from every age
Some gleams of garnered wisdom pour,
And fixed on thought's electric page,
Wait all their radiance to restore.

Let in the light! in diamond mines
Their gems invite the hand that delves.
So learning's treasured jewels shine
Ranged on the alcove's ordered shelves.

From history's scroll the splendor streams,
From science leaps the living ray;
Flashed from the poet's glowing dreams
The opal fires of fancy play.

Let in the light! these windowed walls
Shall brook no shadowing colonnades,
But day shall flood the silent halls
Till o'er yon hills the sunset fades.

Behind the ever-open gate
No pikes shall fence a crumbling throne,
No lackeys cringe, no courtiers wait,—
This palace is the people's own!

Heirs of our narrow-girdled past,
How fair the prospect we survey
Where howled unheard the wintry blast,
And rolled unchecked the storm-swept bay!

These chosen precincts, set apart
For learned toil and holy shrines,
Yield willing homes to every art
That trains, or strengthens, or refines.

Here shall the sceptred mistress reign
Who heeds her lowliest subject's call,
Sovereign of all their vast domain,
The queen, the handmaid of them all.

BLOW, WIND, BLOW!

Now the snow is on the ground,
And the frost is on the glass;
Now the brook in ice is bound
And the great storms rise and pass.
Bring the thick, gray cloud;
Toss the flakes of snow;
Let your voice be hoarse and loud,
And blow, wind, blow!

When our day in school is done
Out we come with you to play.
You are rough, but full of fun,
And we boys have learned your way.

All your cuffs and slaps
Mean no harm, we know;
Try to snatch our coats and caps,
And blow, wind, blow!

You have sent the flowers to bed;
Cut the leaves from off the trees;
From your blast the birds have fled;
Now you do what you may please.
Yes; but by and by
Spring will come, we know.
Spread your clouds, then, wide and high,
And blow, wind, blow!

—*Eudora S. Bumstead, in St. Nicholas.*

A LYRIC.

If any one can tell you
How my song is wrought
And my melodies are caught,
I will give, not sell you,
The secret, if there be one
(For I could never see one),
How my songs are wrought.

Like the blowing of the wind,
Or the flowing of the stream,
Is the music in my mind,
And the voice in my dream,—
Where many things appear,
The dimple, the tear,
And the pageant of the Year,
But nothing that is clear,
At Even and Morn
Where sadness is gladness
And sorrow unforlorn,
For there Song is born.

—*Richard Henry Stoddard, in The Century.*

NEW LIGHT ON A LUNAR MYSTERY.

Every possessor of a telescope knows that among the mountains of the moon there are some to which the name of "shining mountains" seems peculiarly applicable. The most celebrated of these is the huge extinct volcano Aristarchus, the slopes of whose crater possess such extraordinary reflective power that it is visible on the night-side of the moon by virtue of the comparatively faint light received from the earth. Another famous bright mountain on the moon is Proclus, which rears its crest high above the eastern shore of the so-called Crisian Sea. With a telescope I have seen Proclus glittering above the brownish plains surrounding it, in the middle of a summer afternoon, when, to the naked eye, the moon appeared as a faint silvery disk, half blended with the blue of the sky. There are other natural features of the moon's surface which shine with extraordinary brightness, the most conspicuous being the systems of long "rays," radiating from such crater-rings as Tycho and Copernicus.

But in addition to these long-known and easily recognized objects, there have occasionally been seen upon the moon certain bright points, which are even more curious and mysterious than the shining mountains. The earliest observation of this kind appears to have been made by Herschel in 1783. It was repeated by him in 1787, when he did not hesitate to report, in a communication to the Royal Society, that he had discovered three lunar volcanoes in a state of eruption. Astronomers have been considerably puzzled ever since to account for Herschel's statement. Nobody could question the accuracy of his observation, so far as the power of his telescope enabled him to carry it. At the same time, few, if any, especially in recent times, were willing to admit that that prince of telescopists had really seen volcanoes in action upon the moon. The complete absence of any evidence that volcanic activity did not cease upon our satellite ages upon ages ago militated too strongly against Herschel's assertion. The general conclusion finally was, that Herschel had been misled by the extraordinary brightness of some of the shining mountains which I have just described. It remained almost the only serious blot upon Herschel's record as an observer. He had described the appearance of the supposed eruption too carefully to admit any question as to his meaning. And yet, it seemed, a mere tyro in astronomical observation could hardly be deceived in such a manner, much less the most famous astronomer of his time.

But just now new light has been thrown upon the mystery, and it comes from that center of astronomical interest, the Lick Observatory. Prof. Holden believes that he has discovered, if not one of the same objects described by Herschel, a phenomenon of the same kind. It is hardly necessary to say that Prof. Holden has not discovered a lunar volcano in action, but the extraordinary appearance that he has seen sufficiently accounts for Herschel's mistake. It will be best to quote the Lick Observatory director's own words from his letter on the subject to "The Observatory," an English astronomical journal:

"I have never been able to understand how Herschel, the keenest of observers, could have been deceived in this observation until the night of July 15th of this year, when I was looking at the moon with the great telescope. At the southern extremity of the Alps, in the dark portion of the disk, not far from the terminator, I saw an illumination of the crest of a high peak which was extraordinarily and incredibly bright. . . . No part of this illumination seemed less bright than a first-magnitude star, and, taken altogether, it was the brightest object I have ever seen in the sky. It was apparently ten times as bright as neighboring portions of the moon's surface. Its yellow light was tinged in places with the purple due to the secondary spectrum of the objective; and, viewed as a whole, it presented the appearance of a vast conflagration—something quite foreign to the brilliant white of the rest of the moon's surface.

"It would have required no stretch of the imagination to have supposed it to be a tremendous eruption of a range of lunar volcanoes. . . . Observations on this and the succeeding nights showed that it was in fact due to a specially brilliant and favorable illumination of a mountain-ridge near the southern termination of the lunar Alps.

"I have now no doubt that the observation of Sir William Herschel referred to similar appearances."

Prof. Holden then refers to a similar, though less brilliant, display that was witnessed in 1843 by Dr.

Gerling, of Marburg, apparently at the same spot on the moon.

I may add that there are at least two other recorded apparitions of this sort which were seen in that neighborhood, but evidently not in exactly the same place. The first was observed by Schroeter, the German selenographer, in 1783. He saw in the shadow of the great range of the lunar Alps, at the eastern foot of the mountains, a bright point, as brilliant as a fifth-magnitude star, which disappeared after he had watched it for fifteen minutes. Subsequently, when the region where this light appeared had become fully illuminated by the rising sun, Schroeter perceived, where the light had been, a round shadow on the surface of the moon, which was sometimes gray and sometimes black. Nothing more was ever seen of the light, so far as any record informs us, until 1865, when Grover, an English observer, caught sight of it again, under circumstances similar to those of its first apparition, and watched it for half an hour, when it once more disappeared. It should be said that, in the case of Dr. Gerling's observation, referred to by Prof. Holden, a "small, round, isolated, conical mountain" was found in the place where the light had been, on the evening following its appearance. It is altogether probable that the gray or black spot perceived by Schroeter was the shadow of a similar mountain, for it is well known that some of the lunar mountains and hills are hardly visible at all except when lateral illumination indicates their position and form by means of the shadows.

Herschel thought he had seen three active volcanoes. If Prof. Holden's discovery accounts for one of these, it is possible that the observations I have just described may give a clew to the others. The phenomenon seen by Schroeter and Grover was located fifty or sixty miles north of the point where Prof. Holden beheld the extraordinary blaze of light last July, and at a point where the mountains, drawing around a culminating peak, confront with tremendous buttresses the broad level of the Mare Imbrium.

The objection has been made by Messrs. Elger and Williams, two competent English observers, that Herschel's volcanoes can not be identical with the glittering peaks seen by either Holden or Gerling, because the latter were observed close to the line of sunrise, where the morning rays touched them, while the phenomena that attracted Herschel's attention were situated far within that part of the disk where the only light came from the earth. But Prof. Holden does not say that the illumination he witnessed was identical in *place* with those recorded by Herschel, but simply that it was identical in *kind*. Besides, it must be remembered that, if these luminous appearances are due to peculiar angles of reflection, a similar effect must be produced whether the reflecting surfaces are presented to the sunlight or only to the earth-shine. The difference would be simply in the degree of brightness of the phenomena.

But while the discovery with the Lick telescope may account for Herschel's mistake, it does not clear up the mystery of the cause of these extraordinary lights. In every case quoted above, the illumination was evidently very much greater than that of Aristarchus, the most brilliant of the shining mountains. Proctor estimated that the reflective power of Aristarchus must be equal to that of new-fallen snow. But the mountain-crest observed by Prof. Holden blazed with a dazzling brilliancy that it would be difficult to account for except upon the theory that nearly all of the sunlight falling upon it was reflected to the observer's eye. Reflection at a particular angle from vast sheets of ice, as smooth as glass, might be suggested as the cause of such a display, but how could ice be there without water or atmosphere? The suggestion that has been offered to account for the brightness of Aristarchus and the "ray" systems, namely, that they are composed of metallic dikes and masses which, for various reasons, have escaped oxidation, is recalled by the phenomenon in question. Upon that view we might have to assume that these luminous points indicated the existence of tremendous crystallized masses, with polished surfaces, throwing back the glare of the sunshine like mirrors. But then we should not be far from the view set forth in Richard Adams Locke's celebrated "Moon Hoax," that some of the glittering eminences on the moon are nothing less than enormous quarts-crystals, whose dimensions are measured by miles instead of inches!

The fact that the apparitions of extraordinary luminosity are confined to comparatively very small areas, and are visible only for a short time and at long intervals, must be taken as an indication that the reflecting surfaces to which they are due must be of such a nature, and so disposed, that they can reflect the sun's light to us only when presented at a particular angle to our line of sight; just as a piece of looking-glass, exposed to the sun at a distance, suddenly darts a piercing ray when the eye comes within the plane of reflection. That these surfaces are the flanks of mountains is in the highest degree probable, and this but serves to heighten the impression of their extraordinary nature.

The rapid appearances and disappearances, and the long periods of invisibility, are readily accounted for by the various librations of the moon, whereby it presents its disk to us at a continually varying angle, as it swims along in its "squirming orbit," under the conflicting attractions of the sun and the earth.—*G. P. Serviss in Popular Science Monthly.*

When the well is full, let it overflow if it will, and run off naturally, watering whatever dry and barren ground it gets access to. Such natural outflow is the only legitimate influence any soul can have.

This great saying of Christianity, "to die unto sin," remains still the highest theoretical solution of the inner life. Only in *it* is there any peace of conscience; and without *this* peace there is *no* peace.—*Amiel.*

When I was a young man I was sure of everything; but in a few years, finding myself mistaken in a thousand instances, I became not half so sure of most things as before.—*John Wesley.*

THE FIRST SKETCH OF THE EMANCIPATION PROCLAMATION.

The Nicolay and Hay Life of Lincoln in the *Century* gives an account of the first sketch of the Emancipation Proclamation, the original draft being here printed for the first time. A cabinet meeting was held Seventh month 22, 1862; concerning this meeting we quote as follows: "Further conference was had on organizing negro regiments, but Lincoln decided that the moment had not yet arrived when this policy could be safely entered upon. Writes Chase: 'The impression left upon my mind by the whole discussion was, that while the President thought that the organization, equipment, and arming of negroes like other soldiers would be productive of more evil than good, he was not unwilling that commanders should, at their discretion, arm, for purely defensive purposes, slaves coming within their lines.' But on the kindred policy of emancipation the President had reached a decision which appears to have been in advance of the views of his entire Cabinet. Probably greatly to their surprise, he read to them the following draft of a proclamation warning the rebels of the pains and penalties of the Confiscation Act, and while renewing his tender of compensation to loyal States which would adopt gradual abolishment, adding a summary military order, as Commander-in-Chief, declaring free the slaves of all States which might be in rebellion on January 1, 1863. The text of this first draft of the Emancipation Proclamation is here printed for the first time: 'In pursuance of the sixth section of the act of Congress entitled, "An act to suppress insurrection and to punish treason and rebellion, to seize and confiscate property of rebels, and for other purposes," approved July 17, 1862, and which act and the joint resolution explanatory thereof are herewith published, I, Abraham Lincoln, President of the United States, do hereby proclaim to and warn all persons within the contemplation of said sixth section to cease participating in, aiding, countenancing, or abetting the existing rebellion, or any rebellion against the Government of the United States, and to return to their proper allegiance to the United States, on pain of the forfeitures and seizures, as within and by said sixth section provided.

"'And I hereby make known that it is my purpose, upon the next meeting of Congress, to again recommend the adoption of a practical measure for tendering pecuniary aid to the free choice or rejection of any and all States, which may then be recognizing and practically sustaining the authority of the United States, and which may then have voluntarily adopted, or thereafter may voluntarily adopt, gradual abolishment of slavery within such State or States; that the object is to practically restore, thenceforward to be maintained, the constitutional relation between the General Government and each and all the States wherein that relation is now suspended or disturbed; and that for this object the war, as it has been, will be prosecuted. And as a fit and necessary military measure for effecting this object, I, as Commander-in-Chief of the Army and Navy of the United States, do order and declare that on the first day of January in the year of our Lord one thousand eight hundred and sixty-three, all persons held as slaves within any State or States wherein the constitutional authority of the United States shall not then be practically recognized, submitted to, and maintained, shall then, thenceforward, and forever be free.'

"Of the Cabinet proceedings which followed the reading of this momentous document we have unfortunately only very brief memoranda. Every member of the council was, we may infer, bewildered by the magnitude and boldness of the proposal. The sudden consideration of this critical question reveals to us with vividness the difference in mental reach, readiness, and decision between the President and his constitutional advisers. Only two of the number gave the measure their unreserved concurrence, even after discussion. It is strange that one of these was the cautious Attorney-General, the representative of the conservative faction of the slaveholding State of Missouri, and that the member who opposed the measure as a whole, and proposed to achieve the result indirectly through the scattered and divided action of local commanders in military departments, was the anti-slavery Secretary of the Treasury, Mr. Chase, representing perhaps more nearly than any other the abolition faction of the free State of Ohio. All were astonished, except the two to whom it had been mentioned a week before. None of the others had even considered such a step. But from the mind and will of President Lincoln the determination and announcement to his Cabinet came almost as complete in form and certain in intention on that memorable Tuesday of July as when, two months later, it was given to the public, or as officially proclaimed on the succeeding New Year's Day, an irrevocable executive act."

From the Woman's Journal.

WOMEN'S CONGRESS AT DETROIT.

The Sixteenth Annual Congress of the Association for the Advancement of Women was held at Detroit on the 14th, 15th, and 16th of November. The opening address of the President, Julia Ward Howe, dwelt upon the valuable experiences gathered in these yearly assemblages which "bring us together in unity of spirit and in the bond of peace."

Senator Thomas W. Palmer, who, as the avowed advocate of woman suffrage, is honored by Michigan women, welcomed the Congress in a scholarly address. He said:

"There are many practical questions in connection with woman which I trust will receive your attention. Her legal status in the different States; her right to her children; the question of wages; the strange anomaly of the same amount and quality of work done by a woman being paid for at a much less rate than if done by a man; the diffusion of correct ideas of life among young men and young women; of the dignity of labor; of the conduct of life.

"I understand that politics are excluded from your deliberation, but I hope that you will accept, for private consideration, the following suggestion: It is constantly asserted that 'the family is the foun-

dation of the State.' It is a travesty upon words. The family should be the foundation of the State, but under our laws it is the merest nonsense to assert it.

"The advancement of women means the advancement of the race. As our women of to-day are, such will be the men and women of the future. Aside from heredity, the chain that binds the child to virtue is the affection for a mother, which growing years will crystallize into devotion, if her moral virtues will justify or not interrupt the process. You seek to elevate the race by ennobling its mothers."

Miss Calliope A. Kechayia, of Constantinople, told of her educational work. This lady was born in Brusa, Syria, of Greek parents. Her father and mother removed to Athens when she was a child, and there she was most carefully educated. After long effort she started an industrial school for girls in Athens. The school now gives work out and employs in it four hundred women and girls. In 1875, she was sent by the Greek Government to Constantinople in response to a call for a teacher to establish a Greek school for girls in that city. The school is like a normal graded school, beginning with a kindergarten. Miss Kechayia has trained nearly all her own teachers. She leaves her school of 400 pupils in competent hands, while she takes a year of rest to visit America. For years this progressive woman, far in advance of most of her countrywomen in all educational movements, has stood alone; almost single-handed, she has met prejudice, and put down opposition. No woman in all Greece to-day is more honored than she.

Manual training for girls, by Miss Ella C. Lapham, of New York, was a strong argument for the adoption of the system and for making all its departments open to girls as well as boys.

"The very fact of the girl's less physical strength, is the reason for their broader development. Cities that have provided the best advantages in this respect for boys offer nothing to girls. Those cities which do give any training to girls—and there are more than twenty—teach only cookery, sewing principally, and then free-hand and mechanical drawing, designing, cutting and fitting, and in a very few places modelling and wood-carving, and in a very few places some work in carpentry. Sewing and cooking are not the best needed, though at present necessary for all girls for manual training. They do not develop judgment, though they demand it. Less pliable materials, such as wood and metal give better opportunity for care and judgment. Omaha, Denver, Cincinnati, and Toledo teach the girls carpentry. In all these the experiment has been a success. Some kinds of light metal work, in iron, steel, and brass, such as is given jewelers and locksmiths, is admirably adapted to girls. It is their right to have whatever will help them to clearness of perception and to energy of action."

Antoinette Brown Blackwell dealt with the multiple question, "Where is the work of women equal where superior, where inferior to that of men?"

"She said that the question was largely one of opinion. Forty years ago none but a few women thought of having any non-domestic work, while now 3,000,000 women are classified in work. There are 34,000 accountants, clerks, and saleswomen, 275 clergywomen, 75 lawyers in this number. Every industry which requires only average strength, dexterity, and faithfulness can be done as well by women as men. Our reports of work of philanthropies show women superior to men. In delicate works, where quick apprehension and manipulation are required, women are the superiors. A new strain has undeniably been brought into literature by women. Good work is neither masculine or feminine, and in the long years, man must become more the woman, woman more the man."

It is evidence of the growing interest of women in dress-reform that the largest audience of the Congress gathered Friday afternoon to hear Annie Jenness Miller describe the "Correct Dress."

At the evening session Mary F. Eastman, of Massachusetts, presented the "Legal Aspect of the Temperance Question."

The closing paper, "High Life and High Living," was read by Julia Ward Howe. She thought she saw vital dangers in the direction of striving after the customs of "high life."

"Not politically only, but also socially, American life is an advance upon European life. The simple, convenient home is a great improvement upon the mediæval palace. The reverence shown to women, the recognition of their rights, are better than any of the crownings of female ambition, the homage paid to female vanity. It is better for the community to be rich and the individual but moderately endowed with fortune than for individuals to absorb the wealth of the community. It is a glory to us to hold and maintain that there is no majesty like the majesty of character, no crowning like that of public virtue and service. Who would go back from this state of things, to a state in which the strong and cunning should rule, in which to rob the State shall be accounted a glory, to serve her obscurely a vulgar merit!"

Splendor from within! It is the only thing which makes the real and lasting splendor *without*. Trust that inevitable law of self-expression. *Be*, not seem! Be *to* seem! Be beautiful, and you will by and by seem so. Carve the face from within, not dress it from without. Within lies the robing-room, the sculptor's workshop. For whoever would be fairer, illumination must begin in the soul,—the face catches the glow only from that side. It is the spirit's beauty that makes the best face, even for the evening's company; and spirit's beauty is the only beauty that outlasts the work and wear and pain of life. The single prayer worth praying in this connection is that of Socrates, the ugly man: "Ye Gods, grant me to become beautiful in the inner man; and that whatever outward things I have may be in harmony with those within!"—*Gannett.*

What I admire in Columbus, is not his having discovered a world, but his having gone to search for it on the faith of an opinion.—*Turgot.*

LATE AUTUMN IN CALIFORNIA.

A San Francisco newspaper, the *Bulletin*, of a date in Eleventh month, has the following:

The edge of the rainy season is usually indicated by three or four sharp frosts. These have already come. The plank sidewalks in the suburbs were white with frost crystals for several mornings in succession, and the drivers of horse-cars were seen swinging and flapping their hands, making the first signals of winter. The early rain of October started the grass and awakened the buds in many a garden; but they have gone to sleep again. The bouquets of roses which are seen in the shop-windows were not grown out of doors, but in the rose-houses of gardeners. The winter crop of out-of-door roses is not due yet, and will not be until there have been at least two weeks of wet weather. But the honest chrysanthemums come in the autumn, and do not wait for any of the drenching rains of winter. Neither do they bow their heads if the frost comes, but appropriate the crystals as so many diamonds. The gayest flower of November is the chrysanthemum, which wins on color alone but has a perfume hardly more acceptable than onions or garlic. It is not, therefore, to be accepted as a nosegay; in fact, the regulation distance of the nose is three feet from the flower. When the rains come in abundance it will droop and disappear. But until then, it is the autumnal flower of paradise, or would be, if only its perfume matched its color.

Had the rains of October continued during the month, there would have been a wealth of violets, mignonette, crocuses, heliotrope and roses. But nothing would have been gained to compensate for damaged hay and grain, for the lost bloom of grapes and the must and mildew that would have come unbidden to many an orchard and field. The roses will bloom at their best just when the snow is flying in eastern cities, and oranges will be turning to the color of gold when blizzards and gales sweep over all the northern states.

NEWS AND OTHER GLEANINGS.

—The *Christian Advocate*, (Methodist, New York City), has the following paragraph: "It is stated in Philadelphia that after coquetting with worldly ways and fashions for a season the young generation of Friends undergo a reaction and gradually fall into the same ways and the same austere life, even to the plain garb of their grandfathers and grandmothers. This is brought forward as an explanation of the fact that the general attendance upon the Quaker meetings in Philadelphia is not decreasing. We doubt the alleged fact and the explanation. A great many of those who were brought up Friends are now members of the Episcopal Churches in that city. We do not find similar reactions in the Methodist Episcopal Church. When persons give up the customs of their fathers and adopt worldly habits and manners, we find that the great majority of them continue in that course, and that, even if under revival influences there is a temporary reaction, it fails in most cases to reconstruct the life."

—The American Line steamship Indiana was eighteen days in getting from Queenstown to Philadelphia. "Ten hours after she left port," reports the Philadelphia *Times*, "she encountered a storm which raged continuously until she passed the Delaware Capes late on Saturday night. The second day out the captain had fish oil dropped in small quantities into the sea through the pipes leading from the cabin closets. The experiment was so successful that it was continued until after the steamer had passed into the Delaware Breakwater. The oil prevented the waves from breaking over the ship. One of the officers said it was one of the most dangerous trips on the ocean he had ever made, and he believed the vessel's safe arrival was due to a large extent to the free use of fish oil."

—The Joint Committee of the Philadelphia Board of Public Education on Office and Estimates have adopted a resolution approving the proposition that an exhibit of the work done by pupils of the public schools, be sent to the Paris Exposition in 1889, and providing for an application to City Councils for $2,500 to defray the expenses of preparing the exhibit.

—Edward Atkinson, of Boston, besides his well-known work in economic statistics, has devoted some time to the study of scientific methods of cookery. He has invented a cooking-stove, which, it is claimed, operates more easily and economically than the ordinary stove of our kitchens. His apparatus comprises two ovens, one heated by a column of water and one by a column of air, the heat being derived from lamps which burn ordinary kerosene oil. The cost, with this stove, of cooking twenty pounds of bread was one cent's worth of oil; that of roasting thirty pounds of meat did not exceed two cents. Mr. Atkinson has not patented his invention. We notice also that a writer in the *North American Review* says that in the matter of economy the American cook stove of the present day is "a scientific shame." The writer continues: "We probably use every day in the year fifty times the fuel actually needed. Chief among the sources of this waste is the fact that we use cold-blast stoves." The author's idea is that much of the heat that is wasted in such a stove might be utilized in heating fire materials before lighting. Our hot-air blast furnaces date from an invention of Nielson in 1828, and the same principle when applied in the regenerative gas-lamp results in more heat and light with economy of fuel. The invention of a regenerative cooking stove, the author believes, would result in an immense saving of anthracite coal.—*The American.*

—"If pine straw," says the Augusta, (Ga.), *Chronicle*, "becomes as popular in making bagging as wood pulp has in making paper, the pine lands of the South will become gold mines. Thousands of barren acres in Georgia will become immediately valuable. With turpentine, wood pulp, pine straw, and fine timber, the owners of pine barrens will become pine barons sure enough."

—The mule is very rarely sick—not near so often sick as is the horse. Its hoofs are much sounder. It is not so apt to be injured, not being so easily frightened. It will do the same amount of work on two-thirds the amount of food required by the horse. It will eat coarser food. When properly bred and handled it is full as trustworthy and industrious as the horse, and more docile than the horse. The docility and patience of the ass is proverbial. The mule endures exposure better than the horse. It will endure heat better, and I have never been able to perceive that it did not endure cold as well, though the notion that it cannot is general. But there is no good reason why it should not endure the weather of the Northern States. While the mule is most used in warm climates, it is also used in regions where the temperature is full as low as in our Northern States, and there lasts longer than do our horses.—*Country Gentleman.*

—The keeping of money is a harder job than the earning of it. The old adage may not always be true, that any

fool can make money, but only a wise man can save it. Those who save money frequently cannot keep it, for their very thrift frequently becomes blind. There is perhaps no fact so quickly known as an individual's possession of more money than he requires for his living.—*Exchange.*

—Of the fifteen students sent by the government of Siam to receive professional training four are young women.

—The corner-stone has been laid at Nashville, Tennessee, of the Dental department of the Meharry Medical College. This is an interesting step in educational progress, as it is the first dental school in the world for colored pupils.

—Announcement has been made in London of the death of N. M. Prjvalsky, the bold and successful explorer of the wildernesses of Central Asia. Until the expeditions of Prjvalsky began, twelve years ago, the interior of Thibet and the highland region between East Turkestan and India were unknown to civilized man. The present expedition, during the progress of which the explorer died, was the fifth undertaken by him. The specimens collected, it is estimated, amount—including botanical, zoölogical, and geological specimens—to over 30,000. Prjvalsky's account of his fourth journey has just been published. He was an enthusiastic traveler and hunter, and an athletic and companionable man.

—A commission appointed by the French Senate to report upon the subject of utilization of the sewage of Paris for irrigation recently inspected the system now in operation in Berlin. The whole of the closely built portion of that city, containing 1,150,000 inhabitants, is thoroughly sewered, and all waste matters are carried by water to pumping stations from which they are distributed to the irrigation fields. In the first experiments one acre of field was allotted for each 400 inhabitants, but this was found to be insufficient, the land becoming soaked and muddy, and the affluent imperfectly purified. The irrigated fields now comprise about 8,000 acres, and 6,000 remain to be taken into service as the population of the city increases. —*Exchange.*

—A dispatch from Washington announces the issue of the twenty-second volume of the Census of 1880, completing that work. This, it says, was the most elaborate work of the kind ever undertaken in the world. The taking of the Tenth Census was provided for by an act of Congress approved March 3, 1879, appropriating $3,000,000 for the work. President Hayes, on April 1st of that year, appointed Francis A. Walker, a professor of Yale College, Superintendent of the Census, he having been connected with the Ninth Census. General Walker determined to make the census something more than a mere tabulation of the age, nativity, and location of the population of the country, and arranged for a series of special reports upon important topics by special agents. These included many well known persons. The whole report makes a library of 19,304 pages, and cost, exclusive of printing, engraving, and binding, $4,853,350, or 9 63-100 cents per capita of population in 1880, a less relative cost than any similar publication ever issued. The appropriation for printing, engraving, and binding was $1,018,116. A large quantity of data was secured that was not tabulated and published, owing to the exhaustion of the appropriation.

CURRENT EVENTS.

THE Congress of the United States reassembled on the 3d instant, a quorum being present in both Houses. The President's Message was read. It deals with all classes of subjects, as had been customary, and not merely with one, as last year. He recommends discontinuing the coinage of silver dollars. Among the members present in the House was Samuel J. Randall, of Pennsylvania, who was obliged to leave the last session by severe illness.

THE deed of trust from I. V. Williamson to the trustees whom he selected for his new school was executed on the 1st inst., and the Board organized by electing John Baird president. As some statements to the contrary have gone out, it is proper to mention that it makes no discrimination whatever on account of color.

THE President has appointed John G. Enright, of Michigan, to be Assistant Commissioner of Indian Affairs.

THE report of the Postmaster General states that the gross revenue for the year was $52,695,176. The total expenditures were $56,885,403. The estimated deficiency, therefore, is $4,190,227. The total number of post-offices is 57,376, an increase over 1885 of 6,124.

THE domestic war in Hayti between the so-called government established at Port au Prince by General Legitime, and the other faction in the north of the island, continues. Arms for each party have been shipped from New York, and a vessel, the *Haytien Republic*, which took out some for the "rebels" has been seized by the Legitime party.

WILLIAM TAYLOR, the Methodist bishop of Africa, sailed for Europe from New York on the 1st inst. He is returning to his missionary labors after a short sojourn in this country.

NOTICES.

*** A religious meeting will be held at Friends' Home for Children, Fortieth and Aspen streets, West Philadelphia, on First-day, the 9th of Twelfth month, at 3 p. m.

Ministers and all interested are cordially invited to attend.

*** Circular Meeting at Old Kennett meeting-house, Twelfth month 9th, 1888.

At Unionville, the second First-day in First month, 1889.

To convene at 2 o'clock.

*** Lecture by George L. Maris.—An Illustrated Lecture, by Prof. George L. Maris, on the Yellowstone National Park, will be given at St. George's Hall, 13th and Arch streets, on next Third-day evening, the 11th inst., at 8 o'clock, for the benefit of Friends' Home for Children, 4011 Aspen street, West Philadelphia. Prof. Maris has about one hundred fine stereopticon views showing the wonders and beauties of this famous region.

*** Philadelphia First-day School Union will hold its next session at Girard Avenue meeting-house on Sixth-day evening, Twelfth month 14th, at 7.30 o'clock. Brief reports with delegates from the several schools, etc., are requested, also class recitations or other exercises. Graded work in First-day schools will claim consideration to be opened by Samuel B. Carr.

Friends are urged to attend and participate.

DAVID L. LUKENS,
SARAH M. HOLCOMB, } Clerks.

*** Haddonfield Quarterly Meeting's Temperance Committee has appointed a Conference to be held in Friends' meeting-house, Haddonfield, on First-day, Twelfth month 16, at 3 o'clock in the afternoon.

A cordial invitation is extended to all.

WM. C. COLES, Clerk.

*** Quarterly meetings in Twelfth month will occur as follows:

13. Haddonfield, Haddonfield, N. J.
20. Fishing Creek Half-Year's Meeting, Pa.

The use of the INTELLIGENCER AND JOURNAL *as a medium for advertisements will, we think, be found very satisfactory. A careful supervision is exercised, and nothing known to be unworthy is admitted. The paper now goes to about 3300 persons, reaching, say, 15,000 readers, and its size and shape, and the character of its contents give special weight to each advertisement.* ☞ *When our readers answer an advertiser, please mention that they do it upon seeing the advertisement in this paper.* ☜

Friends' Intelligencer and Journal.

MEMORANDA TO GUIDE FRIENDS WHO SEND CLUB SUBSCRIPTIONS: 1889.

PHILADELPHIA, ELEVENTH MO. 20, 1888.

1. *Rates for the Year 1889.*

Single subscriptions, $2.50 per year.
8 copies, $2.25 each, a year.
15 copies, $2.00 each, a year.

2. *"No Agents."*

We recognize no one as our "Agent," with the single exception of Friends' Book Association, 15th and Race Sts., Philadelphia. Those Friends who get up Clubs for the paper must be regarded as the agents of those subscribing through them. When money reaches our hands we receipt for it ourselves, and no one, (except F. B. A., as above), is authorized to receipt for us.

3. *Concerning Clubs.*

a We desire very much to add *new names* to our list,—both to sustain the paper, in place of older Friends, who are year by year removed by death; and to extend the circle of its usefulness. One object in making Club rates is to aid this *new growth*. We trust Friends sending Clubs *will have some new names*, unless this is clearly not possible.

b. Names and money, for clubs, should be sent to us in *one, two, or at most three*, installments. We can wait till the person getting up the club is ready with the money, but we cannot accept single names and money, (unless for *new subscribers*), at intervals through the year, on account of Club previously reported.

4. *Subscribers' Names.*

When sending clubs, please carefully designate all "new" names; and in renewals, please use the same name as the paper has been coming to. If for any reason the name is changed, please call our attention to this fact, to avoid duplication.

5. *Discontinuances.*

We do *not* discontinue a paper (unless for continued delinquency in payment) without the order of the subscriber. Persons wishing to "stop" *must so notify us.* (With regard to this, we may say that a great majority of the subscribers to the INTELLIGENCER AND JOURNAL, continue from year to year without a break, and that to stop papers as soon as amount paid runs out, would give offense to many, besides making a large increase of work for us at the busiest season of the year. *We never intentionally continue a paper ordered stopped, when it is not in arrears.*)

SWARTHMORE COLLEGE LECTURE COURSE FOR 1888-'89.

SIXTH-DAY EVENING, 2D MONTH 14TH, '89,

MARY A. LIVERMORE,

SUBJECT: "Women of the War."

PENNHURST,

TELEPHONE No. 118.

MICHIGAN AVENUE, NEAR THE OCEAN,

JAMES HOOD. *ATLANTIC CITY, N. J.*

ANNOUNCEMENT 1888. *Our Fall Stock of* Ladies Fine Hand Sewed SHOES is unusually well selected, embracing all the desirable styles for fall and winter wear. Ordered work a specialty. SAMUEL DUTCHER,
915 SPRING GARDEN STREET.

CALIFORNIA ORANGE AND RAISIN LAND. 7,400 acres of the finest land in Southern California. Just the place for a colony. Will sell as a whole or by sections. 1,600 acres subdivided into 40-acre tracts, for sale to settlers, or would colonize the 9,000 acres. Address
SIGNOR, FERRY & SELOVER, San Diego, Cal.

TO RENT—A FIRST-CLASS BOARDING house, all the modern improvements, yard, garden, fruit, etc. Within ten minutes walk of the R. R. Depot.

Call on or address the owner in the house. L. A. SMITH M. D. Newtown, Bucks Co., Pa.

WANTED—A NURSERY GOVERNESS IN Friends' family at Atlantic City, N. J. Address Box 24, Moorestown, N. J.

WANTED—A PRACTICAL YOUNG WOMAN, about thirty, to train as a nurse for a private Sanitorium. Address Dr. ELIZABETH H. CONELY HOWELL, 3404 Spring Garden St., Philadelphia.

FRIENDS' CALENDAR FOR 1889 *IS NOW* ready. The card is similar to that of previous years, but instead of a pad, the daily slips are in the form of a small, neat book, which can be taken off the card and replaced at pleasure, making it convenient for preservation and reference. With each day is given a quotation from Friends' writings. Each calendar is sent in a box, rendering it less liable to be injured in the mails.

Price, 50 cents each, or six for $2.00. Sent by mail, postage paid, on receipt of price.

"Old Westtown."

A delightful volume of reminiscence, narrative, and personal and historical sketches of Westtown Boarding School, contributed, edited, and illustrated entirely by old scholars and teachers. It is of unrivaled interest to everyone who has ever been connected with the institution.

Price, in cloth, $2 00. In half morocco, gilt top (an elegant binding, suitable for a gift), $3 00. Sent by mail, postage paid, on receipt of price.

(Money should be sent by postal-note, money order, or registered letter, not by checks on local banks.)

FERRIS BROS., PUBLISHERS,
S. W. Cor. 6th and Arch Sts., Phila.

WANTED.—A FARMER AND WIFE. HE to take care of a milk-dairy, and of the milking and serving customers, collecting and returning the money; will be helped to milk. She to assist at milking and to take care of churns, buckets, etc.; must come well endorsed for cleanliness, industry, and honesty. Friends preferred. Address Lock Box 24, Norristown, Pa., stating wages expected. House and garden goes with offer. Wanted on 1st of Third month next.

TEA AND COFFEE.

If $3.00 is sent to me I will send 2lb real good Tea, Black, Green, Japan, or mixed, and 8lb of fine Coffee, roasted. Express charges prepaid in the following states: Pa., New York, New Jersey, Del., Md., Va., W. Va., D. C., Ohio, Ill., Wis., Ind. And I will refund the cost of registered letters when the goods are shipped.

WM. S. INGRAM, 31 N. SECOND ST., PHILADELPHIA, PA. ESTABLISHED 1856.—

CHAPPAQUA MOUNTAIN INSTITUTE,— A Boarding School for both sexes under the care of Purchase Quarterly Meeting. The present building is new and much enlarged, and has perfect sanitary arrangements. Excellent corps of instructors. Prepares for Business or College. Healthfully and pleasantly located near the Harlem R. R., one hour from New York city. For catalogue and particulars, address,

SAMUEL C. COLLINS, A. M., Prin.,
Chappaqua Institute, N. Y.

FRIENDS' ACADEMY,

A boarding and day-school for both sexes. Thorough courses preparing for admission to any college, or furnishing a good English education. The next school year will begin Ninth month 11th, 1888. Terms for boarding scholars $150 per school year. The school is under the care of Friends, and is pleasantly located on Long Island, about thirty miles from New York. For catalogue and particulars address,

FREDERICK E. WILLITS, Sec.,
Glen Cove, Long Island, N. Y.

ABINGTON FRIENDS' BOARDING AND DAY SCHOOL,

Near Jenkintown, Pa., North Penn and Bound Brook R. R Ten miles from Philadelphia.

Next school year begins Ninth month 10th, 1888. Courses of study arranged to furnish a thorough English education and to prepare for college.

Board and tuition $145 to $175 per school year. Tuition alone $25 to $55. For further information address,

ARTHUR H. TOMLINSON, Principal,
Or CYNTHIA G. BOSLER, Sec., Jenkintown, Pa.
Shoemakertown, Pa.

SWARTHMORE COLLEGE

OPENS NINTH MONTH ELEVENTH.

Thirty minutes from Broad Street Station, Philadelphia.
Under the care of Friends, but all others admitted.
Full college course for both sexes; Classical, Scientific, and Literary.
Also a Manual Training and a Preparatory School.
Healthful location, large grounds, new and extensive buildings and apparatus.

For Catalogue and full particulars, address
EDWARD H. MAGILL, LL. D., President,
Swarthmore, Penna.

FRIENDS' BOARDING SCHOOL.

NEWTOWN SQUARE, PA.

Terms, $150 to $225 per year.

Apply to HANNA R. CALEY, Principal, address, during vacation), Media, Pa.

Or to
THOMAS P. BARTRAM, Newtown Square, Pa.,
CLEMENT M. BIDDLE, 815 Arch Street, Phila.

MONTGOMERY COUNTY MILK.—CONSHOHOCKEN Dairies. Special Attention given to serving families.

Office, 603 N. 8th Street, Philadelphia, Pa.

JOSEPH L. JONES.

L. & R. L. TYSON 242 *S. ELEVENTH ST.* Staple trimmings, knitting and embroidery silks and threads, best yarns and zephyrs, wool and cotton waddings. Materials for Friends' caps. Caps made. Plain sewing and quilting done to order.

DRESSMAKING (BY A FRIEND) CLOTH suits, silk dresses, wrappers. Also plain dresses. From $5.00 to $12.00. 605 North Twelfth Street.

FRIENDS' INTELLIGENCER AND JOURNAL.

INTELLIGENCER Vol. XLV. No. 50. | PHILADELPHIA, TWELFTH MONTH 15, 1888. | JOURNAL. Vol. XVI. No. 829.

IN THE LAST DAYS.

As we grow old, how softly, slowly close
The doors of sense, and shut us from the world—
Like tender petals of some ling'ring rose
That, of a frosty night have inward curled!

Dim as the figures in a dream now pass
Those glittering shows that stirred our youthful hearts—
Poor, hurrying shadows in a misty glass,
Each but a moment seen ere it departs.

Nor sight, nor sound, nor taste, of earth's delights
Can longer please; these things are past and gone,
The soul will put her quiet house to rights,
And in the upper chamber watch the dawn.

—*James Buckham.*

A FRAGMENT OF HISTORY.[1]

THE present with its new and varied interests is ever crowding upon the past, and many a fragment of history lies almost forgotten upon the library shelves of a generation fast passing away. There has recently come to my notice such a volume, entitled "Exiles in Virginia,"—a journal of Friends banished to Virginia during the War of the Revolution, edited by Thomas Gilpin, and published in the year 1848, in Philadelphia.

Friends, as a society, have believed that war is inconsistent with the Christian character, and have endeavored to live peaceably with all men. Nevertheless, when they felt their own rights or the rights of others were invaded, they did not in times past hesitate to utter to King and Parliament manly and dignified protest against such infringement. Their addresses were made to the King free from any servile compliments; and when they sought redress from Parliament in regard to their religious or civil rights, the bold maintenance of their privileges often gained for them the justice they demanded.

During the ten years of unjust and arbitrary legislation on the part of Great Britain, which at last culminated in the Revolutionary War, Friends joined with others in remonstrating against the Stamp Act and other attempts by the English Parliament to tax the colonies without their consent, as a violation of their colonial rights as well as the common rights of British subjects. They also joined their fellow-citizens of Philadelphia in the non-importation agreement to prevent goods from being imported from England until the offensive enactments were repealed. To this agreement, dated the 25th of Tenth month, 1765, more than fifty members of the Society of Friends signed their names. When all remonstrance failed and recourse was had to arms to settle the difficulties between the mother country and her colonies, Friends, in accordance with their well-known principles, withdrew from participation in the struggle, and felt themselves required as far as possible to keep clear of the spirit of war. Philadelphia Yearly Meeting and its Meeting for Sufferings, at various times by advices to its members encouraged them to a faithful maintenance of their testimony against war, as became a Christian people making a high profession.

In the summer of 1777 Gen. Howe left his headquarters in New York and sailed up Chesapeake Bay for the purpose of attacking Philadelphia from that direction. Landing at Elk river and marching northward, he met and defeated the Americans at Chadd's Ford, on the Brandywine. While these events were taking place, Congress was in session in Philadelphia; also the Legislature of Pennsylvania and the Supreme Executive Council, consisting of twelve members with its president. Congress, by a resolution dated August 25th, 1777, recommended:

"That the executive officers of Pennsylvania and Delaware be requested to cause all persons within the respective States, notoriously disaffected, forthwith to be disarmed and secured until such time as they may be released without injury to the common cause.

"That it be recommended to the Supreme Executive Council of the State of Pennsylvania, to cause diligent search to be made in the houses of all the inhabitants of the city of Philadelphia, who have not manifested their attachment to the American cause, for firearms, swords, bayonets, etc."

There is no evidence that these resolutions were intended for the Society of Friends; but notwithstanding the loyalty which they had previously manifested, the Executive Council proceeded to arrest several of the most respectable citizens of Philadelphia, chiefly members of this Society. The popular feeling was still further inflamed by a spurious paper said to have been found in some baggage taken on Staten Island and sent by General Sullivan to Congress, purporting to have been prepared by "Spanktown Yearly Meeting," and containing information for the British in regard to the movements of the Americans. In the list of persons thus seized, we find names conspicuous in the annals of our Society a century ago, and some of this number were ancestors of Friends whom we have delighted to honor. Among them were James Pemberton, Israel Pemberton, John Pemberton, Owen Jones, John Hunt, Edward Pennington, Thomas Wharton, Miers Fisher,

[1] Read in a Conference held at Race street meeting-house, Twelfth month 2d, 1888.

Thomas Fisher, and Samuel Rowland Fisher. From their journal we take the following account of their arrest:

"A number of persons professing great attachment to the cause of liberty, undertook the arduous office of executing the arbitrary mandates of the President and Council, and called at our houses, demanding of most of us to sign a paper, conceived in the following terms: 'I, ——— do promise not to depart from my dwelling-house, and to be ready to appear on demand of the President and Council of the State of Pennsylvania, and do engage to refrain from doing anything injurious to the United States of North America, by speaking, writing, or otherwise, and from giving intelligence to the Commander of the British forces, or any person whatever, concerning public affairs.'

"Several of us, on seeing the paper to be subscribed to, replied that except going out of our houses, as our various occasions of business had required, we had not infringed at any time upon the requisition demanded; but we could not agree to give up that privilege; on which we were told we must go before the President and Council. Some of us were taken to the Mason's Lodge under a promise of being heard by the Council, who was said to be sitting there; but this was found to be a deception, as they were immediately put under a strong guard and a hearing denied them. Some were brought there without the offer of becoming prisoners in their own houses, but the greater part were treated in the following manner, with some inconsiderable variations.

"Upon reading the paper, we demanded to konw upon what authority they acted—and were answered, 'By virtue of a resolution of Congress, and by orders of Council.' We demanded to see their written orders, which was in general absolutely refused. To some few, who were more pressing, part of a warrant was read; but not one of us was suffered to read or copy the original. We remonstrated against so arbitrary a proceeding, and endeavored to convince them that signing such a paper would be an acknowledgment of guilt, and would subject us to be removed at an hour's warning without knowing the charge against us; and after laying before them the iniquity of the measure, we refused to become voluntary prisoners for supposed offenses, because we knew ourselves innocent of any.

"Some of the persons asserted they had undertaken the business against their inclination, to prevent its being executed by military officers, who would have used more rigor; but this appeared to be only to excuse themselves to us. They refused us a reasonable time to prepare for confinement, and in some instances brought a military force to intimidate us; they entered the houses of John Hunt, John Pemberton, Henry Drinker, Edward Pennington, and William Smith, (broker,) broke their desks, searched them, and carried off private papers, and some printed books, under color of orders for that purpose, which they would not show."

While these Friends were confined in Mason's Lodge they sent repeated remonstrances to Congress and the Executive Council, and they also issued an address to the "Inhabitants of Pennsylvania," stating their causes of grievance in having been illegally deprived of their liberty without a warrant from persons of competent authority, and in having no opportunity given them for a hearing. At length, all protest and remonstrance having failed in their purpose, and orders having been issued to prepare for removal, on the 11th of Ninth month, twenty members of this little company, seventeen of whom were Friends, started from their temporary place of imprisonment under military escort to Reading. Thence they proceeded to Winchester, Va., the place of exile assigned them by the Executive Council. Considerable freedom of action was allowed them during their stay in Virginia, although they found themselves unpopular, being accused of holding correspondence with their friends without showing their letters to proper officers, and of lessening confidence in the value of the Continental paper money.

These conscientious Friends appear to have held their meetings regularly twice each week, and during this period of trial they found comfort and strength in these hours of silent communion, and under the ministration of John Hunt and John Pemberton, two of their number. We can readily understand how often they must have stood in need of consolation and renewal of faith when we consider their great distance from home, the interruption to their business, with no means of support provided for them during their banishment, and their separation from their families, who were exposed to dangers and privations in consequence of the presence of a foreign army in Philadelphia. In this forlorn condition they were cheered by occasional visits from relatives who brought welcome tidings from their families. John Parrish and John James, also, from brotherly interest and regard, made the long and toilsome journey in the winter season to carry to this lonely little band words of love and sympathy. Sorrow, too, came in their midst, and their ranks were thinned by death. Thomas Gilpin and John Hunt departed this life, one in the Second month, the other in the Third month; and far from home and kindred they were consigned by loving friends to their last resting-place in the little grave-yard adjoining Hopewell meeting-house. In the journal John Hunt is spoken of as a dignified Minister of the Gospel, whose gift was eminent, and as one who had labored in it for forty years. He was often favored with great power and demonstration, singularly manifested in their meetings during the time of their sojourn in Winchester. In the account of the last hours of Thomas Gilpin we find this interesting paragraph: "There are many religions in the world, and a variety of forms, which have occasioned great persecutions and the loss of many lives, each contending that they are right; but there is but one true religion, arising from faith in God, and in his son Jesus Christ, and hope in his mercy. A monitor placed in every mind, which if we attend to we cannot err."

The time of release had now arrived, and an order signed by the President and Council of Pennsylvania, came for the return of the exiles. On their homeward journey they stopped on the way in Loudoun

and Fairfax counties, at the hospitable homes of Friends, the names of whose descendants are still familiar in those localities. Through the intercession of a Committee of women composed of near relatives, they were brought to Lancaster, where the Council was then in session, to receive their discharge; and here it was necessary to procure passports from General Washington whose headquarters were at Valley Forge, to pass through the lines in order to reach Philadelphia. At last, after a banishment of eight months from home and friends, with grateful hearts they found themselves once more among their kindred, and were welcomed to their own firesides by beloved friends.

Friends at home had not been idle or indifferent during these trying months. The Yearly Meeting had appointed a committee to wait upon General Washington,and General Howe, Commander-in-Chief of the British Army, to present to them a testimony prepared by the meeting, setting forth the views of Friends. In this testimony they say:

"A number of our friends having been imprisoned and banished, unheard, from their families, under a charge and insinuation that 'they have in their general conduct and conversation evinced a disposition inimical to the cause of America;' and from some publications, intimating that 'there is strong reason to apprehend that these persons maintain a correspondence highly prejudicial to the public safety,' there may be induced a belief that we have in our conduct departed from the peaceable principles which we profess; and apprehending that the minds of some may thereby be misled, for the clearing up of truth, we think it necessary publicly to declare that we are led out of all wars and fightings by the principle of grace and truth in our own minds, by which we are restrained, either as private members of society, or in any of our meetings, from holding a correspondence with either army; but are concerned to spread the testimony of truth and the peaceable doctrines of Christ, to seek the good of all, to keep a conscience void of offence towards God and man, to promote the kingdom of the Messiah, which we pray may come and be experienced in individuals, in kingdoms, and nations, that they may 'beat their swords into ploughshares, and their spears into pruning-hooks, and nation not lift up sword against nation, neither learn war any more.' (Isaiah, 2: 4.) And we deny, in general terms, all changes and insinuations which in any degree clash with this our profession.

"As to a nameless paper lately published, said to be dated at Spanktown Yearly Meeting, and found among the baggage on Staten Island, every person who is acquainted with our style, may be convinced it was never written by any of our meetings, or by any of our friends. Besides, there is no meeting throughout our whole Society of that name, nor was that letter, or any one like it, ever written in any of our meetings since we were a people. We, therefore, solemnly deny the said letter, and wish that those who have assumed a fictitious character to write under, whether with a view to injure us or cover themselves, might find it their place to clear us of this charge by stating the truth.

"As, from the knowledge we share of our banished friends, and the best information we have been able to obtain, we are convinced they have done nothing to forfeit their just right to liberty; we fervently desire that all those who have any hand in sending them into banishment, might weightily consider the tendency of their own conduct, and how contrary it is to the doctrines and example of our Lord and Law-giver, Christ Jesus; and do them that justice which their case requires, by restoring them to their afflicted families and friends; and this, we are well assured, will conduce more to their peace than keeping them in exile.

"We give forth this admonition in the fear of God, not only with a view to the relief of our friends, but also to the real interest of those concerned in their banishment.

"Having been favored to meet to transact the affairs of our Religious Society, which relate to the promotion of the cause of truth and righteousness, we have felt a renewed concern for the good and happiness of mankind in general, and in the love of the Gospel have issued forth this testimony, for the clearing of ourselves and our friends, and the warning of those who, from groundless suspicions and mistaken notions concerning us, may be persuaded to seek our hurt, to the wounding of their own souls and the loss of the community.

"Signed by order and on behalf of the Yearly Meeting.

ISAAC JACKSON, Clerk."

For Friends' Intelligencer and Journal.

A GLANCE AT THE INDIAN QUESTION.

A SUBJECT ever of interest to Friends, and to many others who have hearts to feel, is the Indian question. When U. S. Grant was called to the presidency, he in public expression said, "Let us have Peace." During an administration of eight years, it was shown that the language came from an honest heart and an earnest one, and was not without its meaning, and when Friends responded to his invitation, and delegates from our several yearly meetings were in consultation with him at the White House, in the work of establishing the new "policy" our dear friend, then aged, (and recently departed,) holding his hand, said to him, "President Grant, when the people nominated thee, I feared that thou being so much accustomed to war, would not favor peace." The President, kindly smiling, and retaining her hand said: "Then for that matter I ought to be the very man for the work in which we are engaged. I have seen enough of war to know that peace is best."

Since that time this high policy has been upheld by every administration, though with varying results, and in this especial matter the first duty of Friends is to stand by the Government with good counsel and encouragement.

The latest trouble with the Indians, an account of which was spread before our late Yearly Meeting, and a synopsis published in this paper, is on account of an effort to negotiate for the purchase of the lands of the Sioux nation by the Government, in the Ter-

ritory of Dakota. The Indians could not come to terms with the commissioners appointed for the purpose, and adjourned the negotiations to Washington, where there was another failure, and they have gone to their far-off homes to await the solution of the question.

The Indians under President Grant's plan, sometimes called the "Quaker policy," are peacefully disposed, and in the main contented. This is verified in almost every annual report of the Government departments that bears on the question. There are plenty of good words for their contentment and advancement.

The present Indian population of the whole country is, as near as can be ascertained, two hundred and forty-six thousand. The supposed decrease since 1880 is fifteen thousand, and the census of 1890 will be more accurate than is the custom, in enumerating the race. One fact that gives discontent to the "ruling race" is in this, that the Indians occupy 112,413,440 acres of land, being equivalent to an average of 456 acres of land to each individual. Their domain has about seventy agencies, and comprises as much territory as the nine States of Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Maryland, and Virginia.

Secretary Vilas in his report speaks in high terms of commendation of these wards of the nation. He says the transformation of the will, character, and habits is steadily progressing. They are welcoming education, which for years they firmly opposed, and the schools are being enlarged in number and capacity, and growing in usefulness. Over sixteen thousand of the young are now being taught the English language, together with the ways and habits of civilized life, in as good schools and under as good teachers as may be found in the public schools of Massachusetts or Pennsylvania, (and *they* are good ones, too). Yet forty thousand Indians at school age are unprovided for, leaving yet a wide field open for effort.

Our people who labor at Washington in this work never fail to press upon the government the necessity of providing matrons for the agencies whose duty it shall be to teach and elevate the Indian women,—we might say men, as well, for the influence of suitable persons in that capacity, would elevate the whole mass. In response to these suggestions the Secretary has embodied in his report a request for an appropriation of fifteen thousand dollars to be used for this purpose.

The record of Baltimore Yearly Meeting in handling this great and living philanthrophy, stands very high and the details of their labors would fill many volumes. The volumes are few, and the records of their deeds are scarce, yet a crown of glory is resting on their heads; the black man, the red man, and the poor man's child will remember them in eternity.

In the year 1795, the Indians of the Northwestern Territory sent letters and messengers to Friends of Baltimore for help. Philadelphia Friends assisted Baltimore in sending supplies to their aid, and the two yearly meetings labored jointly in the work, until in 1804, the concern rested so heavily on Friends of Baltimore, that their committee offered to visit the Indians at Fort Wayne where the remnants of the tribes were in camp. Four members of the committee on the Indian concern were willing to undertake the great labor of the journey, and on the 23d of Second month, 1804, they started on horseback, the only mode of conveyance in that day, over mountains, plains, forests, and rivers, with ten inches of snow on the ground and a driving storm in their faces, which increased the depth of the snow by the next day to twenty inches,—the object of their effort seven hundred miles away. In the first day's journey, in crossing a miry glade, one of the horses fell and threw the rider, when, to the surprise of all, neither rider nor horse was the slightest hurt. They continued their journey single file.

The brave soldiers of this little army of love were George Elliott, Gerard T. Hopkins, Joel Wright, and Elisha Tyson,—philanthropists who feared not the face of man. The yearly meeting authorized them to take one or more Friends to remain with the Indians, to teach them to cultivate the soil and raise provisions. They could get but one, Philip Denis, and took him along.

We have gleaned some of these facts from a little book which was compiled from the diary of G. T. Hopkins and kept by him on the journey, the compilation being made by Martha E. Tyson, of Baltimore, and published by T. Elwood Zell, in 1862. It is a story of thrilling interest. The hearts of Friends still go out to the unhappy red man in his many removals and his many broken homes.

One more incident in my recollection occurred forty years ago. The several small tribes of Indians in Western New York got into trouble with land speculators and were about to be removed beyond the Lakes. These Indians had been under the care of the yearly meetings, and were somewhat advanced in civilization. They applied to the committees for help. Philip E. Thomas, chairman of the Baltimore Committee, realized the need of immediate and vigorous action. He went to Washington, then to Albany, (the Legislature of New York being in session), procured the whole procedure to be annulled, and these Indians are still there in possession of the homes of their fathers. They are not known as Indians except by the color of their skins, and are honest, industrious people. These works were not done by our fathers for parade, or for the praise of men, but from the love of the Father, and pity for suffering humanity.

It is my earnest hope that Friends may not lay down this work, for it must be prosecuted to the end if it takes a hundred years. It is the legitimate work of Friends to guard their upward and onward progress, and be always in call. The Government must have our counsel and advice in its commendable work. The forty thousand children whose education claims attention are calling to us. They must be educated, every child.

"For thou, Lord, hast made me glad through thy works; I will triumph in the works of thy hands."

Baltimore, Twelfth month 6. HENRY JANNEY.

YOUTH AND AGE.

One of the improvements which may be noticed in our modern social life is the more frequent companionship between the young and the old. Even the goddess of fashion is beginning to recognize the value of this union in maintaining the dignity of social intercourse, and is laying down stricter rules than formerly to enforce it. But the real necessity of this union between youth and age has a far deeper root than any mere custom or conventionality. It lies in the very nature of man. As he progresses from infancy through childhood, youth, and maturity to old age, the changes through which he passes, though in the main, advancements, are not entirely so. With every gain comes some loss. The trusting helplessness of the infant, appealing to all for tender care, the joyful abandon of the child, the fresh enthusiasm of the youth, the sense of power and confidence of middle life, are all in some degree laid aside as each higher stage is reached. This loss is, of course, intensified in proportion as each class is held aloof from the others. The influence of companionship is greater in its unconscious magnetism than in any direct and intentional effect. The mother with her child aims to do much in forming his tastes, his habits and his character, and her exertions will never be unproductive; but she is compassing more deep and permanent results upon him by the involuntary influence of her continual presence. What she feels and thinks and *is* continually permeates him, and will be a greater factor in his life than any of her teachings can be. So in all human intercourse the unconscious influence is always the greatest, and the very presence of those who are different from ourselves, and have characteristics in which we are deficient, tends in some degree to restore to us a better balance.

Although every age so gradually merges into the next that no definite distinctions can be laid down, there are general features distinguishing youth and age, each of which has its advantages and its disadvantages. The very things which are so lovely and attractive in youth, that men sigh for them in after years, are naturally associated with certain deficiencies which maturer years supply. The delight in simple existence and simple pleasures, that so charms us in the child, fills him so full, that he can accept neither care nor responsibility. The fresh enthusiasm of the youth, that older people sometimes look upon with envy, closes his eyes to real difficulties, and leads him to attempt much that he cannot execute. His vivacity disinclines him for grave counsel; his inexperience leads him into many dangers. On the other hand, the natural desire for repose which distinguishes the latter part of life, is unfavorable for energetic action; long and hard experience impairs the faith in man which is the foundation of human brotherhood; the continual grapple with obstacles cools the ardor which is needed in every enterprise. If the reason is stronger, the enthusiasm is weaker; if sober judgment prevents folly, it also tones down a joyful spirit.

These differences need not be a matter for regret. They are as natural as any of the varieties we behold in the external world. The grand and rugged rocks can never attain the calm and sweet tranquility of the lake below, nor can the peaceful lake emulate the sublimity of the cliff which overhangs it. Yet how beautiful is their union in the landscape! No hint of deficiency strikes us as we see with delight how each fills its place in the harmony of nature. So youth and age need to be united in order to bring out the finest qualities of each and to yield the best results to society. There is hardly a circle of any kind that is not benefited by the presence of both. The very existence of the family depends upon it, and its welfare is always gauged by the closeness of the bonds that exist between the older and the younger members. Wherever they draw off from each other, each finding separate friends and separate interests—where the parents feel the children to be a burden and the children feel their parents a restraint, there the family always loses its prestige and fails in its purpose. So in the social circle, the joy and hilarity of youth is made more sweet and serene by the calmness and dignity of age, while the gravity and thoughtfulness of age is enlivened and warmed by the brightness and earnestness of youth. Any great *purpose* of life is best carried out where both these elements unite. Every business, every reform, every movement in politics, every enterprise for the good of humanity, will be most successfully pursued when youth and age combine in the effort. The heat and vivacity, the enthusiasm and activity natural to youth, are all needful to give to it vitality, while the experience and judgment, the caution and knowledge of riper years, are quite as necessary to guide it into right channels and give it permanence and weight. We may safely say that there is no circle, whether formed for business or pleasure, for present activity or future benefit, that is complete in itself or useful in the highest sense, from which either the young or the old are entirely excluded.

In order, however, for these advantages to be fully realized there must be sympathy and respect between youth and age. That they simply tolerate each other's presence is not enough. Each should be well aware that the other has something to give which cannot be gained elsewhere—that just where one is deficient the other is likely to excel. There is, at present, too little of this appreciation. Something of condescension, not to say a mild contempt, pervades the minds of many of the young as they compare their own boasted excellencies with the supposed weaknesses of the old; and many of the old regard the young with a measure of the same feelings. There is a deference due from youth to age simply as such; but the respectful welcome which we would have each extend to the other is founded on different grounds. It comes from a true sense of the real advantages which each has to offer to the other and which that other needs. The more this sense of obligation is aroused the more respectful and cordial will be the bearing of youth to age, and of age to youth, and the more intimate will their relations become. And these results, while tending to increase the happiness of both, will also insure to society, in the most enduring form, the real value of their several excellences, which can never be brought out in fullness save in combination with each other.—*Phila. Ledger.*

EFFICACY OF PRAYER.

It is taught by many that prayer can have no influence with God, since his laws are irrevocable, his character unchangeable. For finite man to hope for any reply, reward, or effect whatever to follow his feeble petition other than results from his own increased watchfulness, is to expect a change or suspension of those laws,—in other words is to expect a miracle. In all the works of nature, we are told, "there is neither variableness nor shadow of turning." The seed sown springs forth and yields fruit in compliance with inevitable laws. And this is true. But what would it avail to sow, were the earth not warmed and invigorated by the sun? or what effect could the sun produce upon the earth and vegetation, were there not a mutual, unseen influence operating unceasingly to bring to perfection fruits, the products of the combined agencies brought into action?

It is evident that each must perform its part. The sun cannot do the work of man in the preparation of the earth, sowing the seed or keeping it free from weeds; neither man, of the sun, earth, or seed. But, as to the result, neither is independent of the other. "Paul may plant, and Apollos may water; but God giveth the increase."

Precisely so in the moral or religious world. It is not only necessary that the seeds of righteousness and truth be planted in the soul, but that the mind be kept in preparation, softened by love, free from the weeds of evil passions and selfish desires, in order that the unseen spiritual influence of the Sun of Righteousness may penetrate, and by its life-giving, combining powers cause the seed to germinate and bring forth fruit, "some thirty, some sixty, and some an hundred fold."

But how, it is asked, does prayer effect the result? We answer, that as between the earth and sun God has decreed certain conditions to be observed in order to develop earth's products, so between man and man, and man and his Creator, there are conditions to be complied with in order to develop the fruits of mind. First among these, inherent and imperative in man, is desire to reciprocate ideas; and this desire must be the complied with, else would ideas cease, and all communion, all sympathy, all progress come to an end?

From whom, then, we ask, do we inherit this irresistible principle of attraction, and reciprocity? Are we not God's children, and do we not receive our instincts from him in whose image we are made? Or, having created, quickened, and united by his own spirit all mankind, has he severed the electric cord, cut himself aloof, and closed every avenue to communication, to sympathy? Dark and drear is our condition. if it be true that though we thirst for the pure water of life, gushing from a living spring. we may ask indeed, but be permitted to draw only from cisterns,—"broken cisterns that can hold no water."

Rather may we not infer that the sympathy between the earthly parent and child, quickened and strengthened by obedience and love, but rendered powerless by indifference and disobedience, is but a faint type of the connecting responsive tie that unites the child to the heavenly parent; and as love for the earthly parent will seek and receive confidence through some communicative channel, even so toward the heavenly. Aspirations arising from depths of sincere desire and affection will find language, it matters not whether mental or verbal; and the assistance received in answer to petitions for daily bread, for spiritual growth and increased affections, is as real as that received by vegetation from the natural sun, and as dependent upon the condition of the mind as the other is upon that of the earth, as real as the mutual confidence inspired by human sympathies.

Hence, we urge the necessity of prayer, not to change God's laws or purposes, but on the contrary, to bring ourselves into harmony and communion with his spirit, in accordance with his laws. Elements of the same nature will mingle; minds of a similar character will seek companionship, will seek to reciprocate ideas,—the greater combination, the superior spirit, exerting a more powerful influence, but not uninfluenced by the lesser and inferior, as is everywhere demonstrated.

"Ask, and ye shall receive; seek, and ye shall find; knock, and it shall be opened unto you." These are the conditions; and, though our Heavenly Father knoweth what things we have need of before we ask, it changes not the necessity for compliance with his laws, neither supplies the wants, any more than does a knowledge of our temporal needs preclude the necessity of effort on our part to obtain them. In those instances, he has clearly manifested his wisdom and love for man, having decreed his elevation, his redemption from sin and ignorance, through an earnest coöperation with him in providing both for his physical and spiritual welfare.—*E. S., in Christian Register.*

SCRIPTURE LESSON, No. 49.

Twelfth Month 23, 1888.

Topic: FILIAL DEVOTION.

Golden Text.—Whither thou goest, I will go; and where thou lodgest, I will lodge; thy people shall be my people, and thy God my God.—Ruth 1: 16

Read Ruth 1: 16-22.

The simple story of Ruth and her mother-in-law, Naomi, comes to us in the midst of so much strife and war, as a sweet evangel plucked from the mosaic of the centuries yet to be, when love instead of force shall rule in the hearts of all men. Worthy indeed was this fair daughter of Moab to be the mother, though after many generations, of him whose title was a "saviour," "the prince of peace." We see in this story that marriage with the alien to the house of Israel was not always a disaster. The aged Naomi, in her widowhood and childlessness, found that love and care in the widow of her son, a daughter of Moab, that was very precious to her at this time. It was a famine in the land of Israel that sent this family out of their own country. Famines in those early times were much more formidable disasters than now. The means of transporting the surplus of one country to another, where it was needed, was mostly by caravans; that involved delays and dangers scarcely known to modern traffic. At a very early date com-

munication along the sea-coast was carried on in great barges, rowed by men, and later in similar craft propelled by sails; this, when the winds were adverse, had to be abandoned for the oars. It is easy to be seen that a scarcity of food must have led to many migrations. Word had reached Naomi after a sojourn of ten years, that "the Lord had visited his people in giving them bread;" and her heart yearned to return again to her old home. She encourages her daughters-in-law to return to their own mothers. Orpah, after some hesitation, kisses Naomi, and goes back to her own people. It is Ruth who lingers, and with the loving words of our lesson gives herself wholly and entirely to her mother-in-law, to go with her to her home in Israel.

So the two went until they came to Bethlehem. This seems to have been Naomi's home: here they were received by their friends, the whole city being moved by them.

At the time of the barley harvest. Barley is one of the most important of the cereal grains. It was raised by the Israelites for fodder for horses, and for making into bread by the poorer people. The harvest was gathered in the low portions of Palestine in Third and Fourth months, and in the hilly districts in Fifth month. It is a hardy grain, and the harvest was earlier by three weeks than wheat. This beautiful story of domestic life in the far distant past, bears testimony to the devotion and self sacrifice that has been a link in the chain of family life, outlasting every other tie, and coming down to our own time as pure and fresh as when the Creator first set the solitary in families.

In a well-spent life, old age is the most beautiful season. When the white hair and feeble form frame a face made benign by experience and self-control, the presence of an aged one is almost like a benediction. Youth can have no greater privilege than to be taught by such an one. We can well understand that, however greatly the advantages of mental improvement afforded to the young may exceed the opportunities of their elders, the experience of well-spent years easily places the old people in the position of teachers. The duty of respect to age is therefore clearly apparent, and it is one indication of frivolity when young people ridicule or lightly receive the words of their elders. As old age advances there are often peculiarities developed that sometimes seem amusing, and more often annoying. There is here a powerful lesson for the young. In senility the ruling passions of one's life become most apparent. Being without the restraint of reason, some old people show just what they feel. The loving and kind become more affectionate; the discontented become fretful; the bad-tempered become troublesome. How important that while we are young enough to form habits, and to use our reason to control our actions, and our thoughts as well, we should build our character on the firm foundation. If then, we live to the weakness of extreme age, we shall show to those around us a bright, loving spirit, trusting in the Lord God Jehovah.

We feel that it must have been both love and respect that caused the young girl Ruth to leave her own land and follow the older woman, Naomi. Her feeling toward her mother-in-law made what she felt to be her duty a pleasure also. So it will be with us. When we have the proper feeling of love and respect for our parents and elders, and behave toward them in a dutiful manner, their counsel will be both beneficial and precious to us, and we shall love and enjoy them always, even after the infirmities of age have dimmed their mental powers.

Recently a friend wrote of the death of her father and mother, which occurred near one time: "The loneliness of a home from which both father and mother have been taken, none can know but those who have experienced it. No children were ever blessed with a more faithful, loving mother, and the years of helplessness wherein we have taken such pleasure in ministering to her, have made her peculiarly dear to us all. My father was my all, my companion, my confidant from my earliest years, congenial in every respect, interested in all pertaining to me and my work, and it seems as if I do not know how to be without him." These are the words of an earnest woman, active in the world's work, and it portrays a good daughter as well as good parents. What a place this world would be, if in every family such words could be spoken!

PRAYER.

Do not think it is necessary to pronounce many words. To pray, is to say, "Let Thy will be done;" it is to form a good purpose; it is to raise your heart to God; it is to lament your weakness; it is to sigh at the recollection of your frequent disobedience. This prayer demands neither method, nor science, nor reasoning; it is not necessary to quit one's employment; it is a simple movement of the heart towards its Creator, and a desire that whatever you are doing, you may do it to his glory. The best of all prayers is to act with a pure intention and with a continual reference to the will of God.—*Fenelon.*

The material blessings which lie at the basis of our life reminds us of the Power that has provided for the advent and sustenance of man. "Your Father knoweth what things ye have need of before ye ask him," said Jesus. "We love him," said John, "because he first loved us." Man is not an accident in the world. He is born in the forethought and love of the Infinite Life, and the world has been prepared for his coming. Year by year, it blooms again for his nurture; and from every one who finds any joy in life itself gratitude must radiate to the Source whence that life has issued. It is only the pessimist who can view the bounteous gifts of Providence with cynical disdain. And, when we look at the chief causes of bitterness, dissatisfaction, and misanthropy among men, we shall find that Homer was right when he intimated that the greatest evils that men suffer are those which they bring upon themselves. The larger part of the things which make life hard and unendurable are things which can be righted.—*Selected.*

NO CAUSE FOR THANKFULNESS.

WE have from time to time been reading with painful interest, the discouraging accounts given by correspondents, both in our own and other papers, relative to the condition of the masses of the people in Europe, but none have so profoundly impressed us as the utterances in one of our religious exchanges, of a traveler returning home in time for the recent Thanksgiving Day. We believe firmly in that most ancient testimony of Friends regarding the observance of days, and acknowledge that it should be a superfluity to set aside any *one* day, as every day should find us measuring our blessings and ascribing them to the merciful Giver of all good. Yet we cannot fail to see that advantage may result in the attention of a whole nation being called all at one time to examine if we will, into our causes of thankfulness of spirit, and if this examination tends to the realization of such a melancholy fact, at home or abroad, as that of the existence of human beings so utterly devoid of the joys of living as to have no desire to thank God for life itself, the custom is not without some good. It can at least set us to thinking of the causes that produce such an effect. The writer in question says:

"We are the only nation on the footstool so placed relative to our internal affairs and neighboring lands as to give occasion for a Thanksgiving Day. In my wanderings through Europe, I came upon days of repentance and of sorrow, but no day of Thanksgiving, when it is deemed a bounden duty to praise God and be glad for sure and unfailing mercies. The reason is obvious, when you remember the large classes over there who are always more or less hungry, who have scant covering for the back and poor shelter for the head, and a rayless, hopeless outlook into the future. Where nations stand ready to take each other by the throat across the border, there can be little room for spontaneous emotions of gratitude. Our vexed questions look small and petty in comparison with the great troubles and dangers that menace Europe. The strong powers are armed to the teeth and the weak powers follow the example of the strong as far as they can. Germany is a great military camp, with an iron rule that stifles the thoughts in the soul. You see millions of soldiers glittering in the sun, supported by millions of hinds toiling in the fields, as ignorant and degraded as the beasts among whom they herd in their miserable homes. It is surprising to hear the contemptuous tone in which the so-called better classes in Germany speak of the toilers and producers of the land. You soon begin to suspect that man has no value of himself, and is only worthy to be regarded as human when he wears the garb of a soldier or is decked out with an official badge. . . . .

"Everywhere in Europe we see the poor living on food our artisans of the humblest class would scorn to touch. A walk through an Italian or a French market shows that nothing is common or unclean that has the power of sustaining life. The peasant goes bare and miserable, is pinched with hunger and cold, to sustain vast armies that menace each other along the borders. These frontiers are not invisible geographical lines; they are living barriers, and palpitate with all the fierce passions that divide race from race. They guard the borders, while the toilers work like beasts driven afield to maintain and pay them.

"The necessities of European life spare neither sex nor age, and the rapid increase of population among the most degraded classes has led some of the disciples of Malthus to hail the prospect of a general European war as a means of depleting the pauper millions who do nothing for the world but to perpetuate crime and misery."

A sadder picture than this can hardly be presented, and we are dwelling not upon the condition of "heathen lands" but where advanced civilization flourishes, where the realm of the intellect ranks high, and where for centuries they have boasted of being a Christian people.

Is it any wonder that our religion is sometimes regarded as a failure? And why a failure? Because the sublime teachings of Jesus have been ignored; men and nations acknowledging him as their leader, and straightway by their practices affirming his precepts to be of none account. Professing to believe in his kingdom yet devising false theories regarding his mission among men, thereby misleading them and turning them aside from righteous living, by which, imbued with his spirit, they can only obtain salvation here and hereafter.

And as Friends what can we do? Hold fast to our faith and our testimonies. It is no time now to abandon or even hint at a decadence of a Society of which Emerson said, "they are nearer to the standard set by Jesus than any other." Let us cease to dwell on minor differences of opinion and petty distinctions as to what are now non-essentials, and vigorously present our principles which have their origin in the "Sermon on the Mount," living them out in our daily lives; show that there is a need for our existence as a distinctive religious body and be not content to save only our own fold, but reaching out to point others the way, especially the poor and the weak, that they can have cause to rejoice and thank God for the blessings of life, for "the higher we rise morally and spiritually in the scale of life, the more grateful we shall be for life itself."

MARRIAGES.

PIDGEON—WILLIAMS.—Twelfth month 6th, 1888, under the care of Fairfax Monthly Meeting, Va., at the residence of the bride's father, Lewis Pidgeon, of Wadesville, Clarke county, Va., son of Samuel L. and the late Sarah M. Pidgeon, and Susan T., daughter of William and the late Mary E. Williams, of Waterford, Loudon county, Va.

DEATHS.

BALLENGER.—At the residence of her son-in-law, Jacob Capron, New York city, on Fourth-day, Twelfth month 5th, 1888, Eliza Pearsall Ballenger, in her 89th year; a member of New York Monthly Meeting.

MELLOR.—Eleventh month 30th, 1888, Edward, son of Edward and Deborah Wharton Mellor, in his 11th year.

MERRITT.—At his residence, New York city, on Fifth-day, Twelfth month 6th, 1888, Edward Merritt, formerly of Poughkeepsie, N. Y., in his 72d year.

He was warmly attached to the principles of our Religious Society, and sought to extend a knowledge thereof, as the numerous articles which have in many years appeared in both the JOURNAL and INTELLIGENCER gave evidence.

TOMLINSON.—In Philadelphia, Eleventh month 18th, 1888, Pamela Ambler, daughter of Benjamin and Catharine Tomlinson, aged 3 months.

UPDEGRAFF.—At Colerain, Ohio, Eleventh month 30th, 1888, Sarah Updegraff, in her 80th year; a member of Concord (Ohio), Monthly Meeting.

THE LIBRARY.

MEMORIAL OF SARAH PUGH. A Tribute of Respect from Her Cousins. Philadelphia: J. B. Lippincott Co. 1888.

THIS little book gives only a brief outline of the life of one who, born at the beginning of the present century, was closely associated in sympathy and active service with all the great questions that mark the progress of the age. She was of Quaker parentage, and the distracting agitations which resulted in the division of the Society gave her young life much mental exercise on the subject of religion. Under the date Tenth month, 1828, she wrote: "'Do justly, love mercy, and walk humbly.' In this we agree, and perhaps in little more. Yet is not this sufficient? Men should be judged by actions, not opinions; of this I am more and more convinced. Why, in their judgment of the former, do most agree; in the latter, few? Yes, but ten of us agree that that man's doctrine is unsound, and will lead to bad actions, and it is best to nip the evil in the bud. So man's erring reason has directed him, and to what has it not led? —to the dungeon, the rack, and the *auto-de-fé*. He assumeth the judgment-seat of the Almighty. Even when opinions lead to actions, place the criminal, if possible, in such a situation as to prevent the repetition of the crime; this is all the punishment man has a right to inflict."

For several years she was a successful teacher, only relinquishing her work to others when the advanced age and enfeebled condition of her mother made it necessary to give more time to her care and comfort. She was identified with the anti-slavery movement from the very start, and a co-worker in the effort for the enfranchisement of woman. One can but wish the memorial had been more extended. As we read, we feel assured that a life so true and earnest must have been full to overflowing with incentive and encouragement to other lives; but we are thankful that even so brief a memorial is added to the list of books worthy a place in the library of every family.

For sale at Friends' Book Store, 15th and Race streets; price $1.00.

POEMS BY HALIDAY JACKSON. Friends' Book Association, 15th and Race streets, Philadelphia.

Among the books that we find upon our table is this neat, attractive little volume of poems, prefaced by a brief sketch of the author's useful and most exemplary life. Many of the poems have never appeared in print before; occasionally one has been sent to Friends' INTELLIGENCER AND JOURNAL.

They are mostly commemorative of events of a social or of a national interest, and their chief attraction will be for the large circle of friends who knew and loved the author.

The preface informs the reader that "At the request of near relatives and friends" these poems have been collected and put in this form to preserve the beautiful sentiments therein given for "the children" and many others who were favored with a personal acquaintance with Haliday Jackson.

It is a sweet memorial of a pure and beautiful life, passed amid the quiet scenes of nature, whose varied charms were an open page to his observant mind, from which he was ever ready to draw instruction.

The following poem has been selected from the collection, as appropriate to the present season:

WINTER.

The winter is upon us—stern and cold,
Its chainless blasts sweep through the naked glades
Where late the foliage tipped with hues of gold
And purple, and the intermingled shades
Of red, that gave to autumn's closing hours,
Their parting tear o'er the decaying flowers.

The floral train has left. Naught is seen
Of the bright blooms that deck'd the smiling wood.
The field, the upland, or the meadow green,
Where the bright gentians late in beauty stood!
Those lovely flowers have faded from our view
Till spring and summer suns their life renew.

The closing of the year is drawing nigh;
Fit time for calm reflection, and to dwell
Upon the past, while the swift moments fly,
As monitors, our teachers wise, that tell
How short is life, how soon is its career
Run through its cycle, as each passing year.

The dying autumn wind, it seemed to speak
Of melancholy change—still it hath spread
A calmness o'er the spirit; and even the bleak
November blast an influence may shed
To harmonize our thoughts,—it hath a voice
That bids us in the varied change rejoice.

Though winds may in the elemental strife
Blow keenly, and the newly-fallen snow
The last faint trace of vegetable life
Shroud from our vision, or bedeck the flow
Of rushing-stream or gently-flowing rill,
Winter hath charms that may delight us still.

The snow bird and the winter wren have stayed,
And chirping sparrows round our dwellings steal:
We watch their agile movements; undismayed
About our doors they seek their scanty meal;
Their simple notes of joy seem to proclaim
Presiding Goodness cares for all the same.

Around the evening fireside we throng
With smiling Plenty at our social board,
And pass improvingly the hours along,
With all that books and converse sweet afford;
How should we then recount these blessings given,
Since all our blessings are the gifts of Heaven!

How should we now in our calm moments turn
With thought and feeling to the "sore distressed!"
The suffering poor, who rightfully may earn,
Thro' anxious toil, the comfort and the rest
Too oft, by Luxury and heartless Pride,
Thro' winter's sterner reign to these denied.

How should the helping hand be proffered now,
And the full heart its richer blessings share!
To cheer the sorrowing, soothe the aching brow,
Relieve the child of poverty and care.
If this our mission, then how great our gain!
Nor shed we then the pitying tear in vain.

The Father of all good is ever nigh
Each act of duty to approve and bless,
And wills that all, if earnestly we try
Early te seek Him, and his name confess,
Be gathered, when Life's wintry time is past,
Into His fold of rest and peace at last.

NEWS OF FRIENDS.

VISIT OF JOHN J. CORNELL.

Editors INTELLIGENCER AND JOURNAL:

MANY Friends within the limits of Abington Quarterly Meeting have within the past week considered themselves fortunate in the opportunities they have enjoyed of hearing and conversing with John J. Cornell, of Mendon Centre, New York. At the request of the Women's Committee on Temperance of Abington Quarterly Meeting he consented to leave home and come to this neighborhood, where several large and interesting meetings have been held, at which much good was accomplished for the cause in which he labored.

At Plymouth Meeting on last First-day morning, a very large meeting for worship assembled, at which our Friend spoke to the edification (true spiritual *upbuilding*) of all present. His sermon gave great satisfaction, and favorable comments were general after the meeting. The subject was the need of salvation and the way to obtain it, as illustrated by the interview of the rich young man with Jesus. The two widely differing views of salvation were plainly set forth; the one generally entertained by the so called evangelical bodies, (that it consists in the absolution or pardon of committed sin), was contrasted with the view held generally by the Society of Friends, that it consists rather in the preservation from the committing of sin. Claiming that the highest authority in the Christian church is the spirit of Christ himself, the speaker quoted directly the teachings of Christ on the subject of salvation, and drew many lessons of great value to all his hearers. It was one of the ablest sermons on the subject I have ever read or heard, and in common with many other Friends I feel like expressing my thanks to this gifted servant of Christ for his labor amongst us.

There was a series of Temperance meetings held, all of which were well attended. The first was in the Cold Point Baptist Church on Seventh-day evening, Twelfth month 1st; the second at Plymouth Meeting on First-day afternoon; the next at Ambler on Second-day evening; another at Horsham on Third-day; and the last within the limits of our Quarter on Third-day evening in the Friends Meeting-house at this place; so that Friends will see that we kept our visitor busy during his stay. At these meetings he presented the claims of Constitutional Prohibition as the only right solution of the liquor-traffic problem in a way that could offend none, and made many friends for the cause.

The only regret we have in connection with these meetings is the opposition to them that was found to exist in some quarters, but we trust that with a better understanding of the question and its needs this will entirely disappear. Our quarterly meeting is as yet without a men's committee on Temperance; is it not strange that interested Temperance workers among us are not granted full liberty of action in this line of Christian work? We find no fault with those who do not feel called on to work themselves, but should not others, who do feel such a call to labor, be granted full liberty and opportunity to do what they regard as a Christian duty? With men splendidly gifted going to destruction all around us; with womanhood wronged and childhood hungry, ragged, and uneducated, through an abounding curse, for which they are in no degree responsible and from which they pray for release;—is it not time that all should be doing their utmost to remove the cause of such results? Have we any higher Christian duty?

Norristown, Pa., Twelfth month 5. I. R.

SWARTHMORE COLLEGE ANNUAL MEETING.

THE annual meeting of the stockholders of Swarthmore College was held at 15th and Race Sts., (Philad'a), on the 4th inst., at 2 o'clock. There was about the usual attendance, some of the alumni of the College being present and taking part in the discussion of the proposition (mentioned below) to amend the Constitution. In the election of officers the following were chosen: Clerks, George W. Hancock and Fannie Willets Lowthorp; Treasurer, Robert Biddle; Managers, (for four years), Edward H. Ogden, Eli M. Lamb, Anna M. Hunt, Susan W. Lippincott, Sarah H. Merritt, Clement M. Biddle, Edward Stabler, Jr., and Hannah H. Woodnutt.

The managers presented their annual report, making especial reference to the endowment of the four additional professorships during the year, representing an addition to the endowment fund of $160,000. The report of President Magill was also transmitted to the stockholders. It contained encouraging statements as to the prosperous condition of the institution and enumerated the changes which have been made during the year in the teaching force. These have been reported, from time to time,

as they occurred, in the INTELLIGENCER AND JOURNAL.

The question of the purchase of a tract of land, (about 35 acres), adjacent to the college, from which its water supply is derived, and which is leased at a nominal rent from Isaac H. Clothier, was ordered to be submitted to a stock vote at a special meeting to be held Third month 12th, 1889.

There was an extended and animated discussion of the proposition of which notice had been given a year ago, to amend the constitution so as to provide that managers should be elected by ballot by a stock vote, and that in such stock votes each share shall be entitled to one vote. The recent organization of the Stock Trust Association, which it was stated now controls about 7,200 of the total 20,000 shares, gave special interest to the proposition to adopt stock voting altogether, as it was evident that this change would be a radical one, practically putting the entire control of the corporation in the hands of the Trust. As the constitution now stands, in the choice of officers, and on questions other than the purchase or sale of property, each stockholder has one vote.

Some of the shareholders expressed their grave regret that the change proposed should be considered desirable, and deprecated a narrowing of the circle of those directly interested in the College. As it was now in a very prosperous condition, and had recently received so large an addition to its endowments, it was evident that it had done very well under the old plan, and as the property could not be alienated except by a stock vote, there was no danger in that particular. It was proposed to postpone the vote on the pending proposition to the special meeting in Third month, but after a very full interchange of opinion it was decided to lay it over one year,—until the next annual meeting.

The proposition in full is as follows:

That Article III. of the Constitution be amended so that the clause of that article which now reads:

"The election of Managers shall be by ballot, and votes by proxy shall be received, each stockholder having one vote; and a majority of votes so cast shall determine the election and also other subjects voted upon," shall read as follows:

"The election of Managers shall be by ballot, and votes by proxy shall be received, each share of stock being entitled to one vote; and a majority of votes so cast shall determine the election, and also all other subjects so voted upon."

THE PROPOSED GEORGE SCHOOL.

A MEETING of the (Philadelphia) Yearly Meeting Committee on the proposed George School was held on Sixth-day last, the 7th inst., at 15th and Race Sts. There was nearly a full attendance, and the session continued from 10 o'clock until nearly 2. The subject entrusted to the committee's care received consideration on many important points, but no definite action was taken. The sub-committee on Location reported that about ninety properties had been offered them, in Bucks, Montgomery, Chester, Delaware, Lancaster, and Philadelphia counties. A number of these had been visited and carefully examined, and several would probably answer the purposes in view, but the Committee had formed no conclusions as yet, and did not think it desirable to do so, at present, (as no purchase can be made except by direction of the Yearly Meeting, which will not sit until Fifth month, 1889).

It was informally stated that the funds derived from the George Estate, so far paid over to the Treasurer of the Yearly Meeting, amount, (with interest computed to Fifth month next), to about $150,000. Some small items of real estate, etc., may increase this, within a year or two, to the neighborhood of $175,000. Other than this there are but two items of importance, the $20,000 reserved by order of Court, and the property at Overbrook. A sale of the latter has not yet been made by the executors, and until it is, the amount of the fund must remain uncertain.

The character of the school received extended consideration, especially the proposal that there be connected with the course of study in the ordinary branches of learning an elementary and simple "industrial training,"—so as to educate the hand as well as the head. The best educators everywhere now recognize the great usefulness of this method, regarding it as a help rather than a hindrance to the acquisition of intellectual knowledge. To what extent, and in what manner, the plan can be made practicable in this school will be further carefully considered by a sub-committee which has the matter in charge.

The Committee adjourned to meet at the call of the clerk. It will meet again, no doubt, before the Yearly Meeting, but there will be a disposition to deliberate procedure, until the financial prospect shall be more fully determined.

For Friends' Intelligencer and Journal.

THE PRAIRIE WOLF.

THE *carnivora*, and especially the families represented by our cat and dog, are widely distributed over the globe, and numerous specimens are found in all of the continents except Australia which is notoriously behind the times in the matter of recent types of both plants and animals and which, with her old-fashioned marsupials and her queer stiff vegetation has been able to produce only one species of dog to represent the *carnivora*. But we make excuses for Australia, remembering how at an early stage of her progress she was shut off from that communication and interchange so necessary to the development of both the individual and the class, and turn back to our more normal America for specimens, leaving the jungles of India with their tigers, and the wilds of Africa, that continent so rich in animal life, and coming at last to this fertile, but, alas! rather prosaic and entirely safe spot between the Mississippi and the Missouri rivers in our search for that order of animals of which the bear and the lion are the type. And though we can hardly expect to find in Iowa very large or very fierce examples of the *carnivora*, yet I deem it better to speak whereof I do know and have seen though the field of observation be limited to a country where, even in the days when Indians roamed our prairies and fires swept annually over the regions now covered by corn fields, there was little danger to the traveler from wild beasts.

Yet, though the flesh-eating animals which inhabit this state are generally small and harmless, to man, at least, a list of our *fauna* would include quite a number of the carnivoras.

The family *Musteledae* seems te be best represented. Among its members the weasel and the skunk are quite common, the mink is sometimes found, and the otter occasionally appears near the larger streams.

The *Felidae* are much harder to find, and though old settlers tell thrilling stories of encounters, or rather, escapes from encounters, with the lynx or wild cat it is very rare and will probably entirely disappear in a few years.

The members of the *Canidae* are more common. A few foxes are seen. The large timber wolf, identical with the wolves of Europe and Northern Asia, has never found the prairies a congenial home, but a few may be found skulking in the woods which line the banks of our rivers.

But the most conspicuous as well as the most characteristic member of the dog family in Iowa is the prairie wolf (*Canis latrans*) which ranges the western plains, the basins of the Missouri and Saskatchewan rivers, and extends as far south as Mexico, the name coyote, often applied to it, being derived from the Mexican word for "wolf."

The days of the buffalo are numbered. The deer has become a rare sight. The railroad has sealed the doom of everything foreign to civilization. Even the Indian, because he cannot accomplish in a few years the development which it has taken the white race centuries to achieve, and because he cannot put on civilization as he puts on the white man's clothes, and drink in the spirit of modern progress as he drinks the white man's whiskey, seems doomed to extermination. But the prairie wolf still lingers, though in diminished numbers, apparently better fitted than its companions to survive amid the new environment which the advent of civilization has produced.

On some cold still winter night, when the moonlight bathes the snow covered fields, his short, quick, snapping bark, quite different from the prolonged howl of other wolves, may be heard challenging the dogs of the vicinity, who thereupon set up an answering cry that drives away sleep from the inhabitant of the farm-house, and brings to mind grim tales of blood-thirsty wolves howling around some lone cabin or attacking some belated traveler. But the early riser may see the author of the commotion glide swiftly away in the gray dawn of the winter morning, and no life is lost unless it be that of some unlucky sheep or chicken. The coyote, however, is not fastidious as to his food, and like his Old World cousin, the jackal, regales himself upon the carcass of any dead animal that he can find.

Again, early in the spring, the farmer may find upon some southern hill-slope the burrow of this denizen of his fields, and, with an eye to the bounty paid for their scalps as well as the safety of his barnyard, may invade the home and in spite of the vigorous defense of the small inmates, carry them away in the absence of the parent. A younger brother, with a boy's fondness for pets, tried, a few years ago, to tame seven of these little savages and though the experiment was not carried far enough to base any scientific theories upon it, it did not appear that they took kindly to civilization. Their first impulse on the approach of any member of the family was to hide. They refused to eat in the presence of their captors, but devoured food eagerly when left to themselves.

Though seldem seen in packs, the prairie wolves are often found in pairs and in the fall whole families range together.

They vary less in color than the timber wolf and are of a dirty gray mixed with yellow and dashed with black. The nose is sharp, the tail bushy, and the ears erect.

Like most *carnivora* they are good runners, well-fitted for their active and often precarious life. They avoid the timber and in the open field are more than a match for an ordinary dog.

"THE ELIXIR."

"ALL may of thee partake;
Nothing can be so mean
Which, with this tincture, 'for Thy sake,'
Will not grow bright and clean.

"A servant, with this clause,
Makes drudgery divine:
Who sweeps a room as for Thy laws
Makes that and the action fine.

"This is the famous stone
That turneth all to gold;
For that which God doth touch and own
Cannot for less be told."

—*George Herbert.*

GRANDMA'S BOY.

"HER little boy grows up so fast,"
Said Grandma, "that, some sunny day,
He'll wake, and be a man, at last,
And wander from her far away.
Oh, then what shall his poor old Grandma do?"
"Don't worry," said he, "I'll take care of you!"

"I fear her boy may soon forget,"
Sighed Grandma, "those who love him here,
And leave them with scarce one regret,
Maybe without one sigh or tear."
A tender look beamed in his eyes of blue;
He whispered: "Grandma, I'll take care of you!"

"But Grandma will be very old,
And only in the way, she fears;"
His chubby arms her neck enfold,
His earnest eyes are full of tears—
"And oft we give the old love for the new!"
"But, Grandma," said he, "I'll take care of you!

"I'll build for you a house so fine;
And you shall have six easy-chairs;
Dozens of servants, when you dine,
And lots of comforts everywhere!"
While Grandma smiled at him, her knitting through,
"Don't fret," said he, "for I'll take care of you!"

Dear Grandma softly shades her eyes—
The sunlight, maybe, makes them weep;
Close to her heart her darlings lies,
Rocked in a calm and gentle sleep,
And kisses fall upon the lips, so true,
That said: "Don't worry; I'll take care of you!"

From Young Hearts, (Boston), Eleventh month, 1888.

OUR FAMOUS QUAKER POET.

BY SAMUEL C. CAPPER.[1]

When Dom Pedro, the Emperor of Brazil, visited Boston some years ago, he caused much disappointment in the higher social circles of the intellectual capital by declining to join any of their reunions, alleging that it was his purpose to study Boston and its people quietly, by and for himself. It became known, however, that there was one man whom his Imperial Majesty desired to meet, and that that man was the poet Whittier. Years before, some thrilling lines of the poet's so deeply impressed the Emperor that he translated them into Portuguese verse and sent an autograph copy of the translation to the poet.

He would go to an entertainment if the author of those lines were present. A lady, a leader of society, was equal to the occasion; she secured the presence of Whittier, and then invited all that Boston possessed of intellectual and famous, to meet the Emperor. Her salons were full. I believe that Emerson and Wendell Phillips and Longfellow were all there. Upon his arrival, without discourtesy, but with great abruptness, Dom Pedro pushed through the crowd of distinguished men and women, declining to speak to any one until after he had been conducted to the farther end of one of the rooms, where the humble-minded and somewhat shy Quaker poet was standing, whom, without a moment's hesitation, he folded in his arms, kissed on both cheeks, and clasped to his heart. To compare a small personage with a great one, I feel myself like Dom Pedro.

* * * * * * *

The chief pleasure I had promised myself in visiting America was to see Whittier; and now as I write at 5 a. m. at his own desk in his little sanctum sanctorum, the wish of a lifetime is realized

Americans are beginning to recognize that in the bard of Amesbury they have the most characteristic, if not the greatest poet that the New World has yet produced. They love and revere, as we all love and revere, Longfellow as one of the sweetest, most melodious, and most cultivated singers that any country or any age has seen; but in Whittier they find their representative poet. From my childhood his poems have been household words to me, and hundreds of his stanzas committed to memory in my youth and early manhood I can repeat now. To me many of them are far more than poetry. They are bound around my heart with the memories of the beloved dead; they have become an integral part of my being.

My readers, will not, therefore, wonder that a thrill of emotion passed through me as after a night on the steamboat from New York, and a short land journey by the shores of Massachusetts Bay, through the sharp, crisp New England air, I drove into the grounds of Oak Knoll, Danvers, where the poet spends half his time.

It is an estate and farm of about eighty-five acres, the property of some cousins of the poet, of whose household he is an essential part.

The house is old-fashioned, and looks out upon intensely characteristic New England scenery. Just below the windows is a green and bosky dell, while slight eminences on either hand are capped with young oaks now glorious in the delicate green of early summer. The grounds stretch away to higher land, where, under the shade of the oaks, the turf is now white with lilies of the valley and gay with columbines. Hither, when at this home, the poet comes every day; it is his favorite haunt.

But my one-horse shay has reached the door of the house, and with my modest luggage I am standing under the veranda.

"Is Mr. Whittier at home?"

"No."

I confess my countenance fell.

"Is it Mr. Capper? Mr. Whittier is fully expecting you, and had arranged to come over here on purpose to receive you. A lady, a niece of his, is very ill, and he does not like to leave Amesbury until she is better; but do come in."

A refreshing New England breakfast, with delicate chicken, rich cream, and rolls, was not unwelcome after my night's journey, and prepared me to enjoy the company of my hostesses, three New England ladies eminently combining the simplicity and the culture for which New England is so famous. One of the three has a daughter, a bright young creature in her teens, who canters over the country on a fleet pony for miles around, and who, after dinner, took me a fine drive at a spanking pace, and then landed me at the station in time for the Amesbury train.

The daughter of the house is a special joy to the poet, and he takes a great interest in her reading and pursuits. During our drive I found she had read Charles Knight's "History of England" through, and I rejoiced to think that the daughters of New England should take pains to master the story of Old England—of their and our mother. "Virgil" she was reading in the original, and "Plutarch's Lives" in English. She thinks the men whose lives are there recorded are not altogether a goodly company. "They were most of them killed by others, or by themselves; if they were living in New England there would be very few of them who did not find their way into our State prison."

The train rapidly whirled me along the thirty miles between Danvers and Amesbury, and I soon reach a neat frame-house where a tall, grave-looking man, with high forehead and long face, welcomes me. I am agreeably surprised to see him so stalwart and erect in spite of his fourscore years.

* * * * * * *

While I was writing the early part of this article, the poet came down about half-past six in the morn-

[1] A prominent English Friend, who lately visited this country.

ing and brought some faggots of wood and lit the fire. He cannot understand why I admire his poetry so much. He says, "Thou knowest"—I cannot reproduce the American Quaker "thee"—"I never had any proper schooling, was only one year at an academy, and know only one language, and that very imperfectly. We literally had no money on our farm when I was a boy, but lived entirely upon what it produced. Still 'Friends' in those days would travel ten miles rather than go to an inn. I remember one winter, when the snow was very deep, William Forster (the father of the late Right Honorable William Edward Forster, of England, and a Quaker preacher) came and spent several days with us. I guess he had rather a bad time, for we were as poor as Job's turkey."

He constantly expressed his wonder that I should know so much of his poetry by heart. "I wonder thou shouldst burden thy memory with all that rhyme. It is not well to have too much of it; better get rid of it as soon as possible. Why, I can't remember any of it. I once went to hear a wonderful orator, and he wound up his speech with a poetical quotation, and I clapped with all my might. Some one touched me on the shoulder and said, 'Do you know who wrote that?' I said, 'No, I don't; but it's good.' It seems I had written it myself. The fault is, I have written far too much. I wish half of it was in the Red Sea."

Much of our conversation I cannot repeat. We talked of mutual friends, living and dead, but most of all of the great hope of another and nobler life when this is over. His faith is simple and strong.

"I know not where His islands lift
Their fronded palms in air,
I only know I cannot drift
Beyond His love and care."

* * * * * * * *

If this article is unworthy, it proves that associations cannot supply a writer's inherent defects, for it was begun on the desk where John Greenleaf Whittier writes, and I finish it at the desk where William Lloyd Garrison wrote.

My friend and host, Mr. Frank J. Garrison, has shown me a file of the *Free Press*, one of the first newspaper ventures of his father, in which in the number for June 8th, 1826, there appeared some verses entitled the "Exile's Departure," signed simply "W., Haverhill, June 1st, 1826."

The young editor—for William Lloyd Garrison was then only about twenty-one—encouraged his anonymous correspondent by the following note: "If 'W.,' at Haverhill, will continue to favor us with pieces as beautiful as the one inserted in our poetical department of to-day we shall esteem it a favor."

He subsequently described how this poem came to him, and his immediate search for the author.

"Going up-stairs to my office one day, I observed a letter lying near the door to my address, which, on opening, I found to contain an original piece of poetry for my paper, the *Free Press*. The ink was very pale, the handwriting very small; and having at that time a horror of newspaper 'original poetry'—which has rather increased than diminished with the lapse of time—my first impulse was to tear it in pieces without reading it, the chances of rejection after its perusal being as ninety-nine to one; but, summoning resolution to read it, I was equally surprised and gratified to find it above mediocrity, and so gave it a place in my journal. As I was anxious to find out the writer, my post-rider—carrier, newsboy—one day divulged the secret, stating that he had dropped the letter in the manner described, and that it was written by a Quaker lad named Whittier, who was daily at work at the shoemaker's bench, with hammer and lapstone, at East Haverhill. Jumping into a vehicle, I lost no time in driving to see the youthful rustic bard, who came into the room with shrinking diffidence, almost unable to speak, and blushing like a maiden. Giving him some words of encouragement, I addressed myself more particularly to his parents, and urged them with great earnestness to grant him every possible facility for the development of his remarkable genius. 'Sir,' replied his father, with an emotion which went home to our bosom like an electric shock, 'poetry will not give him bread!' What could we say? The fate of Chatterton, Otway, and the whole catalogue of those who had perished by neglect rushed upon our memory, and we were silent."

The mischief was done, however, and the youthful poet (whose eldest sister had sent the "Exile's Departure" to the *Free Press* office without his knowledge), having now seen his own verses in print, and received warm encouragement from the editor, contributed thereafter to almost every number of the paper so long as Mr. Garrison retained control of it.

The copy of the *Free Press* containing his first poem was flung to the boy Whittier by the carrier one day while he was helping his uncle Moses repair a stone wall by the roadside, and, stopping for a moment to open and glance at it, he was so dazed and bewildered by seeing his lines in print, that he stared at them without the ability to read.

Again and again, however, he would steal a glance at the paper to assure himself that he had not been mistaken. Subsequently, when Mr. Garrison (accompanied by a friend) sought out his new contributor, the boy was again at work in the field, barefooted, and clad only in shirt, pantaloons, and straw hat; and on being summoned to the house by his sister, he slipped in at the back door in order to put on his shoes and coat before presenting himself shyly and awkwardly to the visitors, whose errand was as yet unknown to him.

By sewing slippers at a shoemaker's bench Whittier earned enough to pay for his tuition at the Haverhill Academy the following spring. The next winter he taught school, and was then enabled to pay for another six months' instruction at the Academy.

I think I cannot do better than close this note with a story which has often since then served me well as a text in addressing young men, and which will be as welcome to admirers of Lowell as to those of Whittier. About four years ago I was talking to Mr. James Russell Lowell, then the American representative at the Court of St. James's about the poet, and told him what a lively letter I had just had from

him, sportive as if from a boy. "Mr. Whittier," remarked the Ambassador, "has led a good, pure life, and I have often observed that men who lead good, pure lives are very apt to be cheerful in their old age. And he has done what many nowadays find it difficult to do—he has retained his faith undimmed and strong in the unseen."

TRAINING OF CHILDREN.

"Train up a child in the way he should go; and when he is old, he will not depart from it."

THE farmer sows his grain in the spring, and although there are uncertainties of season, he feels measurably sure of his harvesting; but there is no such assurance in most parental minds respecting the issue of our sowing seed in youth.

There are parents who are careless and indifferent. They are not in trouble. There are parents who are naturally sanguine and hopeful. They are not in trouble. But the conscientious father, the conscientious mother, are burdened with fear for the future, and certainly they would not be burdened if they believed these words to be absolutely, literally, and always true. I believe they are literally, absolutely, and always true, and that our disbelief of them comes in a large measure out of a misapprehension of them.

This promise, then, is not, in the first place, Govern a child in the way he should go; and when he is old, he will not depart from it. That promise clearly would not be true.

A great many children have been governed in the way they should go, and have straightway departed from it as soon as they got to the point of self-government. No child can be made safe for the future by being surrounded with a cage of laws, prohibitions, restrictions, and regulations in the present. It is not by caging an animal that you can domesticate him. It is not by binding him hand and foot that you can teach him to exercise hands and feet. It is not by law that any child can be safe-guarded for his future life. And the reason of this is evident. Law never does, and never can, in the nature of the case, enter into and lay hold upon the springs and sources of being. Law, at the best, can only regulate conduct; and conduct, regulated to-day by external forces, does not necessarily make character that will sweep and swing through the future in safety.

We send the convicts who have been trained in the paths of idleness and self-indulgence to Sing Sing prison. The young man goes there, and stays there for ten years. He is environed by law. He is compelled to be temperate; he is compelled to be honest; he is compelled to be industrious; he is compelled to work; and yet at the end of that ten years, when he comes out of Sing Sing prison, the statistics make it perfectly clear that the chances are fifty out of a hundred that he will go back into intemperance, back into idleness, back into crime again. Law is not training. Government is not training. The child that is governed in the way he should go may, nevertheless, afterward depart from it.

Nor is this a promise that if we will teach our children in the way they should go, when they are old they will not depart from it. We forget the lessons we have learned. There is no promise that the teaching in the present shall assure the safety of the future.

The child may be taught the catechism and all the lessons of religion, and break away from all the tuitions of his childhood. Teaching is, indeed, important, and more important than government, more important than law; but, after all, teaching only directs, shapes, instructs, educates the intellectual qualities—and something more must be done than that. The very impulses, the very unconscious elements of being, the very roots of the nature itself, must be laid hold upon. It is a great deal more important that we teach our children in the way they should go than that we should govern them in the way they should go.

What the Hebrew writer says is this: "Train up a child in the way he should go; and when he is old he will not depart from it,"—and government is only a means to the training, and teaching is only a means to the training.

Now, training is very different. What is the difference? Let a very simple and commonplace illustration answer that question. I sit down with my boy and undertake to teach him about swimming. I open the book and show him the pictures, and show him how he should stand when he is to make the plunge; I show him how to hold his fingers and his hands, when to open them and when to close them; how he should lie on the water; how he should hold his head; and show the movement of the arms, and all that; I taught him swimming, but I have not trained him. In a very little time he will forget it. Now, I go down with him to the river; I swim for him myself; I point him to the older boys diving and swimming like so many porpoises; I stimulate in him an ambition to be a water-dog himself; then I go into the water with him; I put my hands underneath him; I show him how to use his hands and feet; I support him a little, and inspire courage in him; he makes a splash and dash; he gets the water in his face, his eyes, nose, and mouth; we go on day after day, and week after week; at the end of the summer he learns to swim three or four or a half-dozen strokes; and next spring, when he goes in the water, he makes the half-dozen strokes he has learned; he will never forget it, no matter how old he grows to be. The man of fifty goes on the ice on which he has not stood for twenty-five years, puts the skates on his feet, and dashes off again. He has been trained to skate. Take your child; hold him in a stormy atmosphere, in the atmosphere of life, the comparatively equable atmosphere of his own manhood through all the storms and dangers that stand without; shield him a little; teach him how to meet its perils, and how to face its dangers; how to solve its problems; educate him in the brain, and heart, and impulse; accustom him to the way in which you would have him to walk in the future. If you can do that he will walk that way.

What the Hebraist lays down in this text is the enunciation of an absolute, invariable law of being. Let me try to formulate it a little, thus: Action oft

repeated becomes habit. Habit long continued becomes second nature. That is the universal law of growth. We are to-day what we were accustomed to do yesterday and the day before. Our habits of life build us up and make us what we are.—*Lyman Abbott, in Christian Union.*

ON MODERN TEACHING.

A PROMINENT educater, Dr. Patton, President of Princeton College, at a meeting of the "School Masters Association" held recently in the Pennsylvania University Building, said in substance as follows: He repudiated the popular conception of education, by which that term was made synonymous with mere pumping information into a man. "Nor should we be misled by the etymology," said he, "and consider it only as bringing out what is in a man. All true education must begin with a theistic conception of the world and end in religion. Education is the process involved in the establishment of the relation which a man sustains to his environment. On the one side is the external world, categories, facts; on the other his subjective element.

"To bring these two into relation is the object of education, so that in the light of *a priori* ideas facts shall assume system, and in the light of facts ideas become more full. Why do men send their sons to college? That they may 'get on,' be free from the necessity of physical toil. This is the crude, crass, utilitarian conception of education. In order to escape its baneful influence, we ministers of education go to the other extreme. 'Culture for culture's sake; truth for truth's sake.' This is our motto. 'By making culture the means to an end you degrade it. Knowledge is its own reward.' But after all we do not want a man to be a museum of facts. Knowledge divorced from the ethical conception is worse than ignorance. A man may study chemistry to make dynamite bombs. Expertness in arithmetic may turn out an excellent defaulter. 'Truth for truth's sake' is an aphorism that sounds well, but there is nothing in it. We want truth for the man's sake. It must become part of the man. Culture should not be a man's possession, but a man's identity. This is what Hegel means when he speaks of 'self-realization.' Culture, devoid of the moral element, is no education at all. But join it with the ethical, and the highest potentialities of the human soul are actualized. Viewing education in this light, we need not be apprehensive of drawing the lines between scientific and academic training. They both tend to the same end—the symmetric development of the man in his relation to eternal truths."

Dr. Patton also referred to the need of specialization. "Specialization is bread and butter," said he. "General culture is luxury." Developing his argument on these lines he emphasized the necessity of laying a broad foundation for the educational structure, and beginning with this work in the nursery. He closed his remarks by giving some practical advice as to the division of study in the college course.

THE true Christian will be severe to himself, forbearing to others.—*Selected.*

DAKOTA AND WASHINGTON TERRITORIES.

IN his annual report Secretary Vilas, of the Interior Department, says:

The large area of Dakota Territory and the drift of population westward, combine to render the figures of its increase from about 135,000 in 1880 to over 600,000 as now estimated, apparently unprecedented in a single Territory. Two thirds of the present population are natives, and a majority of the foreign born population is of Scandinavian origin.

During the last fiscal year there have been entered 1,838,142 acres of public land, and title acquired by final proof or otherwise to 1,616,650 acres more. In addition to this the sales of land to settlers by the Northern Pacific Railroad Company and by private owners have been large.

The assessment roll of the Territory aggregates $161,420,974 for 1888, not including railroad property with a valuation of $40,000,000 as it is taxed upon gross earnings. The Governor places the actual wealth of the Territory at $320,000,000 as a moderate estimate.

The population of Washington Territory in 1880 was 66,979; it is now 167,982 at a low estimate, and the Governor believes it is 20,000 above this figure.

The assessed value of the taxable property of the Territory is $84,621,182, a gain of over 65,000,000 durthe past ten years, and of $23,058,000 for the past year, due in part to the addition for the first time of railroad property to the assessment rolls.

ELEVATION OF THE INDIAN RACE.

THE labor for the elevation of the Indian race, to be effectual, must devolve upon earnest, consecrated men and women, who gladly devote their lives to it, and whose high qualification for this service depends upon no mere government appointment. In other words, the religious organizations of the country must continue the noble work which they have so well begun, and upon them the chief burden must rest.

It will be worse than vain for the government to attempt it, without their constant coöperation, and their most efficient aid. A merely secular education, a training of the intellect alone, will not accomplish it. You may swell every expense, you may furnish the best equipped boarding and manual training schools, you may obliterate the Indian vernacular, and substitute for it, in the rising generation of Indians, the most elegant and grammatical English speech, you may teach them agriculture, and all the mechanic arts; your attempts will be forever vain, and worse than vain, unless their moral and spiritual natures are trained to keep pace with the intellectual. This is true of the education of any people, and applies with especial force to the present condition of the Indian.—*Pipe of Peace, (Genoa, Neb.) Indian School.*

Do right, and God's recompense to you will be the power of doing more right. Give, and God's reward to you will be the spirit of giving more. Love, and God will pay you with the capacity of more love, for love is heaven and the spirit of God within you.—*Robertson.*

THE WILLIAMSON SCHOOL.

On Sixth-day last, the 7th instant, the trust deed and plan of the new Williamson School were made public, and I. V. Williamson turned over to the Board of Trustees whom he had named, securities having a par value of $1,596,000, and a market value of $1,901,800. A report in the Philadelphia *Press* says:

These securities, Mr. Williamson provides, are to be divided into two funds. One-fifth of the most salable securities are to constitute a building fund, and may be sold for that purpose. The balance is an endowment fund, and cannot be disposed of. The accretions only are to be used in paying the expenses consequent upon the conducting of the school. Having described the powers of the trustees, and the manner in which the financial affairs of the trust are to be administered, Mr. Williamson provides:

"Out of the moneys received from the principal of the building fund the trustees shall purchase a body of land not exceeding in the aggregate 300 acres, situate in some suburban part of the city of Philadelphia, or in either the counties of Bucks, Delaware, Montgomery, in the State of Pennsylvania, and erect thereon suitable buildings and appurtenances to lodge, board, teach, and instruct as many scholars as, in the opinion of the trustees, the revenue of the endowment fund and other sources of income will provide for: and in addition lodge and board as many other persons, such as officers, superintendents, teachers, instructors, agents, workmen, and servants, as in the opinion of the trustees it may be neccessary or convenient to lodge and board upon the premises, for the purpose of fully carrying out the design I have in view and of completely establishing and successfully maintaining the school herein intended to be founded and endowed; and thereupon out of the said moneys to furnish and fully equip the school with such furniture, stock, materials, machinery, tools, implements, books, plant, and equipment as in the judgment of the trustees may be necessary or convenient for the purpose. I direct that no higher sum than an average of $400 per acre shall be paid for the said land and that the title shall, if possible, be taken without lien or incumbrance of any kind.

"I direct that such land shall be selected as has a good drainage of soil and sub-soil, as lies in an elevated and healthy situation, contiguous or convenient to railway connection with the city of Philadelphia, and particularly that it shall be situated where an abundant supply of good water can at all times be had, and where the drainage and sewerage of the school can be properly and securely carried off and disposed of, so as to avoid the danger of disease resulting from improper or imperfect drainage. I direct that all the principal buildings and erections shall be constructed of stone or brick, and made as nearly fireproof as can properly be done with the amount to be expended upon them.

"I leave to the judgment and discretion of the trustees the character, number, and extent of the said buildings to be erected, but as the great object to be attained is to board, lodge, clothe, educate, and instruct in mechanical trades those who, when arrived at manhood, will be obliged to labor with their hands for their support, I particularly direct that all palatial structures, expensive materials, and elaborate ornamentation or decorations shall be avoided, so that the scholars may not by reason of luxurious or expensive accommodations and surroundings, acquire tastes or habits which may unfit them for their trades in the sphere of life in which their lots are to be cast.

"The ages between which boys may be admitted is given as between 12 and 18 years, and as many as the school will accommodate may be admitted. Preference is given to those born in Philadelphia, and then the claims of Bucks, Montgomery, and Delaware counties, the state of New Jersey and the United States are to be recognized in the order named. Boys admitted into the school must be indentured as apprentices to the trustees for a term of not less than three years but the indenture shall not extend beyond the minority of the scholars. Those admitted must be "able-bodied and healthy young male persons of good moral character." Every scholar will be compelled to learn a good mechanical trade, and every facility is to be provided for his acquirement of it. The taste, capacity, and intelligence of each scholar is to be ascertained and considered before assigning him to any particular trade.

"Among the trades which may be taught are those of baker, blacksmith, bricklayer, butcher, cabinet-maker, car-builder, carpenter, carriage-maker, coppersmith, the crafts of constructing, managing, and repairing electrical appliances and apparatus, foundry-man, gas-fitter, gold-beater, harness-maker, hatter, lock smith, machinist, marble-mason, moulder, painter, paper-hanger, pattern-maker, plasterer, plumber, printer, saddler, shoemaker, steam engineer, slater, stone-cutter, stone-mason, tailor, tiler, tinsmith, turner, wheelwright, and many others. The care and cultivation of the grounds are to be made the means of teaching farming and gardening to those who show a taste in that direction. In addition to this a practical rudimentary education is to be given."

Mr. Williamson especially declares that there shall be no attempt at proselytism among the scholars and no favoritism shown by the trustees to any particular sect or creed. The moral and religious training of the scholars must, however, be looked after and the importance of truth impressed upon the boys. The scholars are to have proper physical training, recreation, and exercise, so that "they may grow up with a sound mind in a sound body." Boarding, lodging, clothing, education, instruction in the trades, and all else are to be free and no charge is allowed to be made any scholar for what he receives. Indentures are to be so drawn that if a boy is incompetent to learn a trade or is guilty of vice or crime he may be expelled. The number of trustees is at all times to be seven and when a vacancy occurs the remaining trustees are to fill it by an election. Any male citizen of Philadelphia, Bucks, Montgomery, or Delaware counties, over 25 years of age, is eligible for election as trustee.

A man's heart deviseth his way, but the Lord directeth his steps.—*Proverbs.*

NEWS AND OTHER GLEANINGS.

—Francis Darwin, son of the late Charles Darwin, has succeeded Dr. Vines as University Reader in Botany, at Cambridge, England.

—Several hundred Indians on the Chippewa Reservation, in Minnesota, were, this year, allowed to vote for the first time under the provisions of the Dawes bill.—*Pipe of Peace.*

—It is said that the oldest rose-bush in the world of which there is authentic record, grows in a churchyard, and against the old church at Heldersheim, Germany. Eight hundred years ago Bishop Hepilo caused a trellis to be built on which it was supported. To-day the main stem is thicker than a man's body.

—In the ninth century, an old beggar from Japan took some tea-seeds and plants back with him to his native land. The Japanese relished the new drink, and built at Osaka a temple to the memory of those who introduced it. This temple is still standing, though now almost seven hundred years old.—*St. Nicholas.*

—Coralie Cohen is claimed by the European Jews as a second Florence Nightingale. She is a Jewish lady, who was an angel of mercy during the late Franco-German war, and passed unharmed among the wounded in the two hostile camps. She is a Knight of the Legion of Honor, and has been elected president of that patriotic body, the Association des Dames Françaises.

—Some men digging in an old road in Lowell, Me., came to a peculiarly reddish spot in which they found three sharp chisels and a gouge, all of stone. They lay pointing one way, and were probably buried there with some warrior of the Penobscot tribe of Indians. Interesting relics of these Indians are constantly being unearthed. There is a point of land on the Penobscot river, opposite Mattawamkeag, where unnumbered spear heads and arrow heads and stone axes have been found; and it is said that on that spot the Penobscots fought a great battle with their old enemies, the Mohawks, utterly routing them, and thus ending a long series of wars for the mastery of the hunting grounds of that country.

—Recent newspaper despatches report the safe arrival of Dr. Nansen and his small party of athletic Danes at Godthaab, on the east coast of Greenland. The expedition just missed, at this point, the vessel leaving for Europe, and probably will not be able to leave until May next. Until that time all detailed accounts of the expedition must be deferred. The party crossed Greenland at what is probably its narrowest part, the route taken being sixty miles south of the one it was originally intended should be followed. Two letters from members of the party have appeared in *Nature*, (London), and record the greatest difficulty experienced in landing from the vessel on the west coast. Some hardship was caused by the cold (—40° to —50° C. in some cases), but the party in general has enjoyed good health.—*The American.*

—The Harvard Annex.—The annual reports of the secretary, Mr. Arthur Gillman, and the treasurer, Miss Alice M. Longfellow, of the "Harvard Annex," for the ninth year have been presented. They show that the spirit of fellowship among the students is growing stronger, and that the operations of the society are being carried forward more satisfactorily than ever before. In numbers the society has prospered more than ever before. It may be added that the students for 1888-89 come from an unusually extensive range. Among them are three from Honolulu, and others from San Francisco, Kentucky, Missouri, Virginia, New York, and Connecticut.—*The Post.*

—We quote the following from an article in regard to the over pressure of the public schools in Prussia: "There will be no more public examinations. Home lessons will not exceed one hour's work for the intermediate classes, and two hours for those in higher stages. Tasks are forbidden, as well as any kind of lessons in the interval between morning and afternoon school. No tasks shall be imposed during the holidays. The pupils shall be required to learn as little as possible in the way of historical dates and mere facts. Drawing lessons are not to be enforced at home. Manual instructions, drawing lessons, and penmanship must never be accompanied by conversational exercises in a foreign language or reading aloud. Pupils must be spared even the physical exercise of carrying too heavy a load of text-books between the school-room and their dwellings."

CURRENT EVENTS.

ONLY two cases of yellow fever have been reported in the limits of Jacksonville within the past 10 days. These were both declared convalescent on the 9th inst. There were no new cases then and no death. The total cases to date number 4,705 and the total deaths 412.

A GEYSER, which is throwing hot mud all over the surrounding prairie, has broken out 60 miles from Yankton, Dakota.

PRESIDENT CLEVELAND has sent to Congress another message, which was read in the House on the 4th inst. The general policy and acts of the administration were reviewed, and the recommendations of the executive departments discussed. The whole is a reäffirmation of the President's general attitude on public questions and does not contain much of interest outside of Congressional circles.

THE great publicity given to all the details of the Whitechapel murders in London has led criminals everywhere to do acts which in some way imitate the fiendish performances of the Whitechapel murderer. Several instances have been reported in the newspapers, the latest of which comes from Farmton, Mass., where a number of murderous assaults have occurred recently.

THE war situation on the Continent of Europe remains without material change. A recent bill passed regarding the Austro-Hungarian army is reported to have caused alarm in France and Russia. The bill reduces the standard of height for conscripts, and many exemptions hitherto in force are done away with. The result will be a great increase in the strength of the army. The navy also has been increased in efficiency.

PRESIDENT LEGITIME, the successful insurrectionist in Hayti, is now in full possession of the Government there. Although an armed cruiser has been despatched to the island to look after the interests of American citizens, it is reported that a vessel, the *Haytien Republic*, owned in New York, has been seized.

ELLEN EWING SHERMAN, wife of General William T. Sherman, died in New York on the 7th inst. She was the daughter of General Thomas Ewing, Ex-Governor of Ohio, and at different times Senator, Representative and Cabinet Officer. The deceased was known for her efforts for the relief of suffering, and was a devoted Roman Catholic.

DOM PEDRO of Brazil has granted important concessions to a syndicate of American and Canadian capitalists for the construction of a system of railroad and steamship lines which will open large tracts of that country for mining and grazing purposes. The present concessions are understood to be the beginning only of a general scheme for industrial development which this enlightened ruler has in mind.

NOTICES.

*** Friends' Mission, Fairmount Avenue and Beach street, Fifth-day evening, Twelfth month 20th, at 8 o'clock. Temperance Address by Dr. H. T. Childs, Dialogues and recitations by "Young Temperance Workers." All are invited.

*** The Western Quarterly Meeting's Temperance Committee will hold a Conference at West Grove meeting-house on First-day, 16th inst., to convene at 2 o'clock p. m. All are invited.

ELLWOOD MICHENER, } Clerks.
ELMA M. PRESTON, }

*** At Unionville, the second First-day in First month, 1889.
To convene at 2 o'clock.

*** Haddonfield Quarterly Meeting's Temperance Committee has appointed a Conference to be held in Friends' meeting-house, Haddonfield, on First-day, Twelfth month 16, at 3 o'clock in the afternoon.
A cordial invitation is extended to all.

WM. C. COLES, Clerk.

*** Quarterly meetings in Twelfth month will occur as follows:
20. Fishing Creek Half-Year's Meeting, Pa.

Association of Friends to Promote the Education of the Colored People of the South.

HOWARD M. JENKINS, Chairman, 921 Arch Street, Phila.
SARAH J. ASH, Secretary, 1717 Vine Street, Phila.
LYDIA A. SCHOFIELD, Correspondent, 1717 Vine St., Phila.
HENRY M. LAING, Treasurer, 30 N. Third St., Phila.

EXECUTIVE COMMITTEE—Edward H. Magill, Swarthmore, Pa.; Sarah H. Peirce, Philadelphia; George L. Maris, West Chester, Pa.; Mary Ann Fulton, Wilmington, Del.; Amos Hillborn, Philadelphia; Alfred Paschall Doylestown, Pa.

WORK OF THE ASSOCIATION.

The work of the Association is chiefly *to raise funds.* These are sent to the support of two schools for colored youth in South Carolina,—the Schofield Normal and Industrial School, at Aikin, and the Mt. Pleasant School, near Charleston, in charge of Abby D. Munro.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans.*

IN THE SHADOW.

As when the valleys all in shadows lie,
And shadowy shapes of fear still haunt the night,
Some mountain peak reflects the coming light
And waiting lips break forth with joyful cry
For gladness, that at last the day is nigh.
So, when some soul that towers afar is bright
The souls that sit in shadow at the sight
Grow sudden glad, to know 'tis light on high!
And when these mountain-towering men can say
"*We* see, though it be hidden from your eyes,"
We can believe in better things to be,
So, though the shadows still obscure our way,
We see the light reflected from the skies
That crown thy brow "O man of Galilee!"—*Selected.*

From "A Reasonable Faith."

FUNDAMENTAL RELIGION.

"The humble, meek, merciful, just, pious, devout souls, are everywhere of one Religion, and when Death has taken off the mask they will know one another, though the diverse liveries they wear here make them strangers."—WILLIAM PENN.

"Happily the bases of Religion are few and solid. They teach men to look up to God as their Father, to Jesus as their Saviour, and to the Spirit of Him who sent His Son to save us, as the Source of Holiness and the Guide to Spiritual Truth. These are really the final and fundamental articles of Christianity."—BISHOP FRASER.

RELIGION, in the only sense in which we here need to recognize the word, presupposes the existence of God. Not, however, necessarily any true and sufficient conception of him, *for the fundamental principles of Religion are based upon the relations and disposition of God towards his creatures*, and not upon any of their imperfect ideas of that relation. So that these principles apply in some sense and degree to all the various phases of religion that have ever obtained among men, to the darkest and most elementary, no less truly than to Christianity itself. Not only are they essentially the same in reference to Socrates and St. Paul, to St. Bernard and Luther, to Jeremy Taylor and George Fox, but also to the millions of mankind in all ages, who, though living under conditions of great moral and mental darkness, can never be severed from this radical relationship to the Creator, nor from his fatherly care. It is doubtless true that

"In even savage bosoms
There are longings, yearnings, strivings
For the good they comprehend not,
That the feeble hands and helpless
Groping blindly in the darkness,
Touch God's right hand in that darkness
And are lifted up, and strengthened."

Because sceptics fail to find God, and idolaters misapprehend him, he does not cease to be their God, nor they his children. Human misconceptions cannot possibly make any difference in his relations to us, however much they may affect our attitude towards him.

We hold, therefore, that no theory of Religion can possibly be satisfactory, which is not broad enough in its range, from extreme elementary simplicity to reasonable completeness, to comprehend all the real God-seeking and truth- and goodness-loving of all mankind—savage and civilized, learned and ignorant, child and man.

Then the grandest fundamental truth with regard to Religion is evidently this: that it is something which God himself inspires and superintends, according to the needs, possibilities, and open-heartedness of each individual. Not the Bible, though its claim to this fundamental position is often insisted upon, but the Author and Revealer of all truth whether found in the Bible or elsewhere, is the sole primary source of all religious light and duty.

We often hear false religions spoken of. It would be better to speak of the falsities with which so many of the religious beliefs of mankind, not excepting Christianity itself, are surrounded and obscured. No system which recognizes the existence of God and the moral responsibility of man is wholly false; and it may be said that no human conception or representation of even Christianity itself, is likely to cover the whole range of Spiritual Truth.

In the history of the human race, religious instincts and yearnings are facts almost universally traceable; and equally general s the recognition in some form or other, of the working of an unseen Divine Intelligence that "makes for Righteousness," and whom it is a duty to serve and obey. We hope, therefore, that the day has passed when any one need hesitate to speak of a "pious Heathen." Thoughtful men everywhere are beginning to recognize that although Spiritual Light and Knowledge are of immense importance, Spiritual Life is the one thing needful. That everywhere and under all circumstances, he that according to his light and opportunities "feareth God and worketh righteousness" is accepted with him.

Therefore we put the desire for Righteousness or Holiness at the very head of the fundamental requisites of Religion. It is a hopeful sign of the times that no modern set of thinkers, religious or secular, Theist or Positivist, will have anything to do with any system that does not place real practical right-doing in the front of its theory. Perhaps we may say

that it is steadily coming to this, that the system which has the greatest power to develop the best human conduct, will be rightly accepted as the truest system. To this test we are content to bring the claims of Christianity.

But one great obstacle to the establishment of this claim comes from within the Christian Church itself, from those who practically rob the word "Righteousness" of its reality, and reduce it to a theological fiction—an "imputedness"! No doubt expressions such as this are constantly used by worthy people, in a special and greatly modified sense. But such terms, in their plain and obvious meaning, would seem to imply that Righteousness consists in the hiding or covering up of sinfulness and wrong-doing by the Holiness of Christ—a being "reckoned" righteous "for Christ's sake!"

Surely this notion, in whatever specious or solemn garb it be clothed, is a fundamental mistake. Free forgiveness is one thing; the reckoning a man to be what he is not is quite another.

We repeat, then, that Holiness—the earnest persistent endeavor after the fulfillment of God's will in thought, word, and deed, made effectual by Divine help,—nothing imputed nor merely "reckoned,"—but the real moral condition, is an essential characteristic of Religion. Nay, more, any religion that can produce this condition in any degree, is *so far* of God; and Christianity we maintain to be the best and truest form of Religion, because it has the greatest power to develop Holiness.

But although it be admitted that Christianity has, broadly speaking, the soundest basis of reason, the best array of facts, and the grandest and happiest experience of mankind on its side, this is not enough. We want to know what is the truest and best conception of Christianity. For a religious system, which in its original simplicity and purity, although still waiting its mature development and application, is true and life-giving, may easily receive a wrong bias, and instead of progressing steadily towards its ultimate perfection, may become so perverted and distorted as to lose much of its beauty and power for good. We believe that no little of the trouble and unsettlement in the religious world, at the present time, is due to the fact that our popular theological and ecclesiastical systems, are inherited from the comparative darkness of the middle ages, rather than from Apostolic times. They abound in subtle and highly elaborated details, many of which are based upon essentially false premises, and we shall practically dispose of not a few of them, if we succeed in discrediting some of the fundamental errors from which they spring. For there are certain broad principles at the very root of Christianity which leave no logical standing for the narrowness and harshness of Calvinism, for the pettiness and unspirituality of Ritualism and Symbolism, for the assumptions of Priestcraft, or for the pretensions of a cold Intellectualism that never reaches the heart.

As regards the right place of the intellect, and the importance of clear and reasonable views in relation to religious faith, Pope is, as usual, superficial and over-dogmatic in his well-known dictum:—

> "For modes of Faith let graceless zealots fight,
> His can't be wrong whose life is in the right."

We may welcome the words as implying that no religion is worth notice that does not develop conscientious and holy living, yet they have helped to popularize the grave error that intellectual Light on matters of Faith is unimportant in procuring lives that are "in the right." We can readily admit that the favor and blessing of God are bestowed upon rightness of purpose and motive, rather than upon rightness of knowledge. We can understand that his estimate of moral desert is based upon the condition of a man's inmost affections rather than upon the degree of his intellectual apprehension of abstract Truth, yet it is no mean deliverance to be freed from serious misconceptions of religion. It is the height not only of mental happiness and attainment, but of spiritual blessing and power, even to approach the Apostolic ambition, "to be filled with the knowledge of God's will in all wisdom and spiritual understanding." Looking however at Truth in this latter, its most practical aspect, as spiritual enlightenment and power, we may say that the seeking process is not exclusively nor even mainly intellectual work. It is not a struggle of dialectics, nor even a mere balancing of probabilities: it is something which has to be spiritually discerned. There is a Chinese proverb which says that "the light of Heaven cannot shine into an inverted bowl;" so we may say that Spiritual Truth cannot effectually enter a closed, unloving, rebellious heart. But of the fundamentals of Religion it may be safely said, that they who humbly and sincerely seek shall find, although they will continue throughout this life to long for fuller assurance and a wider range of vision. It is the old teaching which millions have proved to be sound, that if any man will do God's will, as far as it is revealed to him, he will steadily advance in religious perception and spiritual attainment.

We think that these also are fundamental truths: that life is meant to be educational; that the Great Master deals with us according to our capacities and circumstances, but that from all his scholars he looks for teachableness, obedience, and diligence. With these qualities in patient, persistent exercise, the true seekers after God will come to see him and hear his voice for themselves. They will sit at the feet of Jesus and learn from him, not perhaps any special system of theology so much as a growing sense of God's goodness and love, of the brotherhood of all God's family, and of the duties involved in this relationship; a growing love of Holiness, and conformity to the Divine Will, and so, by a natural and healthy process of gradual attainment, they will be led into all needful Truth, and "the Truth shall make them free."

THE constant aim of Christianity is to unite the sundered link between man and God, and to bring the finite and infinite into a conscious harmony and felt oneness.—*W. F. Evans.*

"THERE is no more certain indication of inward strength than the power of silence."

For Friends' Intelligencer and Journal.

HAPPINESS AND GLOOM.

AN ALLEGORY.

HAPPINESS and Gloom once met by the Sunrise Gate of Nature's Temple, and paused upon the threshold to converse.

Happiness. Good-day, my friend! pray, art thou come to worship?

Gloom. The day to thee! to worship what or whom?
What is't to worship, and why should I so?

Hap. To worship Him who made the heavens and earth,
And thee and me, and all the hearts of men;
Who made the crystal ether, clear and pure,
The joyful sunshine and the happy earth,
The birds, the flowers, the trees, the grass, the dew,
The mountains with their bold-cut granite rocks,
Clothed in the delicate verdure of the spring,
The valleys in whose bosoms nestle homes,
The bubbling, leaping, dancing, glist'ning rills,
The roaring, dashing, deaf'ning cataracts,
The peaceful, glassy, smoothly flowing rivers,—
The great, life-giving, grandly solemn sea.
Canst thou behold these things and worship not?
To worship is to love; and thou should'st love
Because it is the natural, healthy state
Of all created things to love their Source.

Gl. I do not know the source whence I am come;
Then, pray, how can I love it? If I spring
From heav'n I care not; it is naught to me
What power created me, for I am sad.

Hap. Art sad? Is't possible thou canst be sad
With all this joy and beauty 'round about?—
Give me a day and life; I ask no more.

Gl. What if the day be dark and full of storm,
Or chilling with a wild and bitter blast?

Hap. It matters nothing, so it be a day.

Gl. Canst thou be happy under sway of night,
When this thou called beauty doth not show?

Hap. Why, yes! for if I cannot see the sun
Yet still I know 'tis somewhere in the skies;
Some one can see it, and that makes me glad;
Somewhere it shines upon the grass and flowers;
Some eyes behold its brightness, and are pleased.

Gl. Canst thou be joyous under sorrow's reign?

Hap. I know him not; no slave of his am I.

Gl. Thou know'st not sorrow? Then thou art but dull.
He is the friendly shadow of King Death.
Ever he mourns and grieves for what is past,
Or draweth tears from men for present woe.

Hap. Sorrow, the friend and minister of Death?
Not so, indeed. For what is death but change,
A change from life below to life above,
From passing joys to permanent delight,
From earthly pleasure to heav'nly ecstacy?
Why, death is but the Sunrise Temple-Gate
To perfect joy,—the dwelling place of Him
Who made and loved us and His children, men.
Why then should death and sorrrow go together?
Say rather, death and patience, trust, repose.
Once in the earth there walked a Son of man
Who well acquainted was with life and death,
With happiness and sorrow, faith and trust,
Patience and vigilance and love and truth,
With grief and joy, with hunger, thirst, and pain,
With work unceasing for his loved ones' good.
But when death met him face to face, he said:—
"Now for a little while ye see me not;
Again a little while, and ye shall see me.
If then ye loved me, ye would be rejoiced,
Because I go unto the Father!" That
Sounds not as death and sorrow reign together.

Gl. Suppose that pain unspeakable should gain
Possession of thee, would'st be happy still?

Hap. Methinks I could be happy even then.
For what is pain? A messenger of good;
Either it warns me I am doing wrong,
Or else permits me to bear others' woes,
And free them, maybe, from its galling chains.

Gl. It doth appear to me, much of thy joy
Is but the joy of others. How is that?
And how can others' happiness please thee?

Hap. That know I not; I only know, it does.

Gl. Then what if 'round about thee, night and day,
But gloomy faces gathered,—human faces
Joyless and sad, woful and sorrowful;
Could'st thou be happy still, O Happiness?

Hap. Ah! now thou touchest on a tender spot;
For in the joy of others is my life.
And naught so nearly saddens me as that—
To see a human face all woe-distraught;
To see a frowning, corrugated brow,
A gloomy eye, a hard, unhappy mouth,
Where heaven's peace and joy should ever dwell,
To lighten care and chase away despair.
Yet even then, O Gloom! I should not pause
To first consider how I might feel dull,
But with my hope, my strength, my best endeavor,
Put forth my soul to point these gloomy ones
To heaven's sunshine and to heaven's joy;
And in that effort I should find my peace.

Gl. And if they should respond not to thy wish,
But persevere in their unhopeful mood?

Hap. Why, I should try again, and yet again;
And if I found they would not give me ear,
But still persisted in their sullenness,
I could but leave them to th' Eternal One,
Who in His all-wise love will find a way,
Some way, sometime to lift them from despair,
Into the light of His sweet countenance;—
And so I could be happy trusting Him.

Gl. Then what if thou should'st be surrounded quite
By sinful men who love their evil ways,
And loving, cease not to pursue them still;
Could'st thou be happy still, O Happiness?

Hap. While useless grief is sin, 'tis all the same.
If men sin-loving would not hear my voice
I could at last but leave them to th' Almighty.
What means the word if not all-strong-for-good?
Ay! Every heart shall bow and knee shall bend,
And every tongue at last confess Him Lord.
That thought is happiness enough for me.

Gl. Suppose thou hadst a loved and trusted friend,
One whom thy heart held close in its embrace,
From whom a separation would seem death,
And that for some unhappy circumstance
Thou hadst been poisoned to him, or offended
Against thy will his deeply loving soul?
Suppose he met thee with averted eye
Or e'en avoided thee quite altogether.
Could'st thou be happy still, if he were cold?

Hap. Ah! Gloom. Again thou touchest to the quick.
Yet if I had offended wittingly
I would seek ever to atone the wrong,

And find my joy in seeking; and again,
If I had pained, or all unknowingly
Had chilled the pulses of his loving heart,
E'en should I call on heav'n to help me bear
The ache his coldness would implant in me,
And turn away from my own bitter pain
To that Divine Love which doth never fail,
And which must soon o'erwhelm me in its joy.
"Him wilt thou keep in perfect peace," said one,
"Whose mind is stayed on thee, because he trusteth—
"Because he trusteth in thee." I should trust
That even a friend estranged must love me still.
And show it when again a season offered.

Gl. O foolish Happiness, to trust so far!
Then yet suppose that not a single friend
In all earth's borders thou could'st call thine own:—
That every face were cold to thy despair!

Hap. That case, O Gloom! is quite impossible;
For happiness has always many friends,
And must have, while the universe shall hold.
I'm more perplexed with idle worshippers
Who worship rather my external form—
Not understanding that which lies within—
Than I am tossed by fears of friendlessness.

Gl. I, too, have votaries, who worship gloom,
And make their sad religion dark and dull
For my sake; but I do not care for them.

Hap. 'Tis sad that anyone should worship gloom.

Gl. Ah! now I've made thee truly sad at last!

Hap. Ah! so? But I am glad to see thee smile!

Gl. Thou hast subdued me. I must flee away!

Hap. So gloom has fled, and I will enter in
The Sunrise Gate to Nature's temple fair
And worship Him whose love is deepest joy,
Whose truth is golden deeds and peace sublime!

Where was the Gate? Within the temple grand
Happiness had been standing all the time,
And worshipping with all his heart and soul,
Conversing only through the crystal walls
With heavy gloom which could not enter there.

"For the kingdom of heaven is not meat and drink, but righteousness and peace, and joy in the Holy Spirit."

A.

"*IS A NEW RELIGION NEEDED?*"[1]

PHYSICAL science may almost be said to be the child of our century, so fast are its strides forward in our day, so many are the new branches which it is developing, so wholly and entirely are some of these sciences the inventions of our age and the tools by which it pursues its astonishing career of discovery, so vast the empire of knowledge into the possession of which our modern world has entered. The face of the universe has practically changed for man. Geology has opened the secrets of the earth, and given man, for the first time, a knowledge of the globe on which he lives. Biology has given him now a knowledge of the inner world of organic life. So fast has biology moved that the great work of Herbert Spencer, which a decade and a half ago summed our modern knowledge, is already antiquated. To read the story of science for the last fifty years is to read a tale stranger far than the wildest fairy tales which the fancy of man has ever written. Forces which would have dwarfed the genii of romance and made Aladdin's lamp a childish toy are our familiars. The law of evolution stands over all life, the process of human growth, as well as the process of nature's growth. Before this revolution in knowledge and thought, the old intellectual systems are breaking up on every hand. A new universe, with a new man confronting it, forces upon us a new thought of God, of human destiny.

Christianity seems on the surface to be losing its moral grip. This is natural, if true. Becloud the intellectual vision, and the spiritual enthusiasm must flag. To read the pages of the early church fathers is to feel the working of a new enthusiasm, in which we read the secret of the magical triumphs of primitive Christianity. That little infant church changed the customs and manners of venerable civilizations, softening, sweetening, harmonizing the barbaric passions which then prevailed. How sadly different runs the story of the Church to-day as she confronts our mighty civilization, pagan again as of old, and so far from succeeding in changing the customs and manners of this selfish world, accepts, as unavoidable, pagan codes and heathen practices. For some reason or other the fact is that which every student of our civilization knows, that organized Christianity to-day, the church, is not recognized as the leader in social progress which it once was, and that the aspiring souls of men are turning away from it in sadness and despair to seek a new religious enthusiasm from some other master than the carpenter's Son of Nazareth.

Does this betoken the end of religion? On the contrary, turn where one will, he finds to-day in the deepest-thinking and most earnest aspiration of the age a pathetic expression of the consciousness that what is needed is a fresh religious inspiration. Where is this religion to come from? It is not to be made by the patchwork of eclecticism. The world to-day does not want a mosaic of religion, but that truest work of art which is wrought by life. Nor is it something to be made to order. There is no factory for religion out of which a new system can be turned to meet the demand of the spiritual market. August Compte tried his mighty hand at making a brand-new religion, but it has not taken the world long to tire of that manufactured by him. The new religion that is needed does not wait to be discovered by any daring explorer. No dark continent holds it, no island secretes it away from the pathway of commerce, no mountain valley shuts it off from the track of trade, no secret order locks up within its bosom this secret of the ages.

In the deepest sense of the word there can be no new religion. The law of evolution determines the matter for us. The religion of to-day is a growth from the religion of yesterday, and the religion of to-morrow will be a growth from that of to-day. We have the rich results of spiritual aspirations of antiquity embodied in essential Christianity. What is needed now is a fresh growth from the old stock. The pagan renaissance of to-day is a movement against the tides of progress. Centuries ago it was settled in

[1] From an address by Dr. R. Heber Newton, delivered Twelfth month 9, 1888, in New York City.

the conflict of the church with paganism that Christianity was fitted to survive. The traditional popular theology of Protestantism, embodied in the confessions and creeds which date from the Reformation, constitute an outer body of dead or semi-dead matter, a skin, a shell. It is the effort to get rid of this which causes the commotion in the organism to-day. If the effort is successful, the church will find herself free to grow a new outer body of popular theology, within which to conserve her more essential and vital faiths. A few years and this whole body of popular theology will probably have been dropped and left behind.

But what of the inner and more essential faiths of the church? These creeds are elastic, fluent, mystic, and when read in their true historical meaning present us with a form of faith which we are far from having yet outgrown. The thought of God therein shrined is that of the indwelling Deity, the life and soul of all that lives, the fount of all force, the spring of all energy, the intelligence back of law, the will behind force, the heart which throbs in the thrills of human affections. Christianity adds to the essential faith in Jesus Christ as the Master of Life; is there any new knowledge which is rendering this Jesus obsolete, any fresh thought which is making His appeal to the spirit antiquated, any higher life which is enabling the greatest of us to look down upon Him instead of looking up to Him as our fathers looked, with loyal, reverent love! The substance of the teachings of Jesus is embodied in the Sermon on the Mount. Is that so well lived that we need to ask for a higher code of conduct? It did not look so yesterday afternoon in Hempstead Plains, when a posse of policemen were on hand to keep cultured men and fair women from the humane sport of coursing rabbits!

On every hand, throughout our Protestant Christianity, one may see the signs of the coming forth of a new theology, and though the iron bolts be drawn against it, it will creep in through the back windows. Let faith then once more rise strong and free, thinking itself into harmony with the knowledge of our age, and a fresh energy will stream forth from the old faiths, inspiring individual lives, enkindling social enthusiasm, setting free the power in which man shall loom above the horizon of the earth. Many are the signs which to-day prophesy the coming of a new world soul. But we need not take much time speculating concerning this possibility of the future. You and I can find the needed new religion, if we will, in the old faith of the church, freed from the dead body in which it has been so long imprisoned. Let us believe in God and see that we walk as sons of the Most High. Let us believe in immortality, and see that we walk soberly, righteously, and godly. Let us believe in the Master of Life, and with all our hearts follow Him. In these endeavors we shall probably have quite enough for over three score years and ten on earth.

"Remember then, O my soul! the quietude of those in whom Christ governs, and in all thy proceedings feel after it."—*John Woolman.*

For Friends' Intelligencer and Journal.

"*ETERNAL VIGILANCE IS THE PRICE OF LIBERTY.*"

Realizing the full force of this statement, and feeling that there is great need for the guardians of that priceless boon to mankind, "liberty of conscience," to be on the alert, we desire in as few words as possible to call the attention of Friends to a threatened danger.

A bill to regulate the strict observance of the first day of the week as the Sabbath-day, has been introduced into the United States Senate, by Senator Blair, and an effort is also being made to make it compulsory to teach "the principles of the Christian religion" in the public schools. This is to be accomplished by an amendment to the Constitution of the United States the object being to make our nation "a Christian nation" by a union of the church and state.

A petition, signed by a million and a half of names, urging the passage of the bill, has also been presented, and we are informed that the friends of this legislation are exceedingly active in its behalf. It is warmly advocated by men and women of high position and great influence, who, undoubtedly, have the welfare of the human race at heart, but as is so often the case, their zeal has outrun their judgment, and one might almost say, their Christianity; for where the spirit of intoleration is, there the spirit of Christ cannot dwell, neither is it with those who arrogate to themselves infallibility.

There are several religious sects who honestly believe (and who would uphold their belief with their lives), that it is required of them to observe the seventh day as the Sabbath-day. Now, shall these Christians, professing the name of Christ, obey the mandates of self-righteous men who presume to say: "This day shalt thou keep," or shall they obey the "voice" within their own souls?

The advocates of this bill say, "obey this law which we have made," and think by this means to build up a Christian nation.

Will any forced observance of moral law be accepted of God, or accounted unto the doer for righteousness? The Temple was built of free-will offerings only. Can we raise up a nation of Christians by simply compelling an outward semblance of religion?

We might say, there is nothing to prevent any one from keeping the Seventh-day if they want to do so, but we must remember that their pecuniary circumstances may not be such as to permit them to observe *both* days as days of rest.

Again, one might suppose that the clause, "to the disturbance of others," so limited the operation of the law as to render it less harmful; but when we remember the bitter persecution of Friends for acts in themselves quiet and peaceable, we cannot doubt that very many religious fanatics will be very easily disturbed by any observance of the day not strictly in accord with their views.

In regard to the other point, it would at first seem as though we could all unite on a willingness to have the *principles* of the Christian religion taught in the public schools. But who is to decide precisely what

constitutes the essentials of the Christian religion or its principles?

The highest civil tribunal is the Supreme Court. Can that body decide the question so as to satisfy the Catholic and the Protestant, or even the various sects among the latter? An attempt to unite the church and state has always proved disastrous. Turn back the pages of history and we shall find that the bloodiest wars that have stained our annals, were waged in support of religious belief. Recall what the early Friends suffered, comparatively a short time ago, in order to maintain "liberty of conscience."

The spirit of Intolerance is only sleeping. Would we, as Friends, be satisfied to have any body of men decide what our children should be taught as "the Christian religion?" Many of the warmest advocates of these measures utter the most severe denunciations of all religions not in harmony with their own, showing a spirit that would crucify the Christ within their brother's soul, while professing to follow His voice speaking in their own. "Woe unto you, hypocrites!"

It was through the influence of a Friend that liberty of conscience was secured by the Constitution, and they have always stood foremost in the fight when it has been assailed, and we take this means of calling every one to the duty of the hour, reminding one and all that "Eternal vigilance is the price of liberty."

While using every effort to prevent the taking of this step in the wrong direction, we would not be understood as denouncing, personally, the author of the measure or the signers of the petitions or their motives; but even great and good men make very grave mistakes, and it is the duty of each one of us to guard with exceeding care this priceless gift of God unto the children of men, both from the attack of enemies and the harmful abuse of *over-zealous* friends.

No one could be more desirous than we to see the day when Christ shall rule the world, but this proposed step is a retrograde movement, and when one of its supporters would say, "The government has the right to command the consciences of men," it is full time to call a halt.

This is the first step. The second would be to secure the erasure of the word *principles;* and the next, the insertion of the name of that religion holding the balance of power.

Ah, Friends, it would be impossible to fully comprehend the danger until we are caught within its toils.

May our Father in Heaven guide and protect us.

F. M. R.

Richmond, Indiana.

THE harvest of grains and fruits is not more regular or abundant than the yield of human affections, sympathies, fellowships; but here also there are differences of seasons and of soils. We must improve our spiritual husbandry. We must enrich the ground from which good qualities spring. We must expose our inmost life to the quickening sun.—*C. G. Ames.*

For Friends Intelligencer and Journal.

THE CHARACTER OF SAMSON.

To understand correctly the character of a man or woman it is necessary to study it in connection with the age in which he or she lives. So to understand that of Samson it is necessary to study the condition of the people with whom he dwelt. Before his birth we are told, "The children of Israel did evil again in the sight of the Lord; and the Lord delivered them into the hands of the Philistines forty years." After he reached manhood he wished to take a wife from among the Philistines, which grieved his parents, but again we are told they "knew not that it was of the Lord that he sought an occasion against the Philistines." Doing this does not lower his character. Jesus left his parents at one time in childhood when they "sought him sorrowing." Fox grieved his parents in early life by his manner of worship, and because he did not worship with the priests. That Samson was a mighty man is indeed true, and from the Scripture record it appears his whole trust was in the Lord. When he met the lion "The Spirit of the Lord came mightily upon him" so that "he rent the lion as he would have a kid." When he had propounded the riddle, after telling his wife who told the Philistines so that they were able to declare it to Samson, before he avenged himself "the Spirit of the Lord came upon him." His wife was foolish for disclosing her husband's secrets. Her father wronged him by giving his wife to his companion and then the Philistines wronged him again by burning her and her father. He avenged himself for these, and in reply to the men of Judah who came to bind him he said, "As they did unto me, so have I done unto them." This was their law, "an eye for an eye," etc. At that time there had been no prophet to declare, "Vengeance is mine, I will repay."

In nearly every instance that Samson slew the Philistines, we are told that the Spirit of the Lord came upon him. Even at the last his prayer to God was, "remember me, I pray thee, and strengthen me, I pray thee, only this once, O God," and died a martyr. This ending to such a life is most touching. His prayer is so sweet—to remember him "only this once." He believed that God was using him all through his life as an instrument of gigantic strength against the Philistines, and in his last hour his trust did not waver. It was God who had helped him to slay the lion, who had helped him to kill a thousand men with the jaw-bone of an ass, who gave him water to drink when he could find none, who had helped him to break the withes and cords with which the Philistines bound him, and now at the last no one but God could avenge him for his two eyes. What man ever put more trust in God? He was truly a leader of his people of that time, and we are told "he judged Israel twenty years." His life was a complete success. The Lord raised him up to do the things he accomplished. Israel had sinned, and were in the hands of the Philistines, and God wished to show them in their low condition that he was with them. Samson was the very instrument for that work.

W.

RUTH AND NAOMI.

Our Scripture Lesson for this week is based upon that beautiful idyl found in the Book of Ruth. The story relates to the turbulent times when the Judges ruled Israel, which, if we would understand aright, these strongly contrasting, though not conflicting representations, should be allowed to supplement one another.

In the narrative of the Book of Ruth are pictured scenes of peaceful occupation and unaffected piety, showing that while there was much to be reprobated, there was also much to remind us of what we are apt to forget in reading such pages, that no times are so wild but that in them are quiet corners, green oases, all the greener for their surroundings, where life slides on in peaceful isolation from the tumult. Men and women love and work and weep and laugh, the gossips of Bethlehem talk over Naomi's return, Boaz stands among his corn, and no sounds of war disturb them; the blackest times were not so dismal in reality as they look in history. There are clefts in the grim rock, and flowers blowing, sheltered in the clefts. The peaceful pictures of this little book, multiplied many thousand times, have to be set as a background to the lurid pictures of the Book of Judges.

Ruth's passionate burst of tenderness is immortal. It has put into fitting words for all generations the deepest thoughts of loving hearts, and comes to us over all the centuries between as warm and living as when it welled up from that gentle, heroic soul. The two strongest emotions of our nature are blended in it, and each gives a portion of its fervor —love and religion. So closely are they interwoven that it is difficult to allot to each its share in the united stream.

Ruth's great words may suggest the surrender which is the natural language of true love. Her story comes in among all these records of bloodshed and hate, like a bit of calm blue sky among piles of ragged thunder-clouds. Even in these wild times there was still a quiet corner where love could spread his wings. The question has often been asked what the purpose of the Book of Ruth is, and various answers have been given. The genealogical table at the end, showing David's descent from her, the example which it supplies of the reception of a Gentile into Israel, and other reasons for its presence in Scripture, have been alleged, and, no doubt, correctly. But the Bible is a very human book, and surely it would be no unworthy object to enshrine in its pages a picture of the noble working of that human love which makes so much of human life. The hallowing of the family is a distinct purpose of the Old Testament, and the beautiful example which this narrative gives of the elevating influence of domestic affection entitles it to a place therein. Human love should be the parent of all self-sacrificing as of all heroic virtues; and in our homes we do not live in love, as we ought, unless it leads us to the daily exercise of self-suppression and surrender, which is not felt to be loss, but the natural expression of our love, which it would be a crime against it, and a pain to ourselves, to withhold. If Ruth's temper lived in our families, they would be true "houses of God" and "gates of heaven."—*Selected from S. S. Times.*

THE SCRIPTURE LESSONS FOR 1889.

These lessons for the first part of the year 1889, will be upon the record of the life of Jesus, as found in the Gospel of Mark, which deals only with the three years of his active ministry among the people of his nation.

Nothing of either his genealogy or his childhood occupies the mind of this historian, whose object in writing his gospel was clearly to establish the claim of Jesus to be the Messiah,—the Saviour so long hoped for and desired, as resting upon his faithfulness to the Divine life in himself, which made him the light of the world.

What that life enabled him to do, the influence it gave him in the work that he was called to undertake and carry forward, is forcibly set forth, and in such concise language, that one could readily believe this gospel was written for our own time. We realize that he who writes, has himself felt the power of that Divine life and through it has been lifted into the realm of spiritual reality, rather than satisfied to rest in the contemplation of those outward manifestations of power and authority which to the majority of those who heard him gladly were the main evidences of his Messiah-ship.

BANANA FIBRE.

Among the valuable products of the soil now largely suffered to go to waste, according to the United States Consul of San Salvador, is the fibre of the banana. This fibre, which may be divided into threads of silken fineness, extends the length of the body of the tree, which grows without a branch from ten to fifteen feet high, and has a circumference at the base of two and a half to three feet. In Central America, the fibre, with no preparation except drying, is used for shoe-strings, lariats, and cords for all purposes. In its twelve months of existence, the banana tree bears only one bunch of fruit, but from two to four or ten trees spring from the roots of the one that has fallen. At home, the bunch of bananas is worth fifteen cents, and the dead tree nothing, though, if the supply were not inexhaustible, the latter would be worth ten times the value of the fruit to a cordage factory, paper mill, or coffee-sack maker. The banana leaf, with stems of the toughest and finest threads, is from two and a half to three feet wide and ten to fifteen feet long, and serves the native women of San Salvador as an umbrella in the rainy season, a carpet on which to sit, and a bed on which to rest.—*Exchange.*

Every temptation that is resisted, every noble aspiration that is encouraged, every sinful thought that is repressed, every bitter word that is withheld, adds its little item to the impetus of that great movement which is bearing humanity onward toward a richer life and higher character.—*Fiske.*

THE PRESERVATION OF OLD RECORDS.

THERE is a growing sense among us of the value of the records that bear upon the history of the Society in its first establishment in this country. We are beginning to realize, that if we would understand the fullness of the power that enabled those early standard-bearers to trust themselves to the mercy of the waves in a long, tedious journey across the ocean, and the more cruel savages with whom they came to share the discomforts and privations of the new continent, we must find it in the written evidences of their faithfulness to Him who had called them, and to one another in their endeavors to maintain that watchful care over each other, that the holy profession they made so earnestly enjoined. In the same sense that we regard the Hebrew records as the sacred Scriptures of that people from their rise to the dismemberment and dispersion of the nation, we should treasure up as sacred the records that have been made of the Divine dealings, leadings and revealings to our forefathers as recorded in the testimonies preserved by them, through all the vicissitudes of their first coming forth as a distinctive religious body, and continue as one generation succeeds another, each leaving to the one that follows the testimonies of that which was vital and cherished as the word of the Lord to his people then on the stage of action.

It is only as we can put ourselves back through this means, and see with their eyes and hear with their ears, that we can do full justice to very much which was exceeding precious in the past, but which in the progress of the ages has not indeed ceased to be of value, but has become the covering only of the germ of truth, that, but for the shelter and protection it afforded, might have lost its vitality and ceased to grow. The constant unfoldings would not be properly appreciated if all that has preceded were blotted out. We can think of no sadder fate for mankind than what would follow the closing of the book of human experience, and leaving the race to work out its brief span of life with no helpful word from the past,—no helpful word and hopeful aspirations for the future.

Let us cherish these time-worn pages of our religious history; many of them are yet to be found in garrets and among the debris of old homesteads, that have descended to those whose affiliations are no longer with us; some of these doubtless have passed entirely out of the possession of Friends. Be this as it may, the monthly meetings have a duty in this matter that they will do well to consider and, as way opens, gather up such records as are yet uncared for, that all the links in the chain of history of the Society of Friends on this continent may be brought together. Through the Representative committees of the several yearly meetings considerable attention has been given to this subject, but there is yet much to be done before the work is well accomplished.

SECRET SOCIETIES.

AMONG those things which the principles held by Friends disapprove, and which therefore they feel they should discourage and "testify against," are secret societies. In this, as in some other cases, no doubt many persons regard them as unreasonable,—unnecessarily strict and narrow. But a consideration of the subject with any degree of care will very soon convince a candid person that the testimony is not ill founded. What is the reason for men (or women) banding themselves together in secret? Obviously, it must be a reason as against their fellow men and women. The object of secrecy must be to create a bond of union among those who adopt it which does not exist among those not admitted to this secret understanding. It is therefore a body whose interests are made different from those of society in general, and thus directly opposed to the Christian spirit.

In some remarks upon the "Greek letter" secret societies amongst students in college, Dr. McCosh, the late President of Princeton University, says that while some of these had apparently no harmful purpose, he soon found that practically they were exclusive, proscriptive, and in a certain degree lawless. When there were honors to be conferred upon deserving students, these societies sought by their secret influence to get them for their own members, and when there were students under discipline, they upheld them against the faculty. No doubt this is true, and while it is but a minor instance, it gives a clue to the whole matter. What takes place in the boys' secret societies is liable to occur in a greater degree in any organization whose members are pledged to secrecy.

If it should be argued that beneficial organizations, societies for the relief of their needy or afflicted members, are desirable, yet it cannot be said that this object depends upon a secret bond of membership and action. Such work may be carried on, and ought to be just as well carried on, in organiza-

tions making nothing more than a proper privacy in regard to it. If it should be insisted that such societies are not so attractive to the light-minded because of the absence of secrecy, this is an argument which discloses at once the weakness of their foundation. Where the fundamental plan of anything is adjusted to the prejudices, the follies, or the weaknesses of human nature, it must have radical defects. Baits and enticements, lures and temptations, which assail the character of men are all alike dangerous, and wherever it is endeavored to draw them on by such means there is good reason for the consistent Christian to take another path. Even such attractions as are not distinctly immoral, but simply meretricious and empty, can have no call upon him.

MARRIAGES.

ATKINSON—KRUSEN.—At their home, Wrightstown, Bucks county, Pa., Twelfth month 13th, 1888, under the care of Wrightstown Monthly Meeting, Edward Atkinson and Clara A. Krusen.

CLEAVER—GRIFFITH.—In Chicago, Illinois, Tenth month 17th, 1888, Edward H. Cleaver, son of Hannah and the late David Cleaver, of Montgomery county, and Minnie E. Griffith, of Chicago.

SWAYNE—JEFFERIS.—Twelfth month 12th, 1888, by Friends' ceremony, Henry D. Swayne, of Philada., and Mary R. Jefferis, of Romansville, Chester county, Pa.

DEATHS.

ANTRIM.—On Twelfth month 14th, 1888, Hannah A. Antrim, daughter of the late Pindar and Marian B. Antrim, in her 82d year; a member of Spruce Street Monthly Meeting.

BALLENGER.—In New York, Twelfth month 5th, in the 89th year of her age, Eliza P. Ballenger, widow of Edward Ballenger; an interested and life-long member of the Monthly Meeting of Friends of New York. A great lover of Friends, and the principles they profess, and a diligent attender of her meetings, as long as her health permitted; and after she was deprived of this privilege she maintained her interest by constant reading of the current news and movements of Friends as presented through the INTELLIGENCER AND JOURNAL and many Friends' books. J. C.

BLACK.—On Fourth-day, Twelfth month 12th, 1888, Thomas Newbold Black, of near Mansfield Square, N. J., in his 68th year.

COMLY.—In Philadelphia, Twelfth month 8th, 1888, Mary Ann, widow of John Comly, formerly of Upper Dublin, Montgomery county, Pa., in her 77th year.

GILLINGHAM.—In Stockton, Cal., on the evening of Twelfth month 9th, 1888, Charles Augustus Gillingham, son of the late Mahlon Gillingham, of Philadelphia.

GORDON—Twelfth month 13th, 1888, John Gordon, in his 48th year. Interment in Fair Hill, Philadelphia.

GREENE.—At Union Springs, Cayuga county, N. Y., Twelfth month 5th, 1888, Hannah C. Greene, wife of William Greene, in the 92d year of her age; a member of Scipio Monthly Meeting.

HARTLEY.—At her residence, 1803 West Baltimore street, in the city of Baltimore, Twelfth month 11th, 1888, Martha P. Hartley, widow of Elias P. Hartley, in the 65th year of her age; a member of Baltimore Monthly Meeting of Friends. Interment in Friends' burying ground, Ellicott City. Deceased was daughter of Abraham and Evalina Paxson, of Bucks county, Pa.

HUNT.—In Camden, N. J., Twelfth month 13th, 1888, E. Price, son of Benjamin and Esther J. Hunt, in his 54th year.

KOON.—At Union Springs, Cayuga county, N. Y., Ninth month 30th, 1888, Sarah A Koon, wife of Cornelius Koon, aged 82 years; a member of Scipio Monthly Meeting.

MARSHALL.—On the morning of Twelfth month 16th, 1888, Caleb Marshall, in his 83d year; a member of the Monthly Meeting of Friends of Philadelphia.

MERRITT.—In New York, at his late residence, on Fifth-day, 12th month 6th, 1888, of paralysis, Edward Merritt, in his 72d year; an elder and member of Oswego Monthly Meeting. He was a zealous Friend, and earnest in all good works. Temperance and all moral reforms he advocated with his whole heart. He was especially earnest in the dissemination of Friends' literature, and for many years he worked faithfully in the distribution of the paper he most loved—the FRIENDS' INTELLIGENCER—seeking to have it reach distant Friends. Let us trust that the works of the faithful have received their reward.

Twelfth month 12, 1888. A. A. M.

REEVE.—At Camden, N. J., Twelfth month15th, 1888, Sarah Wyatt, widow of Emmor Reeve, in her 62d year. Interment at Salem, N. J., from residence of her brother, R. M. Acton.

SEAL.—On Twelfth month 12th, 1888, Hannah W., wife of Thomas G. Seal, of Mill Creek, Del.; a member of New Garden Monthly Meeting of Friends.

WING.—At Quaker Hill, Dutchess county, N. Y., the 27th of Eleventh month, 1888, David I. Wing, aged 77 years, 8 months, and 5 days.

He was a life-long member and steady attender of Oblong Meeting until it discontinued, a few years since. His illness of about six weeks was borne with Christian fortitude and patience. Of a most kindly nature, he was greatly beloved in the domestic circle, and also by neighbors and friends, to whom he was attached by a long life of pleasant intercourse and hospitable association.

RELIGIOUS SERVICES FOR DEAF MUTES.

THE first House for Worship in America exclusively for Deaf Mutes was opened with appropriate services on the 8th instant. The sermon was delivered orally and translated into the sign language by another minister who is familiar with and accustomed to its use. The text was from Isaiah 56 : 6-7 ; "Also, the strangers that join themselves to Jehovah to minister unto him, and to love the name of Jehovah, even these will I bring to my holy mountain, and make them joyful in my house of prayer." The speaker dwelt upon the fact that even after the coming of the time of which the Apostle declared, "There is neither Jew nor Greek . . . but Christ is all and in all," there seemed to be one class of aliens or strangers who could not "join themselves unto Jehovah to minister unto him." For those who were deaf and dumb before any instruction could be given them, there seemed no hope of spiritual things, and for the reason that knowledge of things divine could not be imparted to them in the very nature of the case. Now this is all changed, and the Divine word

standeth sure. "My house shall be called the house of prayer for *all* nations."

The first public service for Deaf Mutes in Philadelphia, was held at St. Stephen's, Dr. Lucachet being the rector, in Third month, 1859. About fifty were present. Since then much time and thought has been given to the subject, of which the present edifice is the consummation.

The first contribution was twenty-five cents, made by a pupil of the Pennsylvania Institute for the Deaf and Dumb in 1878. Under the will of Catharine Bohlen the fund received five thousand dollars.

NEWS OF FRIENDS.

WHITE WATER QUARTERLY MEETING.

This quarterly meeting was held at Rush Creek meeting-house, Lincolnville, Indiana, Twelfth mo. 1st. It was the first meeting at this place.

In 1887 it was held at Maple Grove, and it is the intention that the Twelfth month quarter shall hereafter alternate between these two points. The most convenient railroad station is Wabash, where we were met by hospitable friends who took us in carriages to their homes in Lincolnville and vicinity, a distance of about eight or ten miles.

The meeting-house is new, and is very pleasant, and furnished with exceedingly comfortable seats. There were about thirty persons present from other monthly meetings. There being no partition, the business was conducted by the clerk of the men's meeting and the clerk of the women's meeting taking up and minuting, alternately, the subjects as they claimed the attention of each body, which proved to be a very satisfactory arrangement. At four o'clock the members of the Philanthropic Committee who were present held a session which they earnestly invited all Friends to attend. A large gathering assembled, and after appointing a committee to draft a memorial to the Legislature on the subject of selling, giving or furnishing of tobacco to minors, and the disposal of several other matters that claimed attention, the subject of the Blair Sunday bill and the proposed amendment to the constitution was warmly discussed, and it was decided that we as a Society, as well as individually, ought to do all in our power to oppose all legislation tending to curtail "liberty of conscience," or towards religious intolerance. A committee was appointed to have a further care of the subject looking towards the presentation of a memorial from our Yearly Meeting, if after further consideration such a course was deemed necessary.

At 6 o'clock, the hour appointed for the First-day School Quarterly Association, a few minutes were allowed for recess, after which we were favored with a very interesting and instructive intellectual feast. A number of the articles were original, and evinced deep thought and careful preparation. The exercises throughout were rendered with marked ability.

The next morning, the First-day School assembled at the usual hour. There was a large attendance, many of them being young people, and the earnest look on their faces was an inspiration.

Meeting hour found the house again filled beyond its seating capacity, and although many stood throughout the entire time, the interest was unflagging. After vocal supplication, several Friends were favored to hand forth messages of Gospel love.

The record would seem incomplete without some reference to the very pleasant social gatherings at the hospitable homes, and when we were driven to the station on Second-day morning and bade farewell to our kind friends, it was the unanimous feeling that "it was good to have been there."

A Friend.

VILLAGE MATRONS AMONG THE INDIANS.

Editors Intelligencer and Journal:

In looking over several of the reports of the Indian Committees of our late yearly meetings I was struck with the almost uniform expression of regret at the inability to have a village matron appointed and sustained for the purpose of teaching the women the arts of housekeeping and other domestic duties on the various reservations, and more particularly the Santee reserve. Now, with all due deference to my friends, I feel that I must express my dissent from them in this matter, and especially as regards the Santees, for these have been under the care of the Government as well as the Episcopal and Congregational missions, particularly the latter, for more than a generation past, and their work of instruction in school, as well as home duties, has been thorough so far as regards the young. To these alone can we look for much advancement, as it is well known that grown persons are hard to change in their habits of life, and to be thoroughly effectual this ought to be done by their own people and not by the whites. For this reason the influence of the children, when properly instructed, upon their parents will be more efficacious than that of any persons whom we might send among them. I therefore look upon such an expenditure as this would involve as injudicious, and in this opinion I find some at least of those who have had experience among the Indians to fully coincide.

From The Friend (London) Twelfth month.

THE COLORED PEOPLE OF THE SOUTH.

Doubtless, many Friends have been greatly interested in reading the paper on "The Education of the Colored People of the South," in the Eleventh month's *Friend*, and I am glad it has thus been brought before its readers. It has been my privilege to spend two winters among these people, principally in Virginia and North Carolina, and only those who are intimately acquainted with the South can understand the difficulties they have to encounter. The advances they have made within the twenty-five years since they obtained their freedom are truly surprising, especially in their Church organizations. It is wonderful to see the large congregations which gather in their barn-like places of worship in the woods, with their elders and deacons; though frequently these can hardly read a chapter in the Bible so as to be understood. The winter before last, I

confined my work chiefly to visiting their day and Sabbath schools, and holding religious services with them. As I became more acquainted with this deeply interesting race, I was convinced it was not so much urging to "come to Christ" that they needed, as to be taught and helped forward in the practical results of Christianity; so last winter I encouraged them in the formation of Gospel Temperance Societies, Bands of Hope, Mothers' Meetings, and sewing classes for girls. I was fortunate in being acquainted with one of their teachers, Mrs. Hayden, who during the summer has been superintending the work there organized.

I wish I could picture the country drives we took through the pine woods of Virginia. A friend would generally go with me in a buggy, a high four-wheeled gig, well suited for the soft, sandy soil, and swampy land of that country. We frequently held three meetings in the day, driving first seven or eight miles to a frame house in the woods, where the horse was "hitched up," while we held a meeting or talked to the school children as the case might be. Then we took our lunch as we drove on to the next schoolhouse or church six or eight miles distant, frequently holding the third meeting on the way back; or, when we were near any Friend's house, staying the night, and driving on for other meetings next day. Very few white people, except Friends, will take you in to lodge, if holding meetings with the colored people; so in this thinly populated district we often had long, dark drives through the woods, to get back at night. On one occasion we returned in an ox cart about two o'clock in the morning.

When in North Carolina we were out for twelve days, lodging at different Friends' houses, thus making the tour of the country; but this can only be done where there are members of our Society, and those who engage in this work are far from popular. I made the calculation that last winter I was driven 1,500 miles in Virginia. The public schools in North Carolina are only open three months in the year, so that the education the children get is very meagre. The New York Friends' supplement this in Randolph county by paying the teachers in about fifteen schools for two months, when the school term is over. This is a great help, but it needs increasing a thousandfold.

Then, too, there is a great need of normal schools for training colored teachers. I greatly wish Friends in England and America would come forward and help to extend this work. The people are anxious to learn (though of course there are many careless and thriftless) but need some one to encourage and stimulate them in temperance, morality, and thrift.

I think the few extracts I will now give from letters received during the last few months will show that, if started and put in the way, they are appreciative and desirous of carrying on this work. The first is from a simple colored girl, who has charge of a school in a country part. Her children are, except during the school term, generally engaged picking cotton and peanuts. She has about sixty little curly-headed black-eyed negroes under her care. She began the Temperance work by talking to them about giving up cider and other intoxicating drinks, and through them has reached the parents, so that when I visited the *Oberry* church over a hundred members had joined the temperance society. This church is near the home of our friends John and Deborah Pretlow, and doubtless their influence had told on the people and made them more ready to go forward.

This teacher writes:

"Myself and others are doing what we can, by the help of the Lord, to keep the Temperance work moving on. We still hold our meeting at Oberry every fourth Sunday, and at the Richard Allen Mission every third Sunday afternoon. The Oberry members have done well in helping to spread the work in other churches. All of us have great need to render thanks for the interest you are taking in our poor race. Many a prayer goes to God's throne on your behalf. I have my sewing school every Wednesday afternoon; we have very few grown-up people, but a good many children. After the sewing school closes, we all retire to the church for the sister's prayer-meetings. We have a sister to lead every meeting. The men also come, but are not half as much interested in the prayer-meeting as they are in the temperance work. We have real good meetings every Wednesday, when anybody can get up and speak for the Lord just as they wish. I am so thankful that the Lord has spared my life, that it may be spent in his service. The only true happiness I have found has been in working for him."

* * * * * * *

Mrs. Hayden, a colored teacher in Franklin, Va., writes:

"I am very busy now helping the teachers to get ready for the county examination. Some of the young teachers are fearful they will not pass. I am also engaged sending off young people to schools to be trained as teachers. Five have gone to Hampton school, and four to Petersburg State school. . . . We have appointed a temperance meeting at Mount Olives. I trust you can see we are busy all the time, and I do so much enjoy it, feeling good is being done, and I do so long to see the day when my people will be as well trained as other races. What a blessing if they can be trained morally and religiously! I plainly see their need, but also feel my own inability. Indeed, I am very anxious to go to college again myself, and would go this winter instead of teaching if all things were equal to the occasion. I often think of the many people who have such good chances to be educated, and don't seem to care for it; and, on the other hand, their are so many poor people praying and longing to be educated."

Mills Raiford, a Friend belonging to Corinth Meeting, who is looking after the colonial work in his locality, writes:

"I have been to Ebenezer twice, once to a temperance meeting, which I believe was the most interesting one we have had there yet, and one day I went to their protracted meeting. I just wished thee could have been there; such shouting all over the congregation we have never heard before. I have been to the temperance meeting at Tucker Swamp once lately, a very interesting time; no men, mostly women and children belong to it, who are much in earnest. It is uphill work, especially at Ebenezer, where the Church does not take up the cause as warmly as one could wish. I gave them an earnest little talk urging the importance of their rising up in one solid army against so great an evil, one that the Bible says so much against. have been to the Richard Allen mission again. It does my heart good to go there, they are so much in earnest."

Later on Mills Raiford writes:

"Early on Sabbath morning I went up to Daniel's (a colored man who lives near in a log house where a Sabbath school has lately been established), to give some directions about the school. I tried to teach Daniel, Eliza, and Ada,[1] the 23d Psalm, by getting them to repeat it over to me in concert that they might so be able to teach the children in the afternoon. I do this every First-day morning before our white school begins. Last Seventh-day we had the temperance meeting at Tucker Swamp, then came on a heavy shower of rain and prevented many from going. Nearly every one had a piece to say: several had badges made of blue calico with white letters B. of H. sewed on. I thought it was real nice. Please pray for me that I may ever be kept by the power of God doing all he would have me do for him."

These letters refer to mission efforts carried on in country parts during the summer, when the day schools are closed, and are all new departures. The colored people have considered it part of their privilege as free men to drink, but are not, I think, more addicted to it than the same class in our own country, and it is encouraging to see how they have laid hold of the Temperance work. The mothers' meetings have not prospered so well, as it is difficult to get white people to conduct them. The girls' classes for teaching them to make their own clothes have been more successful, as their colored teachers take charge of them. Mrs. Hayden writes: "The girls are improving in their needlework. I give each girl a little book or tract, and when they come back next week, before giving them another, each one is required to tell me what they read in the last. It is very interesting to hear them tell these pretty little stories. When one fails to tell the story I do not give her any new book, so that makes them very eager to tell. Some good must come out of this work; I shall visit both the other sewing classes soon. I went to Mount Sinai Church on the third Sunday, lectured to the Church, presented seventy-five pledge cards, and got thirty-four new names to the temperance band. They have their officers and are in splendid working order. The sisters' temperance prayer meeting was very good last Friday. I told them that you sent them those nice papers. I use them in my singing class, and in the sisters' prayer meeting. The temperance work in Franklin moves on well."

The following letter is from one of the men who signed the pledge at Franklin:

"Dear Mrs. Allen,—I feel interested because you have been so kind as to leave your beautiful home in the far east, and come here and spend your time and money in trying to Christianize my race of people, and to cause them to stop indulging in King Alcohol, that great soul destroyer. In 1883 and 1884 I was engaged in selling liquors, as a licensed bar-keeper. To-day I belong to the Temperance Society, and am determined to do all the good I can in that direction. I think the Lord must have sent you here, because I never had any idea of signing the pledge in my life, for I never got drunk and I saw no need of signing, until I heard you talk in Cool Spring church. I feel greatly interested in the work, and thank God that he has sent you here to start this great work, and pray that he may bless and send you back among us again this fall."

[1] These are the teachers, and Ada is the only one who can read.

These extracts show that it is a very hopeful field in which to work, and that this long-oppressed people are anxious to rise; but they need help—they need those who will go amongst them and take the initiative, and I fully agree with Howard M. Jenkins that these people are without adequate means of instruction, and that members of our Society are peculiarly fitted to give them that aid and to set before them that practical Christian life which will be so helpful to them. I feel the mission of the Society of Friends is not ended with regard to them; there are difficulties in the way, but with love to God and love to our fellow-creatures, and going forward prayfully and steadfastly, these will be overcome.

"There's only one thing need concern us,
To find just the work which is ours;
And then, having found it, to do it
With all our God-given powers."

Should any Friends feel it "of the Lord" to help in any way, I shall be glad to hear from them.

M. A. Marriage Allen.

1333 *Bolton street, Baltimore, Maryland.*

ONWARD AND UPWARD.

Keep striving! The winners are those who have striven
And fought for the prize that no idler has won;
To the hands of the steadfast alone it is given,
And before it is gained there is work to be done.

Keep climbing! The earnest and steadfast have scaled
The height where the pathway was rough to the feet,
But the faint-hearted faltered, and faltering, failed,
And sank down by the wayside in helpless defeat.

Keep hoping! The clouds hide the sun for a time,
But sooner, or later, they scatter, and flee,
And the path glows like gold, to the toilers who climb
To the heights where men look over landscape and sea.

Keep onward! *right on*, till the prize is attained,
Front the future with courage, and obstacles fall.
By those, and those only, the victory's gained
Who keep faith in themselves, and in God over all.

—*E. E. Rexford.*

THE DAY IS PAST AND GONE.

"The day is past and gone,"
And gentle evening sits upon the hills.
With noiseless feet, the bright hours slipped away;
And from our lives Time claims another day.

"The day is past and gone."
Night draws her purple veil o'er hill and wold.
Whither, O friend, have all thy bright dreams sped?
What thought is sweetest, now the day is dead?

"The day is past and gone."
The silver stars come shining into heaven.
I kneel beside my bed to-night to pray
That God will keep us safe and right alway.

"The day is past and gone."
The tender moon smiles from a quiet sky.
I lay me down, through night's long hours to sleep,
With one last prayer for all that wake and weep.

—*Juliette Coates Harding, in Christian Register.*

AMONG THE DAKOTA SIOUX.

[Gen. S. C. Armstrong, Principal of the School for Indian and Colored Youth at Hampton, Va., prints in the *Southern Workman* for Twelfth month a letter from Dakota, giving many interesting details of a visit to some of the Sioux Indian reservations. We print below part of it.—EDS.]

GRAND RIVER MISSION, Dakota, Sept., 1888.

A THIRTY miles drive brought us here from Standing Rock Agency. . . . The Grand River mission station is under care of the Congregational church, with a native pastor supervised by Rev. Thos. L. Riggs. And here Miss Collins is devoting herself, in her twelfth year of missionary work, to an interesting village of about 60 Indian families. We drove through the settlement, looking into a log house here and there. Personal visitation, like that of Miss Collins, is the best foundation for Indian or any other mission work; nothing so reaches the individual life.

This village is no "camp," she claims. The "camp" is of the past; it meant huddling together in barbarism. Next in their development, says Mr. Riggs, comes the scattering far out on individual claims, necessary to break up tribal life and influence. There may come, he says, a reaction, and they sometimes leave their wheat fields when harvest is over and spend a large part of the year on some river bottom, or in a pleasant neighborhood, where they raise their vegetables. The Indian families in the Grand River settlement occupy about five hundred acres of land; half of them, at least, having their allotments out on the hills or higher plains, where they raise corn and wheat. . . . .

(Cheyenne River Agency.) This is the largest of all the Dakota agencies. Its 3,000 Indians are under charge of Dr. McChesney. Rev. J. B. Harrison, in his "Studies on Indian Reservations," reports at length, and most favorably, on this Agent and his work, and justly rates him as one of the most efficient agents in the Indian service. As they should be, the Indians are scattered to their homes, appearing only on the semi-monthly ration day, when they pour in from their farms and camps far and near, and make the same picturesque effect as at Standing Rock. But picturesqueness in human life is apt to be only one side of a sad picture. Industry and progress are checked by a several days' break up of home life twice a month; and here is another reason for making an end of the ration system. Were farm utensils or cattle on the hoof issued instead of beef, the farmer would not need to leave his home oftener than once every month or two months.

Usually, and rightly, an agency is the last place to see Indians. Around it—aside from the regular employés, mechanics and school children—few are to be found, except some loungers and grumblers. The farmers are scattered many miles away, and long journeys must be taken to see the industrial, hopeful Indian life of to-day.

I made no excursions at Cheyenne river, but spent a quiet Sunday with the Agent and his charming family. Such homes and social atmosphere are an indirect but most valuable influence on the reservation, commanding the respect of all who gain the good fortune to share their hospitality, and a credit to the Administration wise enough to select such efficient officers for the Indian service. Agents McChesney and Anderson (the latter in charge of Crow Creek and Lower Brule agencies) were appointed by Commissioner Atkins; McLaughlin, of Standing Rock, being one of the few agents of the previous Administration retained in office. Should there be a political change from the election in November, all three should be retained in office. There is no greater crime against progress than changing competent and experienced Indian agents and employés under political pressure. Too much of that has already been done, and no little harm has resulted. The ideas of civil service reform are needed, more than anywhere else, in the Indian service.

Then a visit to "St. John's William Welsh Memorial School," where I was impressed, as all are, with the soundness and success of the work carried on for eleven years under Mr. and Mrs. Kinney, who, in all that time, have had only four months' vacation. Forty-one girls, from six to twenty years of age, are thoroughly trained in household duties and English studies; kept in hand till quite proficient, sometimes seven or more years, and then are ripe for usefulness. Personal influence is the power of this school, and the quality of it is rare. The vernacular is strictly excluded; pupils who enter in September are required after Christmas to speak English only, and in two years they get a fair command of it. During the two months' summer vacation, the pupils leave, but return promptly, having done much good in their homes and received little or no harm. All the work is done by the girls under Mrs. Kinney's direction.

Bishop Hare has devoted ten thousand dollars to a richly deserved and much needed new building for this school, which is near completion. It is admirably planned, of commanding appearance, and will make a strong impression indirectly on all this region as well as directly on the pupils. Not only the character of the teachers but their unbroken series of years here, has made this school a power in Indian life. This is the advantage of missionary work. Its teachers, as a rule, hold on and get a "grip," and an experience of untold value.

There is a Government Industrial School for Boys at this agency, of which Mr. G. W. Wroten is principal, assisted by two teachers and other officers. A Miss Cavalier has long held a position here and has been the means of sending a number of students to Hampton. By her letters to the absent and by her wise influence over those who have returned to the reservation, she has done much to hold up the educated Indian youth.

The boys of the Government school cultivate sixty-five acres of land and care for thirty-one cattle besides other stock.

Here and elsewhere I have found the need of an efficient Superintendent of Government Indian Schools, who should visit each one, see that their many needs are met, and give life and encouragement to faithful but inexperienced workers. On every side the questions are asked, "Who will be Superintendent of Indian Schools? Who will be Commissioner?"

Dr. McChesney reports the failure of Indian crops for the last three years, at this agency. The whites have fared no better, and after thorough trial, he believes that the risks of farming are too great to justify further expenditure in that direction. There is plenty of land for grazing; cattle raising is comparatively sure. The Indians are adapted to this business, and Dr. McChesney declares that had Major Swan, of the Army, who over eight years ago had charge of them, remained, they would have been self-supporting by this time.

He believes in pushing the Indian to land in severalty, for which Government surveys not yet made are indispensable; the day of mere allotments is about over; it is random, unprofitable work to scatter Indians on farms that may be badly cut up by the surveys. Until the land question is settled, Indians will move about and not build permanently; for civilization they must be put on to places of their own, and kept there.

Dr. McChesney believes in giving Indians utensils and live stock instead of killed beef, thus encouraging them to self-support. He states that the Cheyenne River Indians get only about one-half as much beef as is issued to those at the other Sioux agencies, making up the rest of their support by their own efforts. Give them a chance to raise their own food, and, in a few years, they will need no aid.

They are now freighting all their supplies from Pierre, forty-five miles distant, and do the general work on the reservation.

Assistant farmers are as much needed in helping them raise stock as in farming. One such helper to every hundred families is the best way to lead them to independence. They need constant supervision and help, as to seed, utensils, stock, and care of crops, and when the crops are ripe the problem of harvesting and threshing is often the most serious of all; the best machinery is required to enable them to compete with white men, and the most of them are unable to buy it. Some supervision will be needed long after they have become citizens and voters. Political and personal independence is a very different thing from ability to take care of themselves. An Act of Congress can give the one, but can only provide the conditions for the other, which only time and patient effort can realize.

Dr. McChesney thinks that white men could do no better than Indians on farms of 160 acres of such land as this. Many have come into this region with money—say $1,000,—and in about three years been glad to get away with nothing. Even on the better land east of the Missouri, a quarter section is not enough to support a farmer, and the majority fail. But he thinks this will be a good country eventually, as Kansas and Nebraska have become. Tree planting is the great idea, which will bring rain and break the force of the terrible dry winds of June and July.

At Crow Creek, where Maj. Anderson is agent, is another Government Industrial School of which I can speak well. It is under Mr. Davidson, whose three class-teachers, one industrial teacher, matron, seamstress, laundress and cook, all work together in an excellent spirit, giving their forty-five boys and forty-three girls a good plain English and practical education. It is arranged on the half-time plan for study and work. The boys cultivate a fine farm of fifty acres.

Driving from Highmore, the railroad station, forty miles across the reservation, I passed the St. Stephen Roman Catholic boarding school, twelve miles from the Agency, where another large building is going up, the gift of the Misses Drexel of Philadelphia.

There is plenty and to spare of good land on this agency, and crops have been good. The Indians number 1,099 in 375 families. Consumption is prevalent and the tribe is slowly decreasing.

But this is recognized as in many ways the most advanced of all the Agencies on the Missouri. The Agency buildings are complete and sightly, and in the center is a large and pretty square planted with trees and shrubs. No other is so attractive and the Indians have had more than the average educational advantages.

Here alone, of all the Dakota reservations, has the Indian land been surveyed; so that, under the allotment act, the majority of the people went directly to their farms, and the patent from government under the Dawes bill will make no practical difference, simply assuring them of their perpetual rights. The delay in the survey at other places has kept the Indians back not a little. Lower Brule has been partly surveyed.

The wheat crops here average one good one in three years, though never a total failure; hay is sure, and vegetables can usually be relied on. Indian enterprise is shown by the fact that this year they bought four self-binding reaping machines, at $150 apiece, two or three clubbing together for the purpose.

While the 1,200 Indians at Lower Brule, thirty-five miles away, get twenty-one head of cattle a week for their beef supply, the 1,000 at Crow Creek get only twelve cattle weekly; the difference is due to the greater push the latter have received, although under the same agent.

This year, with good crops, I am told, fifty families could support themselves, but in less successful years might not be so able to. Still their ration has steadily reduced; only at plowing time it is given in full, for they need it.

Driving through the reserve, I found the best houses of any on the reservations I have visited; they are framed and weatherboarded and have a room below and above. They are the gift of the government, costing about $175 apiece; given according to treaty, for their taking allotments and cultivating the land. The seventeen new houses are lathed and plastered. I failed, to my regret, to study the interiors. But parts of this agency look, to the passing observer, like a settlement of decent white farmers.

In building these houses, government hires, chiefly, Indian carpenters; it also hires Indian teamsters, and, in all its orders, recognizes the right of competent Indians to have employment. The chiefs have rather better houses than the rest.

From Garden and Forest (New York).

CHRYSANTHEMUMS.

The remarkable popularity of the Chrysanthemum in recent years can hardly be classed among those transient floral epidemics, so many of which are on record in the history of horticulture. The rage for Sunflowers and Daisies with many other ephemeral caprices of this sort, died out as suddenly as they arose, not because the flower which chanced to be the prevailing fashion had no merit, but because an exaggerated or fictitious beauty and value were claimed for it. The interest in the Chrysanthemum has had a slow and steady development, and it is based on the genuine worth of the flower. It appears at a time when rivals are few and its blooming period extends over a long season. It ranges through a series of rich, mellow tones of color, and no flower lends itself more readily to the production of decorative effects. In form it has the merit of symmetry without a hint of rigid formality or any chilling suggestion of artificiality, such as characterizes a double Dahlia or a prize Camellia. No other flower equals it in the diversity of form which it assumes within the limits of perfect proportion. Each variety and class of varieties shows such a marked individuality in the shaping and arrangement of its parts, or such a delightful waywardness in the curving and twisting of its florets, that one can examine a hundred flowers and never find the outline of a single one repeated. When it is remembered, too, how much of promise for the future of the Chrysanthemum there is in this free habit of blossoming out into novel and graceful forms, we can rest satisfied that not even the Rose will more surely maintain its position as an established favorite among flowers.

The history of the Chrysanthemum's development from its earlier and more simple garden forms, is most interesting. It will suffice for our present purpose to note that Loudon, in his Cyclopedia published in 1824, speaks of numerous varieties "recently obtained from China," where the flower had long been cultivated. He enumerates forty-four varieties, of which few are now to be found in cultivation. The Large Lilac is one of those which still may be found in old gardens on Long Island and in other parts of this State. Perhaps several of them still survive in old places still further south. Some of them, like the Tasseled Yellow and White, the Yellow Waratah and the Golden Lotus-flowered, would be appreciated now if they could be re-introduced and cultivated under approved modern methods. Samuel Broome, in 1857, published a list of the varieties then growing in the Temple Garden, London, and among them were 184 varieties of what was known as the Chinese Chrysanthemum, eighteen Large-flowered Anemones, 140 Pompons or Liliputs, and thirty Anemone Pompons. Of these, there are found in collections to-day, twenty-five Chinese, eight Chinese Anemones, twenty-one Pompons and ten Anemone Pompons. It is hardly twenty-five years since flowers belonging to the Japanese section were introduced to general notice. It was in 1865 that the *Gardeners' Chronicle* reported that Mr. Veitch had sent home "three very distinct forms, evidently the representatives of many beautiful productions yet unborn." Two of them had peculiar ligulate ray-flowers, all or nearly all of which were drawn out into extremely narrow, sharp terminations, now and then inclined to fork. The third was of quite another kind, close-headed, incurved, with all the florets divided into two irregular and unequal lips. The now famous Grandiflorum was sent by Robert Fortune to John Standish, of Ascot, and shown by him as early as 1862. At the same time were exhibited Laciniatum and Japonicum, the former spoken of as a "distinct Japanese variety of the Chinese Chrysanthemum with white flower-heads composed of fringed tubular petals." The report speaks of the latter as being remarkable for its slender, tubular, curved florets. How all these peculiarities have been intensified since their introduction, and fused together into new combinations, is made plain in any ordinary collection to-day.

Enthusiastic cultivators in this country recognized the value of the Chrysanthemum long ago, but it is scarcely more than seven years since this flower first attained its real popularity here. Mr. H. P. Walcott, in Boston, Mr. W. K. Harris, in Philadelphia, and Mr. John Thorpe, in New York, were most conspicuous in bringing it into public favor. The importation from Japan, by Waterer, of some fifty varieties, in 1883, many of which were most distinct and beautiful, gave a new impulse to hybridizing, and now the new kinds that appear every year are almost numberless. At least 10,000 tried seedlings have been on exhibition for the first time this year. The diversity of form and color displayed is almost infinite, and the various strains have been so intercrossed that the seeds from a single flower-head will often produce examples of the types most widely separated in structure and size, together with intermediate and kindred forms. The strong propensity of the Chrysanthemum to variation has been of great advantage to the originators of new varieties, and, by careful selection, the improvement in color has been as striking as the changes in form. Shades and tints which were unknown in this flower a decade ago are now common. Maroons, crimsons, rose, pink and buff have all become more decided. The markings of parti-colored flowers upon the tips and along the marginal lines have become more distinct, and the production of a scarlet flower is not despaired of by those who have done the most to bring out the newer and formerly unknown shades. It is small wonder, then, that exhibitions devoted exclusively to Chrysanthemums have been held in at least a dozen of our cities this year, while only four years ago Boston, New York and Philadelphia alone had such displays.

No one can prophesy in what direction the next marked improvement in the Chrysanthemum may be looked for; but judging from the past, striking variations from the forms we are now familiar with may be expected. Those who studiously note the development of new seedlings are quick to mark the appearance of slight peculiarities, for these may be the fore-runners of distinct types. For some years the appearance of hair-like growths from the under

side of an occasional floret has been observed, but they were never sufficiently numerous to give any character to the flower. But last year the remarkable variety, Mrs. Alpheus Hardy, which was figured in the first number of this journal, was found in a Japanese importation, and in this each floret was thickly set with these slender growths, giving an entirely new character and expression to the head. Up to a comparatively recent time the section with laciniated florets invariably had small heads, which did not show distinctly this characteristic. Some of the newer varieties of this type have florets three inches long, with four or more bifurcations, and spreading at least to three-quarters of an inch in width. In many cases the florets, for two-thirds of their length from the disc, are tubular, and then branch abruptly into their particular toothed forms. And the disposition of the florets is quite as interesting as their shape. In many cases their arrangement is flat; again they are reflexed; while in others still they are incurved and confused into a globular mass of slender shreds, which often show the upper and lower surface in each floret. But slight modifications of these characters are needed for the origination of a new class of Chrysanthemums as distinct as any heretofore produced.

But whatever the forms with which the Chrysanthemum may be endowed in the future, we may feel sure, from what we know of its inherited tendencies, that the flower will continue to show that freedom and fluent grace of outline which so strongly commend it to the taste of the time.

FRIENDS' MISSION IN ALASKA.

A RECENT issue of *Friends' Review* gives an interesting correspondence from Douglas City, Alaska, where Friends have undertaken missionary work, in connection with the educational effort. They have in prospect the establishing of a Training School.

Under date Tenth mo. 28th, 1888, the correspondent writes: Since selecting a location, isolated from any settlement whatever for it, I wish to describe a little my idea of commencement. I wish to settle upon a tract of land, the amount allowed by the Government for mission purposes (640 acres), and have it legally surveyed two miles long up and down the bay, and one-half mile wide, choosing the centre of the claim near the beach for our mission buildings. After said buildings have been erected and mission in good running order, we will naturally suppose that a few natives will desire to locate near us. Before allowing this we will form a certain code of rules that each person shall agree to abide by, before letting them have any possession or privilege of living thereon. Not allowing any saloon or dance-house to be within its borders or any person to reside there who will drink whisky, gamble, or is in the habit of any other immoral or scandalous habit. By thus forming a settlement we can build up a little town or village with a class wholly of a moral or religious character; other persons addicted to the above named habits, wishing to join us, can do so by abiding by our rules. After a length of time, when we become able, we shall have a provision store in order to get the trade of our own people and also those who prefer patronizing us, by giving them our goods in exchange for their furs, blankets, etc. This is after the plan of Wm. Duncan, the most successful Indian missionary in America. I had recently a very interesting talk with him, showing him my proposed location and its surroundings, and told him the plan I had thought of. He was favorably impressed with it, and gave me some very valuable advice concerning our work, and assured me of his influence in getting an equal support with other like institutions, from the Government, he being now one of the School Board of Education. Our location is within five or six miles of the nearest steamship landing, which is in plain view, and also on the direct route of the S. S. navigation and within one hour's travel of the gold mines on Douglas Island, intervened by the bay or channel, where the natives can get abundance of work and at the same time make their homes within our borders for moral and religious protection and training. At the time William Duncan first started out on this line, he had no idea of ever forming such a large settlement of people; but after he secured his location, a short distance from any settlement or village, the natives saw at once the propriety of such a hedge around them for protection from the evil influences of the immoral class, that they soon came to join him in his little colony, which was allowed them under certain restrictions; and that little colony has grown larger and larger until he has now near 1,000 people, 500 of whom are children of school age. And the natives are still coming in, without his solicitation, from all directions to join him. He now has a steam saw mill, fishery, store, and two small steamboats in his possession, besides his school buildings, which makes his institutions almost self-supporting, and without boasting, he can claim the most noble company of Indians on the American continent, who were a few years ago one of the most atrocious sets of cannibals in the Northwest.

He believes very much in the plan of working by faith, similar to "Müller, of Bristol, England." He denounces the ordinances, and preaches Christ as our only Saviour to his people.

I am varying a little from my subject, but wish to inform Friends a little of the workings of this noble man, simply to illustrate a little of our future plans, the impressions of which I had before I ever came to Alaska. And as we move out in this way, the work seems to widen more and more, and the Lord seems to increase our blessings. Will Friends aid us in this great plan of redeeming mankind? We need your help. We need cheering words. We need your prayers to hold us up in this great work. —*E. W. Weesner.*

P. S. In answer to many inquiries, I will state that money sent us by registered letter, or draft on New York bank, sent in a private letter, reaches us safely so far. The former is preferable.

"I COULD much sooner doubt my senses than my soul. Much sooner doubt the outward and the changing than the eternal and necessary principles within."—*H. H. Thomas.*

INFLUENCE OF TOBACCO SMOKE ON YOUNG CHILDREN.

During my many years of practice, there have been many occasions on which I have found it necessary to warn persons who used tobacco against using it in the sick-room, especially in the lying-in room. I have often known poor men, after coming from work, and also in the early morning, to fill the room where there was an infant only a few days old, with tobacco-smoke; and that some of these children sickened and died from the effects of it I have no doubt. Three years ago I was passing along Green Lane, a street running from Roxborough to Manayunk, when I met a young man proudly carrying a child of but a few months on his shoulder, with the child's face close to his own head. He was smoking, and, as he faced the wind, the smoke was carried back into the child's face. It was Sunday, and himself and wife had apparently just started to visit friends in Manayunk—a very short distance. After I had gotten away from them I reproached myself for not having accosted them and warned them of the child's danger. It is quite probable that before they reach their friends the child was sick; then, if a doctor was sent for, he was doubtless told: "It was quite well when we left home, and we can't tell whatever has made it so sick." Being so very sick, and malaria being so plentiful in that region, the doctor could readily see that it ought to have medicine—some antiseptic or some germicide—and then —well, we may fancy the rest.

I have often, when called to young children, believed that the cause of the sickness was due to the fumes of tobacco; removing them from the cause often soon placed them in safety. And yet that many suffered from that cause, and that it was not recognized as such by me, I have no doubt.—*Dr. Hiram Corson, in Medical and Surgical Reporter.*

RECOVERY OF LONG LOST TAPESTRY.

When Marguerite of France was married to Victor Amadeus of Savoy, she took with her to Italy twenty pieces of the very finest Gobelins tapestry, illustrating classical legends. This tapestry, which was of immense value, disappeared mysteriously when Napoleon invaded Italy, for it had been hidden away in case the French might think proper to carry it off, which they would certainly have done. It had been so carefully concealed, that, after some years, when calm was restored, it was found impossible to discover it, and the two officials who had put it away were both dead. The tapestry had been almost forgotten till recently, when the master of the royal household was making a thorough investigation of the palace at Turin from roof to cellar, and behind some huge chests in a store-room in the highest story, he found a secret chamber, in which was concealed the long lost tapestry, and it had been very little injured by its hundred years of hiding.—*London Truth.*

Character has far more to do with determining history than history has to do with determining character.—*George Macdonald.*

THE LARK'S SURPRISING SONG.

J. G. Wood, in an article on "The Wonders of the Spring," says that the volume of sound produced by the skylark is most wonderful. "The lark ascends until it looks no larger than a midge, and can with difficulty be seen by the unaided eye, and yet every note will be clearly audible to persons who are fully half a mile from the nest over which the bird utters its song. Moreover, it never ceases to sing for a moment, a feat which seems wonderful to us human beings, who find that a song of six or seven minutes in length, though interspersed with rests and pauses, is more than trying. Even a practiced public speaker, though he can pause at the end of each sentence, finds the applause of the audience a very welcome relief. Moreover, the singer and speaker need to use no exertion save exercising their voices. *Yet the bird will pour out a continuous song of nearly twenty minutes in length*, and all the time has to support itself in the air by the constant use of its wings."—*The Swiss Cross.*

NEWS AND OTHER GLEANINGS.

—A recent careful study of methods at Cornell University shows that there is no diminution of effort because of the presence of women in the lecture and class rooms. On the contrary, the women are an incentive to the young men, and the influence of the two sexes in their work is found to be wholesome and helpful.—*Boston Herald.*

—In the laboratories of the University of Jena, Germany, are three female students at work, studying chemistry and physics. All three are Americans,—Martha Sturgis, of Muskegon, Mich., Gertrude Frommholz, of Lowoke, Ark., and Jessa J. Pearson, of Xenia, Ohio.

—The average annual olive oil crop of Syria alone is worth more than two millions of dollars. It is estimated that about two and a half acres of land will support two hundred olive trees, and that these furnish enough income for a small family.

—The smoke-cloud which daily hangs over London is estimated by Prof. Chandler Roberts to contain about 50 tons of solid carbon and 250 tons of carbon in gaseous combinations. The expense of this waste of coal is calculated at $13,000,000 a year, while the smoky atmosphere causes damage to property which Mr. Edwin Chadwick places at $10,000,000 a year.—*Christian Register.*

—Miss Hughes is the Principal of the Training College for Teachers, in Cambridge, England, where the first step has been taken towards founding a course of scientific carpentering. This college is the youngest of all the English women's colleges except Holloway, having been founded in 1885. Miss Hughes is a graduate of Newnham, where she took Moral Science Tripos, Class 1, and History Tripos, Class 2. She is enthusiastic over the result of training in manual dexterity, and says, "We learn to saw equally well with the left or right hand."—*Exchange.*

—Four hundred men are required to take the great *City of New York* across the Atlantic and attend to the wants of her passengers. The engine department claims the attention of 185 of these workers, including 26 assistant engineers, 30 fireman, and 54 coal passers. In the sailing department there are 60 men, and in the passenger department 150 are employed.

—A National Convention of women is to be called in Chicago early in the new year to consider the question of domestic labor. It is proposed to form a national association for the training of servants and elevating them above

their present status, and in order to further the plan a national college is to be established. The Western women, who have been instrumental in holding the first Convention in Chicago, want the college there, but the moving spirit in the undertaking, Mrs. Laura Pancoast, of Harrisonville, N. J., is anxious to locate it in New York. The different States will have local schools and homes for servants, and the association proposes to issue stock and make their enterprise a business one. The Company has been chartered under the laws of Pennsylvania.

—Jerusalem is rapidly growing as a trade centre. One hundred thousand dollars worth of ornamental or useful objects in mother-of-pearl and olive wood are exported to America and Europe every year. Vine cultivation is being extended, and the price of land has risen six-fold within a few years.

—The Law and Order Society of our city justifies its support of the Brooks License Law by publishing the returns of commitments to Moyamensing Prison and the House of Correction during the five months which followed the establishment of the new system. The former number 8,455, a decrease of 5,099 as compared with the same five months of 1887, the latter are 1,823, a decrease of 840. It is said that other cities have shown a similar decrease under their new license laws, but we doubt if in any case it can have been so great as in Philadelphia. The important features of our law are its restrictive and penal clauses, and a great secret of its success has been the strictness of its enforcement by the Board of Judges who sat for the hearing of license applications. They reduced the number of saloons enormously and weeded out most of the lawless dealers. It is satisfactory to know that the same judges have again been designated for this duty.—*The American.*

—If millions upon millions were lavished upon building churches, and as much more in sustaining preachers in them, that would not make New York a Christian city. Perhaps it would scarcely make an impression upon the mighty volume of its wickedness. What is the use of building more churches in places where those already standing are not half filled? No, no! It is not churches that we need, but men. The work to be done is of a sort for which our city pastors in general are wholly unfitted. We say this with no want of respect for them: for they are doing in their own churches a magnificent work, but it is work in another sphere. To go among the masses requires men of another training—we might almost say, of another physique.

CURRENT EVENTS.

REPORTS from Suakin, (Upper Egypt, on the Red Sea), have stated that Stanley, the explorer, with another European, Emin Bey, was in the hands of the Arabs, who demanded as the price of their release that the British troops evacuate Suakin. It is now (18th inst.), stated that the English government officials do not believe the story, so far as it relates to Stanley.

THE French Company, headed by De Lesseps, which has been engaged in cutting the canal across the Isthmus of Panama, has been unable to raise more money, and has practically failed. The work done in the canal is but a small part of what is needed, while the expenditure has far outrun the estimates.

THE New York steamship *Haytien Republic*, which was seized at Port-au-Prince, has been released, and sent home.

Two refugee special trains from Atlanta and other Georgia cities arrived in Jacksonville, Florida, on the 15th inst., and all the regular trains from the North have also been well filled with returning refugees. These have been, in many instance, welcomed back with bands of music. Business is opening up again, and the streets present almost their usual appearance.

A DISPATCH from Paris, on the 16th instant says: "Terrible storms have been raging for three days in the Department of the Eastern Pyrenees, flooding villages and causing wrecks and much loss of life."

IT is reported that over 200 deaths from diphtheria have occurred in the vicinity of Albuquerque, New Mexico, within the past two weeks, and the breaking out of small-pox has caused much additional alarm.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans.* ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

WANTED—A COMPETENT YOUNG WOMAN to assist with sewing, the care of children, and light household duties. Address Box 230., Moorestown, Burlington Co., N. J.

CALIFORNIA ORANGE AND RAISIN LAND. 7,400 acres of the finest land in Southern California. Just the place for a colony. Will sell as a whole or by sections. 1,600 acres subdivided into 40-acre tracts, for sale to settlers, or would colonize the 9,000 acres. Address
SIGNOR, FERRY & SELOVER, San Diego, Cal.

TO RENT—A FIRST-CLASS BOARDING house, all the modern improvements, yard, garden, fruit, etc. Within ten minutes walk of the R. R. Depot.

Call on or address the owner in the house. L. A. SMITH M. D. Newtown, Buck Co., Pa.

WANTED—A NURSERY GOVERNESS IN Friends' family at Atlantic City, N. J. Address Box 24, Moorestown, N. J.

FRIENDS' CALENDAR FOR 1889 *IS NOW* ready. The card is similar to that of previous years, but instead of a pad, the daily slips are in the form of a small, neat book, which can be taken off the card and replaced at pleasure, making it convenient for preservation and reference. With each day is given a quotation from Friends' writings. Each calendar is sent in a box, rendering it less liable to be injured in the mails.

Price, 50 cents each, or six for $2.00. Sent by mail, postage paid, on receipt of price.

"Old Westtown."

A delightful volume of reminiscence, narrative, and personal and historical sketches of Westtown Boarding School, contributed, edited, and illustrated entirely by old scholars and teachers. It is of unrivaled interest to everyone who has ever been connected with the institution.

Price, in cloth, $2.00. In half morocco, gilt top (an elegant binding, suitable for a gift), $3.00. Sent by mail, postage paid, on receipt of price.

(Money should be sent by postal-note, money order, or registered letter, not by checks on local banks.)

FERRIS BROS., PUBLISHERS,
S. W. Cor. 6th and Arch Sts., Phila.

TO-DAY.

NEW words to speak, new thoughts to hear,
New love to give and take;
Perchance new burdens I may bear
To-day, for love's sweet sake.

New hopes to open in the sun;
New efforts worth the will;
Or tasks, with yesterday begun,
More bravely to fulfil.

Fresh seeds for all the time to be
Are in my hands to sow,
Whereby, for others and for me,
Undreamed-of-fruit may grow.

And if, when eventide shall fall
In shade across my way,
It seems that naught my thoughts recall
But life of every day,—

Yet if each step in shine or shower
Shall be with Thee for guide,
Then blest be every happy hour
That keeps me at Thy side.

—*Anon.*

WORK OF THE PHILANTHROPIC UNION.

Editors INTELLIGENCER AND JOURNAL:

AT the meeting of the Executive Committee of Friends' Union for Philanthropic Labor, held at Waynersville, Ohio, at the time of the late Indiana Yearly Meeting there, the following suggestions in writing were received from members of the Committee who could not be present, and I was appointed to select such of them as might seem of greatest interest and public utility, and forward to you for publication. I am best satisfied, however, and deem my duty will be as well fulfilled in doing so, to forward you the suggestions entire, trusting to your judgment to decide what is worthy of insertion in your paper, and of greatest interest and use to your readers—only remarking now that I find Hannah A. Plummer's suggestion to the "Arbitration Committee" peculiarly sweet and timely, and Aaron M. Powell's communication very readable and instructive.

Your friend,

CLARKSON BUTTERWORTH.

Wilmington, O., Twelfth mo. 20th, 1888.

Hannah A. Plummer.—I wish the Arbitration Committee might do some work in the way of opening the eyes of Friends and others to the wrongfulness of taking sides and creating a partisan spirit. We should attempt to get at the truth and right of a matter in a right spirit, and endeavor to so combine our thought and counsel as to discover the right way of securing a right thing,—keeping out all party spirit or disposition to exult over one another when proven in the wrong. This we must do; govern our own spirit and temper, before we can rightly judge or arbitrate or advance the work of peace.

To the committee on social purity I would suggest the publication, in leaflet form, of Anna Rice Powell's paper, read before the Philanthropic Union in New York in Sixth month, 1888.

Aaron M. Powell.—It has not been practicable, [since the meeting of the Union in N. Y.] for the committee on Social Purity, of which I am chairman, to do more than to work individually as opportunities offer.

On the occasion of a recent visit in Virginia and Maryland, accompanied by my wife, by invitation of interested Friends we addressed meetings of colored people, some of whom were formerly slaves, on the subject of Social Purity. We were much impressed by the statements made to us by these Friends, concerning the urgent need of social purity work among the colored people. Slavery has left to them a special legacy of degradation in the direction of unchastity. If it were possible, it would be most timely and valuable service, could our Philanthropic Union assist in this most important mission field, in behalf of a still unfortunate and much neglected race of people.

Our bill in Congress for the better protection of young girls, and to raise the legal "age of consent," which passed the House at 14 years, has been amended in the Senate, fixing the age at 16, has passed the Senate, and is, I believe, still pending in the care of committees of conference of the two bodies.

Jonathan W. Plummer.—Committee on Arbitration —Suggestions for Yearly Meeting committees.—To keep watchful for proper openings for petitions to State legislatures, and modifications of laws or creation of laws favoring settlement of railroad and other labor strikes, etc., by arbitration.

To Friends in their several meeting localities.—To encourage and aid in the formation of boards of arbitration in factories, stores, and companies where many men are employed, for the purpose of preventing or arbitrating differences. To encourage voluntary and frequent arbitration of neighborhood differences, wherever we have influence, to prevent expensive and irritating laws suits.

Committee on Temperance interests: Suggestions for members in general in each meeting's limits. Continued work in every way that promises good re-

sults and is consistent with our peaceable methods, either alone, or in association with others, individual convincement of the need of total abstinence and legal prohibition in behalf of the young, the weak, and the vicious, being the strong points in the work. Preventive education in schools, First-day and day, and in missions, should have large attention.

Committee on Corrupt Literature.—Suggestions to members in each meeting's limits. Circulation of leaflets furnished by the Union. Instruction and counsel in First-day and day schools, at special times, regarding the effects of evil literature, and creation of bands or companies, pledged against vicious or impure literature, and to use influence to induce others to join in the pledge—care being taken not to include in the prohibition such bright, interesting fiction as may have no improper teaching or thought, simply because it is fiction.

Committee on Prison Reform.—Suggestions for yearly meeting committees and members also.—The usual work in visiting prisons and prisoners, as way opens. Efforts to shut off corrupt literature and introduce that which is good. Wherever practicable evening or day schools in jails where not now existing. Efforts to secure in State prisons and jails a better grade of men for the subordinate positions in immediate oversight of the prisoners. And in all prisons or reformatories where boys of 15 years of age and under, or women, are imprisoned, secure, if possible, women as matrons.

Committee on Dependent Children.—Suggestions to yearly meeting committees. Aid in establishing, sustaining, and improving institutions for this class, wherein school education and education in habits of industry, morality, and good conduct can be given; with a view to passing, as rapidly as is best for the child and family, each child into the care of a good home. So far as practicable, put the public institution upon the cottage or family plan, with central school house, workshop, and play house.

Committee on Tobacco Habit.—Circulate leaflets furnished or approved by the Union. Give instruction through day and First-day schools upon the evil effects of the tobacco habit. Call attention to the occasional serious injury to nervous wives and infant children through inhaling the fumes of tobacco in closed rooms.

Suggestions for the consideration of the executive committee of the Union.—Oversight of all literature sent out by our committees. Aid in supplying leaflets needed, and in preparing such as will give the laws of our several States regarding corrupt literature, social vice, and sale of cigarettes and tobacco to minors. Investigate as to State laws affecting dependent children, reformatories, etc., with a view to bringing each State up to the best standard in these respects, through suitable legislation. Send advice regarding lines of work, methods of work, and guards when coöperating with others in our work, to the sub-committees, and through them to our membership. Advise sub-committees, as per suggestions or otherwise, as the executive committee may deem right, and let each *feel the connection with the Union* through this oversight.

If broader work than is here indicated is concluded upon, requiring an unusually large fund, an approximate estimate of the amount of each yearly meeting's quota being sent to its members of the Union's Executive Committee, I believe an unofficial collection, throughout our membership could be made for several times the sum that the yearly meetings themselves could raise, without complaint.

Mary G. Smith.—My special line of work is the very important one of suppressing impure literature and advancing the social status of thought and action. . . . And I suggest that the Philanthropic Union take some active measures in this behalf, by way of choice literature—either sending out from their body, or recommending some already printed. I would mention some published by the Woman's Temperance Association of Chicago—one on "Literature and Vice," and others,such as "Dress and Vice," "Bad Hygiene *vs.* Virtue," "Pitfalls for our Boys," etc.

James and Rachel W. Whinery.—There is one subject which we hope will receive its due share of attention in your deliberations. That of having matrons appointed to the care of women in all institutions,—charitable, corrective, and reformatory.

Phebe C. Wright.—In alms-houses the men and women should be in separate buildings. There should not be any children over two years of age in alms-houses. Dependent children should be boarded by the overseers of the poor, in families, or in orphan asylums, until good homes are found for them. They should be visited at their homes, or looked after, until they are able to provide for themselves. All men and women in alms-houses who are able to work, should have employment. There should be separate apartments for the sick. There should be religious instruction given by the matron. Card-playing, smoking, and chewing tobacco should be prohibited. Not any [intoxicating] liquors should be used in any way. The buildings should be kept clean, beds and bedding clean and comfortable. There should be plenty of good water for them to do the washing, and facilities for bathing.

Jails. All persons in jails should be employed,—for the men sawing and splitting wood and breaking stone have been done; for women sewing. There should be a school in every jail, good books,and temperance literature. The men and women should have facilities for washing bed clothes, and all their clothing, each keeping his cell neat, white-washed, and in good order. No children should be placed with older criminals; they should be in a reform or industrial school. Card-playing, smoking, and chewing tobacco prohibited.

State Prisons and Penitentiaries. All men should be employed during the day. There should be schools at evening, lectures—and trade schools. The women should be placed in a reformatory, far removed from the prison for the men, and under the care of women. There they should be taught industries, have schools, and careful Religious instruction. There should be indefinite sentences; as they reform they should be placed in good families at $1.50 per week, on trial. If they do not do well they should be returned to

the reformatory. There should be a law in every State, as in Iowa: men and women convicted of *immoral conduct* should be deemed guilty of a penal offense, and they should be sent to reformatories. No public moneys should be used in any sectarian institution.

John William Hutchinson. The only suggestions I have to offer, are, that everything possible should be done to promote Union and coöperative work. The several special committees of the Union should be centers for the general work in their respective fields, particularly so with the committees on Indian affairs, Arbitration, and the Education of the colored people.

THE WORKING CLASSES.

Editors INTELLIGENCER AND JOURNAL:

In the last number of your paper is an editorial notice containing an extract from a religious exchange on the subject of the misery of the masses of the population of Europe. In that extract their condition is attributed to the expense of maintaining the enormous standing armies which now oppress Europe like a nightmare, and to redundant population. This population I ask your leave to discuss; and my interest in it is this: that if the misery of the people abroad is due to standing armies and over-population, we in this country, where there is no standing army to speak of, and no redundant population, need take no precautions to avoid falling into the same condition. Whereas my reflections and observations lead me to the conclusion that we are in danger of evils in some respects greater than those so obvious in Europe.

And *first*, though standing armies are to some extent oppressive to the people, they are not the only or even the principal cause of this poverty. The misery of the lower classes is greater in England than in any other part of Europe, yet in proportion to its population and wealth the military establishment of England is smaller than that of any other European country. The condition of the peasantry in France is better than elsewhere in Europe; yet France has the largest standing army and the most expensive, it being considerably larger than that of Germany and twice as costly. Belgium has a very large army in proportion to its population (100,000 in 6,000,000) and its population is the densest in Europe, or probably in the world, yet there is little actual pauperism. The fact is that in the poorest countries there is enough to make the people comfortable, *if it were well distributed:* in the richest there is not enough, *if it be kept in few hands.*

And there are agencies constantly at work to disturb the equality of distribution. The principal of these is the improvement of "labor-saving machinery," which is immediate in its operation upon the working class. It either dispenses with the human worker entirely, or with his strength, so that a woman or boy may take his place, or with his skill so that every raw laborer becomes his competitor, and lowers his wages. Going through a thoroughly equipped iron works a few days ago, and observing the various processes carried on by some sixty or more hands, I asked the proprietor with wonder: "Where do you get, in this remote place, the hands possessing the variety of skill to perform all those various operations?" "Very few trained workmen are needed," he replied; "I have three or four head men, who have come from the North or abroad; all the rest are taken from the streets, and they can be had in a moment in any number."

It was strikingly said that the "cotton factories of England had whitened the plains of India with the bones of native hand-loom weavers" and the introduction of steam upon the rivers of China was a sentence of death by starvation to hundreds of thousands of boatmen who had theretofore carried on the traffic of those great water-ways. How many teamsters have been superseded by railroads! and the transportation of grain by these from the fertile lands of the interior has affected the cultivation of hundreds of thousands of acres on our seaboard, and impoverished their owners. A modification of the same process is at work in the tendency to consolidation which seems to pervade every branch of industry. Large establishments everywhere swallow up the small ones. In an address, the day before yesterday, at Boston, Charles Francis Adams spoke of the process of consolidation or crystallization which had merged the railroads of two or three hundred miles in lines of five or six thousand, and would soon connect these into lines of twenty thousand miles. Every such operation means the superseding of a certain number of employés, whether they be railroad presidents or blacksmiths.

This tendency is increasing in its operation, and is on the whole not necessarily prejudicial to any part of the community. It would be highly beneficial to all, were its advantages properly distributed; but its first effect is to deprive the laborer of work and reduce him to enforced idleness. The problem what to do with the numbers who have no work, but must and will be fed, is engaging the attention of the best minds in Europe, and in England especially. Why, it is asked, should thousands of acres of good land lie uncultivated when there are thousands of men supported in idleness by the community? Why should people be living in overcrowded hovels, when there are hundreds of thousands of men in the pay of the community doing nothing, who might construct healthy and spacious homes for all? If every able bodied man that is supported by the public were set to some useful work, the face of things would be speedily changed.

There are two branches to the question; one, how to find work for the unemployed; the other, how to ensure to the employed a fair share of the product of their labor. Neither, so far as I know, has yet received a satisfactory solution. But in the second branch some attempts have been made which deserve attention and should incite the benevolent to action. Some employers of labor have voluntarily undertaken to share their profits with their employés, besides paying them wages at current market rates. And then workingmen have formed associations for the purpose of carrying on business enterprises, and becoming their own employers. The first system, (for it has been reduced to a system) is called "Partic

ipation," the second is called "Coöperation." This last has by far the wider vogue. In 1887 one-fourth the cotton manufacture of Great Britain was carried on by Coöperative societies: and France excels Great Britain in manufacturing coöperative companies. Great Britain is ahead, however, in mercantile enterprises or coöperative stores, and Germany in provident societies and the management of savings.

The working of the participatory system, however, displays most interesting features. I have before me a small volume of lectures on the relations between Capital and Labor which cites some instances from a great German work in which hundreds are detailed. One of the earliest to adopt the system was Leclaire, a Parisian house decorator. He began by forming a provident society for his employés and, later, gave them a share of his profits, which, however, went only to increase the common fund, placing to the credit of each workman a share of the profit in proportion to the wages he had earned. His business vastly increased, and a late return showed 1,125 participants earning $200,000 in wages, and receiving $43,000 more as dividends. A very celebrated case is that of Aristide Boucicault, also in Paris. He was born in 1809, a poor boy, and grew up without any education. He was first in the service of a peddler, taking care of his horse and wagon. Then he obtained a place in a Paris shop, and his wonderful abilities soon raised him to a superior position. He obtained some education by studying at odd intervals and especially on journeys when traveling for his house. He then acquired a modest establishment called the "Bon Marche." His sales in 1852 were $90,000; in 1869 they were $4,000,000. He too formed a provident society for his employés and divided among them a share of his profits, but he died in 1877 before his plans were fully under way. He had married early a peasant girl as poor and illiterate as himself, but with a soul as great and disinterested as his own. To her and their only child, a son, he left his business and fortune, but the son died two months after his father. The widow then devoted her life and means to carrying out her husband's plans. She increased her charities and took into partnership ninety-six of her principal employés. Here, 1883, the lecturer leaves us. I am able to supplement his account, for in the fall of 1887 I and my family visited the establishment, which is now one of the shows of Paris, and spent some hours in going over it with an intelligent guide, a clerk, kept I suppose for the purpose. We were told that there were 3,500 males employed; the number of females I did not catch, but they were not so many. The females can, if they choose, board in the establishment, and are required to do so unless they have families. The arrangements for their accommodation and comfort include all that a lady could desire. Among a score of interesting places and things we were shown the stables, where there were 300 fine horses sumptuously lodged, and each one, we were assured, knew his name and would answer to it. Madame Boucicault had died only a few days before our visit. During her life she had given besides dividends $800,000 to the funds of the society which then amounted to $1,500,000, besides enormous sums to other charities. And notwithstanding all this luxury and munificence she left a large fortune. The provisions of her will were not then fully known but it was understood she had left the business to her employés. It was supposed to be worth $4,000,000 of which she held $2,500,000 and the employés the rest. One more case is that of the Paris and Orleans Railway. It began in 1844 to share profits with its employés, and in thirty-six years had distributed among them $12,500,000, besides paying regular and fair wages.

The lecturer says there were then (1883) some fifty such institutions in France, Alsace, and Switzerland, and he advocated the introduction into England, maintaining that ample experience had shown them to be pecuniarily profitable, inasmuch as increased diligence, and more than all the economy and saving disposition fostered by self-interest far more than compensates the outlay in dividends. It is not so certain, however, that the incentive supplied by gratitude and self-interest which moves the impulsive Frenchman and his Celtic kindred would stir the colder nature of the Teutonic races. It may be that these would be content to share their employer's profits without seeking to increase them, in which case the plan would fail to work.

There have, however, been some fine examples in England of the good that can be done by a benevolent employer without pecuniary expense, and even with decided profit to himself. One of the first of these and the most celebrated was the New Lanark enterprise of Robert Owen with his partners Jeremy Benthany and William Allen. Unfortunately Owen later undertook a crusade against the clergy, maintaining business methods to be superior to ecclesiastical as agents in advancing the spiritual condition of the human race, and the enmity so created has rather shadowed the good that might have grown out of his success. For even his detractors admit that he introduced into a depraved community education, sanitary reform, and other civilizing agencies, while others, less revolted by his irreligious notions, represent that under his management health, plenty, and contentment reigned, and drunkenness and unchastity are almost completely banished. There have been many such cases in England, which it is needless to particularize, but I may mention that while in Liverpool last September, I heard equal accounts of a firm of Pease & Co., who carried on extensive works (quarries and stone works) in the county Lancashire, and employed some six thousand workmen, all of whom were said to be well paid and well housed and are every way prosperous, contented, and of excellent character.

Such are the possibilities of just and liberal dealings, securing for the workingman comfort and moral improvement, and for the employer increased gains. It seems to me there is here a field for philanthropic enterprise far more promising than the care of freedmen or Indian. But "distance lends enchantment to the view," or at least it conceals or softens the repulsive surroundings, which one encounters in dealing with poverty and want at first hand. Too often the very poor are mean, untruthful,

and wasteful of the means supplied for their relief, and disgust and contempt alloy the satisfaction which attends the doing of a good action. Hence vast sums are lavished on foreign missions, religious and philanthropic, while vice and want are rampant at home. Perhaps this idea could not be as forcibly put again as it was by Charles Kingsley in a letter to his wife dated from London, October 24, 1849, in which he describes the condition of the cholera regions of Bermondsey, (a district of London.) Hundreds of the people, incredible as it may seem, used the water from the common sewer, for drinking, foul as it was with every form of corruption. "Talk of the horrors of the 'Middle Passage'" cried Kingsley, "O, that one-tenth of the money which has been spent [in suppressing the slave trade] had been spent in buying up these nests of typhus, consumption, and cholera, and rebuilding them into habitations fit,—I do not say for civilized Englishmen . . but for beasts even."

And Kingsley, though a clergyman, was a practical man and did, I should judge, among his parishioners more good to their morals by his active and sound advice and instruction in sanitary and economical matters, than by his preaching, though that was eminently practical also. I have little doubt that eyes properly cleared could find in our own country plenty of people drinking moral sewage and needing a water cart more than the poor people of Bermondsey did.

Washington, D. C., Dec. 17.

DEO VOLENTE. (*GOD WILLING.*)

Some Christians, in making promises and pledges as to their future action, are in the habit of qualifying these promises and pledges by the words, "*Deo volente.*" This habit has the warrant of Scripture, as well as that of Christian reason. James says:

"Go to now, ye that say to-day or to-morrow we will go into such a city, and continue there a year, and buy and sell, and get gain. Whereas ye know not what shall be on the morrow. For what is your life? It is even a vapor that appeareth for a little time, and then vanisheth away. For that ye ought to say, if the Lord will, we shall live, and do this or that."

The inspired penman tells us that we ought to say this as well as think it. We ought to put the thought into words. If we do so, we shall be the more likely to keep the thought in mind. The thought in words would not dishoner or discredit even a legal contract. It would not make the contract illegal, or be out of place.

The fact is that every proposed or promised future action of man is always contingent upon the will of God. It is always true that "in him we live and move and have our being." We are neither self-created nor self-supported. We are as dependent upon God for the continuance of our existence as we are for its original production. No one keeps his heart beating for even one instant. God does this, and not the less so because he does it through what we call a natural law. The natural law is nothing but the result of his will, and, independently of that will, has no existence and no power. What we term second causes are simply divine appointments, and their efficiency depends wholly upon this fact. It is true that "if the Lord will, we shall live, and do this or that," and just as true that if the Lord does not so will, we shall not "live and do this or that." Our existence on earth is always terminable at his pleasure. He holds our breath and life in his own sovereign hand. James was right in asserting our absolute dependence upon God for the continuance of that breath and that life.

Moreover, we can never tell beforehand what will be the divine pleasure on this subject. We know to a certainty that mortality is our final doom in this world at no distant period; but beyond this our knowledge does not extend. God so distributes the providence of death among men as to exclude from them the power to anticipate the event. Human beings die at all periods in this earthly career—in infancy, early childhood, youth, early manhood, matured and fully ripened manhood, incipient old age, and extreme old age. The event, so far as our knowledge is concerned, *may* come at any time, anywhere, and by a great variety of causes, no one of which can we anticipate. Health is no guaranty against death, and age is none. A strong and robust man said to himself: "I was never sick a day in my whole life, and never had occasion to call a doctor." That man was in his grave in less than one week. God meant that we should be ignorant of our own future in this world, and has so constructed our minds and arranged events as to make this a fact. We may say that if this had not happened, then that would not have happened. Very true. But this *has* happened, without our foresight; and hence, the result having come to pass, it is now too late to avoid it.

The lesson to be learned from all this is the one that James commends to us: "If the Lord will, we shall live and do this or that." It is a good lesson for all men, and especially pertinent to the presumers on coming time, whether young or old, who are making large calculations upon what they are going to do in the future, and spending this brief sojourn as if length of days were assured to them; indeed as if the matter of life's continuance were one of their own choice. The language was originally addressed to such presumers. They rush through life's scenes, thoughtless of God, treating him and treating themselves as if the government of this world were in their hands. The things that they ought to do to-day they postpone until to-morrow, quite sure that they will have a to-morrow in which to do them. . . . . *Deo volente* is not stamped upon their practical life. They live as if God had nothing to do with their lives, either as to their continuance, or as to the duties to be performed therein.—*Selected.*

Shun delays, they breed remorse;
Take thy time, while time is leant thee;
Creeping snails have weakest force;
Fly their fault, lest thou repent thee.
Good is best when soonest wrought,
Lingering labor comes to naught.—*Southwell.*

FOES IN THE HOUSEHOLD.

The indifference of many fathers and mothers in the matter of the books read by their children would be incomprehensible if life were not full of similar contradictions and follies. Men work day and night with almost breathless eagerness to make their children physically comfortable; women take up uncomplainingly a cross of self-denial, which often ends in a veritable martyrdom, for the sake of securing something which seems to them to be the happiness of their children; and yet many of these same self-sacrificing fathers and mothers never so much as look at the titles of the books over which the boys and girls are poring as they sit about the evening lamp. It is obvious, of course, that this strange commingling of things so far apart as self-effacement and indifference comes about through ignorance, through failure to understand that peril may be intellectual and spiritual as well as physical; that the mind may be poisoned, the heart corrupted, the life perverted, with any external temptation; that in the midst of comfortable homes, housed from evil companionship, a child's nature may be stained or distorted almost beyond recovery.

The air we breathe and the water we drink may be, and often are, more perilous to us than the possibilities of accident by land or sea. The poisons that lurk in these universal elements are much more destructive of life every year than derailed and burning trains, sinking ships, falling buildings, or the fierce tongues of conflagration. And the peculiarity of the peril lies largely in the fact that its presence is rarely suspected until after the seeds of disease and death have borne indubitable fruit. A better knowledge of sanitary laws is subjecting both air and water to constant and rigid tests; and, having learned how deadly these apparently innocent things may become, we are no longer content to live in a fool's paradise of ignorance. Books, to the children of this day of countless cheap presses, are as common as air and water, and as full of possible peril. It is high time that busy fathers and overworked mothers awoke to the fact that while they are guarding the front door the evil of impurity and untruth may be finding ready access through the back door. It is idle to pour out one's life as a sacrifice to secure the comfort of a child whose mental and spiritual health are being permanently destroyed; better a thousand times let the child suffer some loss of luxury, and take time to look after its mind and heart. Many a father makes himself a slave to business for the sake of a child with whose thoughts and feelings he has as little acquaintance as if the two had never been brought in contact.

No book ought ever to come into a child's hands that has not first been read by the father or mother, or the character of which is not thoroughly understood as matter of trustworthy report. The more intelligent the parent is, the more rigid will be this inspection; he will not be content with the assurance that a book is free from impurity; he will insist that a book be also sound, true, and healthy in tone. Impure books abound; but, fortunately, they wear vice on their very faces, and it is easy to shut the door on them. Peril of a more subtle if of a less deadly kind comes from another quarter, and is often overlooked Hosts of children are reading books to-day which ought to be taken out of their hands because, although good in intention, they are morbid, unhealthy, and untrue in teaching and illustration. There is a great mass of so-called "religious reading" which a wise parent will carefully keep out of the house because of its sentimental, unreal, and essentially untrue presentation of the most serious themes. The puerile materialism of many books which get into Sunday-school libraries is a thing to guard against as one would protect a child from disease. Sound, healthy, noble, natural ideas of religious things are of the utmost moment, and the difficulty of finding them in books for children is one of the most serious perplexities of parenthood. To give a child a true and noble thought of God and its own life, a thought which will deepen with knowledge and widen with experience, without forcing, later on, the painful and dangerous process of doubt and reconstruction, is a duty which no intelligent father and mother will surrender to another. Above all things, keep books which teach religion on a low plane, or present it as a morbid experience, or vulgarize it by familiarity, or falsify it by untrue illustration, off your table and out of your house. An immoral book is not necessarily a shocking book; but it is always an untrue book. There are more immoral books in the hands of children than parents suspect, for the reason that many people confound the substance of immorality with its representations. There are numberless episodes in the Old and New Testaments, and numberless great works of literature, which portray immorality and which are yet profoundly moral, because they exhibit the working out of sin into its inevitable losses and penalties. There are, on the other hand, multitudes of books which do not touch flagrant sin of any sort, but which are both immoral and demoralizing, because they are untrue pictures of life; because they furnish low instead of high motives of action; because they separate actions from their consequences; because they substitute a weak sentimentalism for the health and vigor of deep principles; because they make an easy and magical thing of something which all experience declares to be a very difficult thing, to be attained only by patient and faithful struggle. A story which deals honestly with repulsive sins, and shows how they issue in inevitable misery and degradation, is not a book for children, but at bottom it may be a much more moral work than one in which the hard and fast lines of real life fade out in an atmosphere of sentimentalism. Stories for children of a distinctively religious tendency need especially to be scrutinized with the utmost care, and no book should ever go into a child's hands which substitutes familiarity for reverence, a magical piety for downright faithful living and working, and an abnormal experience for sound, healthy, natural growth.—*Christian Union.*

"Repent, and turn yourselves from all your transgressions, and iniquity shall not be your ruin."—*Ezekiel.*

THE FIRST-DAY SCHOOL LESSONS FOR 1889.

In beginning a new series of Bible Lessons, the Committee in charge of their publication feel an increasing desire that the teachers and others using them should constantly bear in mind that these "Lessons" are only suggestive, the space allotted being too small for any extended elaboration of the subjects treated. It is thought very important for teachers to bring their own thought and research to add to that which can be but an outline of the work proposed.

SCRIPTURE LESSON, No. 1.

First Month 6, 1889.

THE MISSION OF JOHN THE BAPTIST.

Golden Text.—"The voice of one crying in the wilderness, Make ye ready the way of the Lord, make his paths straight."—Mark 1: 3.

Read Mark 1:1-11.

Mark begins his biography of Jesus, with a brief account of the events immediately preceding his appearance as a public teacher, when he was about thirty years old. (Luke 3:23.)

The beginning of the Gospel. The beginning of the ministry of Jesus. The Gospel literally means good tidings and, as used here, has reference to the preaching of John, the account of which immediately follows, and is the beginning of the good news or announcement that the Messiah, whose coming the Jewish people had so long been expecting, was indeed among them, to bless and save.

Jesus Christ the Son of God. The title Son of God was used doubtless to call attention to what was written and to impress the reader with the importance of the history. It was one of the many titles by which Jesus was designated during his lifetime, and by the Apostles after he was taken from them. He was also called the "Son of Man"—the "Beloved Son"—the "Saviour,"—all bearing testimony to the Divine life in him, as well as to his human nature, which he shared with all men. He was called "Jesus," for it was he who should "save his people from their sins." (Matt. 1: 21.) He was called "Christ," because in him was manifested the fullness of the Divine Spirit, which enabled him to work the works of God, "to do always the things that are pleasing to him." (John 8: 29.)

As it was written. The coming of a Messiah had been foretold by the Hebrew prophets, and, as is here quoted, that he should be preceded by a herald, as was usual in the case of kings or great men, whom a nation wished to honor when they came among them. The prophets who spoke of his coming were Isaiah 40: 3; Malachi 3: 1.

John the Baptist—was the son of Zachariah and Elizabeth, both "righteous before God, walking in all the commandments and ordinances of the Lord blameless." Zachariah belonged to the priestly order, and John was his only child. The brief history given of John shows him to have been a man of great force of character, simple in his habits and very abstemious. He preached not himself, nor any doctrine of his own, but called those who came to him to the one greater than himself.

The Wilderness. That portion of the country that lay along the Jordan, to the east of Jerusalem, not destitute of towns and cities, but comparatively unsettled.

Jesus came from Nazareth. After John had been for some time preaching of him who was to be made known to the people as the Messiah, and baptizing all who repented of their evil ways, Jesus came also, not that he was a sinner and needed to repent, or to be baptized, but that he might in this way come before the people, and be recognized as the one of whom John had testified. Baptism had been practiced in the Jewish church, and was not a new ordinance introduced by John.

The Spirit as a Dove. The Divine Spirit gave a radiance to the countenance of Jesus, that was comparable to a dove,—the emblem of love, purity, and gentleness, and of all those graces of the Holy Spirit, that made him the "well beloved son."

If we follow in his footsteps we shall know of the opening of the heavens above us, and the annointing spirit descending with the comforting assurance of our Heavenly Father's favor.

The Divine Father has given to every one of us a message to deliver to all those about us. Those who live most truly and nobly proclaim their messages to the world by their lives—not by any special words they may say. Many people slight the Divine message, or give it to their fellow-men in such an obscure and imperfect way that it is not easily understood. Others give it clearly and consistently to the best of their ability.

A messenger should be swift, fearless and trustworthy. Into the care of one who has these qualities God gives his most precious messages for mankind. It would not be safe nor wise to trust such a commission to an indolent, timid, or careless person. To each one of us is a message intrusted, which can be truly delivered only by our devoting ourselves, body, mind, and soul, to the sweet duty of fulfilling our Father's will.

People are often afraid to obey the will of God made known to them by the "still, small voice" within the heart. They fear to throw themselves unreservedly into his care, or to submit to his guidance. They fear to trust him,—to rely upon truth and kindness, thinking that deceit and selfishness are safe for them. They fear to lose some pleasure they have heretofore enjoyed, not knowing the truth, that for everything we give up for his sake, he gives us back tenfold. "His service is perfect freedom." There is nothing in the whole world as safe as truth and kindness.

If all mankind should trust God, and joyfully fulfill his commissions, carry his messages faithfully to others by being always kind and faithful, his kingdom would indeed have come.

"Spirituality does not pretend to define God, but it loves him. It does not understand perfectly, prayer, but it prays."—*David Swing.*

"What glimpses we have of the truth when we have been even a little faithful."

PHILADELPHIA, TWELFTH MONTH 29, 1888.

THE ONE GREAT REMEDY FOR SOCIAL DISEASES.

OUR friend John D. McPherson is deeply interested, as his letters from Europe have shown, and as he expressly says in a private note before us, in the problem of social conditions,—the common welfare of the people. In his article elsewhere printed in this issue, he returns to the discussion, and in opening points out the error of ascribing to one or two influences the general conditions of society,—as, for example, regarding the wretchedness of the European peasantry as entirely due to the maintenance in their respective countries of great standing armies. Such errors are very liable to be made, and they vitiate no small part of the writing and speaking on sociological subjects. It is frequently assumed, in the discussion of the temperance reform, that if all the money expended in drink could be withheld from that use, society would at once be reformed and made prosperous, whereas, until all influences combine to put cleanness in the place of degradation, and virtue in place of vice, there will be leaks like the drink waste,—if not for one thing, then for some other. There must be a great inward change, a grand influence comparable to chemical, not mechanical, forces, in order to elevate and purify mankind.

Such an inward force is Christianity. Not as a matter of creed only, but of that which rests upon belief, and comes out of it. As in chemistry, elements the most diverse and opposed, acids that singly would corrode and destroy, are harmonized by a simple controlling element, so in life there is the entire possibility that every sin and savagery may be melted by the inward solvent of Christian influence. Whoever truly consents to the divine order, as exemplified in the Christian ethics, is ready for use in the great system where good shall fully take the place of evil.

It is to such a controlling element that we conceive our correspondent is looking. His letters have not generally gone beyond a statement of the existing diseases: he has not undertaken to point out remedies. But he says, in the private note already alluded to, that he believes the Friends ought to be a great and useful agency of social betterment. "I verily believe," he says, "they have more influence for good than any other people, and more wisdom in choosing methods to do good."

Any consideration of the influence which Friends have exerted goes very soon to the secret of their original strength. This is the simplicity of their life. In that lay the power which they applied to social conditions. In that lies the vital spark of their opportunity for influence, now. Friends have testified against the very things which produce the evils which our correspondent describes,—luxury on the one hand, and misery on the other. Nobody doubts that if the rules which Jesus set forth could be literally applied they would make all life serene and beautiful, and it is because the early Friends strove towards these rules, earnestly and sincerely, that they exerted a real power for real good. It is easy to see that it must be a millennial condition when the Christian ethics are completely established, and that we are yet very far away from that, but this does not lessen the need of making them our ideal, and using every practical means to direct life toward them. Upon the conception of this duty it was that the Friends built, and their fabric is good, to-day, just so far as it stands plumb and true on that foundation. They condemn inordinate ambition, they condemn extravagance and excess, they condemn selfishness and greed. Their rule lies within the limit of "true moderation." And in the other direction, they are willing to live simply, to avoid waste, to apply to good use all that is committed to their charge.

We do not doubt that whatever betterment of social disorders may be realized in this country or elsewhere must come from the application of principles like these. But it must be a practical, a real, a positive application,—not one of mere sentiment, and involving no individual sacrifice. It must be a rule of life which will keep to "true moderation" and simplicity. It will reject the allurements of that meretricious civilization, in which "taste" stands for truth, "style" for sincerity, and "polish" for quality. The drift of the world has been too much toward those luxuries of life which are essentially pagan, and which have characterized, in all the experiences of mankind, the decay of virtuous society. The charms and beauties of life may not be forbidden fruits, but they are forbidden certainly in their excess, and when they are enjoyed as the result of systems which by unequal distribution create at the other extreme a sad body of human misery.

There is no panacea of human invention which will cure diseases of the social body. It is, as we have been trying to explain, a divine medicine that is required. The process of cure will be from within, not from without. It will be chemical, not mechanical. It will harmonize, not assail. It will use, not de-

stroy. It will bring order out of chaos, employing the same elements. And as an agency in its behalf we believe the organization of the Friends is valuable, because it is simple and sincere, and because it rests upon a foundation containing so many of the essentials of Christian truth.

AN ELEMENT OF WEAKNESS.

THERE is a beauty and true dignity in *order* that cannot be set aside by any plea for freedom of action, for we are free only when we are "a law unto ourselves" and such freedom will lead us to observe rules and regulations that are deemed needful for the good of the whole. As a Society we feel that Friends are now suffering in many places from the non-application of a rule or custom regulating the order of our meetings for worship, in not having the raised seats, or "preachers' gallery" as it is sometimes termed, more generally occupied. From all of our meetings, time, in its onward course, has gradually removed our standard bearers, taken them to a well-earned rest, and many of their seats are still left vacant.

It is a profitable thing sometimes to dwell upon the past, and recall with reverence those who have so endeared it to us, yet it is neither wise, nor is it just to the living, to keep up a perpetual reminder of what we have lost, by permitting their vacant places to remain unfilled. The effect upon old and young is depressing, and some of the latter reason that it is but a question of time when all will be gone, forgetting that were all loyal there would be sons to follow the fathers, and daughters to take the place of the mothers not necessarily in the same family relation, but in the church. There are those fitted and who would be willing to come forward were the subject properly presented to them.

Especially let those who fill official positions, such as elder or overseer, assume with the position the place and standing that is theirs, for the sake of good order and discipline. Particularly is this desirable in those meetings where the First-day Schools have increased the attendance of the young, these needing the observing eye and the grave deportment as examples before them in the hour devoted to social worship. Not that there is disorder; on the contrary, there is much to admire in the reverential attitude of the young, but there is a fitness in a precedence and respect being given to those advancing in age and experience, as well as to the hoary heads and those of venerable appearance. Monthly meetings should be watchful that the official positions are kept well filled by those who are able to be in their places at meeting, and increase the number if need be, so that the aged and experienced ones, who from physical inability are necessarily often absent, shall not be so missed. Do you say there are not those ready to fill up the ranks? If the preparing hand of the church is laid upon them who can tell what the response will be? The spirit life of many a one has been touched and fairly leaped to its work when aroused by a duty being laid upon it.

We believe in the very general reviewing of all religious faiths there will be a gathering to and quickening in our own; let us be ready with our house set in order to welcome all to that broad faith in the Divine indwelling that has for so long been our guiding light, directing us to the Master whose rules of action as revealed through the Sermon on the Mount, still far outstrips any other leader; and to follow him is to be led in the way of love and peace.

MARRIAGES.

BYCRAFT—ZAVITZ.—At the residence of the bride's parents, Lobo, Ont., Twelfth month 12th, 1888, under the care of Norwich Monthly Meeting, John E. Bycraft, of Barnsley, Yorkshire, Eng., and Mary E. Zavitz, daughter of Geo. O., and Anna S. Zavitz.

DEATHS.

ALLEN.—At their residence, Germantown, suddenly, Twelfth month 20th, 1888, Emma Deacon, wife of N. Penrose Allen, also her infant daughter; members of the Monthly Meeting of Friends held at Green street.

BRINTON.—At Aikin, S. C.,where she was sojourning on account of her health, Twelfth month 18th, 1888, Hannah S., youngest daughter of George F. and Mary E. L. Brinton; a member of the Monthly Meeting of Friends of Philadelphia.

COMLY.—At her residence, West Philadelphia, Fourth-day morning, Twelfth month 19th, 1888, Elizabeth P., widow of the late Dr. Isaac Comly, and daughter of the late Cyrus and Ruth Peirce; a member of the Monthly Meeting of Friends of Philadelphia.

GARWOOD.—At his late residence, near Newtown Square, Pa., Twelfth month 18th, 1888, Allen Garwood, Sr.

HAVILAND.—At Purchase, West Chester county, N. Y., on Seventh-day, Twelfth month 8th,1888, David Haviland, in the 68th year of his age; a member of Purchase Monthly Meeting.

POPE.—At Baltimore, Md., on 22d of the Eleventh month, 1888, Sarah R. Pope, widow of David S. Pope, in the 85th year of her age; an elder of Baltimore Monthly Meeting.

THOMAS.—At his residence, Riverton, N. J., Twelfth month 20th, 1888, William S. Thomas, in his 82d year.

THOMPSON.—Twelfth month 15th, 1888, Sarah Thompson, in her 89th year; a member of Abington Monthly Meeting, Pa.

ALL truly wise thoughts have been thought already thousands of times; but, to make them truly ours, we must think them truly over again honestly, till they take root in our personal experience.—*Goethe.*

"ONE'S character can not be essentially injured except by one's own act."

FRIENDS' HOME FOR CHILDREN.

Among the excellent institutions of our city that are doing good work in a small way, the Friends' Home for Children deserves favorable notice. The name seems in some degree a misnomer, as it is non-sectarian in its work and no Friends' children are found among its inmates.

It was started seven years ago, and was the outgrowth of a recognized want which had not been fully met by any home or charity then existing. The work at first was conducted by Friends who had been instrumental in starting a parlor meeting in the vicinity of Fair Hill, and the schoolroom of the Home was one of the places in which the meetings were held, until the meeting-house erected on the Fair Hill grounds was ready for occupancy.

The Home "provides shelter and secures good private homes for orphans, neglected, and destitute children." It is, as has been said, entirely non-sectarian, although the management is still in the hands of Friends and Friendly people, the present matron being a member of the Society. The first building occupied, not being well adapted to the purposes of the institution, a larger house with ample grounds was secured at 4011 Aspen street, between Brown street and Fairmount Avenue, West Philadelphia.

From the last annual report we learn that in the early part of the present year the property now occupied was purchased at a cost of $14,000, $7,000 of which was a gift from Catharine D. Wentz, the owner. Seventy-four children have been cared for during the past year. Of these thirty-two remain in the Home, fourteen have been indentured, two adopted, two placed in permanent homes, several are out on trial, and twelve have been returned to their parents. The children placed out in private homes are visited at least once a year, and frequent intercourse by letter is maintained.

A teacher is employed and instruction given in the rudiments of common school education, while "the industrial part is not forgotten." The school averages about twenty-five. Religious meetings are held once in every month; ministers of all denominations, and all others interested in the welfare of neglected children are cordially invited to attend. A First-day school is also held, except during the Seventh and Eighth months.

A visit to the Home will well repay any one who feels an interest in work for the class of children collected there, many of whom but for the excellent care they receive might be found among the ignorant and depraved, whose future is without promise, and it commends itself to the charitable among us, in that it is so nearly under the management of Friends.

"I pray to Christ most, and yet it is really God whom I address,—the Christ part of God—not his justice, but the mercy and love that also dwell in Him."—*M. W.*

"Great is the difference between a man's being frightened at, and humbled for his sins."—*Fuller.*

MEETING-HOUSES IN NEW YORK CITY.

Editors Intelligencer and Journal:

I was very much interested in the article in the Intelligencer and Journal relative to the New York meeting-houses, (copied from a New York city paper), but consider it to some extent misleading. At no time were there more than four houses, and the whole number built by the Society was seven. (The Orthodox built three,—Henry street, Orchard street, and 20th street,—the last alone remains.) In my early childhood with my father I attended Liberty street Meeting and recollect well when it was sold to Grant Thorburn for his florist and seed store. There had been a burying-ground surrounding it. The wooden supports of the gallery when he sold the property were used by him at Astoria for supports of a piazza, where they may be yet. I used also to attend at the Pearl St. meeting-house, as I was a scholar at the school attached to that house. I was unacquainted with the direction from my father's home, and was told to "go down Pine street till I came to a common on the corner" and that would be Pearl street. The teacher in that school was Phebe Johnson, whom no doubt many of your readers will recollect.

I was also at the opening meeting of Rose street when there was somewhat of a fright caused by some slight settling of the floor and a cracking of wood, which I believe was caused by the cap of a column crushing. I was at the last meeting in this house and had always attended meeting there. It is saddening to think of that meeting, which in those days was so largely attended.

Hester street was too far away for my attendance but at yearly meeting it was used for the men's meeting, as Rose street was for the women. Downing street was the next built where I frequently was in attendance in 1842, and this was closed when that on 27th street was opened. But 27th street was always a small meeting, as the new 15th street meeting was a more central house for the Friends.

The Orthodox house was built in Henry street as a temporary meeting and was so arranged that it might be converted into two dwellings when they had decided to build a more suitable house, which they did in Orchard street. Now, we have in New York only the 15th street meeting, but in Brooklyn the Schermerhorn street meeting is the more largely attended.

As some of your readers may not know that old cannons were frequently used as a defense for warding off carts when turning into the narrower streets, and the one spoken of on Pearl street was a memorable one to me, I may add that the last one planted for this purpose was by my father, who procured it from the Corporation Yard to ward off the stages then just started to run to Greenwich Village. A memorable one is still in existence, but now used as a newel post for the office building, No. 55 Broadway, corner of Tinpot alley, being the corner it used to protect from vehicles. (The building was the old Douglass family mansion, which the daughter would not alter or sell during her life; from its condition it had the reputation of a haunted house.) Thousands

now pass it daily, very few of whom ever give it a passing thought; but to me it is a reminder of early days and inhabitants, who now are mostly forgotten.

Brooklyn, L. I. S. W.

THE ROBE OF SNOW.

THE Earth, one day, at eventide,
When past was all her bloom and pride,
Thus o'er the changes moaned and sighed,
"Alas! my beauty all is flown;
From every tree the leaves are blown;
Gone are the sweet birds I have known;
Dark hang the clouds each sad, long day;
The moaning winds the branches sway,
Reproachful words they seem to say."
As faster fell the night's dark cloud,
Again she sighed and moaned aloud,
"A few short moons ago my robes were green,
Now nought but bare brown leaves are seen,
And when the moon peeps out with her pale gleam,
No beauty greets from me her gracious beam,
He who controls all space is hard and cold;
Gone is the faith in Him I once did hold."

But lo! when dawn broke on her discontent,
The fury of the storm was spent,
And a white robe from heaven was sent,
A covering of pure and spotless snow,
With countless diamonds sparkling so
It seemed a bit of heaven below,
And from the blue above the angels sang
Until the mighty arch with echoes rang,
"Have faith in Him who is the King of Praise,
And he will ever guard thy joyous days."

Thus Earth the meek and lowly lesson learned
By Faith in Him alone rewards are earned.

A. H.

BETWEEN THE LIGHTS.

A LITTLE pause in life, while daylight lingers
Between the sunset and the pale moonrise,
When daily labor slips from weary fingers,
And soft gray shadows veil the aching eyes.

Old perfumes wander back from fields of clover
Seen in the light of suns that long have set;
Beloved ones, whose earthly toil is over,
Draw near, as if they lived among us yet.

Old voices call me, through the dusk returning,
I hear the echoes of departed feet;—
And then I ask, with vain and troubled yearning,
What is the charm that makes old things so sweet?

Must the old joys be evermore withholden?
Even their memory keeps me pure and true;
And yet, from out Jerusalem the Golden
God speaketh, saying, "I make all things new."

"Father," I cry, "the old must still be nearer;
Stifle my love, or give me back the past!
Give me the fair old earth, whose paths are dearer
Than all Thy shining streets, and mansions vast."

Peace, peace,—the Lord of earth and heaven knoweth
The human soul in all its heat and strife;
Out of His throne no stream of Lethe floweth,
But the clear river of eternal life.

He giveth life, ay, life in all its sweetness,
Old loves, old sunny scenes will he restore;
Only the curse of sin and incompleteness
Shall taint thine earth and vex thine heart no more.

Serve Him in daily work and earnest living,
And faith shall lift thee to His sunlit heights;
Then shall a psalm of gladness and thanksgiving
Fill the calm hour that comes between the lights.

—*Sarah Doudney, in Sunday Magazine.*

NOT LOST.

WHERE are the countless crystals, so perfect and so bright
That robed in softest ermine the winter day and night?
Not lost; For life to many a root,
They rise again in flowers and fruit.

Where are the mighty forests and giant ferns of old,
That in primeval silence, strange leaf and frond unrolled?
Not lost; For now they shine and blaze,
The light and warmth of winter days.

Where are the early lessons, the teachings of our youth,
The countless words forgotten, of knowledge and of truth?
Not lost; For they are living still
As power to *think*, and *do*, and *will*.

Where are the seeds we scatter, with weak and trembling hand
Beside the gloomy waters, or on the arid land?
Not lost; For after many days,
Our prayer and toil shall turn to praise.

Where are the days of sorrow, and lonely hours of pain,
When works are interrupted, or planned, or willed in vain?
Not lost; it is the thorniest shoot,
That bears the Master's sweetest fruit.

Where, where are all God's lessons, his teachings dark and bright?
Not lost, but only hidden, till in Eternal light,
We see, whilst at his feet we fall
The reasons and results of all.

—F. R. HAVERGAL.

ZOOLOGY OF THE BERMUDA ISLANDS.

IN the last number of the *Proceedings* of the Academy of Natural Sciences, Philadelphia, Prof. Angelo Heilprin contributes his first paper upon the zoölogy of the Bermuda Islands. The visit was made by the professor during the past summer, in company with a class of students from the Academy. He says:

"But little systematic work, other than that in the department of ornithology, ichthyology, and botany, had hitherto been done in this remarkably interesting and typically oceanic, island group, and it was thought that a more critical survey might bring out facts of general interest to the zoölogical student, and throw some additional light upon the intricate subject of zoögeography. In the results obtained I have not been disappointed. The exuberance of animal life has yielded much that has proved to be new to the systematist, while certain remarkable peculiarities in the distribution of a number of well-known types of animals open up vistas in geographical distribution which appear to me at present to recede into darkness, and, perhaps, tend to draw only more closely the veil over this mysterious subject.

"Much of my time was devoted to an examina-

tion of geological features, and, indeed, the special object of the journey was to ascertain, in the light of more recent inquiry, what evidence could be obtained from the Bermudas bearing upon the question of the growth and development of coral islands. The substance of my observations in this field will be presented in a future paper. Only a portion of the zoölogical results is here published, inasmuch as additional material in certain departments, intended to fill in gaps in the inquiry, has been promised by local collectors.

"The specimens noted or described in the following pages were mainly obtained through dredgings, which were carried on as well in the outer water as in the smaller interior sounds and lagoons. As might have been anticipated the greatest profusion of animal life was found on the edge of the growing reef itself, the shoals surrounding the cluster of rocks on the northern barrier known as the North Rock. The wealth of forms occurring here almost transcends belief; unfortunately, the combination of limited time at our command and the state of the weather prevented more than a cursory examination of this locality, which is made comfortable for collecting and wading during a partial exposure above water of some three hours. All the dredgings were confined to depth within 16 fathoms, which also represents the greatest sounding made by us in the lagoons.

"The true stone corals of the Bermudas are comprised, as far as we now know, in some twenty-five species, the greater number of which are represented by identical forms in the Bahaman or West Indian seas. The genera thus far indicated are *Oculina, Mycedium, Astræa, Siderastræa, Porites, Isophyllia, Mæandrina,* and *Diploria.* The genius *Madrepora,* one of the commonest of the Bahaman and Floridian corals, appears to be absent. On the south and east side of the island group the outer margin of the growing reef, largely covered by a serpuline and vermetus growth, approaches to within a few hundred feet of the shore, where it breaks the inflowing surf into a white crest. Within the line of these breakers the depth of water is in places as much as ten or twelve fathoms. The brain coral (*Diploria*) and various gorgonians develop here in great profusion, the huge yellow masses of the former appearing almost everywhere at depths of from ten to twenty feet. Vast growths of millepore also cover the shallower bottoms, presenting in the ensemble a wonderful garden of animal development. This profusion of coral growth is, however, surpassed on the north side, where the reef recedes to a distance of some eight or nine miles from the island-shores, enclosing an extensive body of water whose depth is in general about eight or ten fathoms, and more rarely twelve fathoms. Much the same coral growth is indicated here as on the south side, the large brain corals preponderating by their masses. While, probably, the greatest profusion of animal life is really met with on the actual edge of the growing reef, this does not appear to be the case with the corals themselves. At any rate I was unable to satisfy myself that there was any marked difference to be observed between the marginal growth and that which extends gradually backward from the margin into deep water. Indeed, as far as the brain-corals themselves are concerned, it appeared to me that their largest masses were to be found some distance within the bounding reef and consequently beyond the breaking action of the surf. This condition is again shown in the comparatively quiet and sheltered waters of Castle Harbor, where portions of the platform-bottom may be said to constitute one almost connected mosaic of huge *Diplorias.*

"In so far, therefore, the Bermudas differ from the greater number of Coral islands, in which, as is commonly stated, there is a marked deficiency in the coral growth within the bounding area, and an equally marked luxuriance on the crest and outer slope of the reef. In most places the largest corals do not come nearer than a foot or two feet of the surface of the water, the massive brain corals rarely appearing in water of less depth than five or six feet. But in the shallows off the North Rock we found *Porites astræoides* almost at the surface in low water, and just off the entrance to Harrington Sound, on the north shore *Siderastræa galaxea* was covered by only about two inches of water.

"The borders of Harrington Sound are largely overgrown with species of *Isophyllia,* which likewise approach to within a short distance of the surface. In the greater depths of the sound we found only *Oculina,* down to ten fathoms, the dredge net being frequently caught and reversed by their ramose stems; beyond ten fathoms the dredge usually came up empty."

TOUCHES OF NATURE.[1]

In the Abbott collection of Egyptian antiquities, in possession of the New York Historical Society, is a bundle of wax tablets, looking not unlike school-boys' slates of our day. They were the tablets (serving the same purposes with modern slates) of the school-boys in an Egyptian school in the Ptolemaic period. How they came to be placed in a tomb we have not time now to conjecture. Perhaps they were an offering to a dead schoolmate. They are the record of many interesting things; but I am writing now about the perpetuation of records of little things; of small thoughts, trifling and unimportant mental actions. One of the boys had a copy, a line of Greek, set by the master across the top of the tablet. (Young readers may need to be told that the tablet was wood, covered with a black waxen composition, in which the boy could make marks with a sharp stick, like a pencil; and he could erase a mark by smoothing down the wax with the blunt or flattened end of his stick.)

This boy had worked along just as modern boys work in their copy-books. Probably he got to be weary. At all events he came to a point, as many a boy has done, when the pencil would go wrong in spite of him. He misspelled a word. He carefully erased it, smoothing down the wax, wrote it again, and it was again wrong. He smoothed the wax and wrote the word once more, and once more his wearied brain and his pencil went wrong. What did he do? Just what you, my boy, might have done, I

[1] Wm. C. Prime, L.L. D., in New York *Journal of Commerce.*

fancy. Some of you would exclaim "Confoundit!" Some boys in the up country might say "Darn it!" The small Egyptian not only said, but with his pencil scratched a Greek word (*phthazesthe*, it seems to be) which means just about what one means who says "Deuce take it!" And there it is to-day, the record of a school-boy's little quarrel with his own perverse brain, in the days before Cleopatra was born.

Many years ago, before crowds of travelers went to Egpyt, there was (and I doubtt no there still is) away up among the Theban hills, in a ravine once crowded with temples and sculptured monuments, one tomb which the Arab resurrectionists for many years had used as a convenient place for breakiog up mummies found in other tombs. In the course of years this tomb, consisting of two rock-hewn chambers in the side of the mountain, had become filled to within a few feet of the ceiling with fragments of mummies and masses of mummy cloth. I have, from time to time, spent hours in overhauling this accumulation, chiefly for the purpose of finding specimens of the cloth of ancient Egypt. Here I once found an old garment, a linen shirt, of coarse fabric and much worn. It had belonged to a poor man. How it came to be part of his burial dress could only be conjectured. As I first saw it in the dim light coming in from the top of the doorway, I was about to throw it down as worthless, when my eye fell on something which seemed to be an interesting relic of a poor man's home and home surroundings. A thin place in the old shirt, where, indeed, it had once given way entirely, was carefully darned with coarse thread. You can read the record in what way you please. To me, it made the Egyptian hut of the ancient ages to have very close similarity, in some respects, with the modern home of a poor man, in which you have doubtless seen, as I often have, the wife mending the ragged clothes of her husband.

Let me tell of one more little record which speaks of personal affections. If I have told of it before it will do no harm to repeat the story. I once opened an Egyptian coffin which contained the body of a woman who had lived somewhere about 1300 or 1400 B. C. The body was enveloped in the usual way, with linen bands. Wound around the head, and trailing down on the chest, was a wreath of leaves and flowers. It was simply made. Splinters of palm branch formed a continuous cord. The fresh green leaf of some Egyptian plant, a pointed leaf, was folded over this cord, point to stem, and pinned with a splinter through the folded leaf. Another leaf was folded and pinned, lapping a little over the first one. Then another and another; so that the cord, more than two yards long, was covered with a continuous row of folded leaves, the points hanging downward. At the place where each leaf lapped over the next one was pinned a flower, making thus a row of flowers all along the wreath. All this was dead now, and leaves and flowers alike were of a dark brown color. When I was a boy, in the up country, I have a thousand times make baskets in which to gather raspberries and blackberries in just this way, by pinning leaves together with splinters, stiffening the rim by folding the points of the leaves over a flexible stem. In younger days I can remember making wreaths closely like the Egyptian wreath, on which dandelions were pinned like great buttons.

I handed some of the brown flowers of the Egyptian wreath to that eminent and lamented man, whom many readers of this remember with warm affection, Dr. John Torrey, not telling him where I obtained them. He examined them and found them to be the immortelle, the flower now in universal use for funeral wreaths in Europe and America. "They were the driest flowers I ever examined," he said; "where did they come from?"

Here was a flower which thirty centuries ago expressed, in the symbolism of flowers, the same thought which it still expresses, the thought of immortality. The wreath itself was eloquent of love, for none but loving hands had woven it for the forehead of the dead woman, sister, mother, which?

From The Swarthmore Phœnix.

ONE AFTERNOON.

"So you have all come to talk with me about books, to-day," said our Professor as we gathered around him in his study one holiday afternoon.

"Did you ever consider what an advantage it would be to society and to people in general if their conversation were more upon this subject of books, and less about themselves and one another? Suppose one of you meets a stranges, why not, instead of commenting upon the state of the atmosphere, turn the conversation toward the realm of books. Here, perchance, you may find many mutual friends, and a conversation which might otherwise have been dull and commonplace, becomes thoroughly interesting and instructive. Moreover, you have gained an insight into the thoughts and feelings of your companion. For if a man's opinion of the world is a confession of character, surely his opinion of books and authors is no less so. But in your conversation, wherever you are, make no pretension to more knowledge than you really possess, for I think it is an old Persian proverb which says, 'A wise man knows an ignorant man, because he has been ignorant himself; but the ignorant cannot recognize the wise, because he has never been wise.'"

"But Professor," interrupted the youngest of our company, who knew well our good Instructor's habit of wandering from his subject, "will you please tell us how much and what sort of reading we college students ought to do?"

"Well, my young friend," replied the Professor with one of his kindly looks, "your question is one which has been agitating the minds of some of our wisest men, and I am almost inclined to think that each student must answer it for himself, to suit his own individual case. Not that you may not gain many valuable aids to your decision from consulting the experience of older minds. Perhaps you have been reading in our periodicals of recent date the articles written by some of our leading literary men upon the books which have helped them. There, you no doubt found widely different views as to what particular books young people should read,

but in all cases did you not observe that it was the few books which were read, remembered, and *thought about* that helped the most? It does not matter so much what we read and how we read as what we think and how we think it."

"I think you said the other day that you did not approve of our reading much in magizines and newspapers. Please tell us why, Professor," suggested one of our incessant readers.

"Young people, especially students, are apt to read merely for entertainment and pleasure, and consequently read anything that chances to come in their way. Few things weaken the memory more than light and miscellaneous reading. For this reason I would especially discourage the promiscuous and constant perusal of newspapers and magazines. After reading for hours, you will most likely find that you have only a confused mixture of ideas and vague images. You read without the intention of remembering, just for mere pleasure or recreation, but every time you thus crowd the memory you weaken its powers and lose your control over it. This reminds me of what Petrarch says, 'We ought to regard books as we do sweetmeats, not wholly to aim at the pleasantest, but chiefly to respect the wholesomest, not forbidding either, but approving the latter most.'

"Now you wish to know how much you should read? The habit of constant reading is a commendable one, and through it lies the only sure way to learning, the only means of becoming acquainted and familiar with the thoughts and feelings of the wise men who lived in ages past. The student who considers attentively the writings of a powerful mind, is made to feel that he can and will make his mark in the world. The speeches of Hamlet, in Shakespeare; the voice of the orator from the Senate, the words of wisdom from the pulpit, and above all the overwhelming torrent of clear thought, in burning language, which the masters of ancient times poured forth will rouse the soul, and call all your powers into action. Furthermore, by thus bringing your mind under the direction of another mind, you have not only your thoughts, but your mode of expression influenced. You soon learn to know how a strong, a nervous, or a beautiful writer expresses himself. Suppose you spend a fortnight reading productions from the pen of Johnson, do you not find yourself in your writing unconsciously catching his dignified step and gait? Be as careful not to read a book which would vitiate your style, as you would be not to associate with those who would corrupt your manners.

"All distinguished men have been given to the habit of constant reading. It is told of Plutarch that he felt unhappy if at some time during the day he did not read or write. One of his friends out of anxiety for his health once begged him to lend him tho key of his library. Plutarch reluctantly complied with the request. His friend locked the library and forbade him to read anything for ten days.

"The poet consented, but the first day seemed longer than a year, the second found him with a raging headache, and by the third day he was in such a fever, that his friend, touched by the situation, restored the key, and with it health and spirits. By constant reading I do not mean rapid reading. Some one who has a deep insight into the nature of man, says that he never felt afraid to meet a man who had a large library. It is the man who has but few books, and who thinks much, whose mind is best furnished for intellectual operations. If a student would improve by his reading, he must be very deliberate. The careful reader makes the clear thinker, and the clear thinker the exact writer. The ancients had a certain advantage over us in the fewness of their books. 'They had no catechism but the creation, needed no study but reflection, and read no books but the volume of the world.' Then, a book to be owned must be copied with a pen, and he who thus transcribed a book for the sake of possessing it, would have a pretty good idea of its contents. What a wide difference between their age and ours! We might be greatly benefited by taking to heart the old Latin maxim, '*Aliud enim est scire, aliud sapere.*'"

Suddenly the Professor paused. Silence reigned supreme for several seconds, then thanking our kind friend for his words of practical wisdom, we said "adieu."

THE YELLOW FEVER IN FLORIDA.

At the recent annual meeting of the Medical Society of Virginia, Surgeon-General Hamilton, of the Marine Hospital Service, gave briefly an account of the epidemic of yellow fever in Florida. The first case appeared in Key West, last year, in the family of one Baker, who kept a restaurant, who received and stored the household effects of a family from Havana, in rooms above his restaurant. The Baker family died of the disease and the fever rapidly became epidemic.

It was introduced into Tampa by a family of Italians, named Yurk, fruit dealers. When they were taken down it was impossible to learn where they were infected, but it has since been shown that disregarding the strict quarantine instituted against Key West, they had been engaged in smuggling goods from that place and among other articles blankets were brought from the infected city, used on the journey, and introduced the disease into Tampa. Although denied, the fever lingered in Tampa all winter. From Tampa the disease spread to Plant City, Manatee, and other places and it is now believed that the fever was in Jacksonville as early as February.

A man from Jacksonville introduced the fever into Decatur, Ala., he being admitted because traveling upon a ticket from some other place. In Gainesville and Fernandina the fever was brought by baseball players who went to Jacksonville before the fever was declared epidemic and then returned to these cities. He reported that only one death had occurred at Camp Perry, and that the experience there had shown that five days was the period of incubation. Persons coming to the camp and not developing the disease in five days, were free from danger. He further claimed that if the first cases in

Tampa had been reported that there would probably have been no epidemic and that the fever had become epidemic in Jacksonville at the time the "*first case*" was acknowledged.

THE DEAD SEA.

This mysterious lake, sunk thirteen hundred feet below the surface of the Mediterranean, and buried far below our line of vision, is walled, rather than bounded, by parallel lines of precipice on either side, rising almost sheer from two thousand to four thousand feet. For an extent of forty miles on the west side, from Jericho to Jebel Usdum, only two or three precipitous and dangerous passes afford an access to its shore. On the east side there is but one track available for a baggage animal along the whole extent of the lake; and on neither side is it possible for horses or camels to follow the shore, excepting on the southern half of the west and on the northern half of the east side. To reach the Moab of Israelitish history from Judah, the only route was to descend the cliff of Hazziz over Engedi, and skirt the lifeless and waterless shore of the lake for twenty miles to the salt mountain of Jebel Usdum; then cross the dreary salt plain which forms its southern boundary for twenty miles; and then follow the east shore up to the pass which leads through narrow defiles for three thousand feet up to Kir Moab, the modern Kerabd. The approach from northern Palestine was less difficult, being from the fords of Jordan above Jericho, down the plain of Shittim, and for nearly twenty miles by a narrow rock-strewn track along the sea-shore to the mouth of the Arnon, from which a few steep paths, hardly practicable for mules, led up to the highland plateau of Moab.—*S. S. Times.*

THE CHRISTMAS LEGENDS.

Leonard W. Bacon (Orthodox Congregationalist), writes to the *Sunday School Times* condemning the acceptance of the legendary matter associated with Christmas. His view of the case is partly expressed in the following paragraph:

How many of those who are taught to sing of "the kings of Orient" and their symbolical gifts, in which they declare their belief of vicarious atonement and the divinity of Christ, are going, by and by—when they come to find out that this is all wholly without foundation, that there were no kings at all, and not even any wise men, but only foolish and ignorant men, and no star that was visible to any one but an astrologer—how many are going to rush to the conclusion that the whole gospel of the incarnation is part of the same "old wives' fable?" No danger, do you say? There is always danger, both to the teacher and to the taught in tampering with falsehood. But this is a time when the danger is peculiarly grave. Among those critical questions that begin in the investigations of laborious Christian scholars, and find their way thence to the libraries of thoughtful men, and are then caught up by malignant cavilers and scattered abroad to disturb the faith of many, there are none more serious than those which affect the story of the nativity of Jesus Christ. The coming generation have got to face as difficult a discussion, on this point, as the Church has ever known. Is it a good preparative for this trial to saturate their young minds with the falsehoods of a mediæval superstition?

ONE HUNDRED YEARS OLD.

A newspaper paragraph dated at Wheeling, West Virginia, says: A remarkable old lady is Mrs. Rebecca McGirr, now living at Clover Hill, in the adjoining county of Washington, Pennsylvania. "Aunt Beckie," as she is familiarly called by those who know her, was born in Cumberland Valley, on the Conococheague Creek, on Oct. 16, 1788, and now, after the lapse of 100 years, still lives, with the bloom of health upon her cheeks, and is bright and lively as the average woman a generation less in age. She belongs to the Society of Friends, and is an unwavering follower of Elias Hicks.

"Aunt Beckie" has been twice married. Her first husband was Isaac Griffith, whom she wedded in 1809, and to whom she bore one child. Her husband died in 1811, and in 1818 she married William McGirr, who spent a long lifetime as a preacher among the Friends. To them were born four children, and of these a son and a daughter still live, with their venerable mother, both looking, to the casual visitor, more aged than she.

"Aunt Beckie's" memory is clear, and she can recite many stirring but now forgotten incidents of her youth and early life. Think what a panorama unrolls before this ancient dame as she looks back over a hundred years of what General Garfield called "a century crowded with peril and crowned with triumph." She has seen Washington, and heard the hurrahs of all the campaigns of all the Presidents. She has seen the Indian living near her on the waters of the Monongahela, she has visited on Pennsylvania soil the wigwams of the Mohawks, Mingoes, and Delawares, eaten venison with them, and looked out on the streams while they glided by in their bark canoes. She remembers the war of 1812 very distinctly, and with her own hands fed the hungry soldiers. She has seen Pittsburg grow from a small frontier trading post to be a city of 200,000 inhabitants, and watched the expansion of the American population from 3,000,000 to 60,000,000.

"Aunt Beckie" seems good for half a dozen years of life, and looks forward to the celebration of her 105th birthday with confidence.

1900 *NOT A LEAP YEAR.*

The following explains why the year 1900 will not be counted among leap years: The year is 365 days 5 hours and 49 minutes long; 11 minutes are taken every year to make the year 365¼ days long, and every fourth year we have an extra day. This was Julius Cæsar's arrangement.

Where do these 11 minutes come from? They come from the future, and are paid by omitting leap year every 100 years. But if leap year is omitted regularly every 100th year, in the course of 400 years it is found that the 11 minutes taken each year will not only have been paid back, but that a whole day

will have been given up. So Pope Gregory XIII., who improved on Cæsar's calendar in 1582, decreed that every centurial year divisible by four should be a leap year after all. So we borrow 11 minutes each year, more than paying our borrowings back by omitting three leap years in three centurial years, and square matters by having a leap year in the fourth centurial year.

Pope Gregory's arrangement is so exact, and the borrowing and paying back balance so closely, that we borrow more than we pay back to the extent of only one day in 3,866 years.—*Yonkers Statesman.*

THE OLD TIME NEW ENGLAND MILL GIRL.

When, at the beginning of the century, the cotton business arose, it afforded the girls of New England the first opportunity to find occupation outside their homes sufficiently important to affect the destiny of any large number of them. They rushed into the new opening, not dreaming that they were precipitating their sex into the maelstrom of modern industry, or that they were merely the advance guard of a great army of female workers, whose disadvantageous attitude towards economic forces is one of the most fruitful sources of suffering in our social body. It was not the stupid girls who, in that early day, broke away from the monotony of farm life, or the still worse helplessness of existence with parents too poor to be farmers. It was the bright, eager young women, who went to the mills to earn money, and free themselves from the semi-servitude engendered by dependence on relatives. The story has often been told of the Lowell factory girls who published a paper, and in time settled to no meaner avocation than that of author or social reformer. There are legends also of a generation of Yankee mill girls who sent to Preston S. Brooks the suggested tribute of thirty pieces of silver, after his assault upon Charles Sumner. But the careers concerning which these stories are related belong to a late period in the history of the Americans' connection with the manual part of cotton manufacture, and some of them were exceptionally striking. Still, such incidents indicate something which it is important to understand, and that is that the nice girls of New England for many years became mill operatives. Of course I do not mean that such labor was ever aristocratic, but that it possessed a certain social sanction which it does not now command. A consideration of the average fortunes of the native help leads to the same conclusion. The mill girl had worldly superiors then as the dressmaker, the typewriter, the telegraph operator, the common-school teacher, has now, but she was from exactly the same stock, and was herself just the same sort of girl, as are the ones who now follow these different vocations. She maintained her dignity while in the mill, and if she left it before she grew old it was because she wanted to leave it,—usually because some man wisely wanted to marry her. Her marriage was generally sensible, and sometimes brilliant. In studying the traditions of the whole period, one finds occasional hints of that romance which attaches to all history, as amid the homely details one catches now and then a glimpse of ideal beauty, and comes upon the trace of some girl whose loveliness attracted a fate quite different from that of her village comrades. It is happily due to the purity of New England ethics that this fate is more often found to be joyful than sad.

I suppose it would be impossible to obtain statistics which would tell us much either of the life of the Americans who were operatives, or of the after fate of their descendants. But every person who has been long familiar with the native residents in the older manufacturing towns is necessarily acquainted with many family histories, which reveal the essential features of that former time, when factories were small, and owners and workers were often not only neighbors, but friends. They were all subjected to the ancient New England village tradition of substantial equality. They were of one blood, they held to one religion, and called each other very generally by their Christian names. "Of that early time," writes a lady now more than eighty years old, "I have many recollections, when the wife of Mr. S—— met the wives of overseers not only in her church work or at prayer-meetings, but in social equality."—*Lillie B. Chace Wyman in Atlantic Monthly.*

THE DRESS OF JESUS.

Leaning upon what contemporary Hebrew literature tells us respecting the religious garb of the Jews, Professor Stapfer endeavors to picture to himself what sort of dress Christ habitually wore.

"He had neither the fine linen nor the sumptuous raiment of those who live in kings' houses; neither had he a long, flowing robe like the scribes and Pharisees. Upon his head he must always have worn the turban, the national head-gear, used alike by rich and poor. Painters make a mistake when they represent Christ bare-headed. Every one wore the head covered. The turban he wore was probably white; it was fastened under the chin by a cord, and at the side fell down to the shoulders and over the tunic. Under his turban he wore his hair rather long, and his beard uncut. His tunic, the underneath vesture, was of one piece without seam; it was therefore of some value, and had probably been given him by one of those women who 'ministered to him of their substance.' Over this he wore the *talith* loose and flowing; this mantle was not white, for we are told it became white during the transfiguration—then it was not so before. It was not red, for that was only the military color; it is possible that it was blue, for blue was then very common; or it may have been simply white with brown stripes. In any case, Jesus had the four corners of this mantle, the *tsitsith* 'tufts,' the blue or white fringes placed at the four corners as commanded by law (Numb. xv. 37, 38; Deut. xxii. 12). He wore sandals on his feet, as we learn from John the Baptist; and when he was traveling, going from place to place, he doubtless wore a girdle round the loins and carried a stick in his hand. His apostles accompanied him wearing the same garb. At a little distance came some women: 'Mary, that was called Magdalene: Joanna the wife of Chuza, Herod's steward: Susanna, and many others.'"
